The annual report to the 31st December last shows that the number of shares issued in the old company has been 62,946, of which there have been exchanged for new shares 54,970, leaving old company's shares unexchanged 7,976. The bonds given by the old company, amounting with interest and bonus to 17,414*l.* 12s. 10d., have been duly paid, also its liabilities on open account, with some exceptions shown in the balance-sheet; compromises made with some of the Colorado creditors reduced the amount payable to them to less than that set forth in the agreement for reconstruction, but the directors have been called upon to pay additional claims which were not scheduled, one of them having arisen from a serious accident to a miner as far back as 1886. The damages claimed were very heavy (thirty-five thousand dollars), and legal action was taken against the company. Acting under the advice of eminent counsel in Colorado, a compromise was effected by payment of 1,750 dollars, including costs. An outlay has been made for an assay plant, which under the care of an assayer sent from England, has been, and without doubt will continue to be of advantage to the company and its *employés*. The directors are disappointed at the result of the mining operations; they cannot, however, attribute it to any fault in the management. From time to time rich ore, sometimes very rich, has been met with, but it has not opened out into large paying quantities; the board have not, therefore, thought it advisable to authorise any large expenditure upon deadwork; but have preferred, so long as it was not being injured, to work the mine mainly by lessees driving upon the course of the lodes, and in this way husband the resources at command until an opportunity should arise to use them with a minimum risk of failure.

BARTHOLOMAY BREWING CO. (OF ROCHESTER), LIMITED.

This company has been formed to take over and amalgamate three of the largest freehold breweries in New York—viz., the Bartholomay, Rochester, and Genesse. The former stands on upwards of 5 acres of land, and possesses a frontage of 450 ft., comprising brew-house and storage vaults capable of turning out with the present plant 200,000 barrels per annum, and a malt-house capable of malting 200,000 bushels of malt annually. The Rochester brewery is substantially built, and possesses a frontage of 453 ft. with a depth of 170 ft., and with capacity for 150,000 barrels per annum. The plant and buildings are in first-class order, and the cellars, which are cut 40 ft. into the solid rock, cannot be excelled. The malt-house included in this brewery is capable of turning out 100,000 bushels of malt per annum. The Genesse is a model freehold brewery, possessing efficient plant and machinery, with a capacity for 100,000 barrels per annum. Its malt-house is fitted throughout with the most modern appliances, and can turn out 120,000 bushels annually. In addition to the above-named properties, the company acquires a number of hotels, pavilions, bottling stores, &c. All the breweries and malthouses are in close proximity; the railway accommodation is good, and the water exceptionally fine for brewing purposes. Messrs. Price, Waterhouse and Co. have examined the books of the three concerns, and certify that the net profits for the last three years have been as follows:—1885-6, 86,374*l.* 16s. 10d.; 1886-7, 108,684*l.* 16s. 2d.; 1887-8, 115,300*l.* 12s. 3d., thus showing a steady increase in the profits. The amalgamation will naturally have the effect of enabling the breweries to be worked to much greater advantage, and it is anticipated that these profits will show a considerable increase in the future. The share capital is 620,000*l.*, in 31,000 8 per cent. cumulative preference shares of 10*l.* each, and 31,000 ordinary shares of 10*l.* each, in addition to which 350,000*l.* 6 per cent. debentures, secured upon the property, are offered for subscription. The price to be paid to the vendor is 970,000*l.* The company purchasing a going concern, no working capital is required. The board appears to be strong and influential.

THE MONEY MARKET.

City, Friday Evening.

No alteration has been made in the Bank rate this week, although fully expected, as since the distribution of the dividends on the Funds on Saturday last the supply of capital has been plentiful, and rates had fallen away, discount declining to 1⅛ per cent., or even a fraction less, and money at call or for short loans to half its former value, offering indeed at 1½ per cent. The discount houses acting independently of the Bank had also reduced their allowances for deposits to 1½ and 1¾ per cent. for money at call, and "notice," as they could no longer afford to give more than they would be receiving on the discounting of bills. The occurrence, however, of the settlement has given evidence that the supply of money is none too great, and, in fact, the quotation has improved with the greater demand to 2 to 2½ per cent., and even 3 per cent., to avoid taking a week's loan of the Bank. Last week's Bank return indicated that the dividends had been anticipated pretty fully, and this week's return makes it plain that the markets' resources are too limited to afford the expectation of any lengthened cheapness in money, and that in all probability the directors will delay the downward step for the present, and maintain the 3 per cent. rate until they once more regain control of the market. Nearly half a million was received from abroad on the week, but the increased circulation has absorbed it all, but the reserve is a little better, owing to a reflux of notes, and the proportion has improved 2¾, to 41¾ per cent.

Discount to-day has been firmer at 1¾, ⅞ per cent., and money has been in continued demand, both in the open market and at the Stock Exchange, at 2 to 2½ per cent., but 3 per cent. has been paid till to-morrow in preference to going to the Bank, where a great part of loans due to-day were renewed. The action of the Government Broker in lending some large amounts on Consols at 2 per cent. till the 3rd May led to a better supply in that market. Some heavy calls fall due next week, particularly on Monday.

Gold to the value of 25,000*l.* was bought by the Bank to-day, and bar silver was unaltered at 42⅛d. per oz.

Business at the Stock Exchange was restricted by the arrangement of the fortnightly settlement, which was satisfactorily concluded. Money was in plentiful supply, but the rates for carrying over speculative bargains were stiffer than on the previous occasion, and ranged from 2 to 3 on Foreign Government Bonds, and from 3½ to 4½ per cent. on American Railway Securities, and on Home Railways the contango went as high as ⅞ per cent. on North-Western Stock. Speculation has been active, and in some cases quite recklessly. Prices have been buoyant, and have risen as if affairs in France were on the most established basis, that the Boulanger affair was entirely settled, and that Servia was not to be reckoned in the calculations of the prospects of peace in Europe. At home the "Parnell Commission" has resumed its sittings, and Sir Charles Russell has occupied the time of the Court with a speech for the defence. Some of the prices at the Stock Exchange are quite unprecedented, for instance, Egyptian Unified, Spanish, and Metropolitan Railway Stock. The Funds have been good, although the public have been selling and re-investing the proceeds in Colonial and Indian Government Stocks and Home Corporation Stocks. Throughout the Foreign Government Department the rise ranges from ½ to 1 per cent. In the Railway market the favourites have been Brighton "A," Great Northern "A," Caledonian and Sheffield "A," which have risen 3 to 4, and the rest 1 to 2 per cent. American Railways have also been active, and the list has risen ½ to 1, with an exceptional rise of 2½, owing to rumours of a fusion with the Chicago and North-Western Companies. Grand Trunk of Canada Stocks were flat on a bad traffic return. Mexican were firmer, and there was a good demand for Brewery Shares for investment purposes. Cable Stocks were also in request, and many other and Miscellaneous descriptions were higher on the week.

The markets to-day have not been so good, many realisations having taken place in order to secure profits; but in spite of this prices closed firm. New Consols were unaltered both for cash and next account. Foreign Government Bonds were conspicuously firm, and there was an average rise of ¼ per cent. Attention was chiefly directed to South American Loans, and more especially to the low-priced issues such as Paragnay Peruvian, and Honduras Bonds. In the absence of fresh buyers coming forward, operators for the rise in Home Railways were anxious to secure profits after the recent smart advance prices fell away with a rush, and after occasional rallies, closed flat with Caledonian, 1¾; Great Northern, 1½; Brighton "A," 1¼; Sheffield "A," 1¼; North-Western, 1½; Midland, 2⅛; North-Eastern, 1⅜; Great Western, 2; and others, ½ to 1 per cent. below last night's levels. American Rails opened firm, but on the "bears" making a raid on Lake Shore, Louisville, and Canadian Pacific Shares, prices fell away all round, but the final alterations were not important, and about equally divided. Grand Trunk Stocks opened good, but fell away with the other markets, and Mexican Railways were also freely sold, and closed ½ to 1 per cent. down. Nitrate descriptions were particularly heavy, and closed at about the lowest, Primitiva being 1¼ down.

Annexed are the final quotations to-day:—Consols Account, 98½, 98⅝; Egyptian Preference, 104¼, 104½; Egyptian Unified, 91¼, 91⅝; French Four-and-a-Half per Cents., 104, 104½; Hungarian, 86½, 86¾; Italian, 95⅝, 95⅞; Mexican Six per Cents, 91¼, 94¾; Pern Five per Cents, 11¼, 11½; Peru Six per Cents., 16¼, 16½; Russian, 1873, 102⅝, 102⅞; Portuguese, 66½, 66¾; Spanish, 75 9/16, 75 11/16; Turkish, 1871, 92¼, 92⅜; Turkish Defence, 101¾, 102¼; Caledonian, 119⅞, 120⅛; Great Eastern, 76⅝, 76⅞; Great Western, 157, 157½; Brighton "A," 154, 154½; North-Western, 183⅜, 183⅝; Metropolitan, 91¼, 91¾; Metropolitan District, 144⅜, 144⅝; Midland, 144⅜, 144⅝; North British 56¾, 57 xd; North-Eastern, 171⅞, 172⅛; South-Eastern "A," 115¾, 116; Hull and Barnsley, 35⅛, 35⅜; Grand Trunk 11, 11⅛; Ditto First Preference 71, 71¼; Ditto Second, 51¼, 51½; Ditto Third, 27⅝, 27⅞; Canadian Pacific, 51¾, 52; Deuver, 16⅞, 17⅛; Erie, 28 15/16, 29 1/16; Milwaukee, 67⅛, 67⅜; Lake Shore, 105¼, 105½; Louisville, 65½, 65¾; Atlantic First, 31¾, 32; Ontario, 17⅛, 17¼; Ohio, 23, 23½; Norfolk and Western, 51⅜, 51⅝; Reading, 23 1/16, 23 3/16; Reading Bonds, 84½, 85; Union Pacific, 63⅜, 63⅝; Wabash Preference, 27, 27¼; Ottoman Bank, 12 5/16, 12 7/16; Anglo-Telegraph, 52¼, 52¾ xd; United Telephone, 16⅜, 16⅝; Hudson's Bay, 20⅜, 20⅝; Suez Canal, 91¼, 91¾; Guinness, 31¼, 31½; Allsopp's, Ordinary, 8⅝, 8⅞; Bryant and May, 13⅛, 13⅜; Nitrate Railway, 21¾, 22; Bell's Asbestos, 18⅝, 18⅞.

SOUTH AFRICAN NEWS.

LATEST TELEGRAMS, &c.

Umbeloosi Exploration. — Letters of allotment have been posted.

Witwatersrandt (Knight's).—The London ageney advise the receipt, ex Athenian, of one box native gold, contaiuing 459 ozs.

Luipaard's Vlei. — The secretary has received the following cablegram :—"Income for March over 1,000*l*."

Unity.—The office has been removed to the offices of the African Gold Share Iuvestment Company, Liuited, No. 8, Old Jewry, E.C.

Essaman.—The company have sold, through Messrs. Johnson, Matthey and Co., 175 ozs. gold, produce of February crushing, realising 684*l*. 13s. 3d., or 3*l*. 18s. 3d. per oz.

African Gold Share Investment.—Certificates are now being issued, on presentatiou of banker's receipt and allotment letter, at the offices of the company, Old Jewry.

Wolsingham.—Messrs. Robert Whyte and Co. advise the receipt, ex "Athenian," of one box native gold, containing 219 ozs., for account of this company.

Gordon Diamond.—Return of work doue at mine for week endiug 6th inst. :—Loads of blue hauled, 8,400 ; loads of blue washed, 5,800. Diamonds produced, 2,100*l*.

African Gold Share Investment. — Notice is given that certificates are now beiug issued on presentation of banker's receipt and allotment letter, at the offices of the company, 8, Old Jewry, E.C.

Sheba.—A telegram from the mine for the month of March states :—"980 tons of orc raised at the mine ; 709 tons of ore crushed at the mill ; yield, 2,770 ozs. of gold ; 20 stamps at work during 24 days."

Wemmer.—The London ageucy advise the receipt, ex Athenian, of two boxes native gold, containing 906 ozs. A cable message has also been received at the London office, stating that 1,460 ozs. of gold have been retorted for the month of March.

Durban-Roodepoort.—The company notify the closing of their trausfer books from the 25th inst. to 1st May, both inclusive, for the purpose of preparing for the first aunual general meeting to be held on the 1st May, at the Canuon Street Hotel.

Moodie's Gold Exploration.—A cablegram from the secretary in Pietermaritzburg gives the result of crushings for the month of March : "Claims reuted or leased, 658 ; claims rented or leased, which are producing returns, 9 ; 900 tons crushed by claim-holders yielded 638 ozs." Annual general meeting will be held ou May 30th.

Crown Reef.—The crushing for the month of March is 1,660 ozs. The directors have decided not to declare the customary quarterly dividend of 6 per cent., but to use the funds to erect a further 20-stamp battery. The compauy is now crushiug with 30 stamps ; 40 stamps are in course of erection, and with the above 20 stamps the company will have a milling power of 90 stamps.

Removal. — The following companies, viz., Development and Invcstment Co., Limited ; Neebe, Loudon, and Transvaal Syndicate, Limited ; the Simmer and Jack Gold Mining Co., Limited ; De Kaap Gold Mines, Limited ; The Tharsis Gold Mining Co., Limited ; and the Midas Black Reef Estate Gold Mining Co., Limited, have removed from No. 8 to No. 1, Drapers' Gardens, Throgmortou Avenue, E.C.

South African.—The directors are advised by the Kimberley Committee that the fall of reef which has taken place in the Bultfontein Miue has in no way affected prejudicially the working or value of the claims belouging to the South African Company. The following particulars of work relate to the week ending March 9th :—Blue ground hauled, 6,405 loads ; blue ground washed, 5,098 loads ; diamouds obtained, 1,489 carats ; estimated value, 1,540*l*.

Barrett.—Report for February :—There has been no rain as yet to affect the springs eommanding the alluvial ground on this farm, and therefore my anticipations of being able to work coutinuously and on an extended scale have not been realised ; the work has only been carried on as water collected in the dams, aud though such work has been very small in amount, the result has been nearly 50 ozs. gold for the month, and proves that the ground will prove rich when water is obtainable. On the 15th of month battery commenced work, and the 30 stamps have been kept going since, 16 hours a day, with a full supply of ore resulting in a return of 200 ozs.

Great She.—Extract from report of mining engineer, dated 5th March.—Magnet shaft : This is now staudiug in consequence of cutting water at a depth of 68 ft. I am obtaining estimates for erectiou of gin. I am of opinion that the water is made from the reef which burst forth directly it was drilled into. Syndicate block : The low level drive is now in 58 ft., and going forward with doutle shifts the quartz carries free gold, but it increascs as we advance towards the shoot, met with in the shaft B. Standard : I am contiuuing the drive here with double shifts. The Sheba Company have met with the gold shoot in their No. 5 level (on reference to the plan you will see its positiou).

Bird's Swaziland Concession.—Mr. Theophilus Shepstone writing from the King's Kraal, Swaziland, under date 11th March, states that the reports circulated as to his no longer being agent aud resident adviser to the King are not truc, and are not to be believed. As to the concession owned by the company, Mr. Shepstone says that it faces his house, and no question can arise as to the title. On April 6th a cablegram was received from the company's agent stating that the transfer of the property had been duly registered, that the company's representative was in possession, aud everything in order. Mr. J. H. Hampton, the superintendent, sailed froui England by the s.s. Hawarden Castle, on March 15th, and should shortly be upon the property. Mr. Hampton has had considerable experience in prospecting work. He has taken with him a complete assay outfit, so that no delay will occur in reporting the value of the discoveries which may be made.

Transvaal Gold Exploration.—The following particulars are from manager's advices of March 11th :—Mines : Theta vein—During week 70 tons have been extracted, assaying 4 ozs. 13 dwts. gold per tou. In workiug No. 1,061, the vein has contracted eonsiderably, but the manager expects it will open out again. In No. 1,062, it continues to look well, and averages 6 ft. thick. Two small veins carrying payable gold have been found in No. 1,061, overlying the main vein. The upper one had improved considerably since first round ; the other had just been struck. Beta vein : The weight extracted during the week was 15 tons, assaying 1 oz. 3 dwts. per ton. Columbian Hill : Two long trenches were cut during the week, but no vein has yet been found. Brown's Hill mill : Battery—The battery was at work for 116 hours, and crushed 147 tons of Theta ore, assaying 4 ozs. 13 dwts. gold per ton. Usual clean-up of plates yielded 448 ozs. of amalgam. Weight crushed in previous week should have been stated in report as 172 tons instead of 148 tons. Pans : These ran for 103 hours during week, and treated 38 tons tailings aud blanketings from Zeta and Theta ores, assaying 3 ozs. 15 dwts. per ton. Gold produce : Figures for February are now to hand : 170 tons Zeta ore crushed, yielded 122 ozs. 11 dwts. gold, or 14 dwts. 10 grs. per ton ; 359 tons Theta ore yielded 639 ozs. 14 dwts. gold, or 1 oz. 15 dwts. 14 grs. per ton ; 154 tons tailings treated in pans yielded 185 ozs. 5 dwts. gold, or 1 oz. 4 dwts. 1 gr. per ton ; alluvial gold received, 3 ozs. 3 dwts. 1 gr. ; total gold produced, 950 ozs. 13 dwts. 1 gr.

South African (Pullinger).—The revenue account for year ending 31st October shows a net profit on the year's work of 13,119*l*. 13s. 5d., which has been disposed of as follows :—1,053*l*. 1s. 1d. to adjust balance at debit of profit and loss account on 31st October, 1887 ; 6,800*l*. in payment of dividend of 1s. per share paid on 1st August, 1888 ; 5,266*l*. 12s. 4d. carried forward to credit of the profit and loss accouut of the current financial year ; and subsequently applied, as you are aware, in part provision for the dividend of 1s. per share paid on 25th February last. The balance-sheet shows that, exclusive of claim property, plant, and machinery, we had, on 31st October last, assets in blueground on the floors (taken at the cost of extraction, which is much below its market value), diamonds and stores on haud, investments and cash, aggregating 17,106*l*. 11s. 1d. Deducting amounts due to sundry creditors, 2,281*l*. 15s. 5d., we had a clear surplus available for working capital, if required, of 14,824 15s. 8d., which is a very satisfactory financial position. The manager's report of work done in the year shows 226,039 loads of blue hauled from the mine ; while the quantity washed was 224,197 loads, which produced 64,239 carats of diamonds, or an average of over 28½ carats to the hundred loads. Since the practice of selling blue at the box has been discontinued, and the fine blue has been washed by the compauy, the average yield has improved, and may now be safely estimated at 30 carats to the 100 loads. The board feel convinced that it is for the interest of the shareholders to arrange for a union of iuterests with neighbouring compauies working the Bultfoutein Mine ; and uuder this conviction they have, for some time past, been in negotiation with various parties interested in the diamond mining industry. They are glad to say that these negotiations have now reached a point at which a final settlement of the basis for such amalgamation may be expected any day ; and they hope to be able, at an early date, to call the shareholders together for the purpose of considering a definite offer, the acceptauce of which by the compauy they will be able to recommend.

Jumpers.—The report of the board for the half-year ending 31st January was as follows :—Mine : First level : Considerable progress has been made with this development. Considerable progress has also been made with the timbering (the stull) of the drifts. Second level : The second levels upon both blocks will be 100 ft. vertical, giving backs of a few feet over the 100. The quartz won and raised during the six months was 10,027½ tons. The whole of the head gear, hoistiug engiue, &c., at the eastern shaft has been roofed in, so that in the most inclement weather operations can be continued without any hitch. The two pumps easily keep both blocks free from water, working only partial time. Tramway is laid from the eastern main shaft to the battery, a little over a mile, and is in constant use. A section of the line is now in hand, connecting the main line with the western main shaft. Mill : 30 stamps are now at work, the additional 10 stamps haviug started iu September last. During the six months we have milled 8,687½ tons of quartz, which, considering the very unsuitable type of the battery engine, is highly satisfactory. Yield of gold : The above 8,687½ tons of quartz yielded 8,627 ozs. 15 dwts. of gold, say "the steady ounce per ton." We may here remark that we mill everything as it comes. It would be easy for us to return a very much higher yield per ton by selecting the quartz. Turning to the balance-sheet and profit and loss account :—Permanent buildings : Consist of dwellings for the manager and mining captain, miuers' cottages, kaffir compounds, stable, magazine, winze houses, battery and engine-house, house for hauling-engine, head-gear at eastern shaft, and workmen's dining hall, all representing good value. Machiuery and plaut chiefly consist of a 30-stamp Sandycroft battery, driven by a 20 h.-p. nominal high-pressure compound engine with two boilers, also 16 h.-p. Marshall hauling engine of the most approved pattern, with a 20 h.-p. boiler, and complete pit head-gear, erected at the eastern shaft, also a six h.-p. hauliug engine, with poppet head (temporary hauling gear) and a 16 h.-p. Marshall boiler, erected at the western shaft. Gold iu transit to England. This cousists of 2,959 ozs. 8 dwts., being December and January crushings. Water rights, dam, &c. : The supply of water has fully answered our expectations, which seeiug that we have practically experienced a drought during the past half-year, is highly satisfactory, aud the necessary supply requisite for a 100-stamp battery can be relied on. Dam is in good order. Profit and loss accouut : The examination of the profit and loss account will show the expenses uuder the various heads to be as follows :—Quartz winning, 11s. 9½d. per ton ; quartz riding, 1s. 9d. per ton ; milling, 11s. 2½d. per ton ; thus making a total for mining and milling of 24s. 8¾d. (This includes management salaries, which are apportioned to their proper headings.) Quartz redeuption accouut, 1s. 4d. per ton ; general expenses, including bank charges, printing, stationery, advertising, licenses, general, special, and legal charges, and directors' fees, 3s. 7d. per ton ; written off for depreciatiou (955*l*. 0s. 7d.), say, 2s. 5d. per tou. Thus you have a mining and milling cost of 24s. 8¾d. per ton, and general expenses and depreciation of 7s. 4d. per ton, making a total cost of production of 32s. 0¾d. per ton, representing the cost of producing say 1 oz. of gold, of 3*l*. 10s. value. Depreciation : The sum of 955*l*. 0s. 7d. has been debited to profit and loss under this head. The assets stand at their lowest value, and many of them could be sold for a higher sum than that at which they staud in the

balance sheet. In addition there has been a very large sum written off indirectly for tools and appliances, having been charged direct to quartz mining and milling expenses. The directors' scheme to issue 8,000 shares (increasing the capital of the company from 42,000*l*., as originally floated to 50,000*l*.) was duly approved of in August last. 5,000 of these shares realised by public tender 32,422*l*. 10s., and 3,000 remained unissued. Under this scheme the 100 h.-p. nominal compound high-pressure engine, four boilers, and 70 additional stamps and other machinery were ordered, also large quantities of material for buildings, &c., all of which have been delivered or are in transit, and the speedy erection of the machinery to bring the stamps up to 100 head is having every attention. Excavations for the 100 stamp mill are near completion, and the necessary steps are well in hand for the speedy erection of the whole of the machinery, the additional permanent buildings, &c. The battery will be lighted by electricity, and a telephone to connect the battery with the officers' and manager's house has been ordered. A complete plant of rock-drilling machinery driven by compressed air has also been ordered, to enable the manager to push on the development of the second and lower levels with all speed. A London office, for the transfer and splitting up of shares, and payment of dividends, &c., has been opened at 29 and 30, Holborn Viaduct. Messrs. H. Becher and Chas. Rube have been appointed London agents, and A. Moir secretary of the agency. An interim dividend of 10 per cent was declared on the 4th January. As it is found unworkable to close the share registers for seven days in each month, which step the payment of monthly dividends necessitates, it has been decided to pay quarterly dividends in future.

THE ETHERIDGE UNITED GOLD MINING CO., LIMITED.

SATISFACTORY CIRCULAR FROM THE DIRECTORS—PAST DELAYS EXPLAINED—VIGOROUS POLICY OF THE BOARD.

9th April.—The directors have pleasure in communicating to the shareholders the following telegram from the company's mining manager in Queensland, and which was forwarded to the Press on receipt :—"Mills started to run 14th day of January, 9th day of February. 441 ozs. equal 1,057*l*." From this telegram it will be seen that crushings of quartz commenced at the company's two batteries—which consist of 10-head of stamps each, one situated at the Lord Nelson Mine (Etheridge Reefs); the other at the mines adjoining Goldsmith Creek—on the 14th January and 9th February last. In addition to the before-mentioned two batteries of 10-head of stamps each there are 10 stamps more on the ground and engine power available for double the whole number. The unavoidable delay in starting the batteries, which was occasioned by the long continued drought and consequent difficulty in obtaining food supplies, has now apparently come to an end, and the rainfall having been sufficient to fill the company's dams, adjacent to each battery, all the water necessary for keeping the batteries at work for some considerable time is now available. Hereafter the batteries, however, will not be dependent upon the rainfall; the opening out of the shafts and levels having shown that there is sufficient water in the mines to keep the dams replenished from this source. The requisite iron piping for conveying this water to the dams is now *en route* to the mines. Mr. Mitchell Vivian, who left England last year for the mines, has been, much to his regret, unfortunately compelled to relinquish the managership in consequence of ill health, but the company has been fortunate in finding a successor of great practical experience in Mr. Matthew Ferguson, who took over the management at the beginning of February last. Mr. Ferguson has the advantage of being a man of great local experience, and was very strongly recommended to the directors by Mr. William Smyth, the member of the Queensland Legislative Assembly for Gympie. The directors have great pleasure in stating that the Etheridge United Company is rapidly being placed in possession of the cash assets of the old companies, and that the amalgamation is progressing very satisfactorily. All the assets of the Etheridge Goldfield Company have already been transferred, and, as soon as the remaining shares in the other companies shall have been exchanged, the directors will have pleasure in calling the shareholders of the Etheridge United Company together to place before them the satisfactory position of the company. Since the directors waited upon the Agent-General for Queensland in London, as a deputation, the railway advocated by them between Normanton and Croydon, a distance of 99 miles, has been started by the Government, and 35 miles have already been constructed. A continuation of this line for a further distance of about 120 miles, to connect Croydon with Georgetown, which latter town is adjacent to the company's mines, is also under consideration. The advantages to be derived from railway communication are evident, such as a cheaper and better class of labour, lower rates for transport, and cheaper materials, &c. The last consignments by the company to the mines were sent by the Normanton route.

The following are extracts from Mr. Vivian's report just received :—"I have the authority of several members of the Queensland Legislative Assembly in saying that the Government are partly pledged to continue the construction of the Croydon Railway into the Etheridge Goldfields. In the Lady Franklin, Ropewalk, and Canadian West blocks you have good valuable properties, capable of turning out large quantities of gold, as soon as they are more fully opened out and developed, that is, the shafts deepened, and the levels driven on either side. The St. Lawrence reef is of exceedingly good repute in the district, but it contains a quantity of water, with which we were unable to cope, owing to the difficulties of transport delaying the machinery. In the Canadian Middle the company has a nice looking reef, and I have very little doubt in saying that this reef is a continuation of the Canadian West reef, and will show the same good features in depth and extent. Regarding the Etheridge Reefs, it is undoubtedly a good property, and I am of opinion it can at once be made to pay. With regard to the crushing plant and machinery sent out, I desire to express my satisfaction as to their utility and nature. They are in every way suitable, and are the best and most complete in the Etheridge goldfields. I beg to express my unbounded faith in the Etheridge as a goldfield, and in the company's properties in particular." The directors have pleasure in printing the following letter from the Right Hon. W. O. Hodgkinson, M.L.A., F.R.G.S., and late Minister for Mines in Queensland, to the address of Mr. Mitchell Vivian :—"In wishing you good-bye and a safe and pleasant trip home, my opinion, justified by 37 years of practical mining, may not be unwelcome to you. I have, as you know, been a northern pioneer in the introduction of quartz crushing batteries in remote districts, and well know, therefore, the risks incidental to the pursuit. As member for the rich and vast district with which you have been associated, I desire to express my surprise at the energy, skill, and devotion you have displayed, evidencing, as it does, not only practical engineering talent, but coupled therewith a wonderful adaptation to the local exigencies and shortcomings. Should you return, I hope all difficulties to a brilliant development of the undoubted resources of the district will be removed by railway connection with the coast."—L. J. Woodman, Secretary.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

BERTHA CONSOLS.

To the Editor of the Mining World and Engineering Record.

Sir,—It may be interesting to your readers to know that the quantity of tin in our arsenical, mundic, and coppery ores has been steadily increasing during the last three or four months as we open and develop our lode *east* of the new shaft and great cross-course. Our ores have always contained tin (principally in combination with copper), and early assays from parcels containing many hundreds of tons of ore have proved this fact, but only *recently* has the lode shown this decided and marked improvement. The last six parcels sampled, and sold to the Coombe Arsenic Works and Messrs. Vivian and Sons, of Swansea, give the following assays :—

	Computed quantity. Tons.	Arsenic per cent.	Copper per cent.	Tin lbs.	
1. Jigged Mundic ...	120	30.47	1.83	28	Average of these five parcels contains in the burnt leavings (*i.e.*, after burning out sulphur and arsenic) 56 lbs. per ton of tin.
2. Hand picked Mundic	170	21.50	1.35	18	
3. Jigged and hand-picked, mixed ...	75	33.15	1.92	23	
4. Jigged Copper ...	60	17.50	4.0	33	
5. Copper Ore	120	16.50	5.25	79	
6. Jigged and hand-picked, mixed and Mundic	120	33.11	2.20	37	

Parcels No. 4 and 5 were sold as *copper ore*, and nothing paid by the buyers for tin and arsenic, and parcels Nos. 1, 2, 3, and 6, were sold as *arsenic ores*, and nothing paid by the buyers for the copper or tin.

It will be seen from the report of the East Pool meeting, held on the 18th March, when a dividend was declared for the three months' working of 10s. per share, that the average produce of their ore was 50 lbs. of tin to the ton, as against 52 lbs. for the previous three months.

It will be seen that the burnt ashes of the Bertha ores yield 56 lbs. of tin to the ton.

As under their lease the company cannot erect burning works on the property, the directors have taken steps to secure works for *firstly* calcining their ores, and *secondly* extracting the tin by stamping and buddling the ashes. At the same time it is contemplated to extract the copper (and silver) from the residue by the "wet process."

I send you the above facts for your information.—I am, &c.,

Watson Smith,
Managing Director.

6, Great Winchester Street,
London, E.C., April 10th, 1889.

The offices of Elmore's Patent Copper Depositing Company, Limited, have been removed to 20, Bucklersbury, E.C.

The letters of allotment and regret in the Hansard Publishing Union, Limited, have now all been posted. The preference shares were subscribed three and the ordinary twice over, allotment being made *pro rata*.

Publications Received.—"Trübner's Record," a Journal devoted to the Literature of the East, with Notes and Lists of Current American, European and Colonial Publications.—The last issue contains a most interesting article by Dr. Leitner.

The Almada and Tirito Company, Limited.—The above company have applied to the Stock Exchange for a settlement and quotation for the shares set out as follows :—Original shares allotted with 2s. paid, 190,476, numbered from 1 to 174,922, and 174,933 to 190,186; shares allotted to creditors fully-paid (2s. 6d), 66,431, numbered from 217,669 to 284,099; total, 256,907.

A Stock Exchange member is reported recently to have visited Westminster Abbey for the purpose, not of worship, but of inspecting the sacred edifice. On arriving at a certain part of the building, he asked his guide what it was called. "The Poet's Corner," replied the individual thus addressed. "A 'corner' in poets," said the Stock Exchange member, "Well, I should never have thought it would come to that!"

"Otto" Aerial Ropeways.—Messrs. Commans and Co., of 52, Gracechurch Street, are the licensees in this country for the above ropeways, which are specially suited for the transport of ore in the Lilly De Kaap district of the Transvaal. One of these is now being supplied to work in conjunction with the Sheba and Oriental Tramway. As it is of importance to have an accurate survey of the section of ground a ropeway has to traverse, and inasmuch as the particulars hitherto received from several mines were very incomplete, the Messrs. Commans decided to send out to Barberton one of their own engineers, who left the week before last. He has had great experience, and knows the special points that have to be observed in making these surveys.

CONSOLIDATED ESMERALDA, LIMITED.

5th April.—I am instructed by the directors to inform you that the mill was re-started on March 11th, and has since been running steadily on ore extracted from the stopes opened up from the 375-ft. (lowest) level (Durand Mine). The pay streak in the ledge has been narrow, but the ore has been good, and estimated to yield about 2 ozs. gold per ton; within the last few days, however, a marked improvement has taken place. The superintendent advises by cablegram that the ore body is now 2½ ft. thick, and the average assay value about 4 ozs. gold per ton. From the discovery of the narrow seam of ore in drifting on the 375-ft. level, reported March 20th, which assayed about 180 ozs. gold per ton, it was expected that further developments would show an increase in the quantity of milling ore, and it is satisfactory to find that this has been the case. The bullion returns will be announced as soon as received. It is proposed to hold the general meeting of shareholders sometime during May, when a full report on all the properties owned by the company will be presented, an eminent mining engineer having been engaged to spend two or three weeks upon the property, so that his report may be as full and complete as possible.—F. Fuller, Secretary.

THE MYSORE WEST GOLD CO., LIMITED.

THE APPOINTMENT OF A NEW MANAGER.

11th April.—The directors have pleasure in informing the shareholders that the agreement between the Mysore West Gold Mining Company, Limited (in liquidation) and Capt. Tregay having expired by effluxion of time, they have secured the services of Mr. Louis Evans, who was previously the mining superintendent of the Mysore Reefs Gold Mining Company, Limited. Mr. Evans entered upon his duties as mining manager of your company towards the latter part of last month, and your directors have perfect confidence, from his past career and experience, that the mining operations will now be pushed forward with the utmost possible vigour.—L. J. Woodman, Secretary.

The Yuruari Company, Limited.—We are informed by the assistant secretary of this company, that opinions have now been obtained from several of the first experts in this country with reference to the samples of tailings received from this company's property. An exhaustive report is now being prepared by one of the most eminent assayers in this country, who meantime states that, provided there is, as reported, about 200,000 tons of tailings, these alone constitute a most valuable property.

WATER-GAS PROVED A COMMERCIAL SUCCESS. A SAVING OF £10,000 PER ANNUM IN ONE WORKS ALONE.

THE BRITISH WATER-GAS SYNDICATE, LIMITED.

WATER-GAS.

The following extract from the *Times*, of January 2nd, 1889, relative to the manufacture and application of Water-gas, is reprinted for general information.

WATER-GAS.

"For many years past attempts have been made at intervals to produce what is known as water-gas—that is, gas resulting from the decomposition of water. Experimentally there have been several successes, but practically and commercially up to the present time, as far as we are aware, these have been only failures. These failures have mainly arisen from the difficulty experienced in separating the water-gas from the other products. This difficulty has now been overcome, not by one invention, but by the combination of the best features of several inventions having for their object the manufacture of water-gas. What is more, the patented inventions which have been combined in the new process are not those of one inventor or of one country, but represent several inventors and several nationalities—namely, England, Germany, America, and Sweden. The amalgamation of these various patents and the beneficial results which have accrued therefrom came about by reason of the exigencies of manufacture of corrugated boiler flues and press-flanged steel frame plates for railway rolling stock at the Leeds Forge Company's Works, Leeds. The metallurgical operations carried out there demanded fuel of a higher calorific intensity than could be obtained from either the generator gas of the Siemens' producer, or ordinary coal gas. Mr. Samson Fox, the managing director, therefore turned his attention to water-gas, and, having carefully considered the whole question, decided upon putting down a water-gas plant at the Leeds Forge. The works were begun on September 29th, 1887, and on March 29th, 1888, plant capable of producing 40,000 cubic ft. of water-gas per hour was started, and has since been in constant operation with perfect success, and without interruption. The gas produced gives every satisfaction, not only for metallurgical, but also for lighting purposes, the whole of the works being supplied with it.

"Water-gas is the result of a chemical re-action which takes place in passing steam through incandescent carbonaceous matter, and may be considered as the practical result on a wholesale scale of the ordinary laboratory experiment of decomposing water by passing steam through a highly-heated iron tube. In the water-gas apparatus the fuel, which at Leeds Forge is coke, is raised to a high temperature in a generator by the aid of an air blast. The blowing is continued for about 10 minutes, by which time the fuel has reached a dull red heat. During this period what is known as producer-gas is given off, and this is led away to a range of Lancashire boilers, where it is utilised in raising steam for the engines in the works. At the end of 10 minutes the valves are reversed, the air-blast being stopped, and the further exit of producer-gas to the boilers prevented. Steam is then admitted at the top of the generator for four minutes, and, passing down through the incandescent fuel, becomes decomposed, and a fixed gas results. This gas as formed passes away to a scrubber, where it is treated much in the same way as ordinary coal-gas. From the scrubber it passes to the gas-holder, where it is stored for use for metallurgical purposes in the works, such as heating and welding. For indoor illuminating purposes a portion of the gas is conducted from the gas-holder to the purifiers, where its purification is effected by means of oxide of iron. It will thus be seen that the process consists of alternately blowing the generator hot and making gas, and that a run of gas is made every 15 minutes, during which time the yield from each generator is about 17,500 cubic feet of producer-gas and 5,000 cubic feet of pure water-gas for heating and lighting purposes. The gas is also used most successfully for driving gas engines.

"The metallurgical purposes to which the water-gas is applied at the Leeds Forge are various. In the first place, it is used in the heating furnaces in the plate mill, where the steel ingots are rolled into plates for the manufacture of Fox's corrugated boiler flues. It is also used in welding these tubes and heating the plates for Mr. Fox's flanged frame-plates for railway rolling stock, and for his flanged boiler-fronts, besides which it is utilised in various other similar operations throughout the works. In the application of water-gas to the manufacture of Siemens' steel there is a marked improvement in the quality as well as the quantity of the product. With this gas 30 charges of steel per furnace per week can be turned out, as against 11 charges per furnace per week from furnaces of equal capacity using gas from Siemens' producers. Besides being used for metallurgical purposes, the offices and various parts of the works are lighted with water-gas, the burners employed being arranged on the Fahnejelm system. Burnt in the ordinary way, the water-gas gives a blue flame, but by suspending a comb composed of thin magnesia rods in the flame the filaments are quickly heated to a white heat, producing a bright glow light of high illuminating power, but which is neither unpleasant to the eye nor prejudicial to the sight. The heating power of water-gas was very great, as was demonstrated upon our recent visit to the Leeds Forge Works, where we inspected the method of its manufacture as well as that of its use in the various departments. To give one instance only, a piece of copper wire placed in an ordinary coal-gas flame was only made red hot. A similar piece of wire placed in a water-gas flame issuing from a similar burner was quickly and perfectly fused.

"An important consideration in the adoption of any new system is, of course, its cost; and in this respect water-gas comes out well. Its production per ton of fuel is about 30,000 cubic ft., and with fuel at 8s. per ton, labour at 3s. 6d. per man per day, and the production going on continuously, it is found that the gas costs slightly less than 4d. per 1,000 cubic ft. The experience of nine months' working at the Leeds Forge has led to the conclusion, based on carefully-ascertained data, that the saving effected on the whole works is about £10,000 per annum. Looking at the advantages of water-gas for illuminating purposes, it is to be observed that, besides giving an agreeable light, it does not develop any noxious fumes, nor does it produce smoke; health and cleanliness being thereby preserved, and paintings, furniture, and decorations remaining uninjured. For lighting mansions this would prove a boon, while the producer-gas can be utilised for heating purposes. Similarly, a mill-owner laying down a water-gas plant for lighting his factory will obtain gaseous fuel for steam-raising purposes practically for nothing. For small towns also the lighting could be carried out with water-gas, the producer-gas being used for steam-raising and manufacturing purposes generally. Although the installation of this water-gas plant at the Leeds Forge is the first in England, the system is being largely adopted in America and on the Continent, both at steel works and for illuminating purposes."

In addition to the above extract, the following papers have recently commented favourably on water-gas.

THE ZAFRA AND HUELVA RAILWAY (SPAIN).

SHARE CAPITAL, 28,000,000f., or £1,120,000, In 56,000 Shares of 500f., or £20 each.

ISSUE OF 56,000 THREE PER CENT. FIRST MORTGAGE BONDS OF 500f., or £20 each. Being the Balance of 112,000 First Mortgage Bonds authorised by Royal Decrees of the Spanish Government of 6th and 26th May, 1884.

The Bonds yield an Annual Interest of 12s. or 15f. per Bond, and are repayable at par, by a cumulative Sinking Fund. operating by half-yearly Drawiugs from 1st July, 1890.

Interest is payable half-yearly on the 1st January and 1st July, in London, Paris, or Madrid.

Messrs. MATHESON & CO., 3 Lombard Street, London, E.C., are prepared to receive subscriptions for 56,000 First Mortgage Three per Cent. Bonds of the ZAFRA AND HUELVA RAILWAY COMPANY (of Spain), of 500f. or £20 each.

The form of the Bonds is in conformity with Spanish law; is that in general use for the railway obligations of that country, and is identical with those now quoted on the London Stock Exchange.

An interest coupou for one quarter will be attached to the scrip, viz.: 3s.[illegible]= 3.75 f. payable on 1st July, 1889, being iuterest from 1st April, 1889.

The price of issue is £11 12s. 6d. (or at the exchange of 25.30 f. 294.11) per bond, payable as follows, viz.:—

On application		£1	0 0
„ allotment		3	0 0
„ the 1st June		4	0 0
„ „ 1st July ...	£3 12 6		—
Less quarter's interest	0 3 0		
		3	9 6
		£11	9 6

Paymeuts may be made in full on any Tuesday under discount at the rate of 4 per cent.

The drawings of bonds will be made at the Company's office, 16, Calle Barquillo, Madrid, and the bouds drawn will be paid either in London or Madrid, at the option of the holder.

PROSPECTUS.

THE Zafra and Huelva Railway is one of the lines designated by the law of November, 1877, to form part of the general network of Spanish railways. Starting from Zafra, a converging point for the railways constructed under the general plan, it has a length of 180 kilometres.

On the 22nd July, 1886, the first portion of the line from Huelva to Valdelamusa, a distance of 67 kilometres, was opened for traffic.

The traffic receipts upon this portion of the line then belouged, by the construction contract, to the contractor, and he reports that the net proceeds of the local traffic for 1888 were more than sufficient to pay the interest on the 56,000 obligations already issued, which required an amount of £501 per kilometre on this section.

The remaining 113 kilometres of the line have now been opened for passenger and goods traffic, thus completing the entire system, aud establishing communication between the terminal points.

The completion of the Line throughout now establishes communication with the main system of Spanish and Portuguese Railways, and there can be hardly any reasonable doubt that the local traffic alone will yield more than the 400*l*. per kilometre per annum required to provide for the interest and sinking fund on all the Bonds. It is confidently expected that the result of the opening of the whole line will largely develop the through traffic, and will suffice to pay good divideuds ou the share capital.

The line is finished throughout in the most substantial manuer, and is fully equipped with rolling stock, all appliances. aud stores.

At Zafra the line connects with the railways that pass through the rich wheat producing province of Estremadura, and gives the growers direct railway access to Rio Tinto and other large mining districts of Huelva (which have to import all grain and flour required), and also provides them with the shortest route to the Port of Huelva, whence grain can be transported coastwise to the eastern provinces of Spain at much less cost than has hitherto been possible. Freight arrangements to the chief portsin Spaiu have been made with Messrs. Ibarra and Co., who have steamers plying regularly between the ports.

The phosphate mines north of Zafra, the cork forests near Zafra, and the large tracts of land iu Estremurada planted with vines, will now have open to them the shortest route to the seaboard at Huelva, where three lines of steamers call specially for wine shipments to France.

Besides these sources of general through traffic, and that of the districts and towns which the line passes, the Company havo made considerable coutracts extending over a number of years for the carriage of pyrites for shipment at Huelva.

Large deposits of the finest white and coloured marbles are now being opened up along the line, which also has two stations situated within extensive deposits of granite of good quality.

The large mining district on the upper part of the line is being rapidly developed, and during the year 1888 there were about 120 mining concessions claimed in the neighbourhood of the line, in anticipation of its being opened for traffic.

The bonds of the following Spanish railways are now quoted as under, viz.:—

Northern of Spain	Fcs.	382.
Madrid, Zaragossa, Alicante	„	368.75
Andaluccs	„	333.

THE SUBSCRIPTION LISTS WILL BE OPENED ON MONDAY, 15TH APRIL, AND CLOSED ON OR BEFORE THE 16TH APRIL.

Applications must bc made on the form enclosed with the prospectus, accompanied by a deposit of £1 per bond.

In case no allotment is made, the deposit will be returned without any deduction; and where a less amount is allotted than applied for, the balance of the deposit will be used towards payment of the amount due on allotment.

Default in payment of instalmeuts, as they fall due, will render previous payments liable to forfeiture.

Scrip Certificates to bearer will be issued in exchange for Allotment Letters, which, when the instalments are paid up, will be exchanged for Bonds to bearer with half-yearly coupons attached.

Prospectuses aud forms of application can be obtaiued from Messrs. Matheson and Co., 3, Lombard Street, London, E.C., by whom subscriptions will be received.

3, Lombard Street.

VALUABLE HÆMATITE IRON ORE MINE IN THE FURNESS DISTRICT.

TO BE SOLD BY AUCTION,

By MESSRS. CASSON AND CHAMLEY,

Pursuant to the trusts of the Will of Myles Kennedy, Esq., deceased, at the County Hotel, Ulverston, iu the County of Lancaster, on Thursday, the 25th day of April, 1889, at three p.m., subject to such conditions as will then be produced.

ALL that valuable HÆMATITE IRON ORE MINE, situate in the parish of Dalton, in the County of Lancaster, known by the name of

"THE DALTON HÆMATITE MINES,"

with the Mineral rights and power to get Iron Ore over an area of 104a., statute measure more or less, situate in the heart of the Furness ore district, and within a quarter of a mile of the Dalton Station on the Furness Railway.

The Mines and royalties are held by the Vendors under Lease from His Grace the Duke of Buccleuch and Queensberry, K.T., for 21 years, from the 12th day of May, 1887, at a dead rent of £250 per annum, and a royalty on a sliding scale, ranging from 1s. per ton to 6s. 7d. per ton, according to the market price of the ore. The certain rent of £250 per annum merging in the said royalty rent.

The Mines are in complete working order, and the ore raised therefrom is a rich blast and puddling hæmatite, and there are several shafts and proved deposits of ore in the royalty.

The whole of the Buildings and Plant are of the most modern and substantial description, and are adapted to meet the requirements of the Mines and the further development thereof. A short permanent tramway connects the drawing shafts with the Furness Railway, and affords every facility for delivering ore at a slight cost.

15a. 3r. 8p., more or less, of valuable Land purchased by the testator, for the more convenient working of the Mines, and in which the principal works are situated, will be sold therewith.

All existing contracts and the Stock of Iron Ore on the bank on the day of sale, will be included in the sale.

The working plans of the Mines, and a schedule of the Plant and Tools, may be seen on applicatiou to Mr. F. Booth, Dalton Mines Office, Market Street, Ulverston, who will personally attend parties wishing to inspect the Mines.

Plans of the royalty, conditions of selling, and a schedule of the Working Plaut, and all further particulars, may be had on application to Messrs. Rowley, Page and Rowley, Solicitors, 2, Clarence Buildings, Booth Street, Manchester, or

JAMES PARK,
Solicitor,
Ulverston.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of hard quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms:—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.

"New Mill crushed 29,000 ,, 25 ,, ,, 8.60 fcs. per ton.

"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

REPORTS OF MEETINGS.

THE NEW FLAGSTAFF MINING CO., LIMITED.

THE COMPANY TO BE PLACED ON A SOUND FINANCIAL BASIS BY RE-CONSTRUCTION—A COMMITTEE APPOINTED TO AID DIRECTORS—THE MORTGAGEE—DIRECTORS AND SECRETARY WORK FOR NOTHING.

AN extraordinary general meeting of the shareholders was held at Winchester House, Old Broad Street, on Thursday, to take into consideration the present financial position of the company, and to pass such resolutions as may be considered advisable, with a view to raising further capital.—G. W. Bacon, Esq., presided.

Mr. GEO. T. VERNEY (secretary) read the notice calling the meeting.

A FLAGSTAFF MEETING WITHOUT THE PROFESSOR.

The CHAIRMAN: Gentlemen, a Flagstaff meeting without Prof. Vincent in the chair is an anomaly, especially after his many years of service in trying to bring the mine to a success. He is now in America, and in his absence it seems to devolve upon me to lay before you a statement of the company's affairs. We must go back to the time of the re-construction of the company a year or more ago—that re-construction having taken place, unfortunately without providing working capital. At that meeting the chairman was asked, "What about working capital?" and his reply was, that we had some 60,000 surplus shares, which he hoped to make available for raising money in some way. We did not seem to be fully aware of the legal difficulty that was subsequently raised as to the illegality of issuing shares at a discount, and, therefore, the professor seems to have been depending on a broken reed. Soon after the re-construction a shareholder came forward with 1,000*l*., which was cabled out to the mine, and kept matters going for some time. This was to tide over the period during which the chairman expected still to place these surplus shares. Various means for utilising them were suggested, but each one, in its turn, was reported upon by the solicitors and counsel as not practicable; in fact, the numerous proposals that were made during some six months in regard to utilising these surplus shares would form quite a chapter in the history of Flagstaff finances. The chairman finally gave his attention to negotiating with a shareholder for funds to carry on the mine. This he succeeded in doing, without, up to the present time, asking the shareholders at large for any subscriptious whatever.

AN ADVANCE OF 3,000*l*.

On September 22nd 2,000*l*. was advanced by the largest shareholder in the company, and cabled out to the mine—this party taking finally a mortgage upon the property. In the November following, this amount was increased by another 1,000*l*., and the whole sum of 3,000*l*. became due on the 22nd March last under the mortgage, which had been executed. Up to very nearly the date of maturity the chairman fully expected to place debentures with the mortgagee for the amount of his loan, and not only so, but he expected he could obtain sufficient funds with which to continue operations at the mine. So sanguine was the professor that this would be accomplished that on the 8th of March he cabled out the following message to our banker in Salt Lake City:—

"Issuing debentures; ample remittance within a fortnight. Please advance March pay roll."

Negotiations, through some means which I am unable to explain, suddenly fell through, and to make matters worse, they fell through just at a time when Prof. Vincent had entered into a contract to go to America on a professional trip (unconnected with Flagstaff business). This left the matter in the hands of the board, who had had previously scarcely any experience in financing the company, and left them in rather an awkward predicament. The mortgagee was pressing urgently for the payment of his 3,000*l*., but there were no funds. Certain smaller creditors were also pressing, and a petition was filed by one of them with a view, as he claims, of protecting the assets of the company in the interests of all concerned. That petition has by his consent been allowed to stand over, pending the result of this meeting. The mortgagee is still earnestly pressing for the payment of 2,000*l*. at least, and it was hoped that it would have been liquidated by some shareholder taking his place, and thus obtaining a first charge himself upon the entire property of the company. That is the way in which we stand as regards finances. In order to decide what is best to be done, under the present circumstances, it is proposed to appoint a committee to confer with the directors. I am prepared to give you some particulars in regard to the condition of the mine (exterior and interior) having visited it myself, but that perhaps will come more appropriately later on when we have gone more fully into the financial part of the subject.

POSITION OF FORMER DEBENTURE-HOLDERS.

Mr. KELSEY: What are the debts in addition to the 3,300*l*. mortgage?

The CHAIRMAN: 1,000*l*., which was advanced soon after re-construction, now amounts to 1,100*l*., and the total is above 5,000*l*.

A SHAREHOLDER: Was that mortgage taken with the consent of the shareholders?

The CHAIRMAN: No; there has been no meeting of shareholders since the re-organisation.

The SHAREHOLDER: Have you the minutes of the last meeting? because they will show that when the debenture-holders arranged to take three shares for every 1*l*., it was distinctly understood that no further debentures would be issued.

The CHAIRMAN: I was not in London at that time, but I believe the understanding referred to was at the time of the re-construction of the company.

The SHAREHOLDER: We consented to that course to get rid of the obstacle the debentures were creating to the re-construction of the company. At that meeting it was made a note of that no debentures should be issued without the consent of the shareholders. I want to know why immediately afterwards you raised this 1,000*l*., and I ask whether you consider this was a proper proceeding on the part of the directors?

Mr. KELSEY: We cannot understand the position without an explanation.

Mr. GEORGE HOPKINS: I did not understand the chairman to say that the 1,000*l*. was advanced on debentures.

The SHAREHOLDER: You have mortgaged the mines since the debentures were turned into ordinary shares, and I mean to say that the directors have done what they had no right to do.

The CHAIRMAN: The mortgage was executed nearly 12 months after the re-construction, and was the only available means for obtaining money to carry on the mine.

THE POSITION FULLY EXPLAINED.

Mr. SNELL (solicitor to the company): I knew nothing whatever of this matter until the mortgage deed was brought to me cut and dried for signature by Prof. Vincent. He wanted me to look it through immediately, and say whether it should be executed or not. I cursorily looked it through, and told him I could not give him immediate advice upon it, but I said: "You have no right whatever to execute any mortgage such as that." I think I have scarcely attended any board meeting since. Therefore I want to keep myself clear of any responsibility with regard to the action of the directors in this matter, although I do not think when you hear all that has been done you will blame them much for what they did. In fact, they had been working without any money. The shareholder who has spoken is perfectly right. I remember the observation he made, for he said that there would be nothing to prevent the company issuing debentures immediately after the debenture-holders at that time had taken shares.

JUSTICE TO DIRECTORS.

At the same time it is absolutely necessary that the mine should be worked, and the company had no money to work it. Whether it was advisable to continue to work the mine or not was a matter for the directors, but they continued working as a matter of fact and incurred certain debts, so that it was absolutely necessary that money should be raised for the purpose of paying them. Whether the mode they adopted was right or not I will not say, but the debenture-holders were induce to subscribe for shares, on the understanding that no further debentures would be issued without the consent of the shareholders. Prof. Vincent has carried on the mine for the last four or five years by personal appeals to the shareholders, and he thought he could still continue in that way. Now, if money had not been raised the mine would have been seized by the creditors. There are proceedings pending with reference to the mortgage, and although the money was borrowed by Prof. Vincent from a large shareholder, still within the last few days the proceedings have been commenced on behalf of the mortgagee, and an application is to be made to-morrow to appoint a receiver for the property of the company.

CONDUCT OF THE MORTGAGEE.

My impression is that that motion will not succeed. No benefit can accrue to the mortgagee by driving on the proceedings at the present moment without giving the shareholders an opportunity of considering what course they should adopt. That is why I advised Mr. Bacon, who is left in charge by Prof. Vincent, to call this meeting—the professor, I believe, being called away on Harney Peak business. As far as I have learnt from the professor and the directors—the latter have left everything in his hands, and he, practically, has run the mine. He has always said he would be able to run it, and I believe he always thought he could.

JUSTICE TO THE PROFESSOR.

Although a good deal has been said about him I must say this in

his favour, that he is a very large shareholder. (Cheers.) He is the largest in the company. He holds over 20,000 shares, and there is no doubt he has great faith in the mine, and has strained every nerve possible for the purpose of keeping it going. (Cheers.) About a fortnight ago he said he was going to America, and he was very much concerned about this mortgage. He said no doubt the large shareholders would be able to give a great deal of assistance by raising money on debentures, and a scheme was formulated which would have been submitted to the shareholders, with resolutions, whieh would have authorised the board to raise the money in this way. Those negotiations were carried on with the knowledge and consent of the mortgagee, and up to the last moment it was believed the money would have been raised on debentures aud the mortgagec paid off. However, it was then they turned round and said "We must have a mortgage." What it was required for I cannot tell, but the object would probably be to put the company in a great deal of difficulty. Contrary to my advice that mortgage was executed: after which I wrote a letter to the board protesting against it, and requesting that my protest should be entered upon the minutes.

IMPORTANT POINTS FOR SHAREHOLDERS' DECISION.

One or two points you will have to face, and the first is, Is it worth while spending any more money upon the Flagstaff Mine? I am told the reports are most favourable, but then they always are favourable when you want to raise money upon a mine. (Laughter.) That has been said outside, and I may as well say it inside. (Laughter.) I have been connected with the Flagstaff for some time, and there is no doubt about it that whenever mouey is wanted the reports are good; but these favourable reports have been coming over for some time before they knew we were in financial straits, so that that remark should be discounted a little. From all appearance it seems as if Flagstaff is really getting near an ore body, but whether that is so or not the shareholders have first to consider whether they will go on.

ABSENCE OF INFORMATION.

The directors, I must say, have not given the shareholders the information they were entitled to. I must, however, absolve the directors now present from any participation in that fault. I have said to them, "You are bound to give the shareholders the news as you get it, and if you do not get reports from your mauager week by week, you are bound to employ a manager who will send them." (Hear, hear.) I have wandered fruitlessly through the mining papers to see the Flagstaff reports, and could not find them. Why is this? I have been in the Flagstaff for years, and know what it is. I know it is held in good repute in Salt Lake City, but unless the shareholders could keep touch with the working of the mine, and know how things are going on, you canuot be surprised if, when they are called together, they complain of information not having been furnished by the board. When I say I absolve the directors present from any responsibility of this, I couple it with the further remark that they ought not to have allowed Prof. Vineent to have had quite so much control. Having decided in your own minds that it is advisable to go on, the next point is how are you to do it?

THE ONLY ALTERNATIVE.

Are you going to raise money by debentures, or will you go in for re-construction, which means an additional sum to be raised upon your shares? Unless you see your way to get a considerable amount of debentures (which I do not) you will have to adopt the other course, and the sooner it is done the better. I observe the representative of the mortgagee is present, and if he sees there is a prospect of the money being raised to pay his client off, I feel sure that he will have no wish to give the company trouble, or to put it to expense. I will ask the representative of Messrs. Wontner and Sons, who represent the mortgagee, Mr. Thornhill, whether that is so.

Mr. Wontner's Representative: Certainly.

Mr. Snell: The petitioner is willing to let the petition stand over until the shareholders have the opportunity of taking the course they think best to raise funds. Therefore that petition need not trouble us at preseut. If the company is closed now, there will be nothing left for anyone, but if by further subscriptions, and under a little better mauagement, and allowing the shareholders to know from time to time what has been done, I do not see why, in the not distant future, the Flagstaff should not turn out succcssful. (Cheers.)

Mr. Kelsey: What was the percentage charged for this loan?

Mr. Snell: On the 22nd of September, 1888, the 3,000*l.* was secured by a resolution of the directors to give a first charge on the property for repayment. The interest was 10 per cent. with a commission of 5 per cent.

WHY THE REPORTS WERE NOT ISSUED.

The Chairman: In further explanation of why the reports from the mine have uot been published so frequently of late, I will read a few lines written by Prof. Vincent a few days before he sailed, which were intended to form a part of a circular to the shareholders: "Some six or eight weeks ago the foreman's reports began to indicate a marked improvement, but the directors did not consider it advisable to send them out to the shareholders until the improvements were fully confirmed by subsequent reports, and they have now much pleasure in sending to the shareholders such reports from the mine as show an improved condition, snch as we have not had for many years!" Those reports which are now in your hands are the ones to which this intended circular alluded.

THE DEEP TUNNEL AND THE 20,000 TONS OF ORE.

Mr. Urwick said he had been a long time connected with this company, and that a remnant of his old faith in Flagstaff was still left. Their first duty was to find out the liability; their next to learn what the mine was doing at the present time, and finally, how money could be raised to put it on a proper financial basis. He wished to know why the long tunnel had been stopped. It was stated by Mr. Maxwell that it would enable the mine to produce in larger abundance a class of ore whieh would not pay for hoisting. He believed there were 20,000 tons of low-grade ore that would be available if the tunnel were made. Shareholders should bear in mind that Prof. Vincent had raised this money to save the property. (Hear, hear.) He was put in a fix by the case in whieh it was deeided that shares under such circumstances could not be issued at a discount.

MINING DETAILS LUCIDLY SET FORTH.

The Chairman: The tunnel as proposed was 3,000 ft. long, and of these 300 ft. have been driven. The importance of driving it has never been lost sight of. Our eoal bill is about 2,000*l.* a year, and that would be saved. If this tunnel were made, it would drain the mine as well as save a vast amount of expense. 4,000*l.* a year would be the total saving which that tunnel would effect. It would take 12 to 15 months to run it by air-drills, and the cost would not be less than 9,000*l.* The 20,000 tons of low-grade ore is also connected with the tunnel question. With the tunnel we can work it at a profit, without it that is scarcely practicable just now. The Eclipse Mine adjoining has struck a silver-lead vein at just about the levels we have lately opened. That encourages us that we too shall soon have a strike. The Vallejo Mine has struck rich ore bodies on the other side. These discoveries led us to believe that we are just upon similar finds in the 8th and 9th levels of the Flagstaff Mine.

OVER A MILLION STERLING HAS BEEN YIELDED BY THIS MINE

in years past, and I have heard it estimated at one and half millions

Mr. J. C. Bolton: How much are we in debt here?

Mr. Snell: The debts here amount to about 4,500*l.* as far as I have been able to ascertain, and the debts out there about 500*l.*—say 5,000*l.* altogether. The present company has not opened out this tunnel, because there were no funds to do it.

DIRECTORS AND SECRETARY WORK FOR NOTHING AND THE COMPANY RENT FREE.

The Chairman: In regard to the London expenses—I do not think that 50*l.* of the entire amount raised has been expended in London. The 4,000*l.* was all cabled out at the time it was advanced. The directors have been feeless, and the secretary has been without his salary, whilst the office rent remains unpaid.

Mr. Urwick: What is the cost of working the mine in America?

The Chairman: We have coals and supplies at the mine paid for sufficient to last six months, and the wages, with 22 men at work, amount to about 300*l.* a month. We always lay in 12 months' coal and provisions for the winter in October, and it was solely for that purpose the money was obtained from the mortgagee. (Cheers.) The branch railway running up to the mine is closed from November to June, and provisions have to be laid in for 12 months. That was the use that was made of the 3,000*l.*, and that was why Prof. Vincent and the board eonsidered they were justified in raising that sum on the mortgage rather thau have the mine shut down all the winter. (Cheers.)

DIRECTORS HAVE DONE THEIR BEST.

Mr. Kelsey: After this explanation we cannot blame the directors in any grave degree. They have done their best, and they deserve our sympathy and thanks for working the company without fees. (Cheers.) We do not wish to be hostile to them, but we do think they ought to have told us the position a long time ago. Why were we not called together before? Why have we been left in the dark so long? I am uot quite sure that this mortgagee is not *ultra vires* altogether, and possibly this man has no legal claim against the company. Why then should we let him put us in a difficulty when he has no legal claim? I ask Mr. Snell whether his claim is legal. We owe 5,000*l.*, and we shall want working capital, but we have not been told to what amount. The facts are thrown before us in au undigested state, and we are allowed to digest them for ourselves as best we can. I understand there are 240,000 shares, and if 2s. were raised upon each that would be 24,000*l.* which would be ample for all practieal purposes.

VOICE OF EXPERIENCE.

Mr. Snell: I thiuk it would be better to have 2s. 6d. liability than 2s.

Mr. Kelsey: I think we should have been called together when Prof. Vincent was here. We ought to have seen the man who is responsible for this state of things. Let us in future have the reports weekly, whether they are good or bad, and let us know all about this tunnel.

Mr. Urwick: I think it is useless to try to raise money by debentures, but let us raise 2s. a share on 240,000 shares.

A Shareholder said he did not agree that no fault was to be found with the directors. They should have informed the shareholders earlier of the financial position. There was nothing to show for the past re-construction, for they had not even got down to the depth of Vallejo, where Prof. Vincent said such great riches were to be found. He was asked by a circular if he would authorise the employment of Prof. Vincent at a large sum to go out to the mine, but declined. He now hoped the committee would take care that that gentleman had nothing further to do with the mine, and that the whole matter would be placed in the hands of some capable American mining expert, and the company put upon an entirely different basis from what it was now.

The Chairman: We did not call you together sooner because we believed the negotiatious with the mortgagee would be carried through. Prof. Vincent thought he could raise the necessary working capital, and the board believed he would succeed. As to the question why we have not run the new deep tunnel we have been expecting to strike ore, and that the tunnel might be driven out of the proceeds of the mine. The prineipal object of this meeting is to appoint a committee to confer with the directors, and decide what is best to be done.

Mr. Snell: As to the legality of the mortgage I have not had time to look into it, but if it is *ultra vires* I will take care that he does not get an order against the company.

Mr. Hopkins: I am an holder of between 5,000 and 6,000 shares, and the mortgage debt, in the event of re-construction, would be got rid of in the first instanee. I think the shareholders would be glad to repay the money, and it is quite likely if an appeal be made to the gentleman who has lent it that there might be a reduction in the amount of interest. I have a doubt as to whether the tunnel could be made for 9,000*l.*

Mr. Snell: It is important that no delay should take place. It will take a month or six weeks to carry through re-construction, and if a committee is appointed I hope it will sit immediately, and decide as to the course to be adopted, or otherwise let the directors carry it out. I am sure the shareholders are not going to let this pro-

perty fall into the hands of the mortgagee for 3,000*l*. It looks to me very much as if this mortgage was to be hurried through

FOR THE PURPOSE OF GETTING POSSESSION OF THIS PROPERTY,

and I do not think the shareholders are going to stand by and quietly allow that to take place. I hope you will authorise the directors at once to take the necessary steps to prevent it. If the meeting is satisfied that re-construction shall take place, I hope that we shall go on with it at once. I think the board should be strengthened, and I know that there are one or two of its members who would be willing to give up their places to some other gentlemen. Meantime, the key-note to our proceedings should be—no delay. (Cheers.)

Mr. Stidstone: I will move "That a committee be appointed to confer with the directors upon the course of action necessary to preserve the property, with full power to take such steps as to them may appear desirable in the interests of all parties."

Mr. Kelsey seconded the motion.

The Chairman: I should inform you that the mine has not been shut down, and that yesterday, by the liberality of a few shareholders who have confidence in the property, 300*l*. was cabled over to pay the month's pay roll. (Cheers.)

The following gentlemen were then proposed and elected as a committee:—Messrs. Hopkins, Zuccani, Urwick, Partridge, Bolton, Kerly, and T. A. White.

Mr. Snell: The representative of the mortgagees is here. Some strong observations have been made with reference to his clients, but I do not want him to go away with the impression that the committee wishes to act unfairly or to take any advantage of any legal technicality. They do not wish to take any advantage of the position as long as he deals with them in a fair way, which I am sure he will do under the guidance of his present advisers.

A cordial vote of thanks to the chairman closed the proceedings.

The committee immediately met to discuss the company's affairs, and to formulate, under the advice of Mr. Snell, a scheme of re-construction which will be shortly submitted to the shareholders.

THE TRANSVAAL LANDS CO., LIMITED.

FORMAL RESOLUTIONS HAVING REFERENCE TO THE ALTERATION OF THE ARTICLES AND THE SUB-DIVISION OF THE SHARES.

An extraordinary general meeting of this company was held at the City Terminus Hotel, Cannon Street, E.C., on Saturday, 6th inst., in order that the following resolution, which was passed at the extraordinary general meeting of the company, held on the 21st of March, 1889, might be submitted for confirmation as a special resolution:—

RESOLUTION.

"That the articles of association of the company be amended as follows, namely:—By the addition of a further clause, between clauses 8 and 9, to be numbered 8A. Clause 8A.—The company may at any time, by special resolution, sub-divide the shares in the capital of the company, or any of them, in such manner as may seem expedient. Clause 23.—By inserting the words, 'in the usual common form,' after the word 'deed.' Clause 24.—By omitting the word 'or' in the sixth line, and also the last phrase in the clause from the words, 'in their absolute discretion,' down to the end of the clause. Clause 49.—By inserting the words 'not fully paid' after the word 'shares,' in the first line of the clause."

Mr. W. J. Thompson presided.

Mr. Heron-Maxwell (the secretary) read the notice calling the meeting, and the above resolution.

The Chairman: Our meeting to-day is to confirm the result which you arrived at at the last meeting, and I think, therefore, that it is unnecessary that I should take up your time with any further remarks, and I will simply move the resolution that you have heard read, inserting a new clause in the articles, clause 8a, and altering clauses 23, 24 and 49; they have been read by the secretary.

Sir Frederick Young seconded the resolution.

The motion was put and carried.

SECOND EXTRAORDINARY GENERAL MEETING.

A second extraordinary general meeting of the company was then held for the purpose of considering, and if thought fit, passing the resolution following, that is to say:—

RESOLUTION.

"That each of the 85 founders' shares in the capital of the company be divided into eight shares of the nominal value of 2s. 6d. each, and that the following words be added to clause 81 of the articles of association of the company, namely:—'For the purpose of this clause, eight founders' shares of 2s. 6d. each shall be deemed to be equivalent to one ordinary share of 1*l*. each, and the holders of founders' shares shall be entitled to vote accordingly, and a member who holds less than eight founders' shares of 2s. 6d. each shall not in respect thereof be entitled to any vote.'"

Mr. A. W. Heron-Maxwell read the notice and resolution.

The Chairman said the object of the resolution was to carry out the resolution which they had just passed. They had all had a copy of the resolution before them, and the matter had been referred to at the two last meetings, and he thought, therefore, that he need not do anything else than propose that the resolution that had just been read by the secretary, and which he would read again, should be passed. He then read the motion again, and formally moved its approval.

VOTING POWERS.

Sir F. Young, in seconding the resolution, pointed out that although the resolution provided for the division of the shares into eight shares of 2s. 6d. each, it would not be competent for the holder of any less number than eight portions to have a vote upon any question connected with the company. (Hear, hear.)

The motion was put, and unanimously carried.

CONFIRMATORY MEETING.

The Chairman stated that immediately after the 14 days required by law had had elapsed the shareholders would be called together again to confirm the resolution just passed.

The proceedings terminated with a vote of thanks to the chairman.

THE ROBURITE EXPLOSIVES CO., LIMITED.

ADJOURNED MEETING—EVERYTHING SETTLED AMICABLY—NEW DIRECTORS.

The adjourned general meeting of the company was held at the Cannon Street Hotel on Tuesday—Sir John Stokes (chairman of the company) presided.

Mr. H. A. Krohn (secretary) read the notice calling the meeting.

GOOD NEWS FROM AUSTRALIA.

The Chairman: Before proceeding with the business of the day I wish to make one or two announcements, which I think you will consider satisfactory. We had a telegram from our licensee in Australia to the following effect:—"Experiments successful; syndicate formed; send a further supply of components, 10 tons, and same a month later." (Cheers.) Their arrangements must be in a very forward state if they are already in a position to order 20 tons, and I know by letter, six weeks old, that the first experiments of mixing the stuff, which failed in South Africa, have been perfectly successful in Australia, and that monied men are taking up the question with very great keenness. The practical working miners have also seen the benefit of it, and the Government people will take it up for Government use if further trials are successful, so that altogether roburite is well launched in Australia. (Hear, hear.) You will say these telegrams come very *à propos*, but there was one reached me just as I came out of the board room from a gentleman who is trying to introduce the explosive into Cornwall. We have before tried it in Cornwall, but not been altogether successful. "Roburite" (says the telegram) "equal to dynamite; certain good future here; arrive to-morrow with details."

RESULT OF THE CONFERENCE.

It was understood at the last meeting that the board should have a conference with the Lancashire committee. That conference took place on Saturday, and I think its general result was that the board should convene a meeting of the shareholders next October in order to communicate to them the financial result up to September. We discussed other points, and I believe the result will be beneficial to the interests of the company in the future.

The Secretary then read the minutes of the last meeting, which were confirmed.

The Chairman said the next business was to re-elect the retiring directors, and the first on the list was himself.

OLD DIRECTORS RE-APPOINTED.

Mr. King, in proposing the re-election of the chairman, said: I think I need not dilate upon the advantages which must accrue to the company from Lieut-Genl. Sir John Stokes holding the position of director, and especially of chairman of this company. Not only is he of advantage to the company on account of the professional knowledge he has, but his position is one which is of great service in connection with the persons of influence with whom the company is brought into contact for the proper transaction of its business. I fully expect that this resolution will be carried unanimously. (Cheers.)

Mr. Weatherley seconded the motion, which was carried by acclamation.

The Chairman: I thank you for your kindness. I am quite certain that I shall work with the same energy and attention to your business in the future as I have done in the past. We have now to proceed to the re-election of Col. Copley Wray.

Mr. Charles Mozley moved the resolution.

Capt. Lousada, in seconding the motion, said he thought the knowledge which Col. Wray brought to bear upon the company's affairs was very advantageous to the shareholders.

The motion was carried unanimously.

Col. Wray, in returning thanks, said: I assure you I will do my utmost to promote the interests of the company in the future as I have done in the past, and I trust before long we shall make the company a real success.

NEW DIRECTORS ELECTED.

The Chairman: Mr. Robertson, who was one of the retiring directors, and who offered himself for re-election, has now withdrawn, and there is, therefore, a vacancy to be filled up. Mr. Robertson was the gentleman we elected last year at the request of the Lancashire shareholders, and I propose we should elect in his place Mr. Cockson, who, in my opinion, from his knowledge of collieries and north country business generally, and the interest he has in the company, is well qualified to act on your board. I, therefore, propose his election.

Mr. Guthrie seconded the motion, which was carried.

The Chairman: I have further to announce to you that Mr. Seymour has placed in my hands his resignation as a director on account of his private business not allowing him to devote sufficient attention to the affairs of the company, and I think that the board would be very much strengthened by the addition to their number of Mr. Siegmund Loewe, who represents a very large number of shares in Germany, and who, from his business connections with Germany, will, I am certain, be able to afford us much valuable assistance.

Col. Wray seconded the motion, which was carried.

Mr. John Newton proposed the re-election of the auditors, Messrs. Price, Waterhouse and Co.

Mr. Weatherley seconded the motion, which was carried.

The Chairman: That is all the business, and I hope to have the pleasure of meeting you again next October.

Mr. Barnes: I think it desirable that the accounts should be made up to, and presented shortly after, June next.

A MEETING IN OCTOBER.

The Chairman: We discussed that question at great length with the committee, and it was agreed that we should have very little to add to what we now tell you in June, as there would only be two more months. The accounts could not be made up then with any advantage.

Mr. Barnes: I do not wish to press the point if I am not supported.

The Chairman: The result we arrived at with the Lancashire

committee was that we could meet you more usefully in October than at any earlier period. (Hear, hear.)

Mr. Weatherley proposed a cordial vote of thanks to the chairman.

Capt. Lousada seconded the motion, and with the brief reply of the chairman the proceedings were brought to a close.

GREAT LAXEY MINING CO.

INCREASED DIVIDENDS AND AUGMENTED PRODUCE.

The half-yearly meeting of this company was held at the City Terminus Hotel, on Wednesday—Mr. James Spittall in the chair.

LEAD AND BLENDE.

The Chairman: Gentlemen, the accounts and reports have been in your hands for some time, and it is scarcely necessary for me to make any lengthened observations upon them, as you have had the opportunity of examining them for yourselves. Many of you will be satisfied merely by looking at the results, but there are some who look more closely into affairs, and would like to see the manner in which those results have been arrived at. If we compare the present half-year with the past half-year, we find that in the previous half-year the raisings of lead amounted to 800 tons, and the price obtained was 13,505*l*. This half-year the lead sold amounted to only 700 tons, a deficiency of 100 tons, as against last half-year—the price realised being for that 11,197*l*. 10s., making a loss on lead sales of 1,628*l*. 10s. Then as to blende—the raisings in the previous half-year were 2,600 tons, and the price realised 9,875*l*. The amount raised during the present half-year has been 2,250 tons, and the price obtained 10,312*l*. 10s., leaving a deficiency on the raisings of 350 tons in blende, but an increase in price for the smaller quantity of 437*l*. We have this year also had to clear the floor of some copper ore which was in our way, and we fortunately disposed of it at a time when copper was at a better price than it is now, and we realised for that 344*l*. Although the amount appears in the return of 700 tons of lead as sold, we had in the market at the time 100 tons of lead, which were sold within a day or two of the accounts being made up. That was raised in the half-year, and has been brought in the present accounts. It has wiped off the deficiency caused by the sale of lead, and leaves a considerable margin to the profit of the lead sales. The manner in which we had obtained this result had been from

THE RISE IN PRICE OF METALS.

There has been a rise of 7s. 8d. per ton in lead upon an average, and, also upon an average, of 15s. 8d. per ton in blende. That will account for the manner in which our accounts this half-year appear to be so much more satisfactory. On the other side, there is a decrease in expenditure and general charges of 1,014*l*. 10s. 9d. We commenced our year with a balance in our favour of 6,528*l*. 14s. 1d., and we closed the half-year with a balance of 9,567*l*. 18s., showing an increased balance of 3,039*l*. 3s. 11d.

INCREASED DIVIDEND.

After carefully going through the financial statement, and making provision for claims that we knew were in existence, and providing for all liabilities as far as we were able to judge, we have been able to increase your dividend, and it is satisfactory to know that yesterday at our board meeting we raised the dividend from 7s. to 8s. I hope, if the prices of metal should keep up, that at our next half-yearly meeting we shall be able still further to increase the dividend. However, that is a thing over which we have no control, and, therefore, we can hold out no promises—we can only express a hope, in which I am sure you will all join. Referring to the underground operations—of course, as in all past years, Laxey has been found to be a bunchy mine. We are into a good thing one week, out of it the next, and into it again the week following, but there are some important places in the mine where this does not occur. I have on previous occasions drawn particular attention to the 255 and the 266 as being the deep levels, where there has been almost a continuous run of ore ground, and I am happy to say that that still continues. In the 235 south of the ground, which was cut off by a slide of unusual dimensions, after cross-cutting about 20 fms. in an easterly direction, the managers considered that the trial would be sufficient, and they therefore commenced to cut in the opposite direction. Of course we cannot tell what the result of that will be.

STATE OF MATTERS UNDERGROUND.

The level for a long time would be a profitable one; this slide has cut off the ore, and we are, in fact, hunting in the dark. We have cut from the east, and have not found it there, and we are now cutting to the west, and hope in a short time we shall be able to find it in continuance of the profitable level we had before. The 255 north and the 266 are the most interesting features in the mine. The 255 compares favourably with the working of the previous half-year, when 19 fms. were driven in value from 8*l*. to 20*l*. In the present half-year it has been further advanced 44 fms., 35 fms. of which have been upon an average of 25*l*. a fm. The present worth is 30*l*. per fm., and the winze from the 243, which will be taken down, has been commenced, and at the commencement is worth 28*l*. per fm. The excess in driving has been 3 fms. more than in the previous half-year, and has opened out good ore ground ranging in value from 15*l*. to 55*l*. per fm.—the average throughout being 30*l*. per fm. In the previous half-year 21 fms. of rich ore ground were driven through in this level, and when the 271 has driven sufficiently to drain it we will be able to commence winzes, in all worth 25*l*. per fm. The 271 is the bottom level of the mine. It is in advance so far of the two levels I have named, and therefore, until we get a little further on with it, we shall be impeded to a certain extent by the water in the 266; but the level above is being pushed on with the utmost vigour. From the shaft to the 271 there was a run of dead ground before we came to the ore in the 266, and in consequence the managers have thought it desirable, instead of putting the next level at 10 or 15 fms., to sink 24 fms., and drive out from this, so as only to have one cutting through the portion of dead ground if it should still continue to exist. For that purpose (it is an unusual course to adopt) the drawing was found to be excessively heavy, and to avoid the excessive manual labour, we have put a motor and drawing machine at the bottom of the mine, and will be enabled by that means to clear ourselves of water, and to raise our *débris* at a much quicker and cheaper rate. All the north ends have been temporarily suspended—the 266, 255, and 230 for a week, owing to our discovering some deficiency in the working of the rock-drills. There was evidently a leakage of air, and we have had the compressors and pipes thoroughly overhauled, and I expect they are in operation again this morning. At the last meeting I mentioned that we had a new parallel lode which we had driven from the 200-fm. level. I stated then that if it turned out a satisfactory lode it might, in fact, be considered a new mine. Our expectations have been somewhat disappointed. After driving to the 200-fm. level we drove some fathoms north, and found that the north, though strong, did not bear sufficient value, and we drove south. That not being more satisfactory than the drivage north, we made another cross-cut on the 230 fms. below the other cross-cut, and have cut the lode and driven upon it southwards. It is not much better than it was in the level above, but we considered it by no means discouraging, so that our duty will be to drive upon it north and see whether we cannot meet with a larger body of ore.

A WRECK BRINGS ABOUT A NEW HARBOUR.

The report refers to the loss of the steamship Viking, laden with ore, which was wrecked, not in the harbour, but outside it, and against the pier. There was no loss to the company, but of course the loss of the ship was a consideration, but the loss to the underwriters who had insured the cargo was but trifling, because out of a cargo of 280 tons of lead about 200 tons have been saved, but the disaster to the steamer, I trust, will bear some fruit for the benefit of Laxey. For years past we had considerable difficulty in the shipment of our ore from Laxey, from its being known that it is a port which you must enter in one tide, and leave the next, unless the wind is off shore, and it is only at spring tide that we can get in in any weather. We also refer, in the report, to the inconvenience that is to us at present. We have at present 1,200 tons of ore sold which are able to be delivered. This, of course, creates annoyance to purchasers, as we sell for delivery, and we have greatest difficulty in getting steamers to come for our produce. The question of improving Laxey harbour has been before the Insular Government for a considerable time, and some years ago plans were prepared for affording protection to the harbour, the cost of which will be 6,000*l*. odd. The Governor considered that a grant of 3,000*l*. from the insular revenue should be made towards the harbour, which grant should be supplemented, if possible, by a contribution from the Woods and Forests. The Woods and Forests, upon application, agreed to contribute 1,000*l*. upon condition that the Laxey Mining Company would also contribute 1,000*l*.

WHY SHOULD LAXEY SUBSCRIBE?

Now, the Laxey Mining Company built the present pier many years ago at a cost of 2,600*l*., and considered that they ought not to be called upon, as a private company, to make a contribution to a public work, but that as the pier which they had built was to be utilised in the improvements that were then contemplated, they considered that the contribution of the pier was far in excess of what they ought reasonably to be called upon to subscribe. Not only that, but having erected the pier they had also maintained it at a very heavy cost. The directors having these views (which I think you will also all endorse) declined to make the contribution of 1,000*l*., and so they have had to bear the reproach and odium of having blocked a great improvement—an improvement which would benefit them and be of great advantage to the surrounding neighbourhood. Small steamers come there continually with coals and produce for the neighbourhood, and your directors considered that that was a further reason why the company should not be called upon to contribute. Now, considering that Laxey Mining Company has paid upwards of 150,000*l*. to the Woods and Forests for royalties, it surprised us that the Governor should consider this proposal by no means unreasonable, and he seemed to consider that the large expenditure, amounting to some 1,500,000*l*. by the mines as a whole, was not a sufficient justification for him to apply any further sum from the insular revenue for its protection. However, the loss of the Viking has really brought matters to a crisis, and last week the Governor proposed a vote of 6,000*l*. for Laxey Harbour—5,000*l*. of which would come out of the insular revenue, and 1,000*l*. would be contributed by the Woods and Forests, who had consented to withdraw the condition upon which they made their first offer. We will now, I hope, in a reasonable time, be able to carry on our shipments with regularity. Although the alterations proposed will not make Laxey an absolutely safe harbour, it will afford such protection as will enable vessels, in the event of their being caught as at present, to get out without difficulty. At present, if caught they have very great difficulty in getting out, so that Laxey will be largely benefitted by the new work which I understand is to be commenced at once.

A USELESS RAILWAY.

I have several times named a railway. It seems to be a sort of standing dish with us, but it is so far advanced that an application has been made to the Insular Legislature for leave to introduce a Bill, and this has been granted. In the course of a few months we will see what the result of that will be, but as at present proposed it will be of no earthly good to the company. The line as originally projected was to be connected with the harbour and with Douglas, and if that had been done the terminus would have been at the mine. It would have been an immense advantage to us, because we could get our heavy goods delivered at trifling cost—cartage being very heavy, and we could also ship ore independent of the weather. If vessels could not come into Laxey they could enter Douglas Harbour, but owing to the increased value of land in the neighbourhood of Douglas through which this line was to pass, the cost has always been prohibitory, and it is now contemplated to make the terminus outside the town. It will only be a passenger line, and as such I doubt whether it will remunerate those who make it. I have now to move the adoption of the report.

DISCUSSION.

Mr. Ramsbotham (a shareholder), in seconding the adoption of the

report, said he thought after the lucid statement of the chairman it was plain to them that their affairs were in a satisfactory state. As a shareholder he was glad that they had increased the dividend, and taking that in connection with the increase of the balance, it was proof that the mine was successful. The only point that occurred to him was whether it was the intention of the directors to recommend that a certain portion of the balance should be placed to reserve. He thought it was very important to speak of the Laxey Harbour. Large sums it seems had been spent in developing harbours in the Isle of Man, but Laxey had been left out in the cold. Still, knowing that there were two or three gentlemen, members of the Insular Legislature who were members of the company, they might leave it in their hands, that the interests of the Laxey Company would not be neglected, and he hoped they would have the pleasure of hearing from them at the next meeting that the harbour of Laxey had been put in decent order. The accounts being so very satisfactory, they might now safely leave the matter in the hands of the directors, and he therefore moved the adoption of the reports.

The CHAIRMAN said he would just reply to the observations of Mr. Ramsbotham. The board would gladly have added a proportion of the balance to the reserve if they could have had confidence that prices would be maintained. Should that be so they would gladly carry out the wishes of the shareholders, who he knew were anxious that the reserve should be increased. As to Laxey Harbour, they might rest assured that having members of the Legislature on their board the interests of the Laxey Mine would not be neglected, and he might tell them that for a long time past the directors had struggled in the direction of having this improvement carried out at Laxey. But the withdrawal of the 3,000*l.* proposed to be given by the Government, as the mining company would not concede the grant of 1,000*l.*, had alone been the cause of the delay. There could be no delay now, as the thing was passed and the money granted, and their endeavours would be to get the work done as speedily as possible, not only for their own interests but for the interests of the locality.

The report was then adopted.

Mr. HEWITT, in moving a vote of thanks to the chairman, said he did not think the affairs of any mine in the kingdom were better conducted than theirs by everyone concerned in the management. He had recently visited the mine and saw a good deal of the working, and was very much pleased.

The motion was seconded and carried.

The CHAIRMAN, in replying, said he did not know how other mines were conducted, or whether this was conducted as a model mine, but all he could say was that they had adopted for many years past a course which was satisfactory to the shareholders and had given satisfaction to the directors, and they intended still to follow that course.

The proceedings then closed.

THE SOUTH AFRICAN GOLD TRUST AND AGENCY CO., LIMITED.

"SOMETHING ATTEMPTED SOMETHING DONE"—A 2s. 6d. DIVIDEND FOR THE FIRST THREE MONTHS, OR AT THE RATE OF 100 PER CENT. PER ANNUM.

THE statutory general meeting of the above company, in accordance with the requirements of the Companies' Act, 1867, section 39, was held at the Cannon Street Hotel, Cannon Street, E.C., on Thursday last. Mr. W. M. M. Farmer presided.

Mr. WALTER F. ANDREWES, the secretary, having read the notice calling the meeting,

The CHAIRMAN said: This is merely a statutory meeting, at which it is not usual to transact any business, we have, therefore, no report and statement of accounts to lay before you. But as the company

TOOK OVER A GOING CONCERN

with established agencies, the chairman has little more than usual to relate. The company was registered on the 14th December, 1888, the applications being very largely in excess of the amount asked for. The company was established to take over the business of a small but a very successful company, and work it on a large scale, and so far the results have proved very satisfactory, since the company was started hardly a day has passed without applications being made offering properties connected with South Africa for floatation on their side; but the directors have used their best discretion in only selecting properties to be offered to their shareholders which they believed to be the least speculative. The number of companies floated by them has therefore been quite inconsiderable in proportion to the number offered and refused. The companies offered for subscription by the Trust have been, taking them in their order: the Victory Hill Consolidated Gold Mining Company, the West Battery Reef Gold Mining Company, the Sunbeam Gold Mining Company, the Mynpacht Gold Mining Company, and the Noitgedacht Estate and Gold Mining Company. The company also underwrote a small amount in the South Vogelstruis Gold Mining Company, and received a fixed fee for receiving subscriptions. In addition to the foregoing, the company have also made considerable profits in assisting in the underwriting of other South African companies. They also, as time went on, found that a field was open for investing far beyond the capital of the Trust Company; and that other people were contemplating forming a company to this end. The directors therefore resolved to identify themselves with those gentlemen, and place the Investment Company upon such a basis that it should not enter into competition with the Trust Company's business. This arrangement the directors have succeeded in carrying out, and at the same time making

A VERY HANDSOME PROFIT

by so doing, and the benefit to this company of having the co-operation of a company with a large capital, working side by side with them, is very considerable, and at the same time mutual. Of course, there are always good and bad times for companies doing the class of business of the Trust Company, but the company felt confident that, with the strong support they have, and endeavouring to do only what they consider to be thoroughly legitimate business, they can secure capital for undertakings recommended by them at any time. Although it will never be their policy to force things injudiciously, upon the market. Our profits, you will have gathered from the foregoing, have been made under three heads. 1st. Issuing of capital of companies. 2nd. The underwriting of capital in companies. 3rd. A general share and agency business, all three of which have united to produce a most highly satisfactory result in our three months' trading, and to enable me to declare

AN INTERIM DIVIDEND OF 2s. 6d. PER SHARE

for the quarter. (Cheers.) This may seem somewhat a large dividend to declare at so early a stage in the company's career, but the directors in doing so have satisfied themselves that the profits they have made justifies them, for the position of the company is such as to lead them to consider that similar dividends for each coming quarter of the current year are secured, and they have very considerable fresh business on hand at the present moment, and still larger prospects for the future. (Cheers.) The company have acquired and are about to issue to their own shareholders a coal company in connection with the Randt, and coupled with some building shares in Johannesburg which are now commanding high figures. The company have also acquired, and are awaiting a favourable moment for issue, the freehold of two large Witwatersrandt properties, and the mining lease of a third, aggregating together some 16,000 acres. These will be floated in the form of a Gold Estate Exploration and Development Company, and while proving a source of immediate profit to the Trust Company will, owing to the large extent of the properties, form a nucleus of a considerable business in the future, as the reefs upon the farms are proved and opened up and disposed of to separate companies. The directors have every confidence in the future of the Witwatersrandt district, but like all new enterprises it will have its times of depression and inflation. The directors are watching other parts of South Africa, where the gold enterprise was developing, and payable mines being opened up. They have

EVERY CONFIDENCE IN THE FUTURE

of the South African gold industry generally, and in the capacity of this company for doing a very considerable amount of the business arising therefrom. Amongst our assets I should not omit to mention that we hold 10 out of 20 founders' shares in the South African Gold Share Investment Company, and 15 out of 500 founders' shares in the Transvaal Mortgage Loan and Finance Company, besides shares in some small syndicates formed to produce large results, the value of which we cannot at present estimate, but which should certainly prove valuable:—Bird's Swaziland Concession, Doornplatz East (Mulmam), and the South-East African Exploration Company. In conclusion, I think I may say that our organisation for obtaining full information, and our agents in South Africa are as good as they well can be. (Cheers) I trust that the few remarks that I have made to the shareholders will have been considered, on the whole, satisfactory to those who have embarked in this undertaking. (Hear, hear.) I only hope that the anticipations of the directors will be more than satisfied, and that you will have next year an even better dividend that we are able to give you this. If there is any question that any gentleman would like to ask that I am in a position to reply to I shall be happy to do it. (Cheers.)

Major DURRANT said he took it that the chairman saw no reason for the recent fall that had taken place in their shares?

The CHAIRMAN said he did not think that there was any cause at all for such a fall. They were up to 4*l.* a little time back; they had only fallen in sympathy with other South African shares. He thought they stood at present at about 2*l.* 10s. premium.

VALUE OF THE COMPANY'S INVESTMENTS.

In reply to Mr. DONALD ANDREW, as to whether the company had any money invested in shares of companies bought at a high value,

The CHAIRMAN said that, on looking through the list, he could assure the shareholders that with the exception of one case—and that they looked upon as their strongest asset—in which there was a little temporary depression, they could that day sell every one of their investments in the market at an advance on the purchase price. (Cheers.)

Mr. STOBART congratulated the shareholders upon the highly satisfactory dividend that they were receiving, and was gratified at the forecast of the chairman, that it was likely to be maintained for the remaining three-quarters of the year. It was extremely satisfactory.

The CHAIRMAN said that was

THE HOPE OF THE DIRECTORS,

but the shareholders must bear in mind that there were always chances connected with mining enterprises.

100 PER CENT.

Mr. STOBART: We do not expect 100 per cent. dividend, Mr. Chairman, without some amount of risk.

Mr. CARL VON BUCH wished to know whether it was correct that, after the payment of such a handsome dividend, the directors had a certain and satisfactory sum to carry to the formation of a reserve for the equalisation of the future dividends.

The CHAIRMAN: Yes.

Mr. CARL VON BUCH said that that was very satisfactory, and he congratulated the shareholders on the results achieved.

THANKS.

Sir RICHARD MEADE moved a vote of thanks to the chairman and directors.

A SHAREHOLDER seconded the resolution.

The motion was carried.

The CHAIRMAN, on behalf of himself and colleagues, thanked the shareholders for their confidence.

The meeting then separated.

ELECTRICAL POWER STORAGE CO., LIMITED

GROSS PROFIT FOR THE YEAR £13,273 15s. 3d.—AN INCREASING VOLUME OF BUSINESS, NECESSITATING MORE WORKING CAPITAL —THE COMPANY FREE FROM LITIGATION.

The eighth ordinary general meeting of the shareholders was held at Winchester House, Old Broad Street, E.C., on Wednesday—Sir Daniel Cooper, Bart., G.C.M.G., presided.

Mr. Holland Dell (secretary) read the notice convening the meeting, and the report was taken as read.

A GRATIFYING INCREASE OF BUSINESS.

The Chairman said: I now propose to offer some remarks and explanations upon the report and the figures in the statement of accounts where they seem to call for observation. During the past year there has been a gratifying increase of business. This increase is mainly made up of a great number of small orders for storage batteries, which are employed for the variety of purposes detailed at length in the directors' report. By far the larger portion of the gross profit of 13,273*l.* 15s. 3d. has been earned in the manufacturing branch of the business, as the firms and companies on the continent who have agreed to manufacture E. P. S. batteries, under royalty, have taken a longer time to complete their arrangements than was anticipated. There is an increase of 165*l.* 5s. 9d. in the item of rates and taxes, owing to the payment of income tax. We have not done so much advertising lately, so there is a diminution of 293*l.* 6s. 8d. in that account. The shares allotted last year to the managing director have been charged against the reserve at par value.

NEW PATENTS.

The company has taken out what we believe to be valuable patents, in the United Kingdom and in several continential countries, for improvements in details of arrangement in the E.P.S. accumulator, and also for distributing apparatus in connection therewith, and much time and thought has been given by Mr. Frank King, our chief engineer, and our technical staff, to perfecting what is commonly known as the E. P. S. system of distribution by storage batteries. On the other hand, law costs and patent fees account is less by 194*l.* 2s. 3d., because we have had no professional fees to pay, and are for the present free from litigation. The amount allowed for doubtful debts has proved more than ample for the purpose, and there is a balance over, which we consider sufficient for this year. There has been, as mentioned in the report, some additional outlay, owing to the increase of business, on the plant and buildings at Millwall works, and further outlay will have to be made this year. The amount under the heading of sundry creditors is larger, but against this is the increase in sundry debtors account, while the cash balance at the bankers is 3,000*l.* more than it was last year. In the report is given a selection from a long list of new electric light installations, in which E. P. S. batteries are used. Reference is also made to various scientific and technical institutions which have adopted accumulators, and I do not think I need here enumerate them.

E. P. S. BATTERIES ADAPTABLE TO ALL PURPOSES.

You will have noticed that E. P. S. storage batteries are now used for all kinds of purposes—train lighting, ship and yacht lighting, omnibus and carriage lighting, and for power in tramcars, electric launches, and again for surgical purposes. In short, their use is becoming general, as you will have gathered from the paragraphs which have appeared in many newspapers during the past year, and you may take it that though the name of the E. P. S. Company has not always appeared, yet in 99 cases out of 100 the batteries were the E. P. S. type. Among the latest interesting applications of batteries I would mention the printing at the office of the *East Anglian Times*, at Ipswich, by power supplied by E. P. S. batteries, which are placed at the central lighting station of Messrs. Laurence Paris and Scott, Limited, in that town, a description of which was sent to the shareholders with the report. I must now dwell for a moment on the subject of central station lighting, the importance of which to this company cannot be over-stated. The company has applied for Provisional Orders for Paddington, St. Martin's, and the Strand districts, and an inquiry is now being carried on under the instructions of the Board of Trade, upon questions which relate to the whole of the applications for Provisional Orders in the metropolis; I shall refrain from making any observations thereon, as the matter is still *sub judice*.

CHELSEA ELECTRICITY SUPPLY COMPANY.

I will now pass to the Chelsea Electricity Supply Company, which is supplying light in the parish of Chelsea. You may not be aware that this is the first company which has supplied electric light in London under the statutory powers of a Provisional Order. It has acquired these powers by Act of Parliament Vic. 50, cap. 18. The E. P. S. Company, in conjunction with the Anglo-American Brush Company, and the Callender Bitumen and Telegraph Company, took up the Chelsea Company last July, and contracted to furnish the necessary plant, and they have now carried it through to its present stage; and I feel confident that the combined efforts of the three companies, each in its own special line, will result in a model central station. The system of distribution is that of the E. P. S. Company, by which the current is supplied from the main station to storage batteries placed in convenient sub-stations throughout the district to be supplied. We believe this system to be the best for such populous districts as Chelsea, and that the public will give the prefereuce (when once they become acquainted with its essential features) to the only system in which a reservoir of light, in case of accident from any cause whatever, is provided. Our managing director, Mr. Courtenay, is a director of the Chelsea Company, having joined the board at our request.

PATENT RIGHTS OF THE ELECTRICAL ACCUMULATOR COMPANY OF NEW YORK.

You will, perhaps, have read the pamphlet issued by the Electrical Accumulator Company of New York. I need only remark that judgment has now been given against the Julien Company for infringing the Faure patent, and therefore that company will be put under injunction. The trial of this suit has taken more than 12 months, and the investigation has been one of a most searching and exhaustive character. The shrewd advisers of the American company consider, as they state in the document referred to, that they had already got the control of the accumulator business in the States from their other patents, even without the Faure patent, and now that they have this basic patent also declared valid, their position should be doubly assured. I beg to move the adoption of the report and accounts, and ask Mr. Sellon to second the resolution. (Applause.)

A GOOD REASON FOR PAYING NO DIVIDEND.

Mr. John S. Sellon (vice-chairman), in seconding the motion, said that it had been remarked by one large shareholder that if a dividend had been declared on the present occasion it would have had the effect of immediately doubling the market value of the shares. This might be the ease, but in view of what was before them. he (the speaker) saw no reason why the shares should not quadruple in value without crippling their resources by the payment of a dividend at present. Directors were bound to consider the exigencies of the business they direct, and were not justified in diverging from what was considered necessary for the protection of the internal interests of the undertaking in order simply to affect the external value of the shares. It had been a labour of years to build up this business, to overcome violent antagonism, and to establish the secondary battery upon a firm basis as an indispensable and reliable factor in electric lighting. This having been at last accomplished, would it not, he asked, be unwise to do anything which might cripple for the moment the extension of the business? Instead of diminishing the resources at their command, they could with advantage employ further capital—in fact every thousand pounds in a growing business of this kind was of value, and, realising that, the directors for fully two years had not taken any of their well-earned fees. (Cheers.)

THE FAURE PATENT.

The chairman had alluded to the recent important decision in the Courts of the United States in favour of the Faure patent, after one of the hardest patent fights on record. With the exception of one decision, sustaining one of the Thompson Houston patents, this was the only electrical apparatus patent, the litigation on which in the Courts of the United States had terminated favourably for the patentee. The Faure patent was held by the Electrical Accumulator Company of America—a powerful corporation formed to work the E. P. S. Company's patent rights, and in which they held a very considerable interest. The importance of the decision would be obvious when he explained that this patent entirely controlled the use of active material applied to the plates, and no efficient practical secondary battery could, by any known means, be made without such application. It was the fundamental and essential point of construction. Though the Faure patent was an important one in itself, the manufacture of plates, as carried on by all infringers, came within the claims not only of the Faure patents, which had been upheld, but of several other of the E. P. S. group of patents, which were held by the Accumulator Company. They possessed in the E. P. S. group some 40 fully-covered patents—every point and detail essential to their business—and so far as was within his knowledge, not one single outside patent existed which would be of use to them in their manufacture. Several of the patents were governing or controlling patents in the sense that no economical and efficient secondary battery could be constructed without infringing the rights of this company.

A UNIQUE AND UNASSAILABLE POSITION.

They might, therefore, feel justified in considering their position in this important and indispensable branch of the electrical industry to be not only unique, but unassailable. In conclusion, he anticipated that one of the results of the important investigation now being held by the Board of Trade at Westminster would be to enable not only electricians, but the public generally, more vividly to realise the solid and paramount advantages of the storage system which this company advocated and controlled. (Cheers.)

Mr. Schomberg thought that the directors should on this occasion have recommended a dividend in view of the profit earned. What interest, he asked, was paid upon the debentures: and how was it proposed to raise the additional capital?

A BUSINESS-LIKE VIEW.

Mr. Barclay, M.P., said it would be a great misfortune if at the present moment they were to divide any profits and starve the company. The capital of the company was inadequate for fully developing the business. He congratulated the board on the very greatly improved position which the company had now attained; indeed, the position of the company was in reality much better than appeared on the face of the accounts. The enquiry now pending at Westminster would bring before the public in some intelligible form the merits and demerits of the various systems of electric lighting which were now in vogue, and he felt confident that it would prove that the E. P. S. system was not only more economical than others, but in point of fact the only system which could be relied upon to give satisfaction to the public. It was satisfactory to know that arrangements had been now completed in Germany, France and Austria for the immediate development of the storage battery, and that could not fail in the course of the present year and in succeeding years to bring

A VERY LARGE REVENUE

to the company.

Mr. John Irving Courtenay (managing director), in reply to Mr. Schouberg, said the debentures bore interest at the rate of 7 per cent., and in reference to the question of providing further capital, the directors were not prepared at the moment to submit a scheme, but it was necessary for them to take the question into account when dealing with the redemption of the debentures in May, 1890.

A VALUABLE ASSET.

The holding of this company in the American Company was, at the par value, in round figures, 120,000*l.* sterling, which he looked upon as a valuable asset.

The motion was carried unanimously.

On the motion of Mr. Barclay, M.P., the retiring directors were re-appointed, as were also the auditors, and the proceedings closed with a vote of thanks to the chairman and directors.

THE LINARES LEAD MINING CO., LIMITED.

DEPRESSION IN THE LEAD MARKET.

THE half-yearly general meeting of the shareholders of this company was held at the Office, 6, Queen Street Place, E.C., on Thursday, under the presidency of William Cox, Esq.

Mr. H. SWAFFIELD (secretary) read the notice calling the meeting.

The CHAIRMAN: I have very few observations to make to you, as it is only six months since we held our last meeting, and there is nothing very fresh to announce since that time. In the first place, I have been requested by Mr. St. John, whom we have elected a director, to fill the vacancy caused by the lamented decease of Mr. Abercrombie, to apologise for his not being present to-day. In moving the adoption of the report, I have one observation to make, which is this—that I regret our dividend is not so good as it was six months ago. I can explain it to you very easily indeed.

A SIGNIFICANT REMARK.

The price of lead, unfortunately, has not been so good. The significance of that remark you will see when I tell you that at the time we gave you a dividend of 6s. or 7s. a share the lead had been sold throughout the preceding six months, one class of it at 14*l.* 13s. 4d. containing silver, and the other ordinary class of lead, with the silver taken out, producing 13*l.* 9s. for the half-year ending June, 1888; but for the half-year ending December, 1888, the price obtained was only 12*l.* 8s. You will observe at once that there is 1*l.* 1s. per ton, which is nearly sufficient to make up the deficiency in the dividend. Every 1s. beyond that 12*l.* 8s. and the 14*l.* 0s. 6d., as against 13*l.* 9s. and 14*l.* 13s. 4d.—every shilling would give so much to increase the dividend on the amount payable.

WORK DONE.

Six months ago we were able to announce that we were just on the point of communicating Peill's Mine with the old Pozo Ancho Mine. That has been accomplished, and we have in the latter more than 100 tributers producing about 1 ton per mau, and as we hope there will be 300*l.* or 400*l.* clear profit, we anticipate a very good return for the money and time we have expended. The old Pozo Ancho had reached the 135-fm. level, so that we are only 10 fms. below the old workings, but, going further, we shall be 60 fms. below them.

Mr. WHITE: I believe the result of the tributers' working has not been brought into the accounts we have here to-day?

The CHAIRMAN: No; we have just begun to receive returns from the result of the working of the old Pozo Ancho. There was a great deal to do before we could set the tributers to work.

The motion was carried.

FORMAL BUSINESS.

The CHAIRMAN proposed the re-election of Mr. John Robinson Peill as director.

Mr. SIMMONDS seconded the motion, which was carried.

The CHAIRMAN moved the re-election of Mr. F. W. Bigge as director.

Mr. AGAR seconded the motion, which was carried.

The CHAIRMAN: We have elected Mr. St. John in the place of Mr. Abercrombie, deceased, and it is our duty to submit that appointment to you to-day, and if you agree, he remains a director; if you disagree, he ceases to be a director. He has been a large shareholder for a great many years, and I have much pleasure in moving that he be elected a director in the place of Mr. Abercrombie, deceased.

Mr. HENTY seconded the motion, and said he had known Mr. St. John for a great many years as a thoroughly good man of business, and one who would be likely to attend to the interests of the shareholders.

MR. ST. JOHN'S MINING EXPERIENCE.

Mr. WHITE: Does Mr. St. John possess any special knowledge in regard to the mining industry? I think when a vacancy occurs in a board of directors it behoves the directors not to appoint the largest shareholders, or those who have been a great number of years connected with the company, but those men who can bring the greatest amount of intelligence to bear on the affairs of the mine. I do not know whether Mr. St. John possesses this qualification, but it is well sometimes to let those gentlemen who sit on this side of the table know that the shareholders look to them to get men of special knowledge to fill these vacancies as they occur.

The CHAIRMAN: I entirely agree with your observations. It is necessary that a man should be a good many of business, and that he should be a shareholder. We like to select a man of intelligence and ability, but we can hardly expect a professional man. He has been chairman and director of some seven or eight mining companies during the last 25 years, and he knows a good deal more of mining than I did when I was elected a director. It is this very day 31 years ago that I was elected a director, and I do not know anything about mining but what I have learned in this room.

The motion was carried.

The CHAIRMAN moved the re-election of Mr. Agar.

Mr. SIMMONDS seconded the motion, which was carried.

Mr. WHITE proposed the re-election of Mr. Jepps, which was agreed to.

Mr. SIMMONDS proposed a vote of thanks to the chairman and the board, which was seconded by Mr. WHITE, and carried.

The CHAIRMAN returned thanks, and the proceedings closed.

THE FORTUNA COMPANY, LIMITED.

DIMINISHED PROFITS DUE TO THE FALL IN THE PRICE OF LEAD.

THE half-yearly general meeting of the shareholders of this company was held at the Office, 6, Queen Street Place, London, E.C., on Thursday—Robert Henty, Esq., presided.

Mr. H. SWAFFIELD (secretary) read the notice calling the meeting.

The CHAIRMAN: We have but very little to say to you. We have come before you with

A CERTAIN AMOUNT OF REGRET,

inasmuch as there is a deficiency in our dividend as compared with former years. This, however, is owing to a cause quite beyond our control. The price of lead has fallen so considerably that we cannot get the same amount of profit as we have in former years. The profits have declined to the extent of 1,100*l.* That has arisen solely from the fall in the price of lead, because we have extracted a small quantity of ore over and above what we have done in former half-years. I may add that the increased output had not been caused by our taking away more than was legitimately considered right, for our resources remaining in the mine are equal to what they were on former occasions. The whole of the works have been carried on very satisfactorily, and, as is usual on these occasions, with varying success. At some times we have found the lodes much larger than at others, but upon the whole we have seen

A GOOD DEAL OF MINERAL EXTRACTED.

The tribute system will materially assist our returns, and it is very much more to the advantage of the company. Mr. Tonkin speaks with great satisfaction of one point in the second paragraph of his report. We are making great efforts to sink the Salidos shaft 200 fms. by the end of April. During some 34 or 35 years we have paid in dividends

20 PER CENT. UPON OUR CAPITAL.

I now beg to propose the adoption of the report.

Mr. SODEN seconded the motion, which was carried unanimously.

The CHAIRMAN proposed that the election of Mr. St. John as a director be confirmed.

Mr. COX seconded the motion, which was carried.

On the motion of the CHAIRMAN, seconded by Mr. SIMS, the retiring directors—Messrs. Fredk. W. Bigge and Richard Donagan, were re-appointed, and the proceedings closed with a vote of thanks to the chairman.

THE ALAMILLOS CO., LIMITED.

MINING OPERATIONS PROCEEDING SATISFACTORILY.

THE half-yearly general meeting of the shareholders of this company was held at the Office, Queen Street Place, E.C., on Thursday, under the presidency of Robert Henty, Esq.

Mr. H. SWAFFIELD (secretary) read the notice convening the meeting.

The CHAIRMAN: I do not think I have any particular remark to make about the proceedings of this company. The whole thing is

PROCEEDING MOST SATISFACTORILY,

and as we happen to be all the same shareholders who were present at the Fortuna meeting just now, it would be really only repeating the same thing over again. The mining operations are going on very satisfactorily, and the last reports have been rather more satisfactory as regards the value of the levels than we have had for some little time past. Some points of the mine are decidedly improved. The tributers are returning a considerable quantity of ore, which helps our receipts very materially. The price of lead has fallen, and it is simply owing to this fact that your dividend is not more, because the mine has in no sense fallen off, either in produce or quality. Of course the price of lead is a thing that the directors cannot possibly control. I should be glad to answer any questions, or to hear the observations of any gentlemen present, and meanwhile I propose that the balance-sheet and accounts be received and adopted.

Mr. SIMMONDS seconded the motion, which was carried unanimously.

FORMAL BUSINESS.

The CHAIRMAN proposed the re-election of Mr. William Cox as a director.

Mr. AGAR seconded the motion, which was agreed to.

Mr. COX moved the re-election of Mr. Robert Henty as a director.

Mr. CUNNINGHAM seconded.

The motion was carried.

The CHAIRMAN: The death of Mr. Abercrombie, which we all deeply regret, caused a vacancy some few months ago in the directorate. To fill that vacancy we have appointed Mr. St. John a director, and it is for the meeting now to confirm that appointment. I propose, therefore, that Mr. St. John be elected to a seat on the board.

Mr. AGAR seconded, and the motion was carried.

Messrs. Jas. W. Jepps and Edward L. Agar were appointed auditors for the ensuing year.

On the motion of Mr. SIMMONDS, seconded by Mr. AGAR, a cordial vote of thanks to the chairman and directors was passed, and with the brief reply of the CHAIRMAN the proceedings terminated.

WEST GODOLPHIN MINING CO.

MINE TO BE STOPPED—REGRETTABLE ACTION OF CERTAIN LARGE SHAREHOLDERS.

A GENERAL MEETING of the shareholders was held at the company's Offices, 7, Union Court, Old Broad Street, on Wednesday, to receive the statement of accounts and manager's report, also to make a call if deemed necessary, and to transact the ordinary general business of the company—Francis G. Lane, Esq., chairman of the company, presided.

Mr. D. JULYAN (secretary) read the notice of meeting, and the minutes of the last meeting.

A SAD DETERMINATION.

The CHAIRMAN: Gentlemen, we deemed it prudent to issue the accounts before the meeting, and although we may have to send them out again, at the same time there will be an exceptional resolution offered for your acceptance to-day, and, therefore, we have been careful to let you know the exact position of the mine. As regards the accounts, no doubt you will recollect that the committee at the last meeting deplored the continued monthly decline in the returns. We now present to you, after a payment of a call of 1s. 6d. per share, made at the last meeting, accounts that show a further loss (including the call) of 50*l.* on the quarter. This has arisen from the fact that our stopes and pitches throughout the mine fell off after the last meeting, and our report to-day shows that our anticipations, which

have led us to hope against hope for a long time past, have not been realised to the extent we have anticipated. The Pink lode, which Capt. Josiah Thomas so strongly recommeuded us to work, and which he held out, as presenting such great prospects, iu the report he made to us a year ago, has not in our deepest level proved to be as productive as either he or the agents expected to find it. The Pink lode at the 107-fm. level, where we naturally expected to find it productive, as in the upper levels it had been productive, and shown appearances of riches in depth—at the 107-fm. level is now proved to be in branches. The ground is more settled, and we had. therefore, calculated to have found a better state of things in the lode itself. but such has not come to pass. The continued disappointments and falling off in the returns from the mine have caused some of the shareholders, I will not say to tender their relinquishments, but to express their determination to relinquish their shares. Under such circumstances I think it is the duty of your committee, and my duty as chairman, to tell you the plain facts, and to take your opinion as to whether you will go on with a small proprietary, which meaus larger calls upon that proprietary, or to stop altogether. Capt. Hodge is here, and will explain to you that to prove the Pink lode at the next level thoroughly, and also at Bellingham's lode, will occupy from 18 months to two years.

RELINQUISHMENTS.

We calculated that if we found the Pink lode productive at our present bottom level, the 107, it would so far encourage us to go on that we would put down the shaft and cut both the Pink lode and Belliugham's lode, and also the south lode at the 120-fm. level. Now, gentlemen, some of the shareholders do not feel inclined to continue the prosecution of the mine for the time necessary to effect this object. I shall propose, therefore, that the accounts and reports as now presented to you be received and adopted. I will also propose a small call, for the continuance of the working of the mine only as far as is absolutely necessary. On the other hand, if the mine is to be worked, and these relinquishments are accepted, a larger call will be absolutely necessary. I now propose the first resolution.

Mr. Bellingham : I second the motion, and think it very much better that we should look matters fairly in the face.

The motion was carried unanimously.

ACCOUNTS CLOSELY CHARGED.

The Chairman : Now, as regards finances for the future working of the mine. If it is the wish of the meeting that we should go on prosecuting this mine, we shall have to make a call sufficient for the purpose. On the contrary, if it is proposed to wind up or to suspend operations, fortuuately for us our accounts are brought up to the latest date. We have no liabilities, except a small amouut of 5*l*. 8s. owing for dues, and we have assets to the amount of 140*l*. Therefore, financially, we are iu a good positiou. Capt. Hodge is here, and will explain to you the disappointments we have met with, and whether it is desirable, knowing that there are a number of relinquishments that will be teudered if this resolution is not passed to wind up—whether iu the face of all this it is desirable to continue the uine with a heavier call upon those who remain. The committee have considered the matter fully, and think they would be justified iu suspending operations and disposing of the assets rather than advising you to go on for another two years. Capt. Hodge will now give you his views.

Mr. Jolly : It is rather to be regretted that we have so small a meeting. Had the importance of it been known many more might have been present.

RATHER SUDDEN.

The Chairman : The determination has not been come to for many hours, but we will require to call a special meeting before the matter is finally arranged.

Capt. Hodge : The mine holds out as good promise as it did four years ago. We thought that at the 107 we should have had a junction with the Pink lode. We got into the junction in the three or four branches, and have been doubtful whether we have the Pink lode or not, and that is the view of the surveyor. If you do not wish to go ou, I do not press you, but I aui bound to tell you what I think. The poiut we are aiming for will occupy 18 months or two years.

Mr. Bumpus : But there is nothing to look for in the meantime.

Capt. Hodge : Quite true; but it will be no use my saying this work will be done in three months, when I know it will take from 18 months to two years.

A Shareholder : There is no likelihood of its payiug its expenses ?

Capt. Hodge : There is no knowing. We might be in tin in a week.

Mr. Bellingham : We only sold 4 tons 8 dwts. in the last quarter. and our loss has been upwards of 700*l*. in the three months. If there was a prospect of increasing our returns there would be encouragement to go on, but, under the circumstances, I think the best thing is to look the matter in the face, and so far as I aui concerned I should like to cast in my lot with those who wish to relinquish. The calls upon the remaining shareholders will be very much heavier—more likely 7s. 6d. than 1s. 6d. I think I am the largest shareholder in the miue.

CHAIRMAN READY TO GO ON IF SUPPORTED.

The Chairman : The holders of 3,000 shares out of 9,800 express a wish to relinquish, and after what has been stated to-day many more will relinquish. I was prepared to go on with a sufficient number of shareholders, but with the proprietary so much reduced I should not feel disposed to put in the concern a large amount of money which would be required for two years. If it is decided to wind-up we shall propose a call of 6d., but if there is a feeling to the contrary the call must be 2s. In the meantime I propose a call of 6d.

Mr. Bellingham seconded the motiou.

The Chairman : I shall next have to propose "That the prosecutiou of this mine be discontinued, and that notice thereof be given to the lords; that they be offered the machiuery aud materials at a valuation, and that the mine be given up accordingly, and that a special meeting be held to confirm this resolution or otherwise. It is further proposed that the winding up be left in the hands of the secretary under the direction of the general committee, who are requested to continue in office for this purpose."

Mr. Bellingham seconded the resolution, which was carried.

A PARTING WORD.

The Chairman : I regret that such is the determination we have come to, but I feel it to be necessary, looking at the report and the feeling expressed by so many shareholders. Perhaps, if affairs had been looking brighter at Cornwall the present determination might not have been come to.

The proceedings closed with a vote of thanks to Mr. Lane for presiding.

WHEAL GRENVILLE MINING CO.

INFLUX OF WATER TEMPORARILY CLOSES LOWER LEVELS—CREDIT BALANCE OF £3,000 CARRIED FORWARD—NO DIVIDEND, BUT A GOOD OUTLOOK NEXT TIME.

A general meeting was held on Wednesday at the Offices, No. 7, Union Court, Old Broad Street, to pass the accounts and manager's report, and to transact the ordinary general business of the company —R. W. Goold, Esq., chairman of the company, presided.

Mr. D. Julyan (secretary) read the notice calling the meeting, and the minutes of the last meeting. The accounts showed a credit balance of 3,106*l*.

AGENTS' REPORT.

26th March.—We beg to hand you our report of this mine for the general meeting to be held on the 10th of next month. At the time of your last meeting the water was in all our bottom workings, and continued to rise soon after the meeting until it nearly reached our 150-fm. level. This became an anxious time with three lifts under water ; however, we are very pleased to inform you that our workings are free from water to-day. We never had a hitch in our pitwork with the exception of one of the bridles in the bottom of the down-right breaking. We are hoping the worst is over. At present time the engine is going eight and a-half strokes a minute to keep the coming water. The 178 east end is worth 10*l*. per fm. The 165 east is worth 9*l*. per fm. The 165 west of Pease's is exteuded 60 fms. 1 ft., producing stamping work. The 150 west is driven 52 fms. 3 ft. 4 ins., low price tin stone. We have a rise goiug up in the back of said level and a winze from the level above coming down to meet it. When we effect a communication we shall have a good piece of ground to take away. A very good lode gone down in the bottom of the 140-fm. level. Two stopes in the back of the 205 are worth together 34*l*. per fm. The stope in the 178 is worth 30*l*. per fm. Hart's stope is worth 12*l*. per fm. The stopes in the 165 and 150-fm. levels, six in number, we value at 90*l*. per fm. in the aggregate. Tribute : We have 20 pitches at work by 50 men, average tribute 10s. 7d. in the £, to be paid 50*l*. per ton for black tin. As far as we know now we hope to work at a fair profit during the coming quarter, unless we get overpowered with water, which we do not expect. The mine coutinues to look fairly well. Persons employed, 312.—T. Hodge, J. Hosking, S. Williams.

FLOODS IN CORNWALL IMPEDE THE MINE.

The Chairman : Gentlemeu, I think you will have gathered from the report that for the first time for a very long time we have not to congratulate you upon so bright a result as formerly in regard to the working of Wheal Grenville during the past quarter. But do not forget, if you please, the reason. Although I am not able to speak in the gratifying terms to which I have been accustomed of the past quarter, the reason is to be fouud in causes beyond the control of any man, or auy set of men, whatever, and you will easily understand, too, after I have explained those causes what an immense amount of anxiety and care must have accuumulated upon the devoted head of your poor captain during this period. At your last meeting I believe you were told that the water was increasing in the mine. Immediately after that it increased to such an extent that our meu were driven out of the bottom level (the 208) and out of the 178, and those two levels were under water for more than 11 weeks out of the 12. They were driven also out of the 165, and all but driveu out of the 150-fm. level above.

MY OWN FEELING IS ONE OF EXTREME THANKFULNESS

that iu the face of such a state of things we are able to show figures so good as those which are before you now. (Cheers.) I think it is marvellous after being driven nearly out of the mine altogether that a return has been made during the quarter of 95 tons of tiu, and it speaks volumes with regard to the management in Cornwall that such an amazing quantity of water has beeu dealt with so that 95 tons of tin have been raised, and that no accident whatever to the pitwork or machinery has been experienced during the whole of that tiuie.

ALL WELL NOW.

I am delighted to be able to tell you that the mine is now drained to the bottom, that the men are all in their usual places, and I think that during the current quarter we shall be able to show a larger return of tin than in the past. It is not my inteution to occupy much of your time to-day, but Capt. Hodge is present, and if any shareholder wishes to ask him questions, he will be able to give any explanations that may be required. The fact is, that very little has been done except at surface during such a state of affairs as I have described. You will have seen from the figures that the sum realised for the tin during the period in question has been 5,334*l*. 5s. 10d., the average per ton beiug 56*l*. 2s. 11d. That is a very fair price, and if we can only maintain it between that and 60*l*. for the next quarter we shall do very well. Your expenses on the other hand have been 5,429*l*. 9s. 6d., showing a trifliug loss on the quarter of some 80*l*. You will have seen also that we have a balance at the bank of 3,322*l*. 8s. Of course, in such a state of affairs you will all have anticipated what I am going to tell you, that we are hardly in a position to pay a dividend for the quarter, but I hope it is merely a suspension of dividend, and that three months from the present time we will be able to meet you with better figures, and something like our former distributions of profit. My only remaining duty is to move "That these accounts, together with the agents' report, be received, approved aud adopted." (Cheers.)

MR. LANE'S VIEWS.

Mr. Francis G. Lane (director) : In seconding the resolution, I would remark that in this quarter we have paid the income tax for the past year. That amounts to 282*l*., which comes out of the quarter's profits, so that in reality there has been no actual loss ; there would have been a profit, in fact, of 200*l*. On the whole, I think we ought to feel satisfied, considering the position of affairs in Cornwall during

the past winter—a winter such as we have not had for many years past—with the accounts as now presented. (Hear, hear.) Now that our water is ont of the mine we can tell you that

DURING THE PAST MONTH WE HAVE MADE A FAIR PROFIT,

and I think it will be increased in the remaining months of this financial period; certainly it will be shonld the prognostications of Capt. Hodge be correct, and should we not have so mnch rain to contend with as during the past qnarter. Capt. Hodge now tells us that we may hope to work for a fair profit dnring the coming quarter, and the first month's result, as I have said, is an earnest that what he says is correct. I think we may fairly hope the dry season will set in, and that the resnlts of developing the bottom workings will prove to be satisfactory. I second the resolution with much pleasure. (Cheers.)

VALUELESS LETTERS.

The Chairman: I should like to mention one circumstance. I have seen in some of the newspapers letters to the effect that an nnusnal qnantity of tin has been running to waste from Wheal Grenville. I do not attach the slightest importance to the signature attached to those letters, "A Shareholder"—(laughter)—becanse I apprehend if the writer had in reality been a shareholder, he wonld, at all events, as a first step, have communicated with the management before committing himself to paper—(hear, hear)—but I have something further to say in regard to that snbject. It was pressed npon my attention a few years ago, and I went to considerable trouble and expense to ascertain the actual facts, whether a larger qnantity of tin was passing from a given quantity of water than was passing from a given quantity of water at some other mines in Cornwall. I had that carefully and critically examined, and found that the contrary was the fact, and that less tin was passing away from our mine than from other mines. (Cheers.) Of conrse we all know that some tin runs to waste at every mine in the world. Possibly we might save some of ours by going to the expense of 500*l*. or 600*l*., and putting down a thousand new frames; bnt Rome was not built in a day, and a mine is not made in a day, and I do not know whether, if we went into that expenditure, we should not lessen your dividend in a way which you would not like. I think Capt. Hodge has done all we can reasonably expect from him, and that there is not the slightest ground for complaint upon that subject.

The report was then unanimously adopted.

LOCAL AGENTS THANKED.

The Chairman: I rise to propose a vote of thanks to the management, and feel that they have deserved it more during the past quarter than during any quarter of our existence. It must have been a terribly anxious time for them to see the water driving them from level after level, and to anticipate being driven out altogether. (Hear, hear.)

Mr. Jolly: I second the resolution with great pleasure. I am sure that those men in the far West deserve all that yon have said of them. They must have had a hard task to get the water out of the mine in the way they have done, and I am snre we owe them our best thanks.

The motion was carried unanimously.

BETTER OUTLOOK THIS QUARTER.

Capt. Hodge, in returning thanks, said: We have done the best we can, and think we have got out of the difficulty very well indeed. I suppose it has cost in coal this qnarter something like 200*l*. a month extra, which has been charged and paid for in these accounts. We have started the new qnarter with a very fair month's profit, and we have 2,000*l*. worth of tin not credited or pnt into the accounts. I hope at the end of another qnarter we shall be able to give you a dividend. I am not certain, because I do not know what trouble the water will give us.

Mr. Bumpus: How many strokes has your engine been working?

Capt. Hodge: Eight and a half per minute.

THAT OLD ARM CHAIR.

Mr. Jolly proposed a vote of thanks to the chairman, and expressed the gratification of the shareholders in seeing him again in the old chair. (Cheers.)

The Chairman briefly returned thanks, and said that they had had a great number of satisfactory meetings, and he hoped they would have many more in the fnture.

The proceedings then closed.

THE MELLANEAR COPPER MINE CO., LIMITED.

THE EFFECT OF THE FALL IN COPPER—PROSPECTS OF FINDING TIN—INCREASED RESERVES OF TIN.

An ordinary general meeting of this company was held at the Offices of Messrs. John Taylor and Sons, 6, Queen Street Place, E.C., on Thursday, 11th April.—Mr. Robert Henty presided.

Mr. W. F. Garland (secretary) read the notice convening the meeting. The report and accounts were taken as read.

The Chairman: We are meeting to-day, gentlemen, under rather peculiar circumstances, because from those circumstances we are not able to put before you so flourishing a statement as we would have done. We all know what has been the effect of the syndicate in copper. It did for a time give us a profit, or if not an actual profit, it, at any rate, recouped the money we were spending upon it. Circumstances have so changed now that it has become necessary to suspend almost all the works whereby we were extracting copper, and our energies for the futnre must be devoted to the sinking of the shaft, and

SEARCHING FOR TIN,

which, under the present circumstances, is our chief, perhaps I may say our only, hope. From all we hear from our mining captain, the prospects of getting tin seem to be increasing. At all events, the reserves of tin in the mine at the present time amount to 1,789*l*. value, as against 1,200*l*. for the previous year. Well, the money that we have in hand is now to be devoted exclusively to the sinking of that shaft in the hope of finding tin. We have money enough to go on for some considerable time, and you may be quite sure that every sort of economy will be practised in that search.

TOO MUCH WATER.

We have been tried very much in all the efforts that have been made, because the water for some time past has been so abundant that the agents have scarcely been able to keep it down, and the consumption of fuel has increased our expenses very considerably. All these things are very much against us, bnt still miners always live npon hopes, and we must only live in hope of the future. Beyond that I do not think there is anything to be said with regard to our affairs, but there is one matter I shonld like to refer to. Some little time back a proposal was made for the debenture-holders to exchange their bonds for preference shares. A good many of the debenture-holders did not fall in with the arrangement. It is, therefore, proposed that that resolution should be withdrawn, and that those who had applied to exchange their bonds for shares will now be released from those applications. I have nothing more to say, except to ask you to pass the report and accounts, and if any gentleman has any question to ask, or snggestion to make, I shall be glad to hear him. My brother directors, from circumstances over which they have no control, are prevented from being here.

Mr. Howard secounded the motion.

Mr. Mitchell: In comparing the accounts before us with those of 1887, I notice that in 1887 we were supposed to have 1,939 tons of copper, at an average price of 43s. 6d., and we made a loss of 1,163*l*. odd. Last year, instead of 1,939 tons, we sold 2,856 tons, for which we got 59s., and yet we made a loss of 1,244*l*.—about 80*l*. more than we did when we got a lower price for copper.

The Chairman: Yon will excuse me if I say that that wonld be more apparent to those fnlly acquainted with mining operations than to others. That does not arise simply from the extraction of that quantity of copper, but there is always an amount of exploratory work going on in searching for tin that does not bear any proportion to the amount of copper extracted. For instance, they are working perhaps in a great many places, and in two thirds of them there is no return. Now, in siuking the shaft there is not the slightest returu at present.

Mr. Mitchell: Then it was simply a loss in trading as I understand it?

The Chairman: The loss was on account of driving levels and so forth, which must always go on in mining.

In reply to a further question, the Chairman said that the small quantity of copper they got was not sufficient to pay the cost. As they went on the copper was diminishing, and the expenses of getting it increasing. But while copper was diminishing, the prospects of getting tin were increasing, and what they were doing now was searching for that tin by sinking a deeper shaft, and when that shaft had got to a certain point they would drive levels.

Capt. Gilbert explained that the reason the loss was greater in 1888 than in 1887 was that the expenses of getting the copper had been greater. When the rise in copper took place it encouraged them to proseente several levels, and had it remained up, the present year's accounts wonld have shown a very different state of things.

Mr. Mitchell: What I want is to reduce the expenses. If we go on as we are now, about 18 months will finish ns.

The Chairman: There is one security you always have—the directors have so large an interest in it that you may be sure we will not spend more than is necessary. There is no greater safeguard than self-interest.

The motion was carried nnanimously.

The retiring directors, Messrs. Robert Henty and Robert Taylor, were re-elected.

The auditor was also re-elected.

A vote of thanks to the chairman closed the proceedings.

TREGEMBO MINING CO.

IT IS DECIDED TO STOP THE MINE—CALL OF 3s.

A general meeting of the shareholders was held at the Offices, Union Court, Old Broad Street, on Wednesday, to receive the statement of accounts and manager's report, also to make a call, if deemed necessary, and to transact the ordinary general bnsiness of the company—R. W. Goold, Esq., presided.

Mr. D. Julyan (secretary) read the notice of the meeting, and the minutes of the last meeting.

EXPENSES INCREASE, AND RETURNS DECREASE.

The Chairman: Gentlemen, when we took steps some years ago to re-start this mine, we did it supposing that in a year and a-half, or two years, we should be able to prove the mine 10 fms. or 20 fms. deeper than it was, and that we shonld be able to do so at a loss of not more than 150*l*. or 160*l*. per month. At first this view seemed correct, and the loss was confined to that, but as yon will have seen by the statement of accounts sent out, whilst the returns of tin have steadily decreased the expenses have as steadily increased, until, upon the face of the statement before you, they amount on an average to 500*l*. per month, with a loss of something over 350*l*. That is a state of things we never contemplated, and conpled with the fact that, whilst developing the mine at this expenditnre we have found nothing to warrant us in going to a further trial, costing 5,000*l*. or 6,000*l*. to go 20 fms. deeper, I, for one, must confess that I do not feel that we shonld be justified in asking our shareholders, as the company is at present constituted, to go on to that extent.

INDISPOSITION TO GO ON.

I may say that this conviction has been brought about mainly by the reception of a letter which I got from a shareholder, stating his determination not to go on any longer. I have no doubt others will take the same steps when they hear to what conclusion he has come. Under these circumstances, I, myself, from considerations of age and ailments, have felt that if there was going to be a move made in that direction I shonld fall in with it, because I did not wish (not seeing my way to constitute the company on a firmer basis, and seeing others gradually sliding out of it) to go on for an indefinite period incurring further expenses. Your committee have considered the subject, and have come to the resolution that it is on all account more prudent to propose to-day that the mining operations be suspended, and the affair be wound-np. I have, therefore, to move "That the statement of accounts, together with the agent's report, be received and adopted, and circulated amongst the shareholders."

Mr. Bellingham seconded the motion, which was carried.

Mr. Lane said that a call of 3s. was necessary, and it was decided to make one of this amount, payable on the 24th April to the bankers, Messrs. Bolitho and Sons, of Hayle, Cornwall.

Mr. Rawlings seconded the motion, and said he supposed the agent would clean up the mine, and abandon it with the least expense possible.

Capt. Hodge said that that would be done.

RESOLUTION.

The Chairman then proposed, "That the prosecution of this mine be discontinued, and that notice thereof be given to the lords, and that they be offered the machinery and materials at a valuation; that the mine be given up accordingly, and that a special meeting be held to confirm this resolution or otherwise." It will be proposed at such special meeting that the mine be offered by auction as a going concern, and that the whole of the machinery and materials be offered together or separately, and that the winding up be left in the hands of the secretary under the direction of the committee, who will continue their services for the purposes of closing the adventure with the least possible delay or expense.

These resolutions were seconded by Mr. Lane, and the business closed.

THE STANDARD GOLD MINING CO., LIMITED.

STATUTORY MEETING—THE TITLE SECURED—A HOPEFUL OUTLOOK.

The statutory general meeting of shareholders in the Standard Gold Mining Company, Limited, was held at Winchester House, Old Broad Street, in the City of London, on Wednesday, under the presidency of Clifton Shield, Esq.

Mr. Alick R. Ramsay, A.C.A. (secretary), read the notice convening the meeting.

PRELIMINARY WORK.

The Chairman: Gentlemen, this is a meeting convened solely to put ourselves in conformity with the Act of Parliament. It would have been better, perhaps, if we had been able to postpone this meeting, because later on we could have given you more technical particulars relating to the mine; but as the Easter holidays are coming on, and as you will be anxious to know how you stand with regard to the property, I thought it right and proper to hold this meeting at once in order to explain our position. You will have noticed, no doubt, that there was a considerable lapse of time between the issue of the company's prospectus and the transfer of the property to the company, and I am free to admit, now that all the difficulties are over, that we had extreme difficulties in effecting this transfer; but inasmuch as it is now absolutely settled, I think you need not regard that part of the business with uneasiness. I may tell you that there were offers for the property very much in excess of what we were paying. With regard to the present position of affairs, I will content myself with reading a letter from Messrs. Scholtz and Cooper, our legal advisers in the Transvaal, than whom it would be impossible to find more competent men to conduct your business, and if I may judge of their future efforts on behalf of this company by their action hitherto, I think it augurs very well for us.

AN IMPORTANT LETTER.

This letter is dated 22nd February, 1889, and is addressed to the solicitors of the company here.

"We beg to confirm our cable of the 19th inst. reading, 'Order of property very good'—the first word meaning that the transfer to the company is complete. As advised in our letter of the 15th inst., Mr. Scholtz attended at Krugersdorp to take transfer in the company's name from Messrs. Schwartz and Hauser, and we are glad to state that he succeeded in putting the matter through, and Messrs. Schwartz and Hauser were paid the first instalment of the purchase price. It was only on Mr. Scholtz's return from Krugersdorp that we ascertained that the sum of 5,500*l.* had been placed to our credit as advised by cable, as the Bank of Africa at Johannesberg gave us no notice of it. In future, kindly remit to us here. Some of the company's claims were held under prospecting licenses, which are rather a precarious title, and make the claims liable to be jumped. So we took out diggers' licenses over the whole property, and paid them up to March 21st, when we will see that they are renewed. The amount expended in this manner is 94*l.* 8s., which we think ought fairly to be recovered from Capt. Hodgkins, as Messrs. Schwartz and Hauser inform us that he is liable for all taxes from and after January 21st last. We secured two water-rights for the company, one on the claims and one in a little creek close by. The latter is not in order to be transferred just yet, but we will see that it is registered in the company's name as soon as possible. From all accounts we gather that the property is an excellent one, and very rich, and we are aware that offers of 100,000*l.* cash were lately made to Messrs. Schwartz and Hauser for it, but fortunately they cleeted to stand by their agreement with Capt. Hodgkins, notwithstanding his long delay in floating the company. As Krugersdorp is a long distance from here, and we cannot give proper attention to the property, we are of opinion that a competent manager should be appointed at once. Of course we will continue to watch the company's interests as its solicitors. We have had considerable trouble and expense in this matter, and we will probably require some more money before the company is registered."

By that letter you will see that your title is all right, and you will see, moreover, that you are on what is called the "diggers' license," which will prevent "jumping" the property, and this is a danger which entails very often considerable loss to companies in the Transvaal.

APPOINTMENT OF MANAGER.

As soon as the property was properly secured the board set to work to find out the most competent man to take the management. After close examination and long research they selected Capt. Martin Kitto, an experienced Cornish miner, to look after your interests. Moreover, they have secured the services, as a local committee, of two gentlemen of considerable experience and high reputation—Mr. William Jenkins, for a great number of years in the employment of Messrs. Lucas and Aird, who will look after the engineering and mechanical part of the business; and Mr. Joseph Lyon Wood, who earned his reputation in the house of Messrs. Sassoon, and is a commercial man of high standing. (Hear, hear.)

THE FAMOUS BATTERY REEF.

From what we know already of the property—which is considerable, inasmuch as we know that the Battery reef runs right through our property, or very nearly so—I believe you have a property of very great value indeed; but before expressing definite opinions about it, I should like to see it more opened up than it is at present. We have proved the reefs, and that is about all. We have in course of erection a 10-stamp battery, and I hope before long we shall be able to communicate to you the results of a further sinking upon your property. At the present time, however, you may take it that very valuable reefs run through your estate, and, in course of time, I think you will not regret the investment you have made in this property. Transvaal shares at the present moment are at a great discount—even the Witwatersrandt companies, which are in the richest gold-producing district in the world, the shares are practically unsaleable, and this often happens in affairs of this sort. Men get beyond their depths—buy more shares than they can hold—and when a little pressure comes they have to get rid of them, and they are thrown upon the market. I am a large shareholder in the Standard, and am quite convinced of its value.

QUESTIONS.

A Shareholder: How long will it be before the battery gets to work?

The Chairman: It will be erected in a short time, but to keep a battery constantly employed you have to open up your mine, and before we receive the report from Capt. Kitto, who is on his way to the Transvaal at the present moment, I should not like to say. In the course of a few weeks, however, we shall be able to tell you a great deal more about the property. The battery is there; the mere erection of the battery is nothing; but the question of opening up the mine to keep your battery fed regularly is a larger question.

A Shareholder: Is there any difficulty with labour?

The Chairman: As soon as the property was secured the board decided to erect the buildings—the manager's house and so forth. If you do not do this the Kaffirs leave your place. That has happened in a good many mines in the Transvaal, but we have taken that precaution, and the buildings are really being put up at this moment.

FINANCES.

As regards your capital, the whole of the shares have been allotted, and we have spent about 11,000*l.* 5,600*l.* was remitted for the purposes of paying the vendors, 2,900*l.* has gone in the purchase of machinery, 1,500*l.* has been remitted for work in progress, 500*l.* for keeping up the licenses, and 450*l.* in legal expenses in Johannesberg. So that you have practically got 30,000*l.* working capital. If the claims are of the value that we believe they are—although there is depression in the market at the present moment with regard to these mines—I do not think it will be very long before we have offers for a considerable portion of our property. We have over 100 claims, and I hope that if a turn comes—and I can barely conceive that a turn will not come, considering the enormous gold production of that district, and believing, as I do, that we are in the best part of it—I hope it will not be long before we have substantial offers for some of our claims. We have already had offers which I did not think commensurate with the value of the property, and I took upon myself to advise the board not to entertain them. We know that the Battery Reefs claims have been sold for 12,000*l.* a claim; and we know that we have got the Battery reef, and we are therefore not anxious to throw away our property.

In reply to a shareholder,

The Chairman said they had 102 claims, each being 400 ft. by 150 ft. The amount at the bank was 4,000*l.* but they had only called up 7s. 6d. on their share capital.

The following extract from a letter just received from Messrs. Cooper and Scholtz, of Pretoria, was read:—"We visited the Standard property, in company with Messrs. Foster and Furnes, on Sunday, spending nearly five hours at the property, and making a thorough investigation, and are more confirmed in the opinion that the same is second to none on the fields. At least five distinct reefs were traced, and considerable prospecting has been done, reefs being traced almost all the way through." (Applause.)

A vote of thanks to the chairman terminated the proceedings.

Messrs. William Fox, Alfred Samuel Kirk, and James G. Bellamy have joined the board of the British Water-gas Syndicate, Limited.

Messrs. Morrison, Kekewich and Co., metal brokers and agents, give notice that they have admitted as a partner Mr. Henry James Kirk, who has for several years taken an active part in the business.

Holloway's Pills.—When inclement weather checks to a considerable extent the action of the skin, an alterative is required to compensate the body by means of other channels. Holloway's Pills can be confidently recommended as the easiest, surest, and safest means of attaining this desirable end without weakening the most delicate or incommoding the most feeble. When from frequently recurring chills or the inhalation of impure air the blood becomes foul and the secretions vitiated, these Pills present a ready and efficient means of cleansing the former and correcting the latter. By this salutary proceeding disease is arrested at its outset, its pains and inconveniences averted, and the nervous structures saved from the depressing effects entailed upon them by an illness.

The LIST OF APPLICATIONS will OPEN on MONDAY, the 15th April, and CLOSE on or before WEDNESDAY, the 17th April, 1889.

THE

BARTHOLOMAY BREWING COMPANY (OF ROCHESTER), LIMITED.

Being an Amalgamation of the BARTHOLOMAY, ROCHESTER, AND GENESEE BREWERIES.

SHARE CAPITAL, £620,000,

31,000 Eight per cent. Cumulative Preference Shares of £10 each - £310,000

31,000 Ordinary Shares of £10 each - - - - - - - 310,000

£350,000 Six per cent. Debentures of £20 each, or any multiple thereof, of Five per cent. premium, are offered for public subscription, redeemable at 10 per cent. premium after the year 1910, at the option of the Company. on six months' notice. A First Mortgage upon the whole of the Freehold and Leasehold Properties, Fixed Plant and Machinery, and the Shares acquired, will be given to the Trustees for the Debenture-holders. The Debentures will be payable 10 per cent. on Application (being 5 per cent. on the Debentures, and the 5 per cent. premium), 45 per cent. on Allotment, and the balance of 50 per cent. two months after Allotment, or the whole may be paid up on Allotment. The Shares will be payable 10s. per Share on Application, £4 10s. per Share on Allotment, and the remainder in two instalments of £2 10s. per Share at two and four months respectively after Allotment, or the whole may be paid up on Allotment, entitling the holders to participate in Dividends on amounts paid up from dates of payment.

The Dividends on the Preference Shares and Interest on the Debentures are payable half-yearly, on the 15th April and 15th October in each year, and the Directors have taken power in the Articles of Association to pay interim Dividends on the Ordinary Shares. The Vendor, Mr. Monro, before the issue of this Prospectus, has been authorised on behalf of the former proprietors and other Rochester citizens to apply for £150,000 Debenture Capital and Shares amounting to £200,000.

Secretary (*pro tem.*)
JOHN J. PUNCH, Esq.

Temporary Offices.
WARNFORD COURT, THROGMORTON STREET, E.C.

ABRIDGED PROSPECTUS.

This Company has been formed for the purpose of carrying out an amalgamation of three large breweries (the Bartholomay Brewery, the Rochester Brewery, and the Genesee Brewery) situate in the City of Rochester, in New York State, U.S.A., and carrying on the businesses under one management.

These Breweries are amongst the largest in New York State, and are all well established, and bear the highest reputation.

The City of Rochester is situate on the Genesee River, about 7 miles from its mouth at Lake Ontario, and about 380 miles from New York City. It possesses exceptionally fine water for brewing purposes, the water being gravitated from the Hemlock Lake, about 22 miles distant from the City.

The City is located in the best barley-producing district in the State, and is in the centre of the most celebrated hop-fields of New York State. It also possesses excellent railway communication with New York, Philadelphia, Baltimore, Boston, Pittsburg, &c., being on the main line of the New York Central Railroad.

The Bartholomay Brewery.

This is a large freehold Brewery, standing on upwards of 5 acres of land on the left bank of the Genesee river, substantially built and well arranged, with a frontage of 450 ft. It comprises brew-house and large storage vaults, capable of turning out with present plant and storage 200,000 barrels per annum (the storage capacity equalling 67,000 barrels), and a malt-house possessing a capacity for malting 200,000 bushels of malt annually. Surrounding the main buildings are the large elevators for storing malt, ice-houses, washhouses, freight depôt, offices, stables, and pitching sheds.

The Brewery is connected by sidings with the railways, and has in addition water communication by the Erie Canal.

The Brewery has been recently considerably enlarged to meet the rapidly-increasing demand for its produce, and, if necessary, with a small further outlay for storage, the present output could be greatly increased.

Amongst the properties belonging to the Brewery are the New York Agency of the Brewery, and valuable Leasehold Premises (50 years' lease) at 34th Street, New York; the Baltimore Agency and Freehold Stores, Bottling House, Stables, &c., at Baltimore; the Philadelphia Agency and Freehold Stores, Bottling House and Stables at Philadelphia. Also a valuable Freehold Hotel and Pleasure Grounds at Charlotte on Lake Ontario, 7 miles from the Brewery, a great pleasure resort of the inhabitants of Rochester and surrounding districts.

The beers brewed are of exceptionally good qualities—viz., Standard Lager, Extra Pale Bohemian, and Extra Dark Bavarian.

The Rochester Brewery.

This is a large freehold substantially-built Brewery with storage houses, situate on the right bank of the Genesee River. The Brewery possesses a frontage on the street of 453 ft., with a depth of 170 ft., with capacity for 150,000 barrels per annum. The storage capacity is about 55,000 barrels.

The buildings are in first-class order, while the cellars, cut 40 ft. into the solid rock, cannot be excelled.

Included with the Brewery is the Mount Hope Freehold Malthouse, of S. N. Oothout and Son, capable of turning out 100,000 bushels of malt per annum.

The Brewery has valuable agencies at Williamsport, Lockhaven, Boston and New York, and a fourth share of the Lake Ontario Beach Improvement Company, on which is built a fine hotel, pavilions, bath-houses, &c. The beers of this brewery are of exceptional quality, and consist of Standard Lager, Extra Pale Bohemian, and Extra Dark Bavarian.

The Genesee Brewery.

This is quite a model freehold Brewery, the plant and machinery (in excellent condition) being of a capacity of 100,000 barrels, with a storage capacity of 30,000 barrels.

This Brewery is on the left bank of the Genesee river, and has sidings to the railways.

Attached to the premises is a valuable malt-house, seven stories high, capable of turning out 120,000 bushels of malt annually, and fitted throughout with first-class machinery.

Arrangements have also been made for including in the amalgamation an additional malthouse as under:—

The Parson's Malthouse.

This is a freehold malthouse on the Erie Canal, in the City of Rochester, with railway connections, capable of turning out 250,000 bushels of malt per annum. The malthouse has 10 malting floors and eight kilns, with double furnaces to each kiln.

All the above Breweries and malthouses are in close proximity, and can be worked under one management with considerable advantage.

The number of barrels of beer produced by the combined Breweries was as follows:—

For the year	1885-6	226,780 barrels.
,, ,,	1886-7	269,206 ,,
,, ,,	1887-8	301,758 ,,

The books of the Breweries and malthouses have been examined by Messrs. Price, Waterhouse and Co. on behalf of the Company, who certify that the net profits of the three breweries for the last three years have been as follows:—

For the year	1885-6	£86,374 16 10
,, ,,	1886-7	108,684 16 2
,, ,,	1887-8	115,300 12 3

thus showing a steady increase in the profits.

It is anticipated that these profits will show a considerable increase in the future, both by economics to be effected by a joint management as well as by the ordinary expansion of trade. The vendor states that since the last annual stocktaking, to which the above accounts were made up, the sales have increased at the rate of upwards of 15 per cent.

Taking, however, the rate of profits at £111,992 per annum, the average of the last two years, the following results will be shown:—

To pay interest on £350,000 debentures at 6 per cent., will require	£21,000
To pay interest on £310,000 preference shares at 8 per cent., will require	24,800
To pay dividend on £310,000 ordinary shares, at, say, 16 per cent., will require	49,600
	£95,400

Leaving a surplus of over £16,000 per annum for management expenses and reserve, or further dividend on the ordinary shares.

The above three Breweries have been hitherto owned and carried on by three local companies—viz., the Bartholomay, Rochester, and Genesee, which severally own the freeholds of the Breweries and real property and buildings, plant, machinery, rolling stock, &c.

At the last stocktaking the amount of stock-in-trade and book debts of three Breweries, less current liabilities, amounted to £182,816.

Mr. Monro, the vendor to the Company, has entered into agreements, presently referred to, for purchasing the whole of the Bartholomay and Rochester Breweries, together with the plant, machinery, and properties held in connection therewith, and the stocks and book debts (less current liabilities), as at the date of last stocktaking.

Mr. Monro has also entered into agreements, presently referred to, to purchase the Parson's Malthouse, and 99½ per cent. of the share capital of the Genesee Brewing Company.

Mr. Monro has fixed the price to be paid to him by the Company for the whole of the properties thus acquired by him at £970,000, and any premiums to be received on the issue of debentures.

The Bartholomay and Rochester properties are taken over from the date of the last annual stocktaking of the Breweries—viz., September 1st, 1888, and November 1st, 1888, respectively—and the shares of the Genesee Brewing Company acquired are taken over with all benefits arising since 1st November, 1888, the vendor receiving an agreed rate of interest as from those dates on the purchase price.

Mr. William Bartholomay as manager, and Mr. Philip Bartholomay as treasurer, two members of the board of management in Rochester, have agreed to jointly manage the business for a minimum period of five years, and the services of the present staff will be retained so far as needful, thus ensuring a continuance of the system of management under which the Breweries have attained their present high position.

A first mortgage on all the leasehold and freehold properties, including fixed plant and machinery, of the Bartholomay and Rochester Breweries, together with the Mount Hope and Parson's Malthouses, and 99½ per cent. of the shares of the Genesee Brewing Company, will be given to the Central Trust Company of New York, the trustees for the debenture-holders, and subject to that mortgage the whole of the property acquired will be conveyed to an American Corporation in New York State, the shares of which American Corporation will be held by or in trust for this Company.

The above statements as to the properties purchased are made upon the authority of information furnished by the American vendors, and of Messrs. Price, Waterhouse and Co., who examined the books.

The memorandum and articles of association of the Company, together with copies of the above-named contracts, can be inspected at the offices of the solicitors of the Company.

If the whole amount applied for by any applicant be not allotted, the surplus amount paid on deposit will be appropriated towards the sum due on allotment. Where no allotment is made, the deposit will be returned in full.

Prospectuses and forms of application can be obtained at the offices of the Company, or at the offices of the bankers, brokers, and solicitors.

ORDERS SHOULD BE TELEGRAPHED AT ONCE.

See Mr. THOMPSON'S MINING AND INVESTMENT CIRCULAR.

PRESS OPINIONS OF THIS CIRCULAR.

"Life," 21st February.

"Colon Gold Mine shares are likely to rise."

"Fair Trade," 15th February.

"The Tetuan Gold shares, which we recommended as a mining investment some week or two ago, have thoroughly fulfilled our prognostication. Colons can be had for 2s. 6d. to 3s. There ought to be a big rush to be in this swim."

"Society Herald," 26th February.

"The interest which has been displayed of late in Colombian Hydraulic Mines continues. The favourite of the hour appears to be the Colon Mines, which are in the immediate vicinity of the Tetuan, Orita, Maravilla, and other famous Colombian mines worked by the hydraulic process. I am assured, on the same good authority which aided me in predicting so accurately the course of Tetuans months ago, that the advance in the price of Colon shares has only just made a beginning, and that they may be expected to cross 20s. within a very short time. Be it observed, I by no means mean to imply that they will not go very much higher than the figure mentioned, but my policy is to advise my readers step by step, so that those who have bought at low prices may turn out their shares whenever they have a good, respectable profit."

"Society," 2nd March.

"Colon Gold shares are likely to have a considerable rise. It is even wise to buy these shares and carry them over from account day to account day. They should, however, be acquired and put by until they show dividends—a time not far distant. The Colon Mines are situated in Colombia, a district now where the mines are significantly productive. All those who are investors should read the report of Mr. Welton, the engineer of the Colombian Hydraulic and Orita Mines. He is a great authority, and in his conscientious statement exhibits what this really legitimate property should produce to the Colon shareholders."

"Stock Exchange Times," 2nd March.

"Colon.—None should stop buying these shares."

"The Hawk," 19th February.

"Colon Gold shares have come with a rush in the last few days. The mine is undoubtedly one of the richest in the gold-paved district of Colombia, consisting of auriferous gravel deposits which are worked on the hydraulic system. It is a near neighbour of the celebrated Orita Mine, already cleaning up to the tune of £1,200 a month. Major Ross, a director of the Orita Mine, has just joined the board of the Colon, and his presence signifies that the works will go forward with redoubled energy."

"Country Gentleman," 2nd March.

"It will be remembered that last week and the week before last I had a good deal to say about Colon Gold mines, and stated that it would not be long before a report, which would astonish even those who believed most firmly in the mine, would be forthcoming. This report is now to hand, and, reading it, it really appears as if the engineer, Mr. W. S. Welton, who is responsible for it, had been drawing upon his imagination; but I am assured that this is far from being the case, and that Mr. Welton has underrated the brilliant prospects of the mine. One thing should be remembered, and that is that Mr. Welton is a well-known and highly-respected gentleman, and anything that emanates from him should be received with the respect that it deserves. Mr. Welton can lay claim to having seen his reports regarding other mines fully borne out by actual results."

"Country Gentleman," 23rd February.

"I can but repeat the advice I gave last week regarding Colon Gold mining shares, and that is to buy them at once. Since I first mentioned them they have risen from 3s. to 11s. 6d., and it is highly probable that they will go as high as 15s. and over. The property, which has only recently come into such great prominence, is situated quite near the famous Colombian Hydraulic and the Orita. It is stated by thoroughly competent authorities that the deposits cover over 1,000 acres, the property really consisting not of one mine only, but of five mines equally rich and promising."

"Country Gentleman," 16th February.

"Colons.—The jump has been as smart as I prophesied, and I hear that the top has by no means been reached. The mine has suddenly been found to be far richer than was ever believed, and consequently the shares, of which there are not very many about, are in the most active demand. An enormous amount of business has been done in them during the week, and they close to-day very hard and firm. In fact, the movement in Colons has been *the* feature of the week."

"Country Gentleman," 9th February.

"Rumour says strong financial combination has wrought a change in the management of a mine for some time before the public, and that the shares, now at 3s., will have a large and smart rise. My readers will do well to watch for this. I may not mention the name at present, but next week shall be able to give full particulars."

"Financial Chronicle," 20th February.

"Colon Gold shares promise a further advance."

"Financial Chronicle," 23rd February.

"Colons.—The rise has only begun."

"Rialto," 16th February.

"Colons seem to be good for a big rise in price."

"Bullionist," 2nd March.

"Colons.—Investors and operators should buy at present prices An excellent report has been received upon the Colon Mines from Mr. W. S. Welton, one of the most experienced hydraulic miners of the day."

"Bullionist," 2nd March.

"Colons are steady, and should be bought. From all we can learn regarding this property, there is no doubt as to its great value, and when the results of the operations now being carried out under the new management become known, we quite anticipate the present price to quickly double itself."

"Stock Exchange."

"Colons will soon be better. Those who should know are buying the shares again quietly. Our readers might do worse than follow this example."

"Stock Exchange," 16th February.

"The feature of this market during the past week has been a great rise in Colon Gold shares. Early on Wednesday morning these shares—then only at 3s. 6d.—began to spring away by leaps and bounds, and in but a few minutes a rise of 5s. was to be recorded. Judging by the prospects of this undertaking, now that some important changes have been effected in the management, the shares ought to have a much further rise, and doubtless but a few days will see them several shillings higher than now."

"Stock Exchange," 23rd February.

"Colon Gold shares have met with great demand during the current week. The reports from the mine are of a very satisfactory character and, we consider, justify a further advance. Reports say that these shares will go a good deal higher."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Iuvestors' Guardian," 23rd February.

"Colon Gold shares are very firm, and there are many indications of a further advance in price. It would not surprise us to see them go to double the present quotation."

"London and Brighton," 17th February.

"The Colar Mines are of the same nature as the Tetuan, being hydraulic, and comprise something over 1,000 acres close to the well-known Colombian Hydraulic and Orita Gold Mines. The advantage these cheap-priced shares present to the mining speculator is that there is plenty of room for a rise, while the possible fall is very limited, and at the worst the loss is infinitesimal compared with high-priced shares which, if they have a chance of a rise of one or two poiuts, have also the probable contingency of a drop of four, five, or perhaps more, at any time."

"London and Brighton," 20th February.

"Colon Gold shares are certainly good to buy for a rise."

"Mining News," 2nd March.

"In the case of Colons, one of the popular speculations, we feel sure prices will advance, and these shares offer an excellent iuvestment medium at their current price. Colons will go much higher than now selling."

"Stock Exchange Times," 2nd March.

"We are confident that the shares will yet see from £3 to £4 each."

"Court Circular," 2nd March.

"Things speculative have been more or less depressed during the last few days, and even the shares of the Colon Gold Mines have had a slightly backward tendency, in common with the rest of mining investments. This is, however, not a bad thing for those who want to speculate, since the report from the mines would show Colons to be very good business, and, if they are a shilling or two cheaper, all the better for the buyer, seciug that they can be so thoroughly recommended."

"Financial World," 16th February.

"Colon.—A pleasant surprise awaited those connected with this hitherto unknown enterprise last week. Very little has been heard of this modest placer mine, until a demand sprang up in the middle of the week for the shares, which forced them upon the attention of the market, and, as a consequence, the shares rose in one day from the insignificant price of 2s. 6d. to 8s., an advance equally as important as some which have had to be recorded with respect to the Witwatersrand properties, when we consider how little has been done to bring them into prominence. As a thread of the gossamer will show the direction of the wind, the results which have lately been made by several well-known placer properties may be taken as giving in some degree an indication of what is yet in store for those whose faith is pinned to properties of this description, in preference to those of the quartz mines. A company whose shares can advance in one day 6s. ought to possess a property destined to make some flutter in mining circles."

"Financial World," 2nd March.

"Colons.—These shares, we believe, have now reached their lowest ebb, and those who want to secure an interest in this ought to do so when the price stands at something reasonable. The decline in the price was due to indiscriminate selling by speculators who desired to realise."

"Mining World," 16th February.

"We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulatiens. We look for a steady advance in the returns in the near future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are managed with honesty and ability."

"Mining World," 16th February."

"Hydraulic mines have been to the fore, and particularly the share of the 'Colon,' of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, began to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success."

"The Capitalist."

"The most remarkable has been Colon Gold shares, which are now quoted 10s. to 11s., with every prospect of a still further rise."

"Financial News," 14th February.

"The feature of the mining market yesterday was the rise in Colon Gold shares. The Colon Gold property is a close neighbour of the Colombian Hydraulic, the Orita, and the Tetuan, and, if we may judge from the reports, a worthy competitor with them. Among the directors of the undertaking we notice Mr. Sankey, of the Colombian Hydraulic, and Major Ross, of the Orita—an ample guarantee that the management will not be lacking in enterprise or intelligence."

"Financial News," 15th February.

"In another column will be found the report of Mr. B. Anderson, a well-known American hydraulic mine engineer, upon the Colon mines, which we had occasion to mention in our yesterday's issue. According to Mr. Anderson, a sampling of the gravel gave, under hand washing, a profit of $1,351 the amount of water used being only 4 to 6 miner's inches. The mine, we understand, has been worked more or less systematically under the hand process, or sluicing, and always with results similar to the above. The new directors of the company have determined to work the mines in a more energetic manner, and have already entered into a contract for the construction of the works necessary to bring 500 miner's inches of water on to the mines at a cost of £14,000, this sum being only half the amount of working capital still remaining intact with the company."

"Financial Chronicle," 2nd March.

"Colons.—We may shortly expect to commence moving again."

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, testimonials, &c., to

WELLINGTON & CO. (Successors to CLARK & WELLINGTON),

MANUFACTURERS.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.

City, Thursday Evening.

BROKERS IDLE—PORTMANTEAUS BEING PACKED UP—QUOTED PRICES REPRESENT ABSENCE OF BUSINESS—COPPER—A WORD FOR THE BROKERS.

Brokers who had been standing idly in the market place were, this morning, seized, as by one accord, with the mad desire to cast off dull care, and to hnrry into the country for a period of repose. In truth, they are much in want of some rest, for the last three months have been peculiarly trying. To late hours and the midnight oil they have not been strangers. The intervention of Easter. and the previous departure of their clients for their holidays, have combined to knock business, metaphorically, into a cocked hat, and the transactions of the week have been few and unimportant, whilst prices represent the absence rather than the presence of bnsiness. Quotations are purely nominal, for shares have not changed hands in sufficient numbers to affect them in any degree. At the same time an exception must be made in the case of South Africans, which are down. How much they have declined during the last six weeks will be seen on reference to an article on our central pages.

The Stock Exchange will keep holiday on Saturday—a four days closure—which. it is believed, is of unprecedented length. Towards the end of the month some American holidays may be expected. On May 1st there will be another closure of the Stock Exchange, and Whitsuntide will follow closely after. Altogether, between now and Whitsuntide, there will be a good deal of holiday-making. This will not be regretted by brokers and dealers, unless it should put a stop to thc genial flow of business which we have experienced during the past few months. We say it will not be regretted, because the publlc have little idea of the intense mental strain put upon these gentlemen to keep touch with the different prices as they rise and fall, and with the ever-varying circumstances of the respectivc companies. The number and the ramifications of thcse companies are ever on the increase, and the difficulty of obtaining information, particularly in regard to the new ones, is not generally realised by country clients, who are often very much displeased that their specific questions are not always answered by return of post.

The position of copper, and the action of the syndicate in this country, is dcalt with on our leader pages.

The position of this metal becomes more and morc hopeless. Prices havel bccn down to 37*l.*, and it is said that 11 firms or institutions hold bctwecn them 145,000 tons of copper, which cannot be sold save at an enormous loss. The 145,000 tons mentioned in one case creeps up to a total of 175,000 tons according to another estimate, and the proportions are even divided as follows :—

	Tons.	
Bank of France	35,000	
Crédit Foncier	33,000	
Banque de Paris	22,000	
Hirsch and Co.	33,000	
Union Bank of London	7,000	(sold)
National Disconnt	4,000	(sold)
Strauss and Co.	2,000	
Société Générale	3,000	
Lecayer and Co.	3,000	
Hambro and Son	3,000	
Baring Brothers and Co....	3,000	

The lock np of capital may be placed at almost any figure between seven and eight millions sterling.

Several important meetings have been held this week, and notably those of Alturas and New Consolidated. As regards the former, we announced last week the perfect success of the re-construction scheme ; and as regards the latter, the general outcome was the expression of the directors' resolve to raise capital to do justice to the valuable properties possessed.

In the Home Market very little has been done, though, as we expected, considerable astonishment has been expressed in Cornwall at the sudden stoppage of West Godolphin and Tregembo Mines. It has come upon the Cornish mind likc a bolt from the blue ; but, nnder all the circumstances, we do not see what course Mr. Lane could have adopted different from that he took on this occasion. Cornish shares are all weaker.

Africans.

Notwithstanding the fact that the Easter holidays have rather unsettled the markets, a considerable amount of business has been done in these shares ; but we have again to record a fall in all the higher priced shares. The greatest fall has been experienced by De Villiers, viz., 7*l.* per share. We are still of opinion that the shares are above their value ; and this remark applies also to City and Suburban, Ferreiras and Salisburys. At the same time several of the lower priced shares might be purchased with advantage.

The following have fallen :—Piggs Peak, $\frac{1}{8}$; Johannesberg Waterworks, $\frac{1}{8}$; Moodie's, $\frac{1}{8}$; Aurora, $\frac{1}{4}$; Bantjes, $\frac{1}{8}$; Bothas, $\frac{1}{16}$; City and Suburban, 2*l.* ; Crœsus, $\frac{1}{8}$; De Villiers, 7*l.* ; Durban Roodepoort, $\frac{3}{8}$; Ferreiras, $1\frac{1}{2}$; Heriot, $\frac{3}{8}$; Henry Nourse, $\frac{1}{2}$; Johannesbnrg Pioneer, $\frac{1}{2}$; Jumpers, $\frac{1}{2}$; Kleinfontein, $\frac{1}{4}$; Lauglaagte, $\frac{1}{4}$; Main Reef, $\frac{1}{8}$; Nabob, $\frac{1}{4}$; Oosthnizen, 20s. ; Simmer and Jack, $\frac{1}{2}$; Stanhope, $\frac{1}{4}$; Star, $\frac{1}{8}$; Van Ryn, $\frac{1}{8}$; Wemmers, $1\frac{3}{4}$; Wolhuters, $\frac{1}{4}$.

The following have risen :—Central Roodepoort, $\frac{1}{8}$; Crown Reef, $\frac{1}{8}$; Evelyns, $\frac{1}{4}$; Langlaagte Block B, $\frac{1}{4}$; Main Reef United Roodepoort, $\frac{1}{4}$; Salisbury, 20s. ; Spes Bona, $\frac{1}{4}$; United Langlaagte, $\frac{1}{2}$; Vogelstruis, $\frac{1}{8}$; Western Langlaagtes, $\frac{1}{8}$.

Copper.

The market has presented a sluggish appearance, and the changes that have taken place have tended downwards—indeed there is not a single rise to record. A fall is shown in Cape Copper, ¾; Libiola, ⅛; Namaqua, ¼; Panulcillo, ¼; Quebrada, ¼; Rio Tinto, ½; and Tharsis ¼. There is no other change to note.

Australians.

A slight enquiry has arisen for Mount Shamrock and Day Dawn P.C., but otherwise the market is almost a dead letter, and very few transactions have been recorded. The following have receded:—British Broken Hill, ¼; Day Dawn, 1s.; Gympie Golden Crown, 6d.; Mosman, 1s. The only improvement is shown in Mount Shamrock and No. 2 Queen of 6d. each.

Diamonds.

There has been little or nothing doing in these shares, and there is not a single rise to record in the week. A fall has taken place in Bultfontein, ¼; De Beers, ⅛; New Consolidated, 2s.; New Jagersfontein, ¼; United, ⅛; United Jagersfontein, 1s.; and Burma Ruby, ⅛.

Indians.

There have been very few transactions in Indian shares during the week, and prices have in consequence fallen from those last quoted, the only exception being Goldfields of Mysore. With regard to the suggested amalgamation of Eastern Mysore and Colar Central—to which we refer elsewhere—should this take place prices are likely to go much higher. A fall is shown in Balaghat, partly and fully paid, of 6d.; Mysore, ⅛; Mysore Reefs, 1s.; Ooregum, 1/16; the only rise being in Goldfields of Mysore of 1s.

Foreign Shares.

Business in this market has been fairly active and in a few instances prices have slightly improved. Of those shares that have fallen United States Placers and Victory appear about the best purchases. We are given to understand that the re-construction of United States Placers is assured, and prices therefore should considerably improve. A rise has taken place in Callao Bis of 6d.; Colombian, 1/16; Old Lout, ⅛; and Viola, 1s. Whilst the following have fallen, El Callao, ¼; Kapanga, 6d.; New La Plata, 6d.; Potosi, 6d.; Sauta Barbara, 2s.; Tetuans, 1s.; Transvaal, 1s.; United States Gold Placer, 1s. 6d.; Victory, 1s.; Viso, 1s.; and West Argentine, 6d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

Colonial Mines.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight ending 13th inst. is as follows:—1,290 tons crushed; yield of gold, 1,033 ozs.; approximate value, 3,565*l.*; fortnight's expenses, 2,155*l.*

Day Dawn P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending April 13th, viz:—"1,120 tons, 1,463 ozs., including return from 10 head of stamps at the public mill." (Estimated value, 4,974*l.*)

Kapanga.—The directors have received the following message from Capt. Hodge, viz.: "Since last message we have crushed for the month 125 tons quartz; the yield has been 100 ozs. of gold."

Midas.—A cable from the mine states:—"Yield for week 60 ozs." (246*l.*)

Mount Albion.—The following telegram is from the manager at the works:—"From 21st February to 21st March 750 tons ore raised, containing 39,000 ozs. silver (or about 52 ozs. per ton); 380 tons ore smelted, containing 22,000 ozs. silver, producing 58 tons silver-lead bullion, containing 15,000 ozs. silver. Shipped per Jumna ss. 28 tons silver-lead bullion, containing 12,000 ozs. silver."

Foreign Mines.

Consolidated Esmeralda.—Superintendent advises by telegram:—"Sold, April 3rd, bar gold, 580 ozs., from 322 tons. Milling ore in drift improving in quality. Mill running; crushing about 16 tons per day."

Excelsior.—A cablegram just received from the mine announces

that the Fanny Eliza shaft which has just been pumped out shows a fine body of ore. This shaft is abont 1,000 ft. long, and the vein is at a depth of about 640 ft. below the surface. Orders have been given for the erection of a smelter, and everything promises well for the summer.

Mason and Barry.—Dividend, 9s. per share; written off, 42,996*l.*; carried to sinking fund, 20,000*l.*; and carried forward, 42,297*l.*

New Eberhardt.—Cable received (17th April) from the mine manager (Capt. Read) states :—"I have commenced milling, 12th day of April, running well."

New California.—Telegram from the manager, dated 18th inst. :—"March output, 830 tons; yield, 685 ozs.; value, 2,370*l.*; mining costs, 1,130*l.*; expenditure on mine development and exploration account, 300*l.*" The mining profit thus was 1,240*l.*

New Guston.—The directors state that the case of Mrs. Emily Weston, of Colorado, a shareholder in the Old Guston Company, *versus* the New Guston Company (in which plaintiff claimed an allotment of 3,950 shares, or damages equal to the market value of the shares) has been tried before the Hon. Mr. Justice Kay, who dismissed the plaintiff's case with costs.

New Russell.—The result of the last month's crushings was 53 ozs.; the mill has not been working anything like full capacity, and will not do so for the present while the new amalgamator is experimenting upon the various ore bodies, and until the 2 tons of ore shipped forward has been treated in England, which will arrive this week.

Ouro Preto.—A telegram advises the March returns as follows :—"2,174 tons of ore produced 8,640 oits. of gold (1,000 ozs.)"

Pinos Altos Bullion.—The out-turn between 1st and 13th inst. was $16,000.

Rocky Bar Wide West.—A cablegram from the company's superintendent states :—"Partial clean-up first two weeks April. Tons mined and milled, 225; ozs. of bullion, 139."

Ruby and Dunderberg.—Telegram received from Eureka :—"155 tons tribute ore shipped; 157 tons tribute ore sold for smelting, producing to company $750."

United Mexican. — Telegram :—"San Cayetano property : Gross returns for week ending April 6th, $5,900; total expenses for week ending March 30th, $7,300; loss week ending March 30th, $450. El Cubo property : Gross returns for week ending April 6th, $1,100; expenditure, including capital expenditure for week ending March 30th, $5,200. Santa Cecilia property : Puerticito hoist started working."

Viola.—For the first two months of the half-year there was a net profit of 5,566*l.* 17s. 2d., which, together with the balance brought forward from July accounts, amounted to 11,900*l.* 1s. 5d. available for divideuds, and a dividend of 1s. 6d. per share was declared, carrying forward a balance of 650*l.* 1s. 5d. From the 30th of September to the 31st January no profit has resulted, but there has been an expenditure of 6,472*l.* 6s., which has been devoted entirely to the development of the property, in accordance with the suggestion of the mining engineer.

THE WEST ARGENTINE GOLD CO., LIMITED.

ELUCIDATION OF THE RE-CONSTRUCTION SCHEME—LATEST TELEGRAM.

From numerous letters received, the directors have reason to believe that the two schemes submitted to the recent general meeting are not properly understood. Some shareholders consider that re-construction on a basis of 15s. per share, credited, and leaving a liability of 5s., would be more to their benefit than the scheme recommended by the directors, which was adopted with only one dissentient. It is as follows :—That the company be re-constructed. That a new company be incorporated with a capital of 125,000*l.* That 100,000 1*l.* shares, with 17s. 6d. per share credited, be issued under registered contract for the purpose of acquiring the property and assets of the present company. The capital provided by the call of 2s. 6d. per share to be applied to take up the outstanding debentures, &c., of the present company. The 53,000 fully paid-up shares in subsidiary companies to be divided amongst the holders of the 17s. 6d. shares, which will, in the first instance, be offered to shareholders in the present company *pro rata*. That the further requisite working capital be raised by the issue of 100,000 preference shares of 5s. each, at 10 per cent. cumulative interest, the preference being on profits, but not on assets, and be convertible on equal terms into ordinary shares. Provided applications are received on a sufficiently large scale, the calls could be arranged on easy terms. The alternative scheme is as follows : A new company to be incorporated with a nominal capital of 100,000*l.* to purchase the assets and liabilities of this company, the shares to be issued under a registered contract, with 15s. per share credited, with remaining liability of 5s. per share, and to be offered *pro rata* to existing shareholders. Either scheme would place the company in a sound financial position, but in that now recommended your directors have endeavoured to offer the utmost advantage to those who provide the additional capital, without unduly burdening any shareholder. The payment of 2s. 6d. per share secures the present interest, as well as the proportion of the shares in subsidiary companies, each member is entitled to, whilst it is optional on the part of shareholders to apply for the new issue of preference shares; but the directors would point out that, unless they are provided with the requisite working capital, it will be impossible even to ascertain the value of the vast area at present under the control of this company. The shareholders are earnestly recommended, if they have not already done so, to subscribe for the new 5s. preference shares, thus ranking for dividends on 1*l.* 5s., whereas in the alternative scheme a further payment of 5s. per share would have to be made on the present holding to secure any interest in the new company, and dividends would only be payable on 1*l.* The directors thank the considerable number of shareholders who have responded so liberally to their invitation to apply for the proposed 5s. preference shares, but as yet the minimum of 30,000 has not been reached. It is absolutely necessary that one or other of these schemes should be actively supported by a large majority of those interested in the property, and unless within the next 10 days the board receive further applications, it will not be possible to carry out the re-construction of the company upon the lines which met with the approval of the recent meeting, and the results may be most serious to all shareholders.—W. P. Owen.

LATEST TELEGRAM.

"350 tons crushed, yielded 118 ozs."

Street Advertisements.—On the motion of Mr. Harry H. Marks, the London County Council on Tuesday unanimously resolved to instruct its Parliamentary Committee to take steps for the purpose of securing power to enable the Council to control and regulate the business of advertising on hoardings in London, and to issue licenses for such advertising, the profits to be applied in relief of the county rates. This most important step is one that is likely to have beneficial results. According to Mr. Marks, there are thousands of hoardings erected in the metropolis for advertising purposes, and in the present state of the law no one has any control of them, and they are free from every sort of tax. It is believed that licenses of from three to five guineas a year for each of these hoardings would bring in a considerable revenue to the County Council, and would do something towards compensating for the loss of the coal and wine dues. The impost would certainly be a fair one; it would be easily collected; it would injure no one; and it would tend to a better regulation of a form of advertising which has long made London streets hideous.

Holloway's Ointment and Pills.—These world-renowned remedies are confidently recommended to miners, navies, and all who have to work underground, or where noxious atmospheres exists. The minute particles of coal or metal which permeate the air in such places tend to block up the lungs and air-tubes, giving rise to bronchitis, asthma and palpitation of the heart. In Holloway's remedies will be found a safe and easily used medicant, for the penetrating properties of the Ointment relieve the local congestions and the mildly laxative effects of the Pills cause the liver to act freely, and the breath to become unembarrassed. By early resort to these remedies many a serious illness may be averted, and soundness of health maintained.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (17th April).—The lode in the 40 fm. level, east of junctiou, produces 7 tons per fm. Lode in 40 fm. level west Haley's winze, 4 tons of arsenical mudic and good work for tin. The large lode below the 30 west at the junction is producing a large quantity of mixed ore per fm. At this point the lode is improving as we open on its course. In the new rise (Glasson's) uear the new engine shaft at the 40 fm. level the lode is 4 ft. to 5 ft. wide in mundic and copper, and is opening a good piece of stoping ground. The stopes in back of the 40 fm. level east of great cross eourse are producing their usual quantity of ores. Cook's late stopes below the 30, east of cross course, produce about 8 tons of mixed ores per fm.—T. Gregory.

CARPUAN (15th April).—The ground in the shaft sinking on the south lode continues of a very easy description, and good progress is being made. The lode contiuues to present a most promising appearauce, but I find it not quite so rich in tin, present value about 15*l.* per fm.; we are hauling rich work to surface, and the slight reduction referred to, I regard as only temporary; indeed, as the appearance of the load leads me to think that it may at any day be quite equal to previous valuations.—R. Knott.

DRAKEWALLS (17th April).—The winze sinking below the 90 west is dowu 6 ft.; ground favourable for exploration. We shall commence cleariug out the soot from the small chambers of the old calciner next week. We are getting on very satisfactorily with fixing the ironwork of the uew calciner, and also with the masonry for the tram-road leading from the engine shaft to the higher new floors. All other surface work is being got on with as rapidly as possible.—H. Rodda.

MELLANEAR (17th April.)—The lode in Gundry's engine shaft is 6 ft. wide, yielding stones of copper and tin ores, and presenting a very promising appearance, and we expect to make good progress from this time forward in sinking. In the 150-fm. level driving east of Gundry's shaft the lode is 6 ft. wide, letting out a good deal of water, aud yielding saviug work for copper and tin. The lode in the 120-fm. level east of Gundry's shaft is 5 ft. wide, yielding 1 ton of copper ore per fm., and stones of tin and blende orcs. This end is getting very near the cross-course, and we arc expecting the lode to improve very soon for tin. The lode iu the winze in bottom of the 120 east of Guudry's shaft is worth 1½ tons of copper ore per fm.; we have suspended this winze for the time on account of the heavy drop in copper. We have now in the tribute department 17 pitches working by 35 men for copper and tin, at an average tribute of 11s. in the £. The water underground is gradually abating, and we hope in a short tiue to stop the old engine again.—J. Gilbert.

MID-DEVON.—Report for week ending 13th April.—Surface: Machinery was stopped for a short time on Tuesday, to screw cap couplings on axle of wheel. A shaft: Water drained 28 ft. below the 80. C shaft: The 60 east driven by nine men 1 fm. 3 ins.; total distance from shaft, 36 fms. 5 ft. Strata slightly easier, but unchanged in composition; yellow ore and arsenical mundic is beiug met with in saving quantities. The preparatory work for trip plat and tramway has been carried on by six men, and their coutract has been completed. They are now excavating inside of level for admission of tram road into plat. The stopiug on the 50 level has beeu suspended.—J. Neill.

SOUTH DARREN (17th April).—The lode in the 142 west looks kindly, but is without ore to value. The stripping in this level holds ou very well; worth 17 cwt. of silver-lead ore per fm. The lode in the 142 end east is stronger. We think this end should cut into ore soon. The drivage in the 130 west has improved, and is producing good leady stuff, which is being saved for dressing. The ground here is much like what it is in the 142, and I think the good shoot of ore we have there will hold up to this level at least. The 110 end east is producing good stones of lead. The 100 end west is worth 15 cwt. of silver-lead ore per fm. in a kindly lode. There is no change in the stope. Drawing and dressing is being pushed ou.—J. Mitchell.

WEARDALE.—Report for week ending April 13th.—Ore raised for week 72 tons: ore dressed for week, 75 tons; ore, &c., smelted for week, 139 tous, producing 69 tons of pig lead.

WEST WHEAL GRENVILLE (16th April).—The forking lift has been dropped to 9 fms. 4 ft. below the 80 fms. level, and are now making good progress in forking water which rose while lift was being last dropped, &c. Shaftsmen have been timbering shaft, and drawing stuff found in same to the 80. We have now five men engaged on skip-road in Harvey's shaft, and shall be able to make better progress with this work.—T. Hodge, J. Skeat.

WHEAL GRENVILLE (17th April).—The mine is drained to bottom; the water has fallen off about one stroke a minute. The 205 east end is worth 8*l.* per fm.; ground hard. The 178 east end is worth 10*l.* per fm. The 165 east end is worth 13*l.* per fm., and likely to improve. The 165 west is worth 10*l.* per fm. The 150 west is worth 8*l.* per fm. The stopes and tribute pitches are turuing out much as usual.—T. Hodge.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report on mine for week ending 23rd March: Balvanera shaft: Have sunk 3 ft. 1 in. with two shifts; rock hard; total depth, 57 fms. 4 ft. Have driven 50-fm. 17 ft., with four men, by machine drills. Breast very hard and full of slips, preventing rapid driving. In prospecting the west, or hanging wall, we discovered a body of fair metal, and I will commence next week cross-cut to the west to prospect said metal. Have placed ventilation pipes from main shaft to breast. Length of level from main shaft to breast 328 ft. Ventilation good. Have driven 24 level north 5 ft. A seam of metal 5 or 6 ins. wide has followed the drivage. Easy mining; ground breaks well. Have sunk No. 7 winze 7 ft. 7 ins. from 24. Shows no metal. Ground not hard, and breaks well.—H. C. Cloud.

ANGLO-MEXICAN.—The superintendent, in his report for fortnight ending 2nd March, says: Work on the main shaft is progressing satisfactorily. We have reached the Santa Margarita level with the timbers. As we have now very good ground we shall probably make rapid progress. In the San Antonio winze below 572-ft. level there is 2 ft. of good ore on the hanging-wall side. Ultimo winze below 572-ft. level is looking about the same as when I last wrote you. We are leaving ore on the footwall side; width in sight fully 4 ft. Assay results of samples takeu during the past week are very satisfactory. Work on the footwall vein, 572-ft. level. East and west drifts from south cross-cut No. 4: Width of ore, 3 ft. East drift from No. 1 south cross-cut, 506-ft. level, shows 2 ft. of good ore in the face.

ASIA MINOR (30th March).—Number of men employed in the mine 427. Value of stopes, 12 tons 15 cwt. Production to April 5th, 1,918 tons crushed, produced 214¾ tons silver-lead ore. Corresponding period last year, 1,437 tons crushed produced 165½ tons. The lode in the lower union is worth fully 1½ tons of silver-lead. The lode in the Savalan end west has greatly improved, and is now worth quite 1½ tons. Several of the trials recently commenced are showing favourable indications. Pappa Sawa Mine: Level No. 3 has greatly improved, and we are looking for good results, and stoping will be commenced in the winze from this level shortly.

BONNIE DUNDEE.—Manager's report for fortnight ending 16th February:—We have had 14 men stoping from the back of No. 1 south-west level on an average of 2 ft. 6 ins. of reef. Have had six meu in the underhand stopes from this level on an average of 2 ft. of fair-lookiug stone. The stone from this and the back stope is now being crushed at the company's mill, and will be cleaned up next week. In the underhand stope from No. 6 north-east level we have had six men stoping on from 1 ft. to 14 ins. of reef, which should yield from 1 oz. to 25 dwts. There is about the same-sized reef in stope at present. We have driven No. 9 south-west level a further distance of 7 ft. for a week's driving, making a total distance of 88 ft. from the underlie; had an average of 10 ins. of heavy mundic stone; the reef is rather pinched in face at present. Have sunk the underlie a further depth of 4 ft. for the fortnight, with one shift of four men, making a total depth from surface 1,011 ft. There is a little stone mixed through the formation, but uo defined reef. We have raised about 290 tons of quartz for the fortnight. The contractors have sunk the straight shaft a further depth of 20 ft., making a total depth of 745 ft. from the surface. After sinking through another 8 ft. of formation they went through into a hard, well-defined footwall, at a depth of 732ft.; total depth of formation sunk through between the hanging and the footwall, 20 ft. There is from 4 ft. to 5 ft. of good formation, with from 6 ins. to 8 ins. of reef on the footwall; the stone carries a little mineral, but is poor quality. The shaft was sunk a further depth of 13 ft. after meeting the footwall. This is required for a well hole, as there is a little water comiug from the formatiou sunk through. The contractors will timber up about 40 ft., and complete their contract during the next fortnight. All machinery and working gear iu connection with the mine in good order.

BRATSBERG (8th April)—Hoffnung Mine: There is no change to notice at either of the points of operation at No. 2 adit level. No. 3 adit has fallen off in value, now yielding ¾ ton per fm. The rise in the back of this level is worth 1 ton per fm. No. 4 level is producing 1 ton per fm. No. 5 level contiuues to open up a lode exceedingly well defined, aud composed of a congenial matrix, but yields no ore to value. No. 5 east level is worth about ½ ton per fm. The mid-level at Murchison's is worth 1 ton per fm. At the shallow rise the lode is worth ¾ ton per fm., and the level east from same of a similar value. Johannes Mine: For the first days of the week we contiuued to drive the cross-cut, and being satisfied that we had cut through the lode, have just commenced to drive west on its course. Næsmark Mine: The necessary timber work preparatory to fixing pump and starting driving is about completed, and the miners will start driving in a day or two. Surface work and remarks: The Ebeuezer has arrived, and is due to load to day.—J. D. Holman.

CALLAO BIS (19th March).—Miue—Unda shaft: In the drift in No. 1 stope we have driveu 7½ ft., making its distance 35 ft. 6 ins. from stope. In the end the quartz has become very mixed with blue stone, apparently nothing more than portions of the hanging-wall, now and theu showiug abundance of pyrites. By assay it produces about 7 to 9 dwts. per ton. The cross-cut at the 350-ft. south-east has been driven 8 ft.; total from shaft, 45 ft. 6 ins. The grouud is still very hard, letting out a little water. Cross-cut at same level north-east has been driven 9 ft.; total distance from shaft, 36 ft. The grouud uot changed. Sosa-y-Mendez: We have continued ou the course of the outcroppings to about 1,500 ft. from the boundary, and find they arc still fouud in each costean pit sunk. The two small shafts mentioned iu my last letter have been sunk, one, 45 ft., the other, 40 ft., but the lode has not yet been struck. I hope to be able to cut it within a few more feet of sinking. I shall coutinue searching on for the outcroppings up to about 2,000 ft. from boundary, which I cousider a sufficient trial. Prospecting: About 300 yds. above the Azules westward I have found a prospect, which I think worth while working at. I have a few men there, and at time of writing we have a reef of quartz about 4 ft. thick, showing a little gold. I defer giving any definite opiuion yet, uutil we have doue more work there.—G. W. Eustice.

CAPE COPPER (28th Feb.)—February report.—Ookiep: The rock in the 105-fm. level east of No. 5 level continues to produce a little copper ore, but uot to value. The stope in back of 105-fm. level east of No. 68 winze is yielding 6 tons of copper ore per fm. The ground in the 92-fm. level (No. 11) north-east of No. 51 winze is still favourable for driving, and at times it produces stones of copper ore. We are pleased to state that the stopes throughout the mine are yielding remarkably well, fully their estimated quantities of copper ore. Trial mines—Springbok: The ground in the winze sinking below the 59-fm. level is yielding ½ ton of copper ore per fm. The 59-fm. levels north-west and south-east of shaft have been temporarily suspended in order to push on the sinking of the winze more expeditiously. A new shaft (No. 2) has been started at a point east of the present workings, where a trial was made by the diamond-boring machine, and where it is reported a little copper ore was struck at a depth of about 90 ft. from surface. This shaft will prove its existeuce, and will be iuteresting when a certaiu depth is attained, as it is situate in the direction of the productive ground discovered in the old mine. Kotzees Mine: The uature of the ground in the 25-fm. cross-cut north-east of main level is not quite so congenial, but the opposite cross-cut south-west of main level has improved, and yields a little saving stuff. Nababeep north: The 21-fm. level south-east of shaft is yielding stones of copper ore, and the ground in the level of the same depth south-west of shaft is compact, and for the preseut unproductive. Nababeep south: No material change to notice has occurred in the ground in bottom of shaft sinking below adit level; it is still of a very promising character. Ookiep east: The rock in winze sinking below 58-fm. level still yields ½ ton

of copper ore per fm. The forebreast of the 58-fm. level south-west of shaft at present yields a larger proportion of iron than for some time past, but it is still spotted with copper pyrites. Spectakel : The 36-fm. level towards Kelly's shaft yields occasional rich stones of copper ore. and the ground which is being stoped behind the end yields 1 ton of copper ore per fm. The draining of the mine proceeds without intermission, and the water is now down to the 64-fm. level.—Capts. Henwood and Lanksbury.

— Returns for February : Ookiep, 2,050 tons of 22 per cent. Arrival at Port Nolloth : The Cicero. Arrivals at Swansea : The Powhattan and Marquis of Worcester. Bills of lading received : 555 tons of ore per Ianthe, 425 tons per L'Esperance, 590 tons per Pacific, and 1,050 tons per James Wishart.

COLAR CENTRAL (26th March.)—Low's engine shaft : 200 ft. east cross-cut has been advanced 12 ft., making a total of 196½ ft. from shaft. The water in this drive has kept about the same during the last fortnight. The floors are nearly flat, not so continuous as formerly, and the ground more broken up, but still bad for rock-drills. Driven by one rock-drill. 200 ft. south drive from east cross-cut had only been advanced 8½ ft. since last report ; total length from east cross-cut, 23½ ft. We made a turn in this drive to cut through the quartz, which reduces the measurement of drivage for amount of work actually done. The stone here continues irregular and bunchy, without having improved in value thus far ; driven by one rock-drill. 200 ft. west cross-cut : 13½ ins. have been driven here, making a total distance from the shaft of 198 ft. The ground continues hard and dry, with no indications of any change. I hope, however, we may soon come across the quartz met with in the upper level at Darlington's shaft, if it holds in depth ; driven by one rock-drill. Underlay shaft : 171-ft. level has been advanced 11 ft. by hand labour, making a total of 83½ ft. We are still carrying a good wall in the eastern side of the drive, with a few inches of ground in the end softer than elsewhere, but at present there is no quartz. We are putting some coolies to cross-cut east through the wall already mentioned. East boundary shaft west cross-cut has been driven 17 ft. ; total length, 23 ft. East cross-cut has been started, and put in 15 ft. since last report. It is as much as we can do here to keep the water and hoist dirt. There are no very favourable indications at present, but the ground is not bad, and compares favourably in appearance with other parts of the mine ; both drives by hand labour. General : Engines and machinery are all working well.—A. S. B. Oakley.

CORTEZ (31st March).—Ore hauled to mill, 182 tons ; ore treated at mill, 198 tons, assays of which show it to contain 52 ozs. silver per ton. Bullion shipped, 11 bars, which contained 11.791 77-100 ozs. fine silver, and 8 72-100 ozs. gold.—Welsh.

CUMBERLAND (6th Feb.)—Report for month of January.—No. 2 shaft, No. 4 level : Stopes over north drive—Stopes have very much improved during the past month. We have now an average thickness of 2 ft. the whole length of the stope (93 ft.), and it is of good payable quality, and I think it will continue so up to No. 3 level, a distance of about 70 ft. A winze was started from this level during the month on the north side of shaft, and is down a depth of 12 ft. We have not broken down the reef in the winze so far, there being room enough between the hanging-wall side of the stone and the hanging-wall of lode to admit of the winze being sunk without breaking the reef. I estimate the thickness of stope in winze 2 ft. The drive going south has been extended a further distance of 16 ft. for month, total length from shaft being now 126 ft. The reef in the end at present is 2 ft. 6 ins. thick, and the quality has improved a little during the month. There are now stopes opened over this drive for a distance of 110 ft. ; in some parts of the stopes the reef is very small, in other parts again we have over 2 ft. of stone. I think it will average about 20 ins. the whole length, and the whole of it is of very fair quality. No. 2 shaft : The contractors have sunk for the four weeks ending the 26th ult. a further depth of 20 ft., which makes the total below No. 4 level 59 ft. The fresh make of stone cut during December still continues, and is of very fair quality. During the month it has been 3 ft. thick, but is now reduced to about 1 ft. 6 ins., but I expect it to make larger again as we sink deeper. Surface : The work in connection with the erection of new quartz hopper is proceeding satisfactorily. The gangway from landing brace to hopper site is completed, and most of the heavy timber for hopper is prepared, and some of it placed in position. New Battery : I am sorry that I am not able to report have started to crush with new battery, everything in connection with it is nearly completed, except some carpenters' work which is going to delay us another week or two ; however, we expect to make a start on or before the 18th inst. I intend putting 9 or 10 tons through each five head of stamps ; that is, 40 or 50 tons altogether from the old mullock heap of No. 1 shaft. This will put the tables, &c., in good working order before starting on the quartz, and it would not surprise me if we got a return of 1 oz. per ton from this mullock. By the time the battery starts crushing I expect to have about 1,200 tons on hand.—W. Straughan.

DENVER (5th April).—Returns. Since writing on the 22nd ulto., two further batches of ore have been sent to the mill ; the first of these shipments was very favourable, milling 1 oz. 7 dwts. to the cord (8 tons), but that succeeding it failed to maintain this improvement.—A. Rickard.

DEVALA-MOYAR (25th March).—The lode in the winze sinking below the deep tunnel is improving, and contains more pyrites. The lode in the deep tunnel east is 3 ft. wide, with a little pyrites, but at present it is of no practical value. The tunnel east of cross-cut is now communicated with the deep tunnel west of winze, and one machine will be employed stripping down the lode in the side for milling. The winze below the 48 is worth fully 6 tons pyrites to the fm. A crushing of 300 tons taken east and west of pyrites winze has yielded 34 ozs. free gold, the pyrites being reserved for future treatment.—J. Williams.

DON PEDRO.—Mine half-monthly report for March.—We succeeded in clearing the north part of the permanent incline and a large portion of the plat—enlarged space—at entrance of the 50-fm. cross-cut before any sudden outbursts of water and sand from the old stopes in advance interrupted progress. These were noted, however, to be lessening in strength and volume, and finding the water to descend more rapidly in the old stopes after the outbursts alluded to, the clearing of No. 2 incline was advanced as rapidly as possible, until a depth of 37 ft. 9 ins. below the 40 fm. cross-cut was reached, when an open space was discovered, *i.e.* one of the southern stopes, from which the sand had no doubt escaped through the 50 fms. cross-cut. Here we descended a further distance of 7 ft., and found the water leaving the deepest point freely. As this must be very near the roof of the 50 fm. cross-cut, we therefore hope but very little trouble will hereafter be experienced in clearing the last-named level. The force has been withdrawn from the bottom, temporarily, and placed to continue the 40-fm. level northward in footwall of stopes to reach the lode, which is not many fathoms distant. Also to sink Gordon's shaft, both points of essential importance in laying open the mine with a view to making returns. The 30-fm. cross-cut is progressing slowly, owing partly to sickness and partly to irregular attendance of the force.

EAGLEHAWK CONSOLIDATED.—Abstract of reports received from the mine, dated 27th February and 6th March :—27th February : During the past fortnight the benefit of taking up the water has been shown, as 18 ft. has been sunk in hard bluestone, making the total depth of the shaft 599 ft. from the surface. The machinery is all working well, and the water is a little more than usual. 6th March : For the first week in the fortnight the engine shaft has been sunk 10 ft., making the shaft 58 ft. below the 550-ft. level, and 648 ft. from the surface. The greatest part of this week will be occupied in timbering the shaft. The water is not much in the bottom of the shaft at present.

FRONTINO AND BOLIVIA (SOUTH AMERICAN).—The directors have received advices from the mines, dated 23rd February and 7th March. Also a letter from Messrs. Restrepo dated 12th February. The statement of profit and loss for the month of February is as follows, viz. : 612 tons from general mines produced 533 ozs. ; tributers' gold 236 ozs. Total 769 ozs. Also 1,692 lbs. of sulphurets containing 43 ozs. of bullion. Estimated value of the gold and sulphurets, 1,705*l.* 10s. 5d. Cost at the mines, Medellin, and in London, 1,912*l.* 19s. 7d. Paid for gold bought of tributers, 367*l.* 9s. 3d. Total, 2,280*l.* 8d. 10d. Estimated excess of expenditure, 574*l.* 18s. 5d. The dry weather still continues. The mills at Tigrito and Rosario have stopped altogether for want of water. In his letter of 7th of March, Mr. Hodge mentions that there were indications of rain ; but none had fallen up to the moment of sealing his letter. The dry season usually ends towards the close of the month of March. Work on the new mill for Cecilia is progressing well.

FRYERSCREEK.—The directors have received the following advices, dated Fryerstown, 7th March :—During the past fortnight we have extended the 520-ft. level south a further distance of 24 ft., making 91 ft. from cross-cut. We have not discovered any stone as yet, but I hope we shall meet with stone shortly ; ground very changeable ; slate and sandstone with small seams of quartz in the sandstone. One of the men who worked in the New Era some years ago says there is a large body of stone coming in your mine between the 420 and 520-ft. levels. He had charge of the underground work at that time. The stone is in the hanging-wall not in the lode, so I hope you will be able to keep this drive going until we get to the south boundary, and put up a rise to meet with this stone between these levels, as rising through the ground has a better chance of finding stone than what we have in driving ; four men working in this drive. We have also driven west from 420-ft. main level, and met with the face of black slate where I expected we might find stone ; but the slate has cut off the flukan from going west, so we have not discovered any stone in this drive. I have put the men to repair the drive and lay the truck road down further south. I intend to go to the south boundary before trying any more places in this drive. Road now in about 310 ft. from shaft ; two men working here. We have also driven the level on the western line of reef a further distance of 15 ft. without discovering any stone, so I have removed the men to the 320-ft. level again, and am breaking out a crushing from the back of the level on the point of the splice of stone where the two walls are about 5 ft. apart. Stone about 2 ft. thick on the western wall ; shall crush about 30 tons. If it is not payable I shall crush prospects from other parts of the reef at different levels. We have three men working here ; one man left the mine. The 260-ft. level : We have extended this drive north 7 ft. for the past fortnight ; total, 68 ft. from the winze. There is a little stone coming down in the back of the drive. I think we shall get the slide in another 20 ft., where I expect a change for the better, that is, if we can find stone north of the slide ; but we have to go 250 ft. before we get under Redhouse's old workings ; two men working in this drive.

GARFIELD (30th March).—The mill was shut down on 27th inst. to make some necessary repairs and to make a clean-up, from which clean-up we obtained sufficient amalgam to make three bars of bullion, which will be shipped to-morrow, weighing 283 lbs. (avoir), of the estimated net value $2,769.21 (silver at 93c.)—Hooper.

GOLDFIELDS OF NORTH QUEENSLAND.—The sinking for the week has been 5 ft. 6 ins., making total depth of shaft 152 ft. 6 ins. ; the ground is still about the same. The Melbourne Exhibition : The length of drive is now 40 ft., making 5 ft. for the week. Have also cleaned out the bottom of shaft, and started to sink—having sunk 3 ft. for the week, and timbered. . . . The engines work well, and work is going on very satisfactorily. The battery is being pushed on as speedily as possible. There has been landed here six iron trucks for the cages to work in Sphero Meliora, and one case of sundries. The trucks are very nice, and well suited for the shaft, and will be the required articles when the mine is opened up, so as to use the cages.

INDIAN CONSOLIDATED (25th March).—Phœnix section : I am glad to inform you that the stopes above the tramway have improved. The blue rock mentioned previously is not so thoroughly mixed through the stone, or in other words, the footwall portion of the lode for 7 ft. wide is much better defined. I am pleased of this, because it has added to the reserves above the tramway level. We consider the quartz here of better quality than the lower stopes, and while it lasts will materially add to the yield of gold, and defray the expenses of working. During the past week we met with a patch of good-looking quartz in the tramway tunnel, but it did not last more than 3 ft., but the end now is looking fairly promising.—J. Williams.

— Office note : A telegram has been received, notifying that an accident had occurred to the machinery at the Phœnix section.

— (25th March).—Colar section—No. 5 shaft : For two weeks this shaft has been sunk 12 ft. 1 in., or 42 ft. 6 ins. below the 360-ft. levels ; there is no lode to value in the bottom of the shaft. The 350-ft. level driving north of shaft has been cut 2 ft. 4 ins., or 61 ft. 4 ins. from shaft ; the lode in the forebreast is 2½ ft. wide, assaying 4 dwts. per ton stone. The 360-ft. level driving south of shaft has been cut 1 ft. 2 ins., or 52 ft. 2 ins. from shaft ; this drive is again showing a little quartz, but ground very hard for driving, assaying 1 dwt. 7 grs. per

ton stone. The stope in the bottom of the 300 south drive has a lode of quartz from 1 ft. to 2 ft. wide, assaying 11 dwts. 18 grs. per ton stone. The stope and rise in back of the 300 south drive is producing a little better stone; lode from 1 ft. to 16 ins. wide; the ground is very hard and spary for breaking, assaying 16 dwts. 22 grs. per ton stone. The stope in the bottom of the 300 north drive has improved in size of quartz; lode 2 ft. wide, assaying 1 dwt. 10 grs. per ton stone. The stope in the bottom of the 230 north drive continues much the same; lode large, being fully 3 ft. wide, but of low-grade stone, assaying 15 grs. per ton. The winze sinking below the 156 north stope has improved, showing some good stones of gold; lode 3 ft. wide, assaying 1 oz. 8 dwts. 17 grs. per ton. Davey shaft: The 170-ft. level driving north of shaft has been cut 24 ft. 2 ins., or 74 ft. 2 ins. from shaft; there is a slight improvement in the nature of the quartz since my last, being of a harder and better defined character, from which we may expect gold at any time; quartz-bearing part 1 ft. wide. Since last report I have put the men to cross-cut east from the end of the south drive; in driving we met a quantity of water coming out of the footwall. Knowing there are two lodes to the east of us, I decided to cross-cut to them to prove if there is anything like pay-rock there. Cut in the drive 1 ft. 8 ins., or 50 ft. 8 ins. from shaft. Cut in cross-cut, 20 ft. 6 ins. from drive. Struck quartz this morning in bottom of cross-cut, but not sufficiently advanced to say if it is a reef or branch. Men doing good work. New south shaft: This shaft has been sunk 3 ft. 6 ins., or 145 ft. 2 ins. from surface. There is no change to notice in the character of the rock or quantity of water. Trial shaft: This shaft has been sunk a further 30 ft. 2 ins., or 116 ft. 10 ins. from surface. Some old workings have been passed through, which show quartz, but of no value. I am hoping now we are at the end of the said old works. The lode is 3 ft. wide, between walls, schistose clay in the hanging, and soft quartz in the foot. We have also extended 8 ft. in levels north and south.—T. R. Davey.

MONTE DEL ORO.—The following are the results received April 13th of assays made in London of nine samples taken from different parts of the mine, viz.:—No. 1 sample from north of No. 6 shaft assayed 2 ozs. 10 dwts. 23 grs. gold per ton. No. 2 sample from south end assayed no gold per ton. No. 3 sample from north level cross-cut west assayed traces of gold per ton. No. 4 sample from intermediate level assayed 3 dwts. of gold per ton. No. 5 sample from north of No. 5 shaft assayed 3 dwts. 22 grs. of gold per ton. No. 6 sample from north of No. 6 shaft assayed 1 oz. 6 dwts. 3 grs. gold per ton. No. 7 sample from north of No. 6 shaft assayed 4 ozs. 18 dwts. of gold per ton. No. 8 sample from north of No. 5 shaft assayed 3 ozs. 17 dwts. 2 grs. of gold per ton. No. 9 sample from north level cross-cut west assayed 4 dwts. of gold per ton.

MYSORE REEFS (26th March.)—Fortnightly report.—Harvey's shaft 320-ft. level north: During the past two weeks we have been cross-cutting east, 23 ft. 3 ins. have been cut through a band of quartz pyrites and trap rock intermixed. I have washed seven samples, which have varied from 2 dwts. up to ½oz. of gold a ton. A selected sample of the quartz gave according to assay 11 dwts. 16 grs. of gold a ton. We shall continue the cross-cut east until we are through this band, and then open north and south on the part which shows the most gold. Cross-cut west of plat 250-ft. level has been advanced 13 ft. 6 ins., now 166 ft. 3 ins. from plat. There is no change. Cross-cut east of the 250-ft. level north has been extended by hand labour 11 ft. 6 ins., now 155 ft. 3 ins. from level. A good stream of water is issuing from the back and breast of end. Winze below the 250-ft. level north has been sunk 3 ft., now 8 ft. 3 ins. below level. We have now a run of quartz and pyrites 15 ins. wide, which shows visible gold in places; a sample of same gave, according to assay, 1 oz. 6 dwts. 3 grs. of gold a ton. I am expecting to find this same run of quartz in the 320-ft. level north when we open north and south on the band that we are now cross-cutting through, and shall then commence to rise to communicate with the winze. Taylor's shaft: The sinking of this shaft has been extended, continued by rock-drills, and a full force of men, 7 ft. 6 ins. have been sunk; total depth, 146 ft. 9 ins. The rock is hard and spare for cutting, but there is some kindly looking quartz intermixed with it, which shows a little gold.—M. Scantlebury.

NEW EMMA (30th March).—I have to report work carried on at the mine for the week ending to-day, as under: Level No. 1 easterly, advanced 8 ft.; total, 235 ft. Rock getting harder as we advance, and is not looking quite so well, although still shows considerable mineral stains. Raise from No. 1 extended 5 ft.; total, 38 ft. Not any change to report, looking fully as well as per last report. Drift southerly towards footwall, as mentioned in my last, advanced 10 ft.; total 20 ft. The seam continues about 2 ins. wide; surrounding rock well sustained with mineral, and is looking fully as well as per last report. Level No. 1 north-westerly, advanced 12 ft.; total, 261 ft. Still opening up for taking out fillings for the mill this season. Level No. 3 south-easterly advanced 12 ft.; total, 389 ft. The improvement, as mentioned in my last report, still holds, and the ground is looking very favourable for ore. Level north-westerly from rise from Attwood winze, advanced 6 ft.; total, 150 ft. This level, I regret to say, is looking poorly. The seam has merely closed, and the rock much harder, and shows but little mineral stain. If no improvement within a few feet, I shall stop work here, and start a level some 40 ft. to 50 ft. below, and run in same direction.—H. C. Wallace.

NEW FLAGSTAFF (16th April.)—During the last week the work has continued in the following place:—Level No. 7: No. 2 west drift north is in 121 ft., has the same good ground, and appears as before. Cross-cut No. 2 south is in 183 ft.; the hard rock from the bottom of this drift is coming in more and more. It is more stained up than it has been, and after getting through this belt of rock, it is my belief that we will find some good ground for ore. Level No. 8: Bonanza drift is in 51 ft.; the hard ground which I previously reported continues. I have commenced driving upwards at an angle of 45 degs., where it is very good looking for getting into a body of rich ore at any moment; the incline is now up 9 ft. Footwall cross-cut is in 138 ft. The ground continues hard, and I have taken the man from here and put him in the ore streak in the opposite end of the Bonanza drift. I want to put all the force I can on this point, because I think it must carry a body of rich ore somewhere. Black winze (leading from 8th to 9th levels) is down 19 ft. The black streaks are extending in all directions, and we cannot follow them all, and I am therefore sinking perpendicular to No. 9 for ventilation. Level No. 9: North cross-cut is in 278 ft. The streak and the ground continue good.—A. Hagan.

NEW LA PLATA.—The results for March month as cabled by the manager are as follows:—Royalties received, $810; total cost, $930. Note.—Profit for the month at Leadville, 100*l.*, including the rental of the smelting works. The manager states that increased royalties may be expected in April; also that the building for the low-grade mill is up, and the machinery is being placed in position.

NEW LIVINGSTONE (23rd Feb.)—Fortnightly report:—The underlie shaft has been sunk a further depth of 9 ft. for the past fortnight, making the total depth 150 ft. from No. 2 plat. The reef is 2 ft. wide of poor quality stone at present. I do not think there is sufficient gold in it to pay for crushing it, so I am tipping it on the mullock heap. At times we come on patches heavily charged with mineral, and that I send to the mill. In my opinion we will soon get on better stone, as the reef is well defined with a good footwall.—N. Mayne.

NO. 2 QUEEN.—The following fortnightly report has been received from the mine, dated Charters Towers, 26th February:—No. 1 shaft—No. 1 level south: The tributers are still stoping over this level on a reef which is very irregular in thickness, varying from 3 ins. to a foot, and of poor quality. No. 5 level south: The underhand stope is being carried forward along the south side of the underlie shaft, size of reef, and quality similar to last report. The underhand stope inside the level is rather improved in appearance, but the shoot of stone is as yet very short. Estimated quantity of stone raised, 68 tons. No. 2 shaft: The contractors have sunk a further depth of 26 ft., making a total of 5 9 ft. from the surface. At 563 ft. we cut 18 ins. of formation, intermixed with quartz leaders. We propose commencing to timber in the course of another week. Mill: We have crushed as follows:—Shepherd and party (tributers) stone, 94 tons yielded 39 ozs. 7 dwts.; No. 2 Queen Company's stone, 208 tons yielded 128 ozs. 5 dwts.; total, 302 tons yielded 167 ozs. 12 dwts. The 98 tons crushed for the company, mentioned in my last report, yielded 52 ozs. 12 grs. smelted. We start crushing the Hidden Treasure Company's stone next week, and are meanwhile engaged making some alterations to the pans and putting in settlers, which, I think, will reduce our past loss of mercury to a minimum.—A. G. Charleton.

NUNDYDROOG (26th March).—Mining operations: There is little new that I can report to you to-day. The rock in Webb's shaft, the 370 cross-cut west, and the bottom of Taylor's shaft, continue to be hard and barren. The intermediate level south of Webb's shaft contains a lode 1 ft. 8 ins. wide, assaying 16 dwts. 6 grs. The middle level contains a lode 1 ft. 8 ins. wide, assaying 1 oz. 10 dwts. 12 grs.; and the rise in the back of the 230 north of Webb's shaft is in a lode 1 ft. 6 ins. wide, assaying 14 dwts. 6 grs.; the stopes continue to look fairly well. In the bottom of the 370-ft. level the lode is 3 ft. wide, assaying 1 oz. 18 dwts. The stope in the bottom of the 300 contains a lode 3 ft. wide, assaying 2 ozs. 18 dwts. 6 grs. The stope in the bottom of the 230 ft. is in a lode 1 ft. 8 ins. wide, assaying 1 oz. 13 dwts. 18 grs.; and the stope in the bottom of the 166 contains quartz 1 ft. 8 ins. wide, assaying 1 oz. 18 dwts. 3 grs. Assay of weekly samples from the mill:—Rough quartz, 2 ozs. 8 dwts. 18 grs.; smalls, 1 oz. 12 dwts. 18 grs.—B. D. Plummer.

OSCAR (12th April).—In Oscar there is nothing new to call your attention to. We are now in a position to break a large quantity of low-grade quartz, and expect shortly to open on richer ground. No. 3 lode averages 5 ft. in width, whereof 4 ft. is quartz. Quality similar to last month. Daw's lode: Lode in shaft continues to improve, as 420-ft. level south. We have seen a little visible gold. No alteration to note in the other levels. There is a slight improvement in the stopes. We have 10 stamps running on quartz from Oscar and No. 3 lode, and 20 from the different points in Daw's.—J. Daw, jun.

MOUNT MORGAN EXTENDED GOLD MINING CO., LIMITED.

The directors have received report, dated Rockhampton, Queensland, 1st March, from their local committee (per Mr. R. Ballard, M.I.C.E.), which states that the erection of the mill buildings is being vigorously proceeded with under the personal supervision of Capt. Aldridge, in accordance with the working plans which I have furnished him. The double tramway is now being laid with rails. Considerable progress has been made in deepening the well; on the 22nd January this well was 31 ft. deep, and the yield of water was very slight, the season being dry. I then fixed the steam pump, and by the 26th of February the well was 56 ft. deep, and after 40 hours the water rose 18 ft., being at the rate of 69 gals. per hour. This increase may probably be attributed to a lode, which we struck at about 56 ft. carrying a defined hanging-wall, and running in the direction of our other lodes, consisting of a nice white quartzite, considered by some to resemble the stone in the Annie reef at Cawarral, which is a rich ore. We have thus a reasonable hope as we deepen our well, not only of obtaining a sufficient supply of the much-needed water, but payable gold therewith. We have driven from the bottom of Classons shaft in a direction north-west by west ½ west, a distance of 29 ft. through compact and regular country, and a change has just occurred in the face, mundic stone like the cap of a lode at the bottom of the drive, and hæmatite oxide, showing trace of copper appearing on the top. You may watch the progress of this drive with interest, as the stone cut looks promising, and may establish the existence of a payable lode, at least 310 ft. in length. When cut in No. 1 tunnel it was also promising, and may be of great width here also, and therefore do much to establish the permanance of the mine. When excavating the approach to the mill near leaching platform a blow of stone appeared in such excavation resembling the cap of a lode. Samples of this stone sent to a distinguished Gympie assayer are stated by him to have given the following assay results:—No. 383: Gold, 15 dwts. 2 grs. per ton; silver, 1 oz. 0 dwts. 3 grs. per ton. No. 384: Gold, 15 dwts. 2 grs. per ton.; silver, 1 oz. 0 dwts. 3 grs. per ton. I have instructed Capt. Aldridge to put down a shaft on this stone, believing that it will develop into a richer class of ore at little depth. Taking it altogether, I think I am justified in congratulating you upon our having met with such favourable indications alongside our mill shed, and on the western side of the valley the progress of this shaft should be watched with deep interest.

Umbelosi Exploration Land and Mining Company.—It has been desired by the directors to return to the shareholders the money they have subscribed.

REPORT OF MEETING.

THE APPALACHIAN CO., LIMITED.

SHAREHOLDERS RESOLVE TO PLACE A VALUABLE PROPERTY ON A SOLID FINANCIAL BASIS — REGRETTABLE RETIREMENT OF COL. MALLESON FROM THE BOARD—IMPORTANT SPEECH BY COL. McCOY.

AN ordinary general meeting was held at the Cannon Street Hotel, in the City of London, on Thursday, "to receive the report, and for such other business as may be properly discharged at an ordinary general meeting."—Col. Malleson, C.S.I., presided.

Mr. C. E. GREEN (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

FORMAL BUSINESS.

The CHAIRMAN at the outset read a letter from the Right Hon. the Earl of Gosford, K.P., regretting his inability to be present, owing to indisposition. Continuing, he said: What we have to do, gentlemen, at this ordinary meeting is to pass or reject—it rests with you—the report and balance-sheet. An extraordinary meeting will be held as soon as the business of the ordinary meeting is concluded, and I must ask you kindly to bear in mind that the two are quite distinct. The business of the ordinary meeting is simply to pass the accounts and fix the remuneration of the auditor, after which we shall proceed with the extraordinary meeting, the business of which I shall unfold to you to the best of my ability. Meanwhile, I beg to move "That the report and balance-sheet be passed." I do not know what may be in the minds of any of the shareholders, or what questions they may ask, but I can only assure you that be those questions few or many, be they complicated or simple, here I am to answer them.

Mr. WM. MARTINEAU seconded the motion.

Mr. HOARE: Is Mr. Lakeman, the auditor, a chartered accountant?

The CHAIRMAN: Certainly.

A QUESTION OF ACCOUNTS.

Mr. HOARE: I should like to know how the item of 3,150*l.* 18s. 1d. for London expenses from the 1st October, 1887, is made up? The reason I ask the question is, because at the meeting of the 15th January, you stated, Mr. Chairman, that the board had been compulsorily inactive. I put it to you, who are most of you men of business, if it would not have been possible for the board to have done "nothing" without expending this sum of money?

Mr. JAMES LAKEMAN (auditor): I suppose the interrogatory of Mr. Hoare is directed to ascertain the amount of the directors' fees.

Mr. HOARE: I want to know the items of the

LONDON EXPENSES,

that is all.

Mr. LAKEMAN: They are composed as follows:—Office expenses and general charges, 964*l.* 16s. 1d.; stationery, 42*l.* 13s. 9d.; advertising, 17*l.* 15s.; postage. 11*l.* 10s. 6d.; rent of offices, 550*l.*

Mr. HOARE; Is that one year's rent?

Mr. LAKEMAN: No, it is from 1887. Salaries, 371*l.* 1s. 11d; legal expenses, 65*l.* 11s. 7d.; and directors' fees, 752*l.* 15s. 2d. There is also a reserve for unascertained expenses of 500*l.* carried forward. On the other side 106*l.* 10s. 6d. has been received in transfer fees, and the balance is the amount in the balance sheet.

Mr. HOARE: I am much obliged to you. I should think, however, that if there had been nothing to do it would have been as well if the fees had not been taken.

DIRECTORS' FEES.

The CHAIRMAN: The directors have not taken any fees. The fees are due, but we have not drawn them. They, however, constitute a debt upon the company. This gentleman says that we had nothing to do, which is perfectly true in one sense, but he has garbled what I said at the meeting in January. The directors have had nothing to do ever since the mine was shut down, but prior to that they had a great deal to do, and it was very poorly compensated by the 50*l.* a year which each director had in perspicuity, not one farthing of which did he put into his pocket. That 50*l.* a year constitutes a debt upon the company which is recoverable by law.

The report and accounts were unanimously passed.

AUDITOR'S REMUNERATION.

The CHAIRMAN: I must ask some shareholder to rise and propose the remuneration of the auditor. I may say that the work entailed by the accounts has been very heavy indeed. They were sent over from America in a manner which required the auditor to take unusual trouble and pains in unravelling them, and he has bestowed upon them time and attention which I feel quite sure the shareholders here present will be willing to recoup him for.

Mr. CUMMINGS proposed that the auditor receive 50 guineas.

Mr. HENDERSON seconded, and the motion was carried.

DIRECTORS RETIRE.

The CHAIRMAN: Two of the directors retire—the Earl of Gosford and Col. Malleson—and they do not seek re-election. If you carry the proposal that will be submitted at the extraordinary meeting—that there be a new board for the new company—I do not think it is at all necessary to elect anyone in their place, as a quorum of directors remains.

THE EXTRAORDINARY MEETING.

Mr. C. E. GREEN then read the following notice of an extraordinary general meeting "for the purpose of considering the company's position, and, if thought advisable, of passing, with or without modification, some or all of the following

SPECIAL RESOLUTIONS.

or such other special or ordiuary resolutions as the meeting may determine in connection with the matters therein referred to, that is to say:—1. That the Appalachian Company, Limited, be wound up voluntarily under the provisions of the Companies Acts. 2. That Mr. James Lakeman be, and he is hereby appointed liquidator for the purpose of conducting such winding up. 3. That the remuneration of the liquidator be fixed at the sum of 52*l.* 10s. 4. That the liquidator be and he is hereby authorised and requested to enter into and carry into effect an agreement for the transfer of the assets and liabilities of the Appalachian Company, Limited, to a new company to be formed for the purchase thereof upon the following basis:—(*a*) That, with the consent of the debenture-holders, fully-paid shares in the new company of an equal nominal amount shall be issued to them in satisfaction and extinguishment of the principal moneys due to them upon their debentures. (*b*) That for every fully-paid share in the Appalachian Company, Limited, four shares in the new company of the nominal value of 5s. each, credited with the sum of 4s. 6d. paid up thereon, be allotted and issued to the present shareholders. (*c.*) That the liabilities to be undertaken and paid forthwith in cash by the new company shall include amongst other things all interest upon the debentures of the Appalachian Company, Limited, down to the date of the issue of the shares in lieu of such debentures; and also the sums due for extra works done at the mine which, under the terms of the contract dated the 11th August, 1886 were to be paid out of the first net profits of the company. 5. That the terms of the agreement for carrying out the above arrangement be subject to the approval of the present directors of the Appalachian Company, Limited, and that the liquidator be and he is hereby instructed to submit the same to them accordingly.

THE POSITION EXPLAINED.

The CHAIRMAN: Gentlemen, it will be in the recollection of most of you that at the meeting which was held at the end of last year, and adjourned to the beginning of this year, a resolution was passed with one or two dissentient voices only, for the raising of an amount sufficient to carry on the works at the mine by the issue of royalty certificates. I stated at the adjourned meeting, not having been able to be present at the ordinary meeting, that the directors would be willing to accept any offer which was made them in excess of the offer of 6,000*l.* which was made in the room. I have received another offer in advance of that sum of 6,000*l.*, and both I and my co-directors did consider that that sum was far too small for the purpose. Yet, as they seemed to say that it was the only method at hand for saving our property, and as the shareholders, summoned in meeting, I believe, in this very room, did not propose any alternative measure which had the confidence of the shareholders, we would have accepted that 6,000*l.* which was offered; but when the time arrived, when we could carry out that arrangement, it fell through—the money was not available, and we declined to proceed in the matter unless the whole money was paid down in exchange for the royalty certificates; and I am quite sure that in taking such a measure of prudence and precaution we are entitled to your approval. (Hear, hear.) At last, after some interval, a shareholder, who I am glad to see present in this room, came forward with an alternative scheme, and that scheme commended itself to the directors, and I believe to a good number of the shareholders, who were consulted as being in all respects far more to the interest of the shareholders than the raising of money in the manner agreed to at the last meeting, and you have been summoned here this afternoon to consider whether you will accept or reject that offer, or whether you will propose, or carry, any modification thereupon. I believe, from all I have heard, that we have

ONE OF THE FINEST MINES IN AMERICA.

that we have a splendid mill, erected and ready for work, and that we have the ore. It only requires capital and a good manager to insure you large dividends.

GENEROUS ACTION OF DEBENTURE-HOLDERS.

Of course, in making a proposal of this sort, it became absolutely necessary to appeal to those who were interested in the mine, and who had the power of foreclosure to make some sacrifices. Now, there were debenture bonds, amounting to 50,000*l.*, held by gentlemen who might have foreclosed, and taken possession of our mine, which we value at 300,000*l.* or 400,000*l.* for this sum of 50,000*l.*, and I am bound to add that it is very much owing to the forbearance of these gentlemen that I stand here this afternoon in a position to make the suggestions which have been read out to you in the resolutions which it will my duty to propose. These gentlemen propose to give up their debenture bonds after having received the interest to which they are entitled, and to exchange their debenture bonds for shares in the company. That is, they propose practically to give back the mine to which they are entitled, or could make themselves entitled as debenture-holders—they propose to give that back to the shareholders if the shareholders will enter into an arrangement by which they will be secured their interest, which amounts, I believe, to about 8,000*l.*, and to take shares, share for share, of debentures. Now, I am standing here to-day simply by the indulgence of my colleagues, because, although I still continue to be a shareholder in the company, I am

NO LONGER A DIRECTOR.

I rejoice in that for one reason, because it enables me to take a shareholders view of the position, and as the owner of 1,000 shares, I feel as anxious as any of you that the company should not fall into the hands of the debenture-holders, but that it should attain, by careful development, the prosperity which, I believe, is in store for it. It is on that ground that I acceded to the wish of my colleagues that I should continue to occupy this chair whilst I put these resolutions before you. I have not had the opportunity that some of my colleagues have had of conferring with the large shareholders personally, but I have received a letter from one of them who is a friend of mine, and who, I am glad to see here, and I am quite sure that anything which falls from him in the way of a suggestion will be carefully considered. But for my part, speaking as a shareholder, I am in favour of passing these resolutions, as they stand, and if any of you should form a different opinion, it will be my duty, in a courteous manner, to give my reasons for adhering to what I believe to be the best plan to be pursued. Gentlemen, I will put these resolutions one by one, and we will discuss them one after another, and as the resolution is passed—rejected, or modified—so it will be recorded.

The CHAIRMAN then proposed resolution No. 1 as above.

The Hon. ARTHUR CADOGAN seconded the motiou, which was carried unanimously.

The CHAIRMAN then moved resolution No. 2 as above.

Mr. MARTINEAU secouded the motion, which was carried.

The Chairman proposed resolution No. 3 as above.

Mr. Leslie Walker seconded the motion, and it was carried unanimously.

The Chairman intimating that this was the crucial resolution, proposed No. 4.

Col. McCoy seconded the motion.

The Chairman, in reply to a question said that 5s. would be the nominal value of each share.

VIEWS OF AN AMERICAN SHAREHOLDER.

Col. McCoy : This is the first general meeting of the company that I have been able to attend since the meeting held at the registered office of the company, on November 23rd, 1887. At that meeting I endeavoured to explain to the shareholders as fully as possible the status of affairs at their property up to October 12th—the time I left for London. Some of the shareholders who were then present are also present to-day ; other shareholders I notice present to-day who were not present then. The latter shareholders have asked me a good many questions regarding the statements made by me at that meeting, which they read in the papers, giving a supposed statement of my remarks. Those shareholders that were present will remember I entered fully into the causes which produced the then existing status of affairs at the mine. I will briefly re-state for the benefit of those who were not present some of those causes, because in very many particulars my remarks were incorrectly reported, and some important statements entirely left out. One of the main causes of our want of success up to the time I left the mine was the complete and utter failure of the Excelsior Iron Works Company, of the United States, failing to fulfil their contract entered into with me on the 6th day of November, 1886, for the construction and equipment, complete in every part and detail, of a 40-stamp free gold mill, with Duncan concentrator ; so that you may understand how particular I was in making this contract with the Excelsior Iron Works, and how desirous I was that the company should have a mill plant equal to the best in the United States, or for that matter, the world. I will read you the contract. (The contract was here read.)

THE AGREEMENT.

This agreement made and entered into this sixth day of November, A.D., 1886, between the Excelsior Iron Works (Incorporated) of Chicago, State of Illinois, party of the first part, and H. McCoy, of the City of Baltimore, State of Maryland, party of the second part ;

Witnesseth :—The party of the first part by its superintendent, J. A. Mason, does hereby agree with the party of the second part to construct and equip complete in every part and detail a forty stamp free gold mill with Duncan concentrators at the mill site to be mutually agreed upon by parties hereto near the Coggins Mine in Montgomery County, North Carolina, and to be equipped with one, one hundred (100) horse-power Corliss engine. Two sixty (60) horse-power boilers, with all necessary connections ; Twelve (12) Duncan concentrators, self feeders, silvered-copper plates. Necessary water connections, all machinery fittings and parts, in fact, that may be required in a mill for working free gold ores, and also to erect over such machinery suitable buildings of such sizes and dimensions as may be necessary as will more fully appear by drawings, which will be prepared and furnished—for the sum of forty-six thousand dollars ($46,000) lawful money of the United States, and the party of the first part does also hereby agree to run said mill for the period of thirty days after formal notification to the party of the second part, that the same is finished and ready for delivery ; and to furnish any and all parts that may be then required to put the same in first-class condition for continuous work.

The party of the second part does hereby agree to pay unto the party of the first part the aforesaid sum of forty-six thousand dollars for said completely erected forty stamps free gold mill as before specified, with buildings theron, in the following payments, to wit :—

Seven thousand two hundred and sixty dollars ($7,260) on the signing of this agreement.

Seven thousand two hundred and sixty dollars ($7,260) thirty days thereafter.

Thirteen thousand four hundred and forty dollars ($13,440) sixty days thereafter,

Thirteen thousand four hundred and forty dollars (13,440) ninety days thereafter. and

Four thousand six hundred dollars ($4,600) on the delivery of the aforesaid mill after running thirty days as before-mentioned. And the party of the second part also hereby agree to furnish all necessary labour and materials, ore, quicksilver, fuel, chemicals or supplies that may be required during the running of the said mill by the party of the first part.

The party of the first part also hereby agrees to complete said mill ready for operating in five months from and after the date of this Agreement. And in the event of the default in any of the payments aforesaid, the aforesaid mill shall remain in possession and ownership of the said parties of the first part until the same shall be fully liquidated.

In Witness whereof the parties to this agreement have hereunto set their hands and seals the day and year first above meutioned at the City and State of New York.

Signed Sealed and Delivered in the presence of (Signed) Henry B. Murray). } (Signed) Excelsior Iron Works by J. A. Mason, Supt. (Seal) (Signed) H. McCoy. (Seal)

I think (he continued) you will fully agree with me if this contract had been fully carried out in every particular I would have had no cause for complaint ; but, as I have stated, they utterly failed in complying with it, and I promptly notified the directors of the non-fulfilment of the contract by the Excelsior Company, and gave them the particulars of the non-fulfilment.

THE MILL.

You will notice from the reading of the contract the mill was to be complete in every part and detail, and was to be completed in five months from the 6th November, 1886—viz., April 6th, 1887. After formal notification to me that the mill was finished and ready for delivery, they agreed to run the said mill for a period of 30 days, and to furnish any and all parts that might be required to put the mill in first-class condition for continuous work. I was not notified that the mill was completed until 60 days after the stipulated time; when so notified the mill, in fact, was not completed and ready for work under the terms of the contract, and instead of running it for 30 days and putting it in condition for continuous work, and furnishing any and all parts that then might be required, they left the mill in an incomplete condition on my hands, and never ran it a day—much less 30 days. In the meantime, under the terms of the contract I have complied, on my part, and made all of the payments under the terms of the contract. The last payment of $4,600 was not due until after the Excelsior Company run the mill for 30 days, as stipulated in the contract. Notwithstanding these facts, the Excelsior Company have brought a suit not only against me, but also against the company for this last payment, and for materials used by me furnished by them, in my endeavours to make the mill perfect and complete, and put it in condition for continuous work. You will see from the contract that the Excelsior Company contracted with me in my individual capacity for the construction of this mill, not as agent for the company. They knew perfectly well the company was in no way liable for any default in my payments, if any such default should be made, but that they had to look to me, and me alone, for all payments.

COL. McCOY ENTERS AN ACTION.

Knowing as they did their want of good faith in carrying out their contract, and not running the mill for 30 days, I must confess I was no little surprised at their assurance and cheek in bringing the suit I have referred to. On my part I have entered a counter-suit against the company for damages, and my lawyers are perfectly sanguine that I will be able to recover. After taking possession of the mill my troubles commenced, and for a period of nearly four months there was hardly a day but what some casualty to a greater or lesser extent occurred causing the mill to be shut down a dozen times a day during that period for repairs, and first for one cause and then another. It is all-important for successful amalgamation in starting up a new mill to run continuously in order that your copper plates may become fully charged with gold amalgam. When so charged it is quite easy to save a proper percentage of free gold, but while in the process of being charged it is more or less difficult to save a proper percentage of your free gold. If the mill had been turned over to me complete in every part and detail, and put in condition for continuous work under the terms of the contract, I have no hesitation in stating the amount of gold saved in amalgamation would far have exceeded what was really saved. Thus I have given you one of the causes, and in my judgment, the chief cause of our want of success. It became incumbent upon me to do those things which were left undone by the Excelsior Company, which I endeavoured to do as promptly as possible, securing a thorough practical mill builder to put the mill in first-class condition for continuous work. All this required time, labour, and expense, and I can assure the shareholders that I neither spared money or expense in putting their mill in first-class condition. All of this expense I paid out of my own pocket, and can assure you it has cost me very dearly. and I can state now, with confidence, as I did on the 23rd of November, 1887, after making large expenditure, and spending much time in endeavouring to make the mill perfect and complete, I at last succeeded in so doing, and believe now, as I stated at the meeting in 1887, that you have a mill equal to any in the Southern States of the United States of America.

I AM FIGHTING, AT MY OWN EXPENSE,

the claim brought against me by the Excelsior Company, and under no circumstances whatever will the Appalachian Company be liable, or have to pay out one penny in connection with this suit. (Cheers). A second cause for want of success during the period named was the talc, or soapy nature of the quartz, and the further fact that the gold, to a considerable extent, was coated with a vegetable film or surplus coating. This was chiefly in the upper level and surface ore. As soon as our amalgamator discovered this difficulty we at once set to work to overcome it, and secured a Beckett and McDowell grinder and the centrifugal amalgamator, which I referred to in my remarks at the meeting of 1887. These appliances succeeded in grinding the pulp and freeing the gold, and in my judgment we will have, when we again start up, no further difficulty in saving a proper percentage of the gold. In the meantime, owing to the causes named, we were milling ore at a considerable loss, with no money in the treasury to meet the same, which necessitated after I left the mine being closed down, and we have been in that unfortunate position up to the present time. These, and these alone, are the causes of our want of success in the past. The main shaft has now reached a depth of about 170 ft. The matrix has changed from a slatey and taley nature to a white and bluish quartz, and the gold is everyway freer and susceptible of much easier amalgamation. The ore that has been milled came chiefly from the upper level and main shaft ; very little of the ore in No. 2 level has been milled.

INTERESTING MINING DETAILS.

Below No. 1 level the dip of the vein considerably changed, and instead of having a dip of 60 had a dip of 45. We could not, however, change the angle of the shaft. The shaft has evidently been sunk on a pay shoot of ore ; the result was, from the first level down to the present depth of the shaft, owing to the change in the dip of the vein, we passed through very poor quartz. In No. 2 level, in extending the levels and making cross-cuts, we have discovered the same rich ore back of the shaft that we had in the shaft from the surface down to the first level. This ore is all intact. In cross-cutting to the hanging wall we have passed through a rich streak over 7 ft. in width, that assays considerably over 1 oz. to the ton. This is all intact, and ready for stoping and milling. The vein at the 2nd level has been cross-cut over 50 ft., without reaching the hanging wall. This, as you are aware, is an enormous deposit of mineralised ore. I do not want you to think for one moment that it is all pay ore, for such is not the case—a great deal of it is very lean—a considerable quantity very fair payable ore, running from 5 to 7 dwts. In addition we have the two rich streaks referred to back of the shaft on the hanging wall side.

SUGGESTED PLAN OF OPERATIONS.

My plan for developing and working the mine would be to sink the main shaft 100 ft. deeper, and start the No. 3 and No. 4 levels—every 50 ft. make cross-cuts, and mine only the rich and payable ore, leaving the lean ore standing in the mine. I have no doubt with this amount of development, sufficient payable ore can

be mined to supply our 40-stamp mill. In the meantime, while these developments are going on, I would place the mine in condition to extract 20 tons to 25 tons of good payable ore per day, and mill this ore running 10 stamps. With a first-class amalgamator thoroughly familiar with the Appalachian ores, I have every reason to believe in 30 days after the mill starts up the proceeds from the 10 stamps will not only be sufficient to pay the expense of development, but also give a surplus to the company. Your property has been thoroughly examined and reported upon by several distinguished mining engineers, viz., Mr. Hambly, of London; Mr. Remfrey, of London, formerly manager of the Cloya Mine in Wales; Mr. Horn, of London; who has had great experience in mining in Australia, California, and New Zealand; Mr. Hancock, of London, now the manager of the Black Reef Witwatersrandt; Mr. Douglas S. Browne, of London, now managiug some properties in Honduras, and the late C. X. Hobbs, formerly of California. Without a siugle exeeption, each and every one of these mining experts report your property to be of great value, with an inexhaustible supply of ore, and I will add, though not a mining engineer, but having considerable practical experience in both miniug and milling, there is no reason why this property, in the near future, should not rank among the dividend paying mines of the world. You are aware most of you, if not all, that

THE COMPANY IS ABSOLUTELY WITHOUT FUNDS

to pay pressing claims long since due; that a great many of these claimants are bringing suit, and some have secured judgment, which, if not satisfied promptly, the property will be sold by them. It is not the debenture-holders who are pressing the company to pay their interest. They have been patient, and at all times willing to assist the company, and not to press it for their interest money. The present scheme of reorganisation is so entirely in the interest of the shareholders I hope it will meet with their unanimous approval. It will put the affairs of the company upon a new and solid basis. The new company will start on its career with about 10,000*l.* in its treasury, and about 3,000*l.* worth of concentrates waiting treatment at the mine to be turned into bullion, without any debt or obligation of any description; with a fully equipped mining and mill plant, blacksmith's shop, carpenters' shop, assay office (fully equipped), retorting house, company's offices, manager's house, miners' houses; in fact, everything that is requisite and necessary for a fully-equipped mining camp. Thus, with the scheme of re-construction successfully carried out, the new company will stand in a position such as the old company never had from the date of its birth, for you must bear in mind the present company has never had one penny of working capital, which is always so essentially necessary to place mining properties upon a dividend-paying basis. My business engagements have been such I have not been able to visit the property since I left it in October, 1887. Since that period, however, all the information that I have received, not only from the company's immediate representative at the mine (Mr. Hancock), but also from various sources, all tend to demonstrate the fact that you have a most valuable gold mine, and with sufficient capital to develop it, it must become in the near future dividend paying. (Cheers.)

The resolution was then carried.

Col. Walker asked if he might have the assurance of the board that they would not allot on insufficient application for shares, and that the first money raised under re-construction would be devoted to active work on the mine.

The Chairman said that these were matters for the new directors, who he deemed would take care that the wishes of the shareholders were attended to.

Col. McCoy: I am quite in sympathy with the remarks of Col. Walker, and as one of the debenture-holders, and knowing their views, though not being officially authorised to speak of them, I feel sure that they are perfectly willing to wait for their money until the mine is put upon a proper working basis. (Hear, hear.)

The resolution was carried unanimously.

HARMONIOUS MEETING.

The Chairman: I congratulate you upon the harmonious character of the proceedings. The resolutions, which have been passed, will have to be confirmed at a subsequent meeting, of which due notice will be given by the present directors of the Appalachian Company, which will remain in existence until its life be extinguished by the confirmation of the present resolutions at the next meeting.

THANKS.

Col. Walker proposed a hearty vote of thanks to the chairman.

Col. McCoy seconded the motion, which was carried.

The Chairman: I am extremely obliged to you, and I may take this opportunity of saying that it is with great regret I sever my connection with the Appalachian Company. I only do it because the work on my hands is so great that I could not pay to the new company, with its capital subdivided into 5*s.* shares, the attention which it deserves, and I have made it a rule of life never to do anything which I cannot properly attend to. (Hear, hear.)

The proceedings were then brought to a close.

THE PORT DARWIN GOLD MINING CO., LIMITED.

The secretary advises receipt of letter from the mines, dated Port Darwin, 26th of February, in which the manager states:—"I am just in receipt of bill of lading for amalgamator, and I have just seen 25 lbs. weight of fine pyrites, without a particle of free gold, that have been assayed over and over again by the bank's assayer, and contain 130 ozs. of gold to the ton, showing that very rich pyrites has gone through with the company's heap of tailings. With regard to the reef at the bottom of the shaft, as this consisted of a thin vein of pyrites, I would recommend a drivage being put in from the shaft south in the direction of the big reef under the old workings, and at moderate cost we might cut something good at any moment, as we should be going right under the old workings, which yielded from 2½ to 5 ozs. free gold per ton, in a good sized reef." The manager adds:—"Since writing, the steamer with the amalgamator has arrived, and it is now being landed."

Letters of allotment for Three per Cent. First Mortgage Bonds of the Zafra and Huelva Railway Company (Spain) were posted last Thursday.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Hill's Waterfall Estate.—The first ordinary general meeting of the shareholders will be held at Winchester House, Old Broad Street, E.C., on Tuesday next.

Gordon Diamond.—Return of work done at mine for week ended 13th inst.:—Blue ground hauled, 10,000 loads; blue ground washed 6,000 loads; diamonds produced, value 2,100*l.*

South African.—The following particulars relate to the week ending March 16th:—Blue ground hauled, 5,640 loads; blue ground washed, 4,877 loads; diamonds obtained, 1,509 carats; estimated value, 1,725*l.*

Jumpers.—The secretary has received the following cablegram:—"Results for March: Quartz won, 1,715 tons; crushed, 1,615 tons; produced 1,379 ozs. gold; profit, 2,138*l.* Large quantity of sandstone crushing from stulls, crushed with reef. April crushings will be exceptionally good. Expect we shall be working with 100 stamps in June."

The George Walker (Moodie's).—The following report is from the manager at the mines:—Eastern section, north reef: In the drift at the bottom of the western shaft the reef has been found standing in the side of the old workings; it is about 1 ft. wide, of good class ore. In the drift west of shaft there is a reef 1½ ft. thick, carrying low-grade ore. Cross-cut south is making good progress. South reef, eastern drift: The rock is hard, carrying considerable pyrites. Western section: No. 1 level being vigorously driven, and carries at times large leaders of ferruginous quartz. A new reef has been discovered about 1½ ft. wide, and is being opened upon. There is about 40 tons of ore at surface from the works of development.

Transvaal Gold Exploration and Land.—The following particulars are from the manager's advices of March 18th:—Mines: Theta vein—The weight extracted during the week was 70 tons, assaying 4 ozs. 3 dwts. of gold, and 11 dwts. of silver per ton. The vein continues without material change since last report. At No. 1,062 it is strong, and looks exceedingly well. At No. 1,061 stripping was going on all the week, but had not got down to the main vein. The upper of the two small veins referred to last week has improved in size, and is now about 1 ft. thick. Beta vein: The weight extracted here was 20 tons, assaying 1 oz. 18 dwts. per ton. Tunnels Nos. 426 and 427 have been driving on the vein 19 ft. and 21 ft. respectively. Columbian Hill: 176 ft. of trenches have been cut during week, but no payable vein has yet been found. In trench No. 6 a vein of 5 ft. thick was cut through, but it carried only colours of gold. Brown's Hill mill: Battery—The battery was at work during week for 128 hours, and crushed 132 tons of Theta vein ore, assaying 6 ozs. 18 dwts. gold per ton. Clean-up of plates yielded 666 ozs. of amalgam. Pans: During week the pans have been at work 107 hours, and treated 39 tons mixed blankетings and slimes, assaying 2 ozs. 9 dwts. per ton.

Vogelstruis (21st March).—Drainage level: Good progress is being made with this level. It is well advanced west of No. 5 winze towards No. 6, and the indications would imply we are well out of the dyke disturbed ground which has, in the past, given so much trouble. Main reef stopes: The six stopes east and west of Nos. 1, 2 and 5 winzes respectively, are producing their usual quantities of ore. In the practical working, however, we find modification to ordinary methods will have to be introduced. The hanging side is bad, the timber obtainable being also small and costly we purpose working partially at least on the pillar and stall system, finally robbing the pillars as much as possible, and run down débris from the surface. A little experience will, of course, determine which is the most economical, viz., the leaving of a certain portion of reef with minimum putting in of timber, or extraction of the whole, and heavy expense of stall timbers. South reef: The drifts being driven east and west of Maddock's and Rosewarne's winzes, respectively exposes the reef to be of workable value with fair gold prospects. No. 2 shaft: The surface machinery is erected at this shaft, but owing to scarcity of joiners we are unable to complete the necessary carpentering. As soon as possible we shall do this, and get to work below ground. No. 3 shaft: We persevered with the sinking of this shaft to plane of drainge level, and drove the drifts north and south some 4 ft. each way merely for shelter when work is resumed. A strong whim must be erected before work can be resumed, but owing to scarcity of carpenters we are compelled to temporarily suspend our deeper trials. Battery: We hope to start up 10 heads to-morrow. The great difficulty of obtaining and retaining the service of carpenters upsets any anticipations regarding dates of starting new work. Just now we are fortunate in having three fair workmen at 20*s.* per day each, and I am hoping they will continue on to enable us to make the alterations referred to in my last report.

Nitrate Railways Company, Limited.—The gross receipts from all sources, for the year ending 31st December last, including the profit on exchange, have been 761,682*l.* 7*s.* 9*d.*, as against 674,205*l.* 9*s.* in 1887, 455,963*l.* 2*s.* 8*d.* in 1886, and 351,615*l.* 0*s.* 8*d.* in 1885; and the net receipts, after payment of working expenses, cost of administration and maintenance of the permanent way, are 414,669*l.* 19*s.* 2*d.*, as against 379,646*l.* 4*s.* in 1887, 183,261*l.* 17*s.* in 1886, and 103,110*l.* 0*s.* 7*d.* in 1885, showing a very satisfactory increase. The working expenses in Chili have been 46.07 per cent., as against 36.92 per cent. in 1887, 41.98 per cent in 1886, and 57.53 per cent. in 1885. Adding the balance of 86,978*l.* 6*s.* brought from 1887, there is an available balance of 414,069*l.* 19*s.* 2*d.*, and deducting therefrom the amount required for the service of the mortgage loans, income tax, &c., there remains a balance of 340,997*l.* 9*s.* 4*d.* to the credit of net revenue. Out of this sum two interim dividends of 12½ per cent. each, amounting together to 322,500*l.* were paid in July, 1888, and January last, leaving a balance of 18,497*l.* 9*s.* 4*d.*, which your directors recommend should be carried forward to next year's account.

JUST PUBLISHED. Crown 8vo. Price, 2s. 6d.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

Balkis.—We do not believe the shares are worth buying. Keep New Emma and Organos.
B. C. (Bournemouth).—Yes; you had better go in for re-construction in U.S.P. Hold your other shares, but sell both the South Africans.
Gold (U.S.A.)—The mine has been at work for about 15 years without doing any good for its English shareholders. The only people who have made a profit have been the Americans.
S. P. B.—No, as regards 1, 2, 5 and 6. Keep 3, 4 and 7.
S. E.—You had better sell while you can get a profit.
W. E. G. (Somerset).—Demand a return of your money before it is too late.
G. L. Trade—Sorry to say you have no remedy.
Gain (L. S.)—Wait. You will see them lower yet.
Rainham.—We believe them to be respectable.
Appalachian.—You should not sacrifice your shares. See to-day's report of meeting.
J. Gordon.—A dividend will be declared next month.
Cautious.—They are not members of the Stock Exchange; neither can we see their names in the London Directory.
Exchange (J. P.)—Thanks for information.
Commercial T.—A pure speculation. Write us more fully.
Miner (Sheppertou).—No. We hope to be in a position to speak more definitely later on.
C. B. A.—Nos. 4, 6 and 7 are worth holding. No. 1 is wound up; and Nos. 2, 3 and 5 are almost defunct.
Waiting.—The low-priced shares you name should go better.
J. Trent.—A very fair selection, which will no doubt realise your expectations.
Trainer (A. L.)—The management certainly is anything but good.
G. W. C.—Two of the directors resigned.
Etheridge United.—We think they will improve.

The Mining World.

LONDON: SATURDAY, 20TH APRIL, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

THE COPPER COMPANIES AND THE SYNDICATE.

Three of the leading copper-producing companies have declared their dividends within the past few days. The Tharsis dividend makes the payment for the year 20 per cent., against 10 per cent. in the preceding year, and 7½ per cent. in 1886; Mason aud Barry pays 9 per cent. against 5 per cent. for 1887, and 2½ per cent. for 1886; and the Rio Tinto dividend brings the year's distribution up to 17 per cent., contrasting with 10 per cent. in the preceding year, and 3 per cent. in 1886. Mason and Barry carries forward 40,000*l.* odd after paying the dividend, while Rio Tinto writes off 210,000*l.*, and carries forward 203,000*l.*, these latter sums representing about 12½ per cent. upon the ordinary capital of the company. Under normal circumstances these dividends would be regarded as exceedingly satisfactory, and upon their announcement prices would have risen sharply. In the present condition of things, however, the announcements have fallen flat, and in each case the prices of the shares close lower than on Friday last. This is, of course, attributable to the depressed condition of the copper market, where the price has fallen to about 37*l.* 7s. 6d. per ton. Some of the leading representatives of the speculation in copper have been in London during the past week, including the official liquidator of the Comptoir d' Escompte, endeavouring to arrange terms for future operations; but no conclusion has yet been arrived at. Indeed, it is rumoured that very considerable differences of opinion have arisen between some of the representatives of the producing-companies and the leaders of the syndicate, and we understand that the American producers are displaying anything but a conciliatory spirit in the discussions which are going on. The statistical position of the metal market remains practically unaltered, for in spite of the great fall which has taken place in prices deliveries show but a very slight improvement. It is the delay in the negotiations that is undoubtedly keeping the market in this regrettable condition; and it is therefore greatly to be hoped that by mutual concessions on the part of those mainly interested the existing deadlock may speedily be removed.

SOUTH AFRICAN MINES.

We have from time to time dealt at some length with the position and prospects of the Witwatersrandt group of mines, and in doing so we have not hesitated to express our belief that the speculation was being very greatly overdone, and that it must inevitably be followed by a sharp reaction. By the leaders of the "boom" we have no doubt been regarded as pessimists; but those of our readers who have watched the recent course of events will not have failed to observe that our warnings have been justified to the fullest extent. Prices have suffered a very heavy fall all round, while many of the shares in what promoters would have us regard as incipient El Dorados, are now, and are likely to continue, practically unsaleable. The tone of the market has been completely changed, and the financial resources of the Hatton Garden group have been powerless to prevent the tumble which has now been going on for three or four weeks past, and which has lately been considerably accelerated.

But, it may be asked, why should there be such a heavy fall when the returns from the district have recently been so satisfactory? The reasons are not far to seek. In the first place, prices had been forced up to a level which would be extravagant if the aggregate yield of the mines were several times what it really has been. The slightest pressure of sales would, therefore, have been sufficient to check the upward movement. But, as a matter of fact, sales have been forced to an extent which would have upset a market of far greater weight than that for Rand shares. The collapse of the French copper syndicate compelled French holders to realise right and left, and in consequence South African gold shares were flung upon the London market in heaps. The digestive powers of the principal dealers here were sorely taxed, but they managed to swallow all the stuff the Parisian speculators sent over—at a price. The reduction in quotations thus brought about seems to have alarmed the Johannesburg people, who for the past two or three weeks have been unloading at whatever figures their shares would realise. When that has been the temper of those on the spot it is scarcely to be wondered at that the market has gone to pieces, and that even at the greatly reduced level which has been brought about outsiders have shown no disposition to purchase Rand shares.

In another column we show, as we have been showing for some weeks past, that prices continue to dwindle, until, in many instances, quotations are little, if at all, more than half what they were a few weeks ago. But the importance of the fall will be more clearly shown by the following table, in which we give approximate particulars in

the cases of the leading companies, of the nominal capital, with the market valuations of that capital at the beginning of March and on Wednesday last. We have made the comparison with the figures ruling at the beginning of March for convenience of reference; but we may point out that in some instances the contrast would be still greater if we selected the highest quotations which have been reached.

Company.	Nominal. £	March 1. £	April 17. £
City and Suburban	60,000	975,000	510,000
Crown Reef	100,000	900,000	625,000
Durban-Roodepoort ...	90,000	675,000	405,000
Ferreira	28,000	588,000	364,000
Heriot	60,000	435,000	225,000
Henry Nourse	50,000	450,000	262,500
Jubilee...	23,000	202,000	121,000
Jumpers	60,000	1,020,000	585,000
Langlaagte	450,000	2,362,500	1,518,750
Robinson	50,000	3,100,000	2,125,000
Salisbury	22,000	594,000	308,000
Simmer and Jack	75,000	844,000	393,750
Stanhope	60,000	375,000	210,000
Wemmer	33,000	366,000	239,250
Wolhuter	70,000	350,000	175,000
	£1,231,000	£13,236,500	£8,067,250

From this we see that the aggregate capital of the 15 companies specified amounts to 1,231,000*l.*, and that this amount had been inflated to 13,236,500*l.* at the beginning of March. If we were to take the highest figures reached we should probably have to raise the market value at the top figures to over 15,000,000*l.*, or very nearly double the market value this week. A loss of somewhere about seven millions between 15 companies is, of course, a very serious matter, and while such a fall has been taking place, it is not surprising that speculators here have held aloof from the Rand market, and that in consequence the decline has extended to good and bad alike.

We have always admitted, and freely admitted, that for a district which was almost unknown a couple of years ago, the mining industry in the Rand has made enormous progress; nor have we sought to minimise the real importance of the field in the question of the world's gold supply. We have merely pointed out that the range of prices was greatly in excess of the proved value of many of the properties. Future developments may more than justify the highest quotations which have been reached; but until those developments have taken place it would be most unwise to place such a high estimate on the value of the mines as the wire-pullers on the spot and on this side would wish us to. Little deep mining has yet been done on the field, and in spite of the large returns which some of the mines are making the industry is still in its infancy. And yet not many weeks ago the aggregate market value of the companies whose shares have been dealt in here was between 30 and 40 millions sterling. Every prudent person who studied the matter must have seen that such a value could not be maintained, for it was utterly preposterous.

It is not improbable that the pitch to which the speculation extended may check the opening up of the district as rapidly as its merits would justify. Shareholders who have had placed before them the prospect of becoming rich beyond the dreams of avarice in a very short time will be indisposed to wait patiently until the properties in which they may be interested can be systematically developed, and thus harm may be done. This would be exceedingly regrettable, for the progress hitherto made has been very satisfactory. In the first three months of last year the aggregate yield of the Rand mines was about 38,000 ozs., in the past quarter it is estimated to have amounted to between 65,000 and 70,000 ozs. This is, of course, less than one would have looked for, if reliance had been placed on statements from interested quarters; but on the basis of actual capital outlay the return is most encouraging. In the following table we give a list of the chief yields in the past three months, premising that the great increase at Langlaagte is due to additional stamps, and that at other mines similar increases may shortly be expected.

	March. Ozs.	February. Ozs.	January. Ozs.
Robinson	3,364	3,400	2,550

EXIT ALTURAS—ENTER ELMORE.

Alturas has been the child of many prayers and not a few curses—the curses perhaps predominating. It has exceeded the expectations of some; it has disappointed the calculations of others. The spectacles through which both parties have looked at Alturas have been the prices they have paid for their shares.

Some persons, who thought their money totally lost, have regained it with a handsome bonus; whilst others who bought at big premiums have seen quotations at a deplorable discount. When the company was launched on the chequered scene of joint-stock life, in the February of 1886, there was some reason to believe that it was not altogether conceived in purity, or brought forth in innocence. The character of its parents was doubtful, and as time went on it did not rise beyond the level of adverse criticism. As Mr. Smith (its able liquidator) on one occasion truly said, "A trail of suspicion runs through everything connected with Alturas." Alturas had a bad name from its birth, and justified that name by its proceedings during life; and now that it is dead it will be unwept, unhonoured, and unsung. Mr. Smith pronounced its funeral oration on Tuesday, and Mr. Biggs added the requiem chant, but tears did not flow, because they were not bidden. Alturas illustrated the course of true love which Shakespeare found out never runs smooth. Managers appeared, and disappeared. There were big returns, and there were little returns, and there were no returns at all. There were dividends, and there were debts; there were debtors, and there were creditors, but the debts and the creditors were in the ascendant. Directors, solicitors and officers retired, though some, possessing more of the confidence of the shareholders than others, and feeling, perhaps, a greater sense of responsibility, like Mr. Foreman and Mr. Frank Hodgkinson, stood by the company, and deserved, as they received, the "well done" that rewards the efforts of faithful servants, but still, above all, or under all, Alturas suffered from "the trail of suspicion," and its departure now to the bourne from whence no company returns will not be regretted, particularly under the circumstances we shall set forth.

On December 28th a committee of shareholders reported that it was advisable to give the *coup de grâce* to Alturas, with a view to re-construction. On February 1st the resolutions authorising this step were passed. On February 19th they were confirmed, and a happy choice of liquidators in Mr. J. H. A. Smith and Mr. J. W. Biggs was made. These gentlemen, when they saw the task that was before them, figuratively and literally took off their coats. The financial position was serious. There were debts, and, needless to say, there were dangers, but by a last expiring effort, which we supposed Alturas made with the view of redeeming its character or participating in the means of grace, it produced 1,285 ozs. of bar gold, and the proceeds saved the company from financial embarrassment abroad, though it did not mitigate the stiff fight the liquidators were waging with the demon of impecuniosity at home. It must be admitted that with 20,000*l.* of debt the sum of 131*l.* at your bank cannot be regarded as an asset of remarkable strength. Re-construction, to be of any avail, must be immediate, for the disease of Alturas could only be cured with a thick poultice of bank notes. The shareholders were appealed to, and the response was quite remarkable. The company's capital is 300,000*l.* 273,043 shares were applied for, leaving a balance of 26,967 to be allotted by tender. Applications for thousands of shares had to be refused. The shares are 1*l.* each, credited with 17s. paid, and of the remaining liability of 3s. one half has been called up, so that the shares will be dealt in as 18s. 6d. paid, with a liability upon them of 1s. 6d. The balance of shares, which could not be allotted in the ordinary way, was tendered for, and this will enable the liquidators to return about 1s. 3d. per share to those holders, who, from a variety of causes, were unable to take up their allotments. After paying all liabilities, the Elmore Company (as Alturas will henceforth be called) will start with a clear working capital of 30,000*l.* Two or three months will have to be allowed for development, after which time the mine may be relied upon to give a good account of itself. A more satisfactory termination to what at one time seemed a hopeless position is not extant. We offer our heartiest congratulations alike to the shareholders and to the liquidators upon a consummation so devoutly to be wished.

MORE ABOUT WHITE'S ASBESTOS CO.

In strongly urging our readers a week ago not to apply for this company's shares, we challenged the statement in the prospectus, that the property had been "proved" to be valuable. We asked then, and we ask now—How has it been proved? And, perhaps, whilst in the Socratic mood, we may as well request the directors to state who is White and who is L. J. Boyd? As regards the former, it is said "there's no such person;" and as regards the latter, he is declared to be quite unknown to asbestos fame. Serious allegations have been made in the Press during the week against the company, and these have been coupled with specific requests for explanations from the directors. Perhaps the best plan these gentlemen can adopt to preserve their commercial reputation will be to return the money to every person who has been so unwise as to make application for the shares.

HOPE FOR NEW CONSOLIDATED.

New Consolidated shareholders have been hard taskmasters of their directors. The bondage of Israel in Egypt is typified in the financial bondage of the Consolidated directors in Coleman Street. They have magnificent properties, whose praises are in the mouths of all, but the wherewithal to work them is a question which has baffled and confounded them at every turn. The directors, now led by their financial Moses, Mr. Spratt, have determined to leave the land of bondage and to go to a Canaan, which, if not flowing with milk and honey, at least will supply the needful to develop the properties. Casting aside their monetary chains, Mr. Spratt and his colleagues intend to appeal first to the shareholders, and then to the much larger constituency of the outside world, for that support to which we hold they make so good a claim.

In the first place, without inquiring too closely into how the company became interested in properties in the two hemispheres, let us look calmly at their present and prospective value. The directors attach much importance to the Grand Canon Placer Company of New York, a concern in which they have a large interest, and which appears to be on the point of success. They have also shares in the British Tintic Company, which are likely to be of value when legal disputes now pending are settled. Thirdly, they have shares in the Marcus Mine, which are also described as likely to be of value ; and fourthly, shares in the Gilbert and Chaudière Company, which were roughly estimated by Mr. Spratt at 7,000*l*. Fifthly, they have their Corsican properties, which are described by Major Joseph as producing a far larger percentage of copper per ton of ore than Rio Tinto, and which a company, since defunct, thought of sufficient value to rent at 8,000*l*. a year. The abiding faith of the directors in these properties, if worked with capital and administered with care, has been evident during all the weary years of waiting through which New Consolidated and Old have passed. Lastly, they own what we have all along believed to be the best property of all—the original one which the company was established to take over, and which it abandoned in a way that did not add to the national reputation for pluck, or the probably even greater reputation for perseverance. We held from the commencement—at all events from the moment when Col. Stanford surrendered 30,000*l*. of the purchase-money—that the whole efforts of the directors should have been devoted to South Aurora, that the company should never have changed its name, and that the other properties, valuable though they may be, should never have been acquired.

On the South Aurora property was a valuable mill which has long been the envy of adjacent mines. This property is on Treasure Hill —a name derived from the enormous pockets of silver extracted from it. We could never understand why the company abandoned their South Aurora mines. They had everything requisite to encourage them—rich neighbours, a splendid mill, and a partially-developed sett ; but it seems that the shareholders, having no backbone, and the administration being deeply discouraged by the results of past endeavours, allowed the chance to slip from them, and sought fresh adventures in the old world as well as the new, which absorbed their capital, and left them later on to pass through the familiar process of re-construction.

There came a day when the Consolidated directors advanced 5,000*l*. as a contribution towards driving a tunnel through the base of the mountain, passing through both the Eberhardt and South Aurora properties. They entrusted its expenditure to other people, with the result that they have now the suspicion, plainly referred to by Major Joseph, that the tunnel was diverted when it struck the rich lead. The statement of Major Joseph was based upon rumours and whisperings which have reached the board. We agree with him that the future will probably show South Aurora to be a very valuable property. The directors of the Eberhardt Company, past and present, are honourable men, and we know Major Joseph is also of this opinion.

The board intimate that they have two new schemes ready to submit to the shareholders for dealing with the Corsican and South Aurora undertakings, and the sooner they are launched the better. At present these properties entail dead charges of 1,000*l*. a year, and the directors would do well to make a vigorous effort to stop this useless expenditure, and to realise something from these properties for the shareholders. We cannot close without uttering a word of protest against a shareholder's manner of dealing with the chairman. He pointedly asked what Mr. Spratt had done for the company, and we hope he was satisfied with the answer he received. Mr. Spratt could have done more for the company if he had been better supported by the shareholders, but to tell the truth, the New Consolidated proprietors have shown less than the ordinary courage of mining investors, or they would have enabled the board, long ere this, to make the vigorous effort they now propose, and to terminate a state of things that has become intolerable to them as business men. The board are determined to raise capital to work their properties, and although they have other strings to their bow, yet they realise that the duty of the hour is to deal with the properties we have named in a manner commensurate with what all agree in describing as their true merits.

THE TRANSVAAL GOLDFIELDS.—7.

By a Cape Colonist.

Subsequently, another rush took place to the Rotunda Creek, a spot some 15 miles down the Blyde River ; claims were worked out, but, with few exceptions, they were quickly abandoned, ill luck pursuing the diggers in almost every instance. No further work was done at this spot until 1880, when gold was again discovered here, not in the valley, but upon the hill, at a point some thousand feet above the level of the river, and some 3 miles distance from water. After some considerable search water was found 4 miles distant, rising at a great height near the top of a basaltic precipice, and they were enabled to bring down a sufficient head of water to commence work in earnest. Patient search has failed to develop a defined reef, but the presence of gold amongst the loose soil, broken quartz, and large masses of *débris*, gave the miners sufficient confidence to continue their enterprise. Even the soil between the grass-roots, when panned off, gave colour. Whilst prospecting about the miners came across some ancient workings, and one of them found a silver Portugnese coin. Judging from the presence of this coin and similar evidence, there can be no doubt that white men have, at some time not less distant than a few centuries, worked in these goldfields, but in what manner, and with what tools or implements, cannot now be determined. The distance of some of these ancient workings from available water, taken together with the contour of the country, indicates that if the search for gold was not thorough, it was very wide spread, and, for those times at least, must have been remunerative.

It was not until 1881, after the War of Independence, that the Transvaal Government granted any concessions to private individuals in the Pilgrim's Rest and Spitzkop districts. Some of these individuals formed companies in England, and much capital was embarked in the development of the ground, but the results have been disappointing up to the present time, owing to the patchy nature of the ground, in which no true fissure vein is said as yet to have been found.

Round about the immediate neighbourhood of Barberton—known also as the De Kaap fields—we find a somewhat different state of things. As the prospects of obtaining good alluvial gold finds in this vicinity died out the indications of a payable reefing country began to grow. The really first reef mining camp established was on a farm belonging to Mr. D. P. Moodie, who had acquired a block of 80,000 acres in extent. On this property more than 1,000 diggers had congregated in 1884, and disputes speedily arose between them and the company to whom Mr. Moodie had sold his rights. The consequence of these disputes was that the diggers dispersed themselves over the country — which had really been prospected by others in previous years — and the result was the discovery of rich alluvial reefs, which caused another and much larger rush in 1885, and ultimately the foundation of the town of Barberton in the De Kaap valley. Moodie's celebrated farms then sank into insignificance before the now famous Sheba mountain, the richness of which has yet to be revealed, and which forms a conspicuous feature in the bird's-eye view I have referred to, and week after week we were inundated with the news of the discovery of other reefs of more or less value. There came upon us the formation of companies to work those reefs. Capital was the first requisite, and company after company was formed on the 1*l*. per share principle, each company being floated with a capital varying from 20,000*l*. to 300,000*l*.

That the Barberton goldfields are at the present moment under a cloud cannot be disputed, but there are several good and substantial reasons for this depression. Many companies were floated by men who knew nothing of the business, and in many instances ground was put into the market which would never yield gold sufficient to pay for the labour of development ; the difficulties of transporting machinery were very great, and the difficulties of obtaining water rights still greater. But notwithstanding these drawbacks, the gold is still there in reefs of surprising thickness and richness, and those companies which are able to weather the storm will soon be reaping their reward. So far as speculating in shares is concerned, it may be said that the De Kaap gold companies are quite out of the running. Speculators have had their day in that locality, and when the output has reached a certain figure they may have it again ; but in the meantime it is only those who decline to part with their scrip, and who are patiently waiting the declaration of dividends, who have the best of the bargain. It is difficult to estimate the number of stamps at work in this district, but I believe I under-estimate when I state that there must be at least 500.

In connection with this part of my subject I will briefly allude to the Komati and Swaziland goldfields. The former are close to the Swaziland border, and they take their name from the Komati River, which takes its rise in the De Kaap mountains. Steynsdorp is the commercial centre of these fields ; it is a small village about 45 miles from Barberton, and at present the population is not more than 600. The number of companies on these fields must be at least 40, but as yet they have absolutely done nothing. One or two batteries are at work, and occasionally we hear of a good result. These fields are, however, very quiet.

When we come to Swaziland the case assumes a different aspect. At present every thing is in a state of political confusion, owing to its being a native territory ruled by a king who appears to be a tool

in the hands of designing white men. When this king was in the full plenitude of his power he granted in 1880 to a Mr. MacLachlan a mining concession over an area of 300 square miles, and another to a Mr. J. Forbes over an extent of 50,000 acres. Mr. MacLachlan sold the whole, or a portion, of his concession to what is known as the "Pigg's Peak Company," and this company appears to be managed on such a basis that great things are expected of it in the immediate future; indeed the results of the stamps quite recently set in motion are making some little noise, and the shares, which have been below par for the past 18 months, are now looking up. That the whole of Swaziland is more or less richly auriferous is true, but capitalists can hardly be expected to embark in such an unsettled country. As the case now stands the elective committee of white men, who are supposed to be advising the king, have quarrelled amongst themselves, and there is every probability that before many months are over the country will be annexed to the Transvaal. When that event takes place I should strongly advise capitalists to keep an eye on the Swaziland Goldfields.

I have already termed the De Kaap Goldfields the Northern goldfields of the Transvaal; in reality they are situated on the north-eastern corner of the State. I will now refer to some news which has just arrived from Zontspansberg, a village lying still further north, and rather more than midway between Barberton and the Luipopo, the northernmost boundary of the territory. A prospector has just written down from that village to say that he has just returned from a twelve months' prospecting tour beyond that river. He crossed it at lat. 21 S., and long. 32 E., and found gold in quantities along its banks. This really is the first reliable information we have had from that neighbourhood. He describes the bottom and the banks of the river to be sandstone and ironstone quartz, of various colours; most of the specimens are rich in gold, and some even show gold freely. He then travelled in a northerly direction for a distance of 36 miles, prospecting as he went along, finding colour in several places, until at last he came to a high mountain range of metamorphic formation. That range he ascended, and found on the top a large table-land, about 50 miles square in extent, with auriferous formations everywhere apparent. To use his own words:—"All the prospects obtained here were splendid. The width of one reef we found to be about 2 ft., and it stretches north-north-east by north-north-west in mica schists in a highly crystallised state, and of a deep red colour, consequent on the amount of iron contained in the quartz. We explored the table-land further, and discovered ancient ruins and workings which must have been worked centuries ago by a civilised people, as the natives seem to be quite ignorant of gold and its value. I prospected the mines and found alluvial gold. They have been working to a depth of from 6 to 12 ft. in rotten reefs or leaders, all of which are extremely rich in gold. I also found several small nuggets from 1 dwt. and upwards."

I refer to this prospector's letter for the purpose of giving my readers the latest ascertained facts in connection with auriferous discoveries. The locality is in a but little known native territory belonging to the Gaza tribe, and is as yet innocent of a mining engineer or a crushing battery.

In my next I propose to treat of the now celebrated Witwatersrand Goldfields.

(*To be continued.*)

LISBON-BERLYN AFFAIRS.

The shareholders of the Lisbon-Berlyn Company must be lamblike indeed if they read without bleating the statement in Mr. Simpson's report—that "no serious attempt during five years has been made to prospect the company's property." They will be tempted to ask what, in the interval, has been done with the vast sums of money they have placed at the disposal of the directors; and what sort of a stewardship account can be rendered in the face of such a deplorable statement as that which we have quoted. Mr. Simpson tells us that indications of gold exists wherever prospecting has been made, and that even the water-courses show the presence of gold. Meanwhile directors have come and directors have gone, and managers have appeared and disappeared, but the pockets of the shareholders have been destitute of that gold with which their land teems, and which discolours their streams. The plan of operations now is to "thoroughly prospect the property from end to end with experienced assistants, and to encourage diggers to rent claims upon the farms." The shareholders will ask why this policy was not adopted before; and they will read with mingled feelings that instead of now confining their energies to their own vast estate, of which Mr. Simpson speaks so highly, they have gone so far afield as the Witwatersrandt district to secure the option of a share "in 54 valuable claims." To work these claims they will have to remove the Lisbon Berlyn machinery to them—machinery which may be wanted anon for their own property. We are afraid that after all the experience of the past the directors have still to learn wisdom; for we believe that their attention would be better concentrated upon their own sett than by being partially devoted to the property of other people. To carry out this nice little arrangement the shareholders will be offered 25,000 shares at 30s. each, which we recommend them to reject, or their last state will be worse than their first.

THE BANTJES (SOUTH) GOLD CO., LIMITED.

In considering the prospectus of this company it is refreshing in the first place that we have not to deal with assays, which are notoriously unreliable, but with a good all round crushing of 1,000 tons which yielded 1,000 ozs. The 1,000 tons from which this satisfactory return was made was taken from one of the two reefs which intersect the claims. In one of these Mr. J. W. Harrison, a mining engineer of Johannesburg, found a well-defined reef 15 ft. wide, and another reef, stripped for about 30 ft., exposing it to be 3 ft. in thickness. As bearing indirectly upon the value of this property we may mention that its adjoining neighbours are the Vogelstruis Company's Estate, and also the Durban Roodepoort Mynpacht, for the shares of which there has of late been so strong, and so satisfactory a market. One of the most successful companies in South Africa is the Jumpers, and it is the manager of this concern, Mr. A. H. Kingsley, who, on his return to South Africa, will superintend the opening up of the Bantjes claims. He will be assisted by Mr. Knox and Mr. Pearce, whose ability as miners has been well recognised in connection with such concerns as Moss Rose, Red Reef, and other Witwatersrandt companies. The 23 acres acquired by the Bantjes Company are 8 miles from Johannesburg, and are in the vicinity of other mines which have made the fame of South African mining. The company has certainly rich neighbours, and there is a great deal of concurrent testimony to show that its claims are well-fitted to establish their own reputation without any reference to that of their neighbours. At the same time, in mining it is always a source of satisfaction to know that adjacent properties are rich, for the encouragement to proceed is thereby increased. The output from the Randt Mines in February was 30,000 ozs. of gold, and the most valuable of them were in the district in which this company's sett is to be found. The claims are found in Wyld's map, a copy of which lies before us. The water rights are extensive and convenient, and suitable sites have been secured for the machinery. The gold is found in reefs—not in quartz. It is very soft, and mining, it is said, will not cost more than 15s. per day. At this rate 6 dwts. would pay all charges, but the directors have wisely based their estimates upon no such return, but upon one of an ounce to the ton. The crushing of 1,000 tons already made would warrant this assumption, and also the deduction they draw from it, that the dividends will be equal to 40 per cent. upon the capital. An experienced board has been secured, including an unusually strong local committee. The capital is 80,000*l*., and the purchase price 60,000*l*. It is stated that 54,000 shares of 1*l*. each are available for subscription. The property has certainly many features to recommend it to investors.

SUGGESTED AMALGAMATION OF THE COLAR CENTRAL AND EASTERN MYSORE COMPANIES.

Proposals have been made by which a union of the Colar Central and the Eastern Mysore Companies may be brought about on terms equitable and beneficial to both concerns. Matters have not yet assumed the shape of a fixed agreement, but it is stated that the boards of the respective companies have met, and that something like the basis of an arrangement has been come to. Of course, before anything definite can be done it will be necessary to obtain consent of the shareholders of each company. The position seems to be this, that the Eastern Mysore Company is deficient in funds, whilst the coffers of the Colar Central Company still present an imposing appearance. On the other hand the Eastern Mysore Company claims to have proved its property, whilst the Colar Central does not pretend that it has yet reached the land of promise, though at any day it may strike a valuable lode. A glance at the map will show that the Eastern Mysore property is due east of the Mysore Mine, whilst Colar Central is due north of that remarkable enterprise with the Indian Consolidated intervening. Although nothing is definitely arranged as yet, shortly after Easter it is quite on the cards that the shareholders will be called together to hear or decide upon what their respective boards have to propose.

APPALACHIAN CO.

The shareholders of this company met on Thursday, and in a business-like manner approved of a scheme of re-construction which will have the effect of relieving the company from its present embarrassed condition. Briefly stated the scheme is as follows:—The new company will have a nominal capital of 350,000*l*., divided into 1,400,000 shares of 5*s*. each. Of these shares 200,000 fully paid (of the nominal value of 50,000*l*.) will be issued to the debenture-holders, which they are willing to accept in lieu of the existing 50,000*l*. debentures of the old company. The balance (1,200,000 shares of the nominal value of 300,000*l*.) will be issued to the present shareholders on the basis of four shares in the new company for each share they hold in the old company. The new shares will be credited with 4*s*. 6*d*. paid, leaving a liability of 6*d*. per share, payable as to 3*d*. a share on application and 3*d*. per share on allotment. Not only will this scheme wipe out the debenture debt of 50,000*l*., and pay off all liabilities, but it will also place 10,000*l*. in the hands of the company as working capital. The shareholders owe a debt of gratitude to Col. McCoy, a shareholder from the other side of the Atlantic, for his pains-

taking efforts on behalf of the company. It will be seen by a perusal of our report of this gentleman's speech that he firmly believes in the property, and at the present moment some 3,000*l.* worth of concentrates are awaiting treatment at the mine to be turned into bullion. Col. McCoy has had considerable experience in mining matters, and his remarks will be read with much interest. The company appears never to have had a fair chance, inasmuch as it has had no working capital, and without this it is impossible to place any mining property on a dividend-paying basis. The property has been thoroughly examined and reported upon by several distinguished engineers, all of whom are agreed as to its great value, and with careful handling it bids fair to become, in the near future, a dividend-paying mine. Col. Malleson has retired from the board, but we think the shareholders would do well to consider the advisability of asking him to act in the capacity of a director of the new company.

THE MONEY MARKET.

City, Thursday Evening.

REDUCTION OF THE BANK RATE.

The Money Market has been decidedly easier this week owing to the influx of the dividend money from the country, the payment of Reduced Three per Cents., and the money offering from loans borrowed for seven days of the Bank at the last settlement. Bills, with considerable competition for the few about, have fallen to $1\frac{5}{8}$ per cent., and loans and advances have dropped away to 1 to $1\frac{1}{2}$ per cent. This morning the Bank directors lowered the rate of discount from 3 to $2\frac{1}{2}$ per cent., which caused no surprise, as it had been pretty well anticipated, although the stringency last week caused some doubts as to the future of the market. The alteration, however, had little effect on the rates. The Bank return, issued to-day, shows a falling off of about 1 per cent. to $40\frac{5}{8}$ per cent. in the proportion of reserve, as, notwithstanding the week's influx of over 300,000*l.* from abroad, the stock of bullion, owing to the increased circulation, is less by 265,000*l.* The less favourable position of the Bank as shown by this return would indicate that the reduction in the rate has been made more with a view to assist Mr. Goschen in his operations in Government Stock, as he intends to pay off early in May between 10 and 12 millions of Three per Cent. Consols, at a fixed price. The discount houses, following the Bank, have further reduced their terms for deposits to 1 and $1\frac{1}{4}$ per cent. for money at call and notice respectively, The closing quotation for bills is not better than $1\frac{1}{2}$ per cent., and money is unlendable even at 1 per cent.

This has been a very quiet week at the Stock Exchange, business being restricted by the approaching holidays, which have had rather more effect than usual, as the committee decided to close "the House" on Saturday. This movement naturally caused speculators to curtail their engagements, and more particularly in those stocks affected by continental politics. Home Railways also suffered from the same cause, but in this market, after closing their accounts for the rise, several operators thought they had been too hasty, and commenced to buy again, which had the effect of again sending prices up, but the movement was not sufficiently strong enough to entirely recover the previous loss. At home the chief event this week has been the introduction of the Budget, which has been favourably received by all parties, the Unionist victory at Birmingham, and the loss, by a trifling majority, it is true, of a seat at Rochester to the Unionists. The Funds have been good, and recovered $\frac{1}{8}$ per cent. on the notification of the Government broker that the Chancellor of the Exchequer intends paying off some 10 millions sterling of the outstanding Consols early in May at a price to be fixed later on. This represents a portion of the unconverted stock, and it is therefore believed that the amount will not be met by the creation of a further issue of Two-and-Three-Quarter per Cent. Consols. Indian Government and Colonial Inscribed Stocks show but trifling alterations. Foreign Government Bonds have fluctuated in sympathy with the Continental Bourses, the final changes being very trifling, as what was gained one day was lost the next, or *vice versa*. Spanish Bonds have fluctuated strongly on the manipulation on the market of those interested in the new loan, and with the rest of the list finally closed at enhanced values. Home Railways at first were fully sold, but gradually recovered, but still show a loss ranging from $\frac{1}{2}$ to 1 per cent. on the week. American Railways were listless, and in the continued absence of support, prices gradually shrank, the result being a loss of $\$\frac{1}{2}$ to $\$1$ dollar on the week. Grand Trunk Stocks were heavy almost throughout, and show a reduction ranging from 2 per cent downwards. In Mexican (Vera Cruz) Stocks the variations of one day were reversed by those of the next. Miscellaneous Securities also suffered through the dearth of business, but the alterations are unimportant.

Business in the Stock Markets to-day was, owing to the holidays, very quiet, but the tone was firm. The 19th falling on Good Friday, this has been very generally observed as "Primrose Day," and dealings in the humble little flower have been active among the outside "jobbers." The Funds were steady, and Indian Government and Colonial Inscribed Stocks were rather firmer. Foreign Government Bonds were very firm, notably Spanish and Mexican, but dealings were quiet; in fact, the Stock Exchange was almost deserted, as members were more eager to visit other scenes than to do business. The closing values show an almost general advance, ranging from $\frac{1}{4}$ to $\frac{3}{4}$, with exceptional advances in Greek, Mexican New Six per Cents. and the Ottoman Defence Loans. Home railways were fairly active, but closed a shade below their best. The Southern Deferred Stocks and Great Eastern rose about $\frac{3}{4}$, Metropolitan 1 per cent., and the rest $\frac{1}{8}$ to $\frac{1}{4}$ per cent., Hull and Barnsley and Sheffield "A" being exceptionally $\frac{1}{4}$ down. American Railway Securities also participated in the general firmness, but were like the rest, very quiet, and at the close the variations, as compared with last evening's values, were very trifling, and about evenly divided. Grand Trunk Stocks were flat on a disappointing traffic return, and the Second Preference fell 1 per cent., and the others in proportion. Mexican Railways were a trifle firmer; Cable Stocks were stronger, and there was a small enquiry for Nitrate descriptions, which, and with several Miscellaneous Securities, closed higher.

Annexed are the final quotations to-day:—Consols Account, $98\frac{5}{8}$, $98\frac{3}{4}$; Egyptian Preference, $101\frac{5}{8}$, $101\frac{7}{8}$ xd.; Egyptian Unified, $91\frac{7}{8}$, $92\frac{1}{8}$; French Four-and-a-Half per Cents., $104\frac{1}{4}$, $104\frac{3}{4}$; Hungarian Four per Cents., $86\frac{1}{4}$, $86\frac{1}{2}$; Italian, $96\frac{1}{8}$, $96\frac{3}{8}$; Mexican $40\frac{3}{4}$, 41; Peru Five per Cents, $14\frac{1}{8}$, $14\frac{3}{8}$; Peru Six per Cents., $16\frac{1}{8}$, $16\frac{3}{8}$; Russian, 1873, $102\frac{5}{8}$, $102\frac{7}{8}$; Portuguese, $67\frac{1}{4}$, $67\frac{1}{2}$; Spanish, $76\frac{1}{4}$, $76\frac{3}{8}$; Turkish, 1871, $91\frac{1}{2}$, 92 xd.; Turkish Defence, $100\frac{3}{4}$, $101\frac{1}{4}$ xd.; Caledonian, $119\frac{3}{8}$, $119\frac{5}{8}$; Great Eastern, $73\frac{3}{8}$, $73\frac{5}{8}$; Great Western, $157\frac{7}{8}$, $158\frac{1}{8}$; Brighton "A," $156\frac{1}{8}$, $156\frac{3}{8}$; North-Western, $184\frac{3}{8}$, $184\frac{5}{8}$; Metropolitan, 91, $91\frac{1}{2}$; Metropolitan District, $37\frac{3}{4}$, $38\frac{1}{4}$; Midland, $146\frac{1}{4}$, $146\frac{1}{2}$; North British Deferred, $56\frac{1}{4}$, 57 xd; North-Eastern, $173\frac{3}{8}$, $173\frac{5}{8}$; South-Eastern, 137, 139; South-Eastern "A," $116\frac{1}{2}$, $116\frac{3}{4}$; Grand Trunk, $10\frac{3}{8}$, $10\frac{5}{8}$; Ditto First Preference $69\frac{3}{4}$ 70; Ditto Second, $48\frac{7}{8}$, $49\frac{1}{8}$; Ditto Third, $36\frac{3}{8}$, $36\frac{5}{8}$; Canadian Pacific, $51\frac{1}{2}$, $51\frac{3}{4}$; Denver, $16\frac{3}{8}$, $16\frac{5}{8}$; Erie, $28\frac{5}{8}$, $28\frac{7}{8}$; Milwaukee, $66\frac{1}{4}$, $66\frac{1}{2}$; Lake Shore, $105\frac{1}{4}$, $105\frac{1}{2}$; Louisville, $66\frac{1}{4}$, $66\frac{1}{2}$; Atlantic First, $31\frac{1}{8}$, $31\frac{3}{8}$; Ontario, $17\frac{1}{8}$, $17\frac{3}{8}$; Ohio, $22\frac{1}{2}$, $22\frac{3}{4}$; Norfolk and Western, $50\frac{5}{8}$, $50\frac{7}{8}$ xd.; Reading, 23, $23\frac{1}{4}$; Reading Bonds, Four per Cents., 95, $95\frac{1}{2}$; Union Pacific, $62\frac{3}{8}$, $62\frac{5}{8}$; Wabash Preference, $26\frac{3}{8}$, $26\frac{5}{8}$; Ottoman Bank, $12\frac{1}{16}$, $12\frac{3}{8}$; Anglo-Telegraph, 52, $52\frac{1}{2}$; United Telephone, $15\frac{7}{8}$, $16\frac{1}{8}$; Hudson's Bay, $20\frac{3}{8}$, $20\frac{5}{8}$; Suez Canal, $91\frac{1}{2}$, 92; Guinness, 312, 315; Ditto Preference, 153, 156; Bryant and May, $13\frac{3}{8}$, $13\frac{5}{8}$; Mexican Railroad Ordinary, $46\frac{3}{4}$, 47; Ditto First Preference, $129\frac{1}{8}$, $129\frac{3}{8}$.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

MYSORE DIVIDEND.

To the Editor of the Mining World and Engineering Record.

Sir,—When is the Mysore Company going to pay us a dividend? There was a considerable undivided profit to the end of last year, and since then the gold returns have been large.

There must be quite 4s. a share to divide by now.—I am, &c.,

Large Shareholder.

London, April 16th.

THE COLORADO GOLD, SILVER, AND LEAD RECOVERY SYNDICATE, LIMITED.

Sir,—After about six months' experience, the directors of the above company have issued a circular to the shareholders, a copy of which appeared in your last week's issue, and the contrast between the representations made in the prospectus and the actual state of affairs as represented in this circular is a very serious matter for the shareholders.

I beg to give a few extracts from each:—

Prospectus.—300 tons a day can be *easily treated*, with a resulting net profit of 118*l.*

Circular.—The manager thinks he will be able to return 20*l.* a day.

Prospectus.—No purchase-money to be paid, no machinery required, no expenses but for labour and smelting, no more calls to be made probably, *as immediate profits will result.*

Circular.—A concentrating mill must be erected. The remaining 7s. 6d. a share will be required, and a call of 2s. 6d. is made.

Prospectus.—Not a word about climate.

Circular.—Slag-heap, 11,500 ft. above level of sea, and climate so cold that little or no work can be done during the winter months.

The shareholders must naturally want to know a great deal more than is told them in this very meagre and very carefully-worded circular. I, for one at least, should like to know not only what the directors have done with the money subscribed, but what means they have taken thoroughly to test the value of the slag heap, and what prospects there are of a profitable return being made on the capital, and then upon this explanation I think it ought to be left to the shareholders to say whether they feel disposed to advance the remaining 7s. 6d. per share, or whether it would not be better to give the whole thing up, and have any money that may remain returned to them.—I am, &c.,

A Shareholder.

THE YURUARI CO., LIMITED.

The assistant secretary advises receipt of the mid-monthly mail from the mines, dated Chile, 19th March. The superintendent advises:—With reference to the Water shaft, I am pleased to be able to inform you that this shaft is now dry, and making very little water. No. 4 drift east has been started on contract. At the commencement the appearance of the lode was poor, but present indications are favourable, Capt. Rogers having sent up to-day some rich rock, showing free gold. The quartz in No. 1 stope is also opening out most satisfactorily, and has a good appearance. We start sinking the shaft to-morrow morning, and as soon as sufficiently deep intend commencing another level to connect direct with No. 8 Cenicero. Present indications in this part of the mine are exceedingly favourable, and work will be proceeded with vigorously. Ceuicero shaft: Since last report there is nothing of importance to record. The quartz, which has recently been giving poor results, has come from the higher levels, which have always been the worst part of the mine. The reason for this has been that we have been unable to obtain miners to continue work in levels Nos. 8, 9, and 10 west, which have always been the best in the mine; but I am happy to be able to state that we have now closed contracts with miners to drive these levels, and have no reason to doubt that satisfactory results will be obtained. We are also about to prospect the cross-cut going south in No. 11 level east, where free gold is visible, and assays have shown over 2 ozs. per ton. Mill: Pulley flanges have just arrived, and alterations in stamps will be proceeded with without delay.

Latest Telegram.

The assistant secretary advises receipt of the following telegram from the mines:—"March, 2,300 tons, 425 ozs. Satisfactory progress is being made with new developments. Prospects good. Water scarce.—Aikman."

REPORTS OF MEETINGS.

NEW CONSOLIDATED MINING CO., LIMITED.

VALUABLE PROPERTIES LYING DORMANT FOR WANT OF CAPITAL TO WORK THEM—MAJOR JOSEPH MAKES IMPORTANT REFERENCE TO THE JOINT WORKING ARRANGEMENT WITH THE EBERHARDT —DIRECTORS WORK HARD FOR £1 A WEEK—MODERATE LONDON EXPENSES.

THE second ordinary general meeting was held at the Cannon Street Hotel on Monday—H. W. Spratt, Esq. (chairman of the company), presided.

The CHAIRMAN: I now call upon the secretary to read the notice calling the meeting.

Mr. ERNEST H. COLLINS (secretary) here read the notice, and the report of the directors was taken as read.

SMALL CAPITAL TO WORK WITH.

The CHAIRMAN: Gentlemen, the report having been taken as read, I have now to call attention to what I may call the salient points contained in the report and accounts. To those who have studied the balance-sheet there will be two great factors, no doubt, before them—the one, the large capital we have to work for, and the other, the small capital that we have to work with. This last factor is always present to the minds of your directors, and no business is ever submitted to them but they have in view the small capital at their disposition, and the object with every director should be that of laying out the capital of the company in such a way that it will produce a return on the entire capital. With a small capital as you will see of somethiug like 3,000*l.* in hand, and 5,000*l.* on call, or a total capital of 8,000*l.*, we cannot do great things. Indeed, it is a most difficult nut to crack. We should easily crack the nut, no doubt, by going into any specnlation that is presented to us, but in cracking the nut it is jnst as likely we should crush the kernel and destroy the whole affair. Therefore, we have to treat these matters in a conservative spirit, and approach them with caution, but at last I think we have hit upon a plan which gets over the difficulty of the nut, because it gently enables us to crack the shell, and I hope to preserve the nut. What I mean is this, that we have a small capital to invest, and we are eudeavouring now to buy in the very cheapest markets any article which we believe to be intrinsically good, and then having obtained it, we try to sell a portion of that which we have bought for such a sum as will procure by us the amount we have expended, and in that way I say that, having bought the article and cracked the shell, we preserve the nut—that is, we get our capital back again. That is precisely the way we have acted in the only speculation we have entered into during the year in connectiou with the Grand Canon Placer Mining Company, of New York. You have had circulars sent you giving you briefly our ideas of that property.

GRAND CANON COMPANY.

We know nothing ourselves, and I need hardly tell you that mining is extremely speculative. Even the best expert can only tell you what he sees and what he thinks, and cannot by any means say I am sure of this or that, and therefore, under these circumstances, the best thing we can do is to get an honest man, if possible, to report, and then on his judgment to act. In the case of the Grand Canon Gold Placer Mining Company, we employed Mr. Stearn, a gentlemen we did not know, but we made a good many inquiries about him, and were extremely pleased with the frank and conscientious way in which he dealt on a former occasion when reporting for us on the Marcus Mine. It was in conseqnence of his frankness, and his very honest report at that time, that we said we would have him on the present occasion. He made a report, and on that report we acted, and I hope in the long run it will prove that we have done the right thing, but at all events you must give us the benefit of good intentions, if nothing more. I will allude further on, and I daresay some of my colleagues will afterwards address you as to this property, but I think I have touched upon it in the first instance. I will tell what we did. We acquired a very considerable interest in it, and perhaps you have noticed that, although in our schedule of properties we call conspicuous attention to shares of the British Tintic, the Gilbert and Chaudière, and the Marcus Companies, we do not say a word about what we hold in the Grand Canon Company of New York; we merely state, "the companies' claimable interest in this property." We have done this intentionally, and we are going to ask you to place confidence in us, and not to request us to state the holding we have in that company. If it should turn out, as we really hope, a success it will be a very great factor in your next account, but we think if we were to tell you the number of shares it might, in some way or other, interfere with the value of those shares when we offer them (as we may do) to the public. Therefore, we ask you to put confidence in our judgment, and not to ask us the exact holding. Suffice it to say it was a large one, and as we can make no profit as directors out of the transaction, we have no object, except as sharcholders, in concealing the positive statement. What did we do? Having spent on the first part of our contract 1,200*l.*, we saw a way of getting that money back, and we addressed to you certain circulars offering you certain shares.

INVITATION TO SHAREHOLDERS.

We assume that in a property of this description, initiated by Americans, who certainly, as a rule, know what they are talking about, that it must be a property that would at least warrant them paying 5 per cent. upon their nominal capital. We, therefore, offered those members who felt inclined to enter into the speculation a certain number of this company's shares, and the effect of that will be this: That supposing the profits of working are 5 per cent., the parties who have invested their money would have 25 per cent. for their investment. We thought it was well worth trying the feelings of our shareholders how far they were disposed to help us in our varions speculations, knowing that we had so little money at command, and how desirous we were of making that little go a long way. In the circular of November 22nd we distinctly called attention to the view we had of husbanding the company's fuuds, and that was why we had spent on the first part of our contract 1,200*l.* We said we will offer a certain number of shares to recoup us this money, and then, to a certain extent, we should stand on velvet. But, at the same time, when we thought these shares good we did not offer any to the outside public, because, if they should turn out to be the property represented they will become extremely valuable, and so we thought if any benefit were to be gaiued by that transaction it should be by the shareholders, and not the outside public, who when they come in will have to pay a fair price for it, whatever it may be. The last reports that we have show Mr. Stearn to be the man we thought. Instead of spending our money at random, he has gone to work looking over the properties, and making trial tests in different parts, so that when the water, which takes some time to flow from the Texas river, or creek, should be brought to the ground he will know where to direct that water, so that he may utilise the most valuable portion of our deposits. He has gone cautiously to work, spending our money carefully, and giving us his views as to the future. Therefore, I think we have here a chance of making a very nice thing. It will take some little time to do, but we promise that as soon as we get information ourselves, though we may not call a meeting, which is expensive, because we have 800 shareholders, we will let you know exactly what has been done.

SOUTH AURORA.

The next property I will call attention to is the South Aurora group. It will be in your recollection that some time last year we had an offer to work this property. The offer was made by a man who knows well what the properties on Treasure Hill are, and he said he would form a company; he would give us a mine which was theu paying, and divide with us the profits if we would consent to raise a certain sum as working capital. We tried to do so, but the response was insufficient and the scheme fell through. The mere fact that this gentleman, who knows perhaps every property on Treasnre Hill, was willing to pnt his good property with ours, shows that there must be something worth working for. If you recollect, Capt. Drake, who was employed at the Eberhardt Company, also said that we had on our lead the best show of miueral that had been fonnd, and all this proves that there must be on our South Aurora property a value which we ought to try to ascertain for ourselves, but with our small capital of 8,000*l.* we should be lost

CAPITAL NECESSARY TO PROVE SOUTH AURORA.

We must have a capital for that of 25,000*l.* or 30,000*l.*, and that will form the subject for discussion later on, because it is part of our proposition, embodied in our report, that a company should be formed to work the South Aurora group, and also to work the Corsican properties—valuable properties which cannot, however, be worked with the limited capital at our disposal. The next item in the report would be the shares that we hold in the British Tintic Company. That represents a sum of 1,580*l.*, and we had that origiually in lien of interest, having got back the money we had advanced as principal, and from the latest information we understand that this property (respecting which there is a law suit going on) will be brought to the front in a way that will bring our shares into play. With regard to the 14,300*l.* worth of shares we hold in the Gilbert and Chaudière Company—I think you will find very shortly that they too will become of very great value. I will not say that they will go to par, but I think they will be worth 7,000*l.*

A SHAREHOLDER: How did we acquire them?

CORSICAN PROPERTIES.

The CHAIRMAN: Many years ago by advances on the property. We have also the Marcus Mine. We have 500 shares of 10*l.* each, which cost us 265*l.* It arose thus: We were induced to look into it and spend the money in making a report, but as the report was not satisfactory, we got that as secnrity for what it is worth. I will now take you to the accounts. The secretary reminds me that I have uot mentioned the Corsican properties; but as regards these we should have to take the same view of having an indepeudeut company. I might traverse that by saying that finding that the old company could not raise sufficient to work it, we had no alternative but to wind them up, and they paid 800*l.*, and have given back the property. During that time they had staked money and acquired a fresh concession. We have two concessions instead of one for working sulphuric acid, which will be of value, I believe, if that property can be worked by the capital being found to do it. I will now come to the accounts. You will see that there is a difference between the accounts of last year and the accounts of this. On the debtor side last year we dealt with 154,170 shares, and this time we deal with 160,000 shares—the entire capital at our disposition. The preparations of these accounts occupied a great deal of attention. It was the desire of some of our members that the old statement should appear on this balance-sheet in the present year, in order that you might know not what became of 154,000 shares, but what became of 160,000 shares, and I think you have it. You will find that, with the exception of the shares we have issued during the past year, namely, 1,520, as against the exchange of debentures, we have now in hand 3,308 and 1,050, which were forfeited. That, with the number we have issued, will account for the difference between the 160,000 and the 154,170 shares in the last sheet. Therefore, having put to the debtors side those shares, making a difference of 5,830*l.*, you will see that we had an increase ou the creditors side, the final cost to the company of these properties, of 145,000*l.*, instead of 139,140*l.*, the difference being 5,800*l.* That is made up by the 3,300 shares, the 1,000 forfeited, and the 1,500 issued. You will notice that the cost of reacquiring the Corsican properties looks like 1,800*l.* We, however, have charged that company with a considerable sum for interest, and, finally, we got from them 750*l.* and 50*l.* besides, so that the property has been recovered for a very small sum. The Corsican Company lost all their money, and I, as a member of it, lost mine too. The South Aurora property we also had to recover. It was seized, and the first intimation we had of the fact was, that the mill was in the hands of the sheriff. We soon put that right, and we have paid the taxes, and are now in possession of the whole of the property. I will touch upon the balance-sheet. You will see the balance we had in hand in cash at the end of 1887 was 3,956*l.*, but in that amount we had 420*l.*, in the

hands of the Anglo-Californian Bank, which eventually paid for the re-acquiring of the South Aurora property; so that compared with last year, if yon make that reduction, you will find that we have 3,072*l.*, as against 3,500*l.*, so that our balance is very nearly the samc, eonsidering what we have had to do. We have not made any eall, althongh we have been pressed to do so. We have felt that we did not want the money, and the ouly inducement to do so has been that certain sharcholders have complained it is very hard there should be no quotation for shares 20s. paid, when there is a quotation for shares 19s. paid. The value of the shares at present is not of material importance, and, thereforc, we thought it better not to make that call, but merely to place it on deposit at the London and County Bank.

ECONOMICAL ADMINISTRATION.

Now, as rogards the expenses. Wc have called your attention in the report to the charge for caretakers since we have re-acquired the Corsican and South Aurora properties, and the rent and taxes for both. The costs for the South Aurora property every year for taxes are 80*l.*, and for the Corsican properties 120*l.* for the rent of the one mine, and a monthly payment of 20*l.*, whieh includes a caretaker, and representative iu Corsica—in faet, altogether we have to pay for Corsica 360*l.* a ycar. If you add to these two figures the cost of the South Aurora and the Corsican properties to the London expenscs you will get about 1,000*l.* a year, and wc consider that too big a figure. We must have some arrangement to deal with the South Aurora and Corsican properties. The office and secretary merely take 200*l.*, and the expenses for printing and stationery, &c., 100*l.*, and the directors, 250*l.*, so that I suppose that very few companies are managed at anything like so low a cost. There is a great deal of work to do, because you have 800 shareholders to address, to execute the transfers, to reply to inquiries, and to answer letters, so that there is an immense amount of business which is not apparent to the eye, but there is no doubt about it, it is a matter in fact. I think the next point in the report will be the question of the directors. The directors now retire, according to the articles of association, and they are myself and Mr. Smedley, and as we are eligible, we offer ourselves for re-election. We have also noted in the report that we propose to take power, "under article No. 73 of the articles of association, to strengthen the board by the addition of two directors, increasing the board from five to seven, but at the same small remuneration of 50*l.* per annum." The objcct we have in doing that is that we really want strength on the board financially, and we have two gentlemen in view who have been obtained for us by our kind friend Major Joseph, because we want with two new companies eoming out, additional strength. We are going to propose that having the power in the articles, we shall add these gentlemen to the present board. I do not know that there is any point that I need call attention to, except to say that I hope you will approve of the policy we have adopted, because beyond what we have done I think it is impossible for men to do more, and there are certain gentlemen in the room who will understand me when I say that we have laid, I hope, the foundation of a good structure, and we trust that from the foundation we have thus laid there may rise a superstructure perfectly honourable and creditable to the builders. (Loud cheers.)

Mr. Bergtheil: I beg to second the motion.

QUESTIONS.

Mr. Haldenstein: You have not given the loans to the Corsican Company and the Chemieal Company. When was the money advanced? What is the investment in shares, and what are these shares worth? I consider this question most importaut. Let us know when this company ceased to exist. You told us that you got the mine back from them, and a considerable amount of money.

The Chairman: It will be much more regular if all the questions were put together.

Major Joseph: If the chairman will permit me I will explain.

Mr. Williams: Are the coneessions for the Cardo and Olmeta Mines sueh as give you permission to erect chambers of brick or lead?

The Chairman: Wc are not bound to either.

VIEWS OF A DIRECTOR.

Major Joseph: Mr. Chairman and Gentlemen, I ask the room to consider my position (although one of the directors) and the way in which I came to this board. The room sent me to the board at their last meeting and made me one of the directors; I therefore deem it my duty to give you an account of my stewardship, because I am your representative. It is very truc that the board were good enough to invite me unanimously to join them, but I did not care to take such an invitation, because I thought I should have more power at the board if the room, as they did at the last meeting, seut me to the board. Now the question put by the hon. proprietor was a pertinent and proper one. He asked how was it that if the Corsican Copper Company, your tenants, did not pay, you did not re-enter. I hold in my hand the agreement made between the Consolidated Mining Company and that company—for the New Consolidated is a re-construetiou of the old company. The agreement made between the old company in June, 1881, and the Corsican Company gave you no right of re-entry, no right to terminatc your agreement. I have never, nor has anybody else I should think, seen such an extraordinary agreement. You agreed to let, and they agreed to pay. You could not euforee any payment. You could not force them to do anything, and there was no termination to the agreement. The agreement does not terminate itself, and you could not terminatc it. Therefore, the question the shareholder asks was very pertinent. I was no party to this agrcement. I was in existcncc in 1881, but not as a director of your company, nor was I a shareholder. I may say that I was some time ago a shareholder and a direetor in the old company, and when this agreement with the Corsican Company was about to be entered into, upon terms I did not like, I left the board, and for the whole time I was there I would not take a penny of remuneration. I sat at the board, not for the fees, but to do as mueh good as I could for you and for myself, because I was a large shareholder. I am not going to blame the directors at that time of the company. I am not going to blame my eolleagues—it was an omission on the part of their lawyers. They ought to have looked after their lawyers, and although you can see what iutelligent looking men my colleagnes are, they were not sufficient lawyers to detect that omission in the agreement.

GOING A LONG WAY BACK.

Mr. Haldenstein: When did they cease to work the Aurora Mines?

Major Joseph: Years ago when they had spent their last penny. Not only that, but the old company had raised 30,000*l.* in debentures. They spent the whole of the money, and then they asked the proprietors to give them more, and whether the proprietors did right or wrong in refusing I cannot say, but if I had been a shareholder and had helped to provide more money, I should have seen it manipulated in a different way from the old money.

Mr. Haldenstein: Do you know the last amount sent out there?

Major Joseph: I only know it from enquiries. The last money sent out was 5,000*l.* Therc was a company called the Eberhardt and Aurora. Part of the set belonged to us and part to the Eberhardt. A tunnel had to be driven at the cost of many thousands of pounds, to try and find a similar ore body such as that which before gave 300,000*l.* Geologists will tell you that one poeket cannot exist without others. 5,000*l.* was our proportion towards driving a tunnel, and we are told, and I believe what we are told is perfectly true, that when the tunnel was driven, the vein was found npon onr sett and the tunnel was immediately diverted, and the lead has never been found anywhere else. I believe the lead is upon your sett, and that you have there a very valuable property. You have asked me the question and I have answered you. I believe you have in Aurora a property more valuable than you imagine. Aurora shares were at one time 11*l.* to 12*l.* each.

Mr. Haldenstein: How was the 5,000*l.* spent?

STRANGE STATEMENTS.

Major Joseph: There was a sum of 20,000*l.* remitted, of which our proportion was 5,000*l.* Whether any of that money was taken by people who ought not to have taken it, or whether it was all spent upon the sett, I am unable to say, but as far as our sett is concerned we are told, and we have reason to believe, and we have heard it from many quarters, and have beeu laughed at, that the vein was really found in Aurora. You have asked as to the re-acquirement of South Aurora. I said we had spent our last shilling, and we had not even the means to pay the taxes to the Government. Now, there is power in America, that when taxes are unpaid the property shall be sold to pay them, but the vendor shall be compelled to return the purchase-money, and 10 per cent. to the owner of the property, if within 12 years the property be claimed. Now, gentlemen, who do you suppose it was bought our Aurora Mine? It was the Eberhardt Company. Directly that sett was put up for sale by the United States Government for arrears of taxes, the Eberhardt Company, to whom we had remitted our 5,000*l.*, and who had charge of the driving of the tunnel, bought it through Capt. Drake their manager. Directly we heard of it, we paid into the bank here the amount that was due to the Government with 10 per cent., and got your property back. We would not have got that property back if we had not believed the reports that had been made to us, and after it had been known whom the purchaser was. The company who had driven that lead, and who, if there was any secret, must know the secret—they were the purchasers. We got the property back for 420*l.* I venture to say that none of yon will think that that money was badly spent. With reference to the Corsican properties, I have told you I was opposed to the agreement. I came into the old company upon the recommendation of my worthy colleague, Mr. Bergtheil.

MR. CUNNINGHAM'S SERIOUS "OFFENCE."

The mines were then under the management of Mr. Cunningham, who sits stroking his beard at the end of the table. (Laughter.) Mr. Cunningham assured me that the mines were a most valuable property. I thoroughly believed in him, and I believe in him still. Mr. Cunningham and I do not generally agree very well, but I should be doing Mr. Cunningham very great injustice if I did not say that I thoroughly believe in his integrity, and that he would not have made the reports he did make upon the Corsican properties if those properties had not been good. I never would take a share in those Corsican properties, and I was also opposed to parting with them. I never wished to lease them to any other company. I thought we ought to work them ourselves. When I found they were to be leased to those who knew their value, and upon terms I did not like, I went out of the concern altogether. The chairman has told you the company has been wound up, and we have our properties back. Directly I went on this board, I found that we had made advances to that company, and I said, "I will have the money back." The amount is 2,045*l.*, as stated in the accounts. I wanted it back with interest. They disputed the amount; they said they had spent money upon the properties, but my reply was, "You did not do it at our instigation." Still there was a great deal in their contention, and to take the matter to the Court of Chancery would be both expensive and dangerous. We might be successful, but there would also be costs, not only between plaintiff and defendant, but as between attorney and clients, and our probable costs would have been more than the money we might have recovered from them. Apart from that, the allotment of the shares was very vague. I felt if I could get back some portion of the money and the properties as well, that that was the best thing I could do in the interests of the shareholders. I want the company to understand their position. They have some very fine properties on which a large amount of development has taken place. We are like manufacturers who have a fine factory, and have a fine stock of raw material which we are unable to work, because we have not the means to pay those whom we employ. That is the position of your Corsican properties; that is the position of your South Aurora property. The chairman made a mistake when he spoke of the capital of the company. He said you had 3,000*l.* of capital in hand, and 5,000*l.* on call—he meant 5,000*l.* to call.

The Chairman: It is the same thing. It is a matter of opinion.

Major Joseph: When I have 5,000*l.* on call, I have always considered it means on deposit.

The Chairman: I explained that by saying that we thought it not prudent to call it.

A MAN WHO THINKS HE CAN MAKE SOUTH AURORA PAY.

Major Joseph: You have 3,000*l.* unspent capital and yon have 5,000*l.* to call. Now I have been desirous not to make a call. I will not fire away my last shot. I want a nest egg. When this Grand Canon Company was offered to us I made inquiries about it. I did not bring it to this company, but I thought so well of it that I was not only a consenting party but the moving party at the board who induced the compauy to go into the matter. I should like to know

what the shareholders wish to do in the future. It is that which exercises the minds of the board. The chairman has told you that we are spending in taxes, rent, and London charges 1,000*l.* a year, and that you are doing nothing on the Corsican and South Aurora properties. We have here an offer for South Aurora. I hold in my hand the copy of a letter written to an eminent banker by an American. The directors do not know that I have this. He writes to these bankers: "I am perfectly satisfied, from personal observation, that I can handle the South Aurora with success and bring returns instead of expenditure after once starting. Do not imagine from this that any fool of an expert you might send out could learn the secret in a few days that has taken me 10 years of close study to comprehend. When I received Mr. Spratt's letter asking me if I would allow an expert to examine the mines, I regarded the matter as a gross insult to my honour and integrity. I had passed my word here to you that this mine was good. Let the results tell the story. As I told you and your brother, my heart has always been set on the development of Treasure Hill. It is one of the objects of my life to make a success of what others had considered a failure. I know I can do so, but at the present moment I am handicapped with other things." He goes on to speak about other things, and concludes thus:—"Will you care to aid in making a consolidation in some way with the South Aurora property, and part of my Treasure Hill interests. I am getting 40 ozs. assays now at Hagensterra after doing but little work." With this in my hand, am I, or am I not, justified in saying to you that we are here to report that South Aurora is a magnificent property, and that we ought to work it? What will it require to work it? The proprietary of the Consolidated Company numbers between 700 and 800 men. Surely these men ought to find a few thousands to work the South Aurora property! We should like to have—and we ought to have—20,000*l.* to work the Corsican properties also. We have foreshadowed in our report that two new companies are to be formed with the support that our proprietors will give us, and with the support of the outside world, and we say that these two properties ought also to be worked. The worst ore we have at the Corsican properties is ore containing 3 to 4 per cent. of copper. The best ore they have at Rio Tinto is only 2½ per cent.

Mr. Cunningham: It is better than that—it is 3 per cent.

Major Joseph's "rugged and unfinished way."

Major Joseph: We have ore at one of our mines giving 12 per cent. of copper. Am I justified in telling you that that ore ought to be worked? I have spoken in a very rugged and unfinished way. I have not thought a word of what I was going to say, because I felt perfectly sure that if I spoke really from the facts as they lay before me, you would see whether mine was a studied or an unstudied speech. (Cheers.)

The Chairman then put the motion for the adoption of the report, and it was unanimously agreed to.

The Chairman: The next business is the election of the retiring directors—Mr. Smedley and myself. I should like that to proceed from the body of the room. We have proxies in favour of our re-election representing 39,000 shares, showing that the holders approve the policy of the board, and their desire to support it.

Major Joseph: I hold between 4,000 and 5,000 shares. I have here proxies representing 50,000—one-third of the capital of the company. May I ask you to re-elect the two directors who are retiring?

Mr. Cunningham: I second the motion.

The motion was put, and carried unanimously.

The motion to elect two new directors was carried unanimously.

Mr. Oswald: Why add to the number of directors? What have they to do?

Words of experience from Mr. Bergtheil.

Mr. Bergtheil (director): It is very clear that Mr. Haldeustein and Mr. Oswald do not realise what it is to work an unsuccessful company. All I can say is this, that my experience goes to prove that it is far easier to work a company that is successful than one that is not. To work a company like this not 1*l.* or 50*l.* per week is recompense. We frequently meet three or four times a week, disputing at one time and agreeing at another, and when we have done we have our hands bound, for we can never get the help from the shareholders that the requirements of the company demand. Our appeals, individually and collectively, to the shareholders have been in vain. We have tried to work this company for many years, and I am sure we are getting heart-sick of it. We want to make this company a success, but the horse, though taken to the water, will not drink.

Major Joseph: The transfer fees alone have come to 143*l.*, and you can suppose from that what a large number of transfers there have been.

Mr. Williams: I move the re-election of the auditors, Messrs. Ogden, Palmer and Langton, at a remuneration of 10 guineas.

The motion was seconded, and carried unanimously.

Major Joseph: I hope you will not go away without passing the ordinary vote of thanks to the chairman.

He came to chide, but remained to thank.

Mr. Haldenstein: I beg to propose a vote of thanks to the chairman. (Hear, hear.)

The motion was carried by acclamation.

The Chairman: If a compliment can be received at all, it should be well received from the man who has opposed the chairman, and, therefore, I value it much more than the usual vote of thanks. I accept the motion on behalf of my colleagues as well as myself, and thank you for it.

The proceedings of a protracted meeting were then brought to a close.

THE BRITISH BROKEN HILL PROPRIETARY CO., LIMITED.

PROGRESS AT THE MINE—LARGE REDUCTION IN THE RAILWAY TARIFF—A SALE OF 5,000 TONS OF ORE—BETTER VENTILATION TO BE EFFECTED.

The second ordinary general meeting of the shareholders of the above company was held at the Canuon Street Hotel, on Tuesday, the 16th April, to receive the directors' report and accounts for the period ending 31st December, 1888, and for the election of auditors—Mr. James Macandrew, the chairman of the company, presided.

Mr. Douglas Petrie (secretary) read the notice convening the meeting. The report and accounts were taken as read.

Work done at the property.

The Chairman: Gentlemen, since we met you here last July the board of directors have been by no means idle in pushing forward the great work that has been entrusted to them of developing your mine, and bringing it into such a condition as will make it a source of revenue and profit to the shareholders. It will be the object of the remarks I have to make to give you a brief record of the works we have been engaged in during the past eight or nine months. First, as regards the operations at the mine itself. We have been working at four out of the seven shafts, and more particularly at No. 1, or the main shaft, which has always been the principal one, and where we intend to concentrate, as much as possible, the haulage of the ore from the entire mine. That shaft has been sunk 100 ft. since we last reported to you, and is now down to a depth of over 320 ft. But our co-directors in Australia are exceedingly anxious that it should be pushed down another 100 ft., as they believe that by so doing they will be able to deal in a most satisfactory manner with the water supply. In this matter, however, acting under the advice of Mr. Patton, who, by going to a certain depth in the Broken Hill Company (the parent company) has been able to obtain an abundant supply of water, and he is satisfied that we shall meet with similar success if we go to the requisite depth. Consequently the deepening of the main shaft has been sanctioned, and it is now being pushed further down. At the same time, at a little above the point to which we have reached—at 312 ft., a level will be opened to explore the ore in that direction, and which we expect will be of better quality than that which we have tapped above it. I should also mention in connection with the main shaft that we have reached

A very large body of galena.

We have gone 163 ft. through this galena—a mass of solid ore, and I need not tell you that that is a feature upon which you are sincerely to be congratulated. It is not very often in mining experience that you meet with such a quarry of ore underground, which will furnish such abundant reserves for attacking in the future. In Nos. 2 and 3 shafts we have been working upon the carbonates, and we have been getting very good results from that also. Some of the ore is rich, and I think may be considered to be paying ore. No. 6 shaft, which is upon block 16, approaching the boundary, is also on a portion of the mine where important developments have taken place. We have had very good ore of a mixed character there, and fairly rich in silver. In the whole of these shafts and levels that I have been speaking of the ore has been fairly opened up, so that it can be worked upon continuously now that we are in a position to send ore to market.

Discoveries in neighbouring mines.

The discoveries that have been made in the neighbouring mines are also of a very reassuring kind, because they lead us to hope that our lode, which is a conjunction of the same lode, will be found equally rich as theirs when we reach the requisite depth. This has been particularly the case in block 14, which at one time was under a cloud, but which is now yielding a large quantity of excellent ore, and we have every reason to believe that our lode, which is simply a junction of it, will be in no way behind. Another matter is that we are pushing our level towards the boundaries of the British Broken Hill Company's ground in order to communicate with the adjoining mines, and by that means procure an amount of ventilation that we cannot obtain in any other way. When these communications are established by their driving corresponding levels to meet us, you can easily see that the ventilation will be greatly improved, and we shall be able to employ a greater number of men, and the work of stoping the ore be carried on with much more freedom than at present. The Colonial Mining law restricts us in the number of men we employ until ventilation has been thoroughly established. Reference has been made in the report to a sale of ore which we have effected—5,000 tons which we are not yet in a position to smelt ourselves, but which it was thought desirable to make an arrangement with one of the local smelting companies at Adelaide to smelt for us. The first thousand tons have been delivered, and the manager informs us that he expects it to average 22 per cent. of lead and 30 ozs. of silver to the ton. Although it is not an extraordinarily rich ore, but it is a very good ore, and is calculated to leave favourable results if the whole mass of ore that we send assays equally well. The balance is in course of delivery, and the price at which we have sold it is one which will yield a very fair profit. All the details of the mine have been put before you in the weekly reports, and in the more elaborate reports of Mr. Patton and Mr. Eyre which have been recently circulated amongst you. I will therefore only allude at present to the second, or parallel, lode in block 16. You will see by the plan that in block 16 the origiual lode tends to the west and passes into the ground of the British Junction Company. We have had reason for some time to believe that diverging from this is a second lode. The thing was mentioned in our previous report—the report of last summer—and there are various indications which lead us to believe that that is the fact—that from the flat or level ground of block 16 a lode runs from one end to the other. Our manager is very sanguine that that will prove to be the case. In a recent report he says:—

"No. 2 shaft:—There is a great improvement in the second level south, which is now being driven in mixed carbonates and galena, of payable quality. The change is quite unexpected, as we anticipated having to drive this level through country rock. I am also very much elated with the prospects in the western cross-cut from the same level north, where we are driving in ore high in lead and carrying a small quantity of silver. In my estimation this discovery is of great value, for it goes to show that the lodes or ore deposits continue north in the same general direction as those opened up south of—say the main shaft, and inferentially that they continue through block 16."

If this is confirmed by subsequent investigations it will be a very important discovery, and will add greatly to the value of the mine. We cannot make too sure of it, but I think there are reasonable grounds for sharing the expectation of the manager, and should further developments prove that that is right we shall be warranted

and justified in spending some money in sinking a shaft through the middle of block 16 to see if we can cut that lode.

THE RAILWAY.

With regard to the other works I may mention the railway, which has been constructed at the joint cost of this company and the two adjoining companies, aud which is a very important aud necessary work. This is now completed at the Silverton end, and we are using it for carriage of stores and for other matters. At the other end there is still a junction to be formed between Port Pirie and the existing railway. That is now being done, and will be shortly completed, when the waggons will be able to deliver their coutents right into the smelters.

A SAVING OF 60,000*l*. A YEAR.

In connection with this matter, I have also to mention the successful issue of the protracted negotiations which have been taking place with the Railway Commissioners of South Australia. We have obtained from them a very important reduction in the carriage of ore, and our own officers estimate that the saving will be 60,000*l*. a year to this company, which, I need hardly remind you, is 5 per cent. towards paying a dividend. (Cheers.) The rates of carriage that we have to pay upon Australian lines are very heavy compared with those that are customary in this country, and the important concession made in this instance has been a very great relief to the board of directors in enabling them to deal with the carriage of the large quantity of ore they have to send to market. The machinery that has been fixed, or that is in course of being fixed, both at the mine and Port Pirie, is of a very extensive nature, and will represent a considerable amount of money. It has been arranged that everything shall be of the most modern type, and some of it has been procured from America, where they have had great experience in dealing with silver ores. But the delay has been far greater than we expected at the outset. At Port Pirie considerable works are in progress. We have procured a space of land there, in addition to what we had at first secured, which was considered necessary for the work of the company—a water frontage to the creek, by which we shall be able to take delivery of coke, &c. Active operations are going on, so that all departments of the work shall be finished simultaneously, and one not have to wait for another. There is still, however, a great deal to be done, and we are naturally a little sceptical about the estimates of time. But considering the large amount of work that has to be done we shall be very well satisfied if the Australian directors are able to complete the plant by the month of May as has been stated. From what I have stated it will be possible for the shareholders to form some idea of the magnitude of the operations we have been engaged in both above and below ground, and it is obvious, time is required where so much has to be done. If we had to do the whole thing over again there is no doubt, profiting by past experience, we should be able to do it more expeditiously ; but still

NO TIME HAS BEEN LOST,

particularly of late. It has been necessary for us to feel our way very cautiously, and to take precautions that no money should be expended upon plant or operations which we might have reasou to regret afterwards. The shareholders must therefore make us some allowance for difficulties and delays that attend any new undertaking of this nature, and must place at our disposal sufficient time to enable this heavy work to be carried through in the best manner possible. (Cheers.) It is perfectly natural and reasonable, however, that shareholders should expect some return for their outlay and patience, and this we hope soon to be in a position to realise for them. If not yet accomplished, it is not because your directors have not urged the ageuts on the other side. They have beeu perpetually saying

"MAKE PROGRESS AND GET RESULTS."

We sincerely hope and believe that the results, when ascertained, will be satisfactory. Every account that we receive of the mine, not only from our own officials, but from outside sources, are that we possess

A REALLY GRAND MINE,

and that the riches are yet to be ascertained. (Cheers.) Without attemptiug to prophecy, I shall be very greatly disappointed if there is not a steady improvement iu the value of the property, and the value of the shares. I may mention that the application for a quotation for the vendors' shares is now before the committee of the Stock Exchange, and we have every reason to believe it will be granted. With regard to the accounts, I have nothing very special to say ; I think they speak for theuselves. I shall, however, be happy to make any explanations that are required. The greater part of the cash reserves which we had at 31st December will be required for commitments, machinery, plant, &c., which will fall due in the course of the current year. It will always be a matter of anxicty and some difficulty properly to apportion the charges that attaeh to revenue and capital, but we shall manage this with the assistance of the auditors. The large amount of the company's capital shall be gradually and safely diminished. (Cheers.) The latest intelligence we have from Australia is from our colleague, Mr. Bond, who telegraphs that he is well satisfied with the result of operations on the spot, and considers the information as to the prospects reliable. He is well aware of the importance of these statements, and we may safely take his opinion as being correct.

RESIGNATION OF THE MANAGER.

We are informed by telegram, received a few days ago, that Mr. Eyre, our mauager at the mine, and whom we have every reason to be satisfied with, has resigned his post, aud that the Australian directors have appointed Mr. Patton to fill the vacancy. We know nothing of the reasous of this change, and must await letters which are doubtless on the way. I can only assure you it will not cause any interruption in the mine, as Mr. Patton is a thoroughly qualified man, and his advice has been fonnd of great value to the parent company, and it will be of no less value to ourselves. I beg to move :—"That the report of the directors and accounts for the year 1888 be received and adopted." (Cheers.)

Mr. Thos. Pyke (director) seconded the motion, and said that the directors wonld do all they possibly conld to urge the carrying ont of the prospectus originally put forward to induce the shareholders to subscribe, and he had no doubt, if they would exercise a little patience, they wonld be rewarded to a certain extent in the same ratio as the shareholders in the parent company.

THE DISCUSSION.

Mr. Roberts thought the shareholders had reason to complain of the great delay that had arisen in prosecuting the operations of the company. The overground operations had no doubt taken a long time, and had been accounted for, and he did not blame the directors, but he thought they had reason to complain with regard to the underground operations. The work done during the 15 months had been extremely meagre. This was the cause of a very serious loss to those who had been auxiously waiting for definite results from the mine. The shares in October last were quoted as low as 35s. in the Colony, and considering that there were 240,000 shares they could well understand what an enormous amount of money was nominally lost in consequeuce of the backward state of the mine. He had very great confidence in Mr. Patton, and did not feel any alarm that their mauager had resigned. He thought it was necessary to urge upon the directors in Australia the necessity of prosecuting operations underground. In the prospectus they were told that in six or eight months the mine would be in full working order, yielding returns. In July they were told that before the end of the year considerable returns would be made, but now in the middle of April they were no nearer to taugible results thau they were then.

IMPORTANT QUESTIONS.

Mr. Geo. Siechell observed that the chairman had told them that application had been made for a Stock Exchange quotation for the 80,000 vendors' shares. He asked the chairman to say that those shares would not be put upon the market nutil such a time as the ordinary shareholders should receive proper value for their shares, as being a dividend-paying mine. The gentlemen who had rceeived those vendors' shares, he trusted, would have regard for the shareholders of this company, and save them from seeing their shares depreciate in value, owing to the market being swamped by the vendors' shares. He also wished to know whether the water supply had been sufficient for the work they had to carry out. He also wished to know whether the body of ore, of which the chairman had spoken hopefully, was as large and valuable in silver as that of the old company ; also what the capacity for raising ore was.

A Shareholder said he thought the amount charged in the accounts for telegrams, postages, stationery and advertising, amounting to 1,503*l*., was excessive, and he would like the chairman to explain how it was the amount was so large.

Mr. Rockwell, iu the course of a long speech, said that the statements of the prospectus had not been realised. Speaking of the directors, he did not think they were the men to manage a property like this, and he would move that iustead of passing the report and accounts to-day they should appoint a committee of inquiry. (No, no.)

THE CHAIRMAN'S REPLY.

The Chairman : I will endeavour to answer some of these questious, and will begin with what was said by Mr. Russell Roberts. He spoke of the delay which has occurred, and which I freely admit ; but it has been as disappointing to the directors as it has been to any shareholder sitting in this room. Mr. Roberts thinks our progress underground has not been satisfactory. I think we have done underground all that could be expected. Our operations have been directed, not to raising the ore, but to opening out and developing the miue. The next speaker was Mr. Siechell, and he spoke particularly of the water supply. That has been a trouble from the commencement. You will know very well that the region of New South Wales and Victoria is afflicted with periodical droughts, and that at any time the rainfall is very small. We built a large reservoir therc, but the rainfall has uot been sufficient to make any impression upon it. After the drought the earth was so dry that it absorbed all the rain, and we have had very little water in the reservoir at all. With regard to the underground supply, I can only tell you the information we have received from the other side. Mr. Patton says he expects to reach water. He has found water in the parent company, and as far as I am aware they have had uo difficulty with water during the past two years.

VENDORS' SHARES.

With regard to the vendors' shares, the board had nothing whatever to do with them. They were allotted by the board of the parent company to their shareholders. The shares have been dealt in upon the market, and it is very likely that comparatively few of them are in the original hands, therefore it is not likely the market here will be effected by them. There is no prospect that the market here will be swamped by a deluge of them. (Hear, hear.) Then he asked if the ore is as valuable as that which the parent company is working. No, it is not ; but you must remember that the parent company has got down to a greater depth. But still 30 ozs. of silver is not at all bad ; and if we can get a sufficient quantity we shall be able to show a very satisfactory, if not a magnificent, return. As to the quantity we can raise, I have no doubt it will be about 300 tons a day. I do not think you will expect me to answer the rambling and personal attaek which was made from the other side of the room. (Hear, hear.) I do not admit that the value of a mine is to be gauged by the price of the shares. (Hear, hear.) There was one geutleman spoke about the heavy expenditure for telegrams, postages, stationery, &c. That was a fair subject for remark. The reason lies in its being the first year of our existence, and we have had an unusual amount of expense in making the calls and advertising them, and also the communications we have had to make with reference to the share capital and inaugural work. You must also bear in mind we have to pay 9s. 4d. a word for telegraphing to Melbonrne, and althongh we are as careful as possible it soon amounts up. I can only hope, as I have said before, that those who hold on to their shares will be rewarded for doing so.

The motion was carried unauimously.

Mr. Russell Roberts moved the election of the auditors, Messrs. Turquand, Youngs and Co., at a remuneration of 50 guineas.

Mr. Thomas seconded the motion, which was carried unanimously.

Mr. Dutton proposed a vote of thanks to the chairman and directors, and the proceedings then closed.

LATEST REPORT.

Mining manager's report for week ending 6th March. Main shaft : Sunk 5 ft., depth from surface 321 ft., below plat, 109 ft., ground still very hard, no indications of change. 212-ft. level south driven 9 ft., making 55 ft. from the cross-cut ; the end now in galena similar in character to that in the level being driven towards it from No. 3 shaft, the intervening distance between the two ends is about 40 ft. No. 2 shaft : 188 ft. level south extended 18 ft., making 141 ft. from shaft ; driviug in carbonate ore, an unexpected and valuable change. Cross-cut from same level north driven 20 ft. distance from level 124 ft. Carbonate ore in this end also. No. 3 shaft : 224-ft. level north driven

6 ft.; distance from shaft 141 ft.; no change in the character of the galena. Commenced putting in the square sets where ore is being raised to send to Dry Creek. Taking ladders, &c., out of the compartment of shaft hitherto used as a footway to adapt the shaft for double hauling. No. 6 shaft: 184-ft. level south extended 6 ft.; total distance 172 ft.; indications of change to carbonates in the end. Commenced sinking winze from 100-ft. level. Plant: Levelling site for wood-cutting machinery putting jigs into position; fixing bobs for pumps. Railway platform finished.—J. T. Eyre.

VIOLA CO., LIMITED.

TWO POCKETS WORKED OUT AND A THIRD BEING APPROACHED—COL. MALLESON AND HIS COLLEAGUES WORK WITHOUT FEES—THEY HAVE PERFECT CONFIDENCE IN THE FUTURE OF VIOLA.

The half-yearly ordinary general meeting was held at the Cannon Street Hotel, on Wednesday, to receive the report of the directors and the statement of accounts for the six months ending 31st January, 1889, and to transact the ordinary business of the company—Col. G. B. Malleson, C.S.I. (chairman of the company), presided.

Mr. George L. O. Davidson (secretary) read the notice calling the meeting.

A POCKETY MINE.

The Chairman: Gentlemen, I had the pleasure of addressing a much larger meeting of the shareholders from this place just about six months ago. On that occasion I informed you that our manager in New York had sent a very experienced miner to the mine for the purpose of examining and reporting upon it, that we had hoped to have that report in our hands to present to you at that meeting, but that it had not arrived. Gentlemen, that report did not reach our hands till about three weeks after the meeting. We at once placed it in our printer's hands, and as soon as he could send it to us we circulated it amongst you. That report was by a Mr. Janin, a miner of great reputation in the United States. The report did not speak favourably of the immediate prospects of the mine. It pointed out that the lode on which we were working had run out. Now, our mine is what you call a mine of "pockets"—that is, there is a pocket full of silver, and when that is worked out stringers lead to other pockets. Those who were shareholders when we first started this mine will remember that about 15 months after that event the ore in the first pocket was exhausted, and for the moment the shares went down very much in public consideration, but we set our people on the spot to work at development, and in the course of three months a stringer was found which led to the second pocket. The second pocket lasted about 13 or 14 months, and those two pockets enabled us to return to the shareholders 31 per cent. of the subscribed capital. Mr. Janin reported, as I mentioned just now, in the middle of November last, that the second pocket was exhausted, and our manager, recognising that fact, at once shut up the smelting works, and proceeded on his course of development. By following the stringers and developing he has gradually approached to what I believe will be a third pocket.

LATEST ACCOUNTS ENCOURAGING.

The latest telegram we have received gives every indication and every hope that we are on the point of arriving at that happy conclusion. I may tell you that when I first joined the board of this company I took the advice of miners, who were very much accustomed to the Idaho mines—Idaho being the name of the territory in which our property is situated—and I was informed that that was the character of the mines in this part of the country—that they were pockety mines, each pocket connected by a stringer leading to its adjoining pocket, and that it was possible, although we might have occasional periods of adversity (that is of coming to the end of one pocket), yet there was an almost absolute certainty of arriving at a second pocket. That opinion was expressed before I joined the board, and it was confirmed by the fact that when the first pocket gave out, after we had been in existence about 13 or 14 months, our miners on the spot following the stringers came to the second pocket, which lasted a similar period, and now following the same stringers they are approaching what I believe to be the third pocket; and as the ground we possess is very large, it will almost certainly, in my opinion, go on for several years to come. The moment we received the report of Mr. Janin we sent it to the shareholders, and took steps, by sending out definite instructions to our miners on the spot, to arrange that the work of smelting should absolutely cease, and that the work of development should progress with all the rapidity possible. That has been done, and the last telegrams that we have had in the papers, I think on Monday morning, gave hopes that we are within measurable distance of obtaining a very satisfactory result. I mention these circumstances as showing the convictions of my own mind—they may be worth something, or they may be worth nothing—but at any rate

I HAVE NEVER LOST FAITH IN THE VIOLA

Company, and have never sold a single share. I have always advised my friends to stand by the company. In other matters we have done what we could to attend to the wishes of the shareholders. It will be in your recollection that at the last meeting a majority of the shareholders present expressed a wish that the board should be reduced from seven to five. That was overruled at the last meeting by those who held proxies, but shortly afterwards (that is within a reasonable period afterwards) the two gentlemen who were then elected resigned their office, and so the board resolved, in conformity with the wishes of the shareholders present at the last meeting, not to replace them. The consequence is that the board at the present moment consists of only five members. Then I may add that since the news arrived from Mr. Janin, and since we had to send out orders to close the smelting works, and to direct all the energies of the miners to development, we thought it would not be right or fair to the shareholders, so long as the mine was not in a paying condition, to draw the fees which are assigned to the directors. (Cheers.)

DIRECTORS DRAW NO FEES.

Therefore, from that moment, that is from the 31st of October last, no fees had been drawn, and no fees will be drawn until the mine is once more in a prosperous position. The accounts, which have been sent to every shareholder, have been drawn up to the 31st of January. At that time we had still a considerable amount of cash in hand with which to go on working the mine. We had in America working capital to the extent of about 10,000*l*., of which 5,000*l*. was in cash and 5,000*l*. was represented in stores, a list of which I have in my hand. They are stores, such as assays, smelters, saw-mill timber, tramway, charcoal, wood, coke, and ore. Hence we have the means of going on for some time to come, and I have every hope, from the latest reports received from the mine, and from the results of its last development, during which a considerable amount of silver was produced, that we shall yet see daylight, and I am quite sure we shall. There is an absolute certainty we shall if there should occur a rise in the price of lead. The price of lead is just about, and only just about the price at which it can be made to pay, but it has always almost happened before that

WITH THE ADVENT OF SPRING THE PRICE OF LEAD HAS RISEN,

and there is every hope that it will do so on this occasion. I know that you who are shareholders always feel a great many anxieties regarding the position of the mine in which you have invested your money, and I can assure you that, as a fellow shareholder, I deeply sympathise with you in that respect. In the few words I have addressed to you I have endeavoured to place in as concise a form as I could the actual position of the mine, but I know very well that it is quite impossible for any one individual, whatever may be his own thoughts, to exactly read the thoughts of any other gentleman in the room, or to answer beforehand questions which might be asked but have not occurred to him. Therefore, in moving the adoption of this report and these accounts, I can only say that I hold myself absolutely at your disposal to answer any questions to the best of my ability which any shareholder here may put to me. Gentlemen, I beg to move the adoption of this report and this audited statement of accounts. (Cheers.)

Dr. W. H. Harris (director) seconded the motion, which was carried unanimously without discussion.

SMELTING WORKS RE-STARTED.

The Chairman: That, practically, concludes the business of this meeting, and I think it right to inform you that the smelting works have been started and are now smelting, and also that we have obtained a very much more advantageous contract than we had last year. For the whole of our ore on the spot, and I still reiterate my hope, a hope which I believe is shared in by very many shareholders with whom I have had the pleasure of talking about this mine, that it will maintain the character which it gained in the first two years of its existence.

QUESTIONS.

Mr. Henderson: Is it not possible to go on with the development of the mine in anticipation of the exhaustion of one of its pockets?

The Chairman: The development of the mine is going on.

Mr. Henderson: Can you not go on with it still further and not wait until the end of the pocket has been reached?

The Chairman: I may tell you that precisely the same idea, which I think is very valuable, was in the minds of the board when the first pocket was exhausted, but our manager had no idea that the second pocket would come to an end so quickly as it did. However, I can promise that we will send out instructions to him to carry out the idea which Mr. Henderson has expressed. I think it very valuable, and one that would assist in preventing any such stoppage as that which has recently occurred.

Mr. Henderson: The Mysore shareholders had to wait a considerable time while Capt. Plummer was developing. Development work should be kept steadily in view.

The Chairman: I think I said that it was being kept in view, and we have sent out instructions to act upon that idea. It was simply owing to the pocket giving out much earlier than was anticipated that we were not well ahead with development. The manager devoted all his energy to getting out the ore and smelting it. I will take care, as far as we can control it, that that shall not occur again.

Mr. Marler: At what price would the lead be remunerated?

The Chairman: At present it is $3.75 per lb., and can just be made to pay at that, but at $4 or $4¼ it would be very remunerative.

A Shareholder proposed a vote of thanks to the chairman and directors.

Mr. Thurlow seconded the motion, which was carried, and with the brief response of the Chairman the meeting closed.

WATER-GAS PROVED A COMMERCIAL SUCCESS. A SAVING OF £10,000 PER ANNUM IN ONE WORKS ALONE.

THE BRITISH WATER-GAS SYNDICATE, LIMITED.

WATER-GAS.

The following extract from the *Times*, of January 2nd, 1889, relative to the manufacture and application of Water-gas, is reprinted for general information.

WATER-GAS.

"For many years past attempts have been made at intervals to produce what is known as water-gas—that is, gas resulting from the decomposition of water. Experimentally there have been several successes, but practically and commercially up to the present time, as far as we are aware, these have been only failures. These failures have mainly arisen from the difficulty experienced in separating the water-gas from the other products. This difficulty has now been overcome, not by one invention, but by the combination of the best features of several inventions having for their object the manufacture of water-gas. What is more, the patented inventions which have been combined in the new process are not those of one inventor or of one country, but represent several inventors and several nationalities—namely, England, Germany, America, and Sweden. The amalgamation of these various patents and the beneficial results which have accrued therefrom came about by reason of the exigencies of manufacture of corrugated boiler flues and press-flanged steel frame plates for railway rolling stock at the Leeds Forge Company's Works, Leeds. The metallurgical operations carried out there demanded fuel of a higher calorific intensity than could be obtained from either the generator gas of the Siemens' producer, or ordinary coal gas. Mr. Samson Fox, the managing director, therefore turned his attention to water-gas, and, having carefully considered the whole question, decided upon putting down a water-gas plant at the Leeds Forge. The works were begun on September 29th, 1887, and on March 29th, 1888, plant capable of producing 40,000 cubic ft. of water-gas per hour was started, and has since been in constant operation with perfect success, and without interruption. The gas produced gives every satisfaction, not only for metallurgical, but also for lighting purposes, the whole of the works being supplied with it.

"Water-gas is the result of a chemical re-action which takes place in passing steam through incandescent carbonaceous matter, and may be considered as the practical result on a wholesale scale of the ordinary laboratory experiment of decomposing water by passing steam through a highly-heated iron tube. In the water-gas apparatus the fuel, which at Leeds Forge is coke, is raised to a high temperature in a generator by the aid of an air blast. The blowing is continued for about 10 minutes, by which time the fuel has reached a dull red heat. During this period what is known as producer-gas is given off, and this is led away to a range of Lancashire boilers, where it is utilised in raising steam for the engines in the works. At the end of 10 minutes the valves are reversed, the air-blast being stopped, and the further exit of producer-gas to the boilers prevented. Steam is then admitted at the top of the generator for four minutes, and, passing down through the incandescent fuel, becomes decomposed, and a fixed gas results. This gas as formed passes away to a scrubber, where it is treated much in the same way as ordinary coal-gas. From the scrubber it passes to the gas-holder, where it is stored for use for metallurgical purposes in the works, such as heating and welding. For indoor illuminating purposes a portion of the gas is conducted from the gas-holder to the purifiers, where its purification is effected by means of oxide of iron. It will thus be seen that the process consists of alternately blowing the generator hot and making gas, and that a run of gas is made every 15 minutes, during which time the yield from each generator is about 17,500 cubic feet of producer-gas and 5,000 cubic feet of pure water-gas for heating and lighting purposes. The gas is also used most successfully for driving gas engines.

"The metallurgical purposes to which the water-gas is applied at the Leeds Forge are various. In the first place, it is used in the heating furnaces in the plate mill, where the steel ingots are rolled into plates for the manufacture of Fox's corrugated boiler flues. It is also used in welding these tubes and heating the plates for Mr. Fox's flanged frame-plates for railway rolling stock, and for his flanged boiler-fronts, besides which it is utilised in various other similar operations throughout the works. In the application of water-gas to the manufacture of Siemens' steel there is a marked improvement in the quality as well as the quantity of the product. With this gas 30 charges of steel per furnace per week can be turned out, as against 11 charges per furnace per week from furnaces of equal capacity using gas from Siemens' producers. Besides being used for metallurgical purposes, the offices and various parts of the works are lighted with water-gas, the burners employed being arranged on the Fahnejelm system. Burnt in the ordinary way, the water-gas gives a blue flame, but by suspending a comb composed of thin magnesia rods in the flame the filaments are quickly heated to a white heat, producing a bright glow light of high illuminating power, but which is neither unpleasant to the eye nor prejudicial to the sight. The heating power of water-gas was very great, as was demonstrated upon our recent visit to the Leeds Forge Works, where we inspected the method of its manufacture as well as that of its use in the various departments. To give one instance only, a piece of copper wire placed in an ordinary coal-gas flame was only made red hot. A similar piece of wire placed in a water-gas flame issuing from a similar burner was quickly and perfectly fused.

"An important consideration in the adoption of any new system is, of course, its cost; and in this respect water-gas comes out well. Its production per ton of fuel is about 30,000 cubic ft., and with fuel at 8s. per ton, labour at 3s. 6d. per man per day, and the production going on continuously, it is found that the gas costs slightly less than 4d. per 1,000 cubic ft. The experience of nine months' working at the Leeds Forge has led to the conclusion, based on carefully-ascertained data, that the saving effected on the whole works is about £10,000 per annum. Looking at the advantages of water-gas for illuminating purposes, it is to be observed that, besides giving an agreeable light, it does not develop any noxious fumes, nor does it produce smoke; health and cleanliness being thereby preserved, and paintings, furniture, and decorations remaining uninjured. For lighting mansions this would prove a boon, while the producer-gas can be utilised for heating purposes. Similarly, a mill-owner laying down a water-gas plant for lighting his factory will obtain gaseous fuel for steam-raising purposes practically for nothing. For small towns also the lighting could be carried out with water-gas, the producer-gas being used for steam-raising and manufacturing purposes generally. Although the installation of this water-gas plant at the Leeds Forge is the first in England, the system is being largely adopted in America and on the Continent, both at steel works and for illuminating purposes."

In addition to the above extract, the following papers have recently commented favourably on water-gas.

REPORTS OF MEETINGS.

ALTURAS GOLD, LIMITED.

(IN LIQUIDATION.)

RAPID LIQUIDATION AND RE-CONSTRUCTION—LIQUIDATORS COMPLIMENTED AND THANKED—RE-CONSTRUCTION A GREAT SUCCESS—MR. BROTHERTON'S AGREEMENT—THE COMPANY STARTS UNDER MOST FAVOURABLE AUSPICES.

AN extraordinary geueral meeting of the company was held at Winchester House, Old Broad Street, on Tuesday, for the purpose of (1) Receiving the report of the liquidators as to the winding up; (2) To consider, and if thought expedient, to confirm au arrangement for the settlement of Mr. Brothertou's claim; (3) To fix the remuneration of the liquidators, and other business.

J. H. A. Smith, Esq. (one of the liquidators), presided.

Mr. J. W. BIGGS (co-liquidator) read the notice calling the meeting.

A SATISFACTORY RE-CONSTRUCTION.

The CHAIRMAN, who was received with loud applause: Ladies and Gentlemen, the first business that you have before you to-day, as you will have heard from the notice just read, is to receive our report on the progress that has been made with the liquidation, since you did us the honour to confide it to our hands on the 19th of February. On the 1st February, in accordance with the recommendations of the committee appointed on the 28th December, you decided to liquidate voluntarily with a view to re-construction. These resolutions were confirmed on the 19th February, and on that day we were appointed liquidators to carry out your views in reference to the liquidation and re-construction. Immediately after taking office we set to our task, and at once saw that it would be no easy one. The balance at the bank at the moment was 131*l*. 18s. 6d. There were some pressing letters from Mr. Watson, the superintendent of the mines, stating that the miners' wages were unpaid, that the merchants, who had supplied goods, were unpaid, and were pressing, and he feared steps would be taken antagonistic to the company, which would lead to complications difficult to face in the future. There was altogether 4,500*l*. up to the beginning of January, which was unprovided for over there. Here, as I say, we had 131*l*. 18s. 6d. We had 15,000*l*. owing to gentlemen on acceptances falling due on the 25th February, and those gentlemen had given us notice that they would require to be paid. We addressed ourselves to these matters as rapidly as possible, and issued a circular inviting shareholders to apply for their *pro rata* proportion of the new capital, but as we are since informed, owing to a misunderstanding, we had demands presented to us with reference to the constitution of the new board, the settlement of the articles, and the settlement of the contracts between the two companies which we felt we were unable to accede to, and the result was that a petition was presented for the compulsory winding-up of the company, and accordingly we were compelled to take the necessary steps to prevent that petition being granted by the Court. Without going into details, but simply giving you results—as we informed you later on, the petition was withdrawn, and the petitioner undertook, as part of the agreement for our consent to the withdrawal, to pay all the costs of the matter. That left us then with the freer hand, and we were able to push on more rapidly with the re-constructiou.

POSITION OF THE SHARE CAPITAL.

Of the 279,851 shares which were offered to the shareholders (of course you will recollect that no shareholder, in the first instance, was allowed to apply for more than the number of shares he held)—of those shares 273,013 were applied for, leaving altogether 26,957 shares, being the balance of the 300,000, the total capital of the new company, to be afterwards disposed of. We have endeavoured to meet the wishes of all shareholders, and to study their convenience as far as possible, but of course in all these cases some little friction arises which it is impossible to prevent. One gentleman, holding 20 shares, said, "You have to credit me with 17s. on these 20 shares; that will be 17*l*., but instead of drawing that I will be content to take 10*l*. in cash, and 7*l*. in fully-paid shares." We were not able to meet that gentleman's views, and I believe he is an aggrieved shareholder to this day. (Laughter.) A lady wrote to say she had paid a high price for her shares, and if we had any remnants of honesty left in us we would see that she was paid before this company was liquidated. (Laughter.) Then we had the usual number of gentlemen who had not received notice. In one or two instances we found that although they had not received the notices they had yet sent in their application for shares. (Laughter.) But in a few cases we were quite unable to account for the non-receipt of the notices. All we can say is that if we have not satisfied every gentleman we ought to have done so, for we have tried.

EQUITABLE ALLOTMENT.

You will next be anxious to know what was the result of the tender for the shares. In order to secure that every shareholder's interest should be protected as far as the law would permit, the late committee stipulated that every share in the Elmore Company should be offered to the shareholders in the Alturas Company, and that the residue not taken by Alturas holders should be offered for tender to those who subscribed to the Elmore Company. You see by this means every shareholder was placed on the same footing, and if any advantage were to be obtained from the additional shares of the Elmore Company, all had equal rights. In accordance with those instructions we issued a form of tender, to be returned to us in a sealed envelope on or before Friday last. Those envelopes were all kept sealed until after the arrival of the last post on Friday, and until late on Friday night and early on Saturday morning we were busy opening and tabulating them with the following results:—26,957 shares are sold at an average of just a fraction under 1s. 4d. premium per share. The highest tender was 7s. premium, and the lowest went down to 6d., 4d., 3d., 2d. and 1d., the total shares tendered for being many thousands in excess of the shares at our disposal. The result to the company is that they nett the sum of 1s. 4d. per share on the difference between the 279,851 shares and the 300,000 shares. For those shareholders who have not received an allotment in the Elmore Company we shall have, after deducting expenses of postage, &c., about 1s. 3d. per share to return. (Cheers.) I think you will admit that we have done all that is possible to safeguard the interests of those who were not able from various circumstances to secure an allotment in the Elmore Company.

PREMIUMS PAY EXPENSES.

The result to the Alturas Company is that we calculate that from the premiums we have received, from the deduction we shall obtain from another matter I will mention presently, we shall be able to pay the whole of the debt of this company, with the exception of the 15,000*l*., the whole of the liquidation expenses, and the whole of the costs of forming and registering the new company, so that the new company will start on its way without a single drag on its capital, with the exception of that 15,000*l*. I think I may safely claim that to achieve this within eight weeks this very day, from the moment when we were appointed, will bear comparison with any re-construction that has ever been conducted in the City of London. (Loud cheers.)

POSITION AT THE MINE—LAST RETURN.

You will be anxious to know what is going on at the mine. We found the position of affairs critical. We had no doubt that we could meet any opposition that might be offered to the company in this country. We were quite sure that we could carry through the liquidation triumphantly, and leave your course undisturbed, but when it came to a question of American law I felt myself at a loss, for my knowledge of it is small, and my confidence in its equity is less—I am speaking of Western American law, not Washington law. We were very anxious that there should be no loophole left in America by which this company could be attacked. Very fortunately for us and the company, after the February clean up we received a cable from our manager, which was published, but which I will read now, as you have probably forgotten it:—"For the month (February) produced 1,285 ozs. of bar gold; for the month milled 1,350 tons of ore." That brought about this position of affairs, that shortly after Mr. Watson was able to cable to us that he had

A BALANCE AT HIS BANKERS AFTER PROVIDING FOR EVERY LIABILITY IN THE STATES.

(Cheers.) At the same time he cabled that he had no reserve ground, and that he was working from hand to month, taking away the ore as he drove the levels. Alturas is a very bunchy mine. You have alternate rich bunches and poor bunches, and in order to work this mine properly, and to do justice to both it and your superintendent, it is necessary to have a certain extent of ground opened, so that the poor bunches may be worked at the same time as the rich, and that you may preserve something like uniformity of yield: otherwise you will have an exceedingly good return of ore one month, a medium return the next, and a poor one the third, leaving the shareholders entirely at the mercy of every movement of the stock and share market. At this moment I believe we have fair looking ore in the face of the level. Whether that is going to keep on or not I cannot say. It may be unchanging for 1 fm. or 100 fms., but is more likely to be the former than the latter. At any rate we considered it too risky to continue to work that way, because if by any chance during the month there was a falling off in the payable ore, we should be left without money to meet the miners' wages, and be

exposed to any adverse action that might be taken. We cabled to the manager to conduct no operations at the mine except such as were necessary to keep it in good order, and enable the new company to prosecute the concern with vigour. Those orders were confirmed by letter. We are just keeping the mine clear of water and doing a little drifting eastward, but not sufficient to make any returns. We have received no report as to the April month, and I presume for the reason there is really nothing to report upon. I do not know whether the stamps have been shut down during the past month, but I imagine they have. If they came across any good ore they would crush it but if in small quantity they would consider it not worth setting the stamps to work again to deal with it. If you see no report the explanation is this, that having got into that good condition, we did not think it right to imperil it until the new company was ready to take over the works and could meet all demands. The new company is now in that position. The whole of the 300,000*l.* capital has been subscribed.

30,000*l.* WORKING CAPITAL.

We have returned applications for thousands of shares, and Elmore will stand in such a position as Alturas never did from the day of its birth. (Cheers.) There has been a good deal of asperity and acerbity in the past, but we want to let bygones be bygones, and we are going to present to you what we believe to be a reasonable and equitable settlement of Mr. Brotherton's claim. A suggestion has been made that Mr. Kemp Vanee has gone to America on business connected indirectly with this company, but Mr. Brotherton requests me to assure you that that gentleman has no intention of interfering or attempting to influence the Elmore Company, and that as far as he (Mr. Brothertou) and his partner are concerned their whole and sole desire is that the company may be brought into a state of prosperity which will recoup the past losses of the shareholders. Irrespective of the money question, it is a very satisfactory position to have got into, that we are not to be subjected to all sorts of rumours, some of them based on truth and some not, but that all are determined to work harmoniously for the common good. This brings me to the resolution as to the settlement.

MR. BROTHERTON'S SETTLEMENT.

In the committee's report they referred to the question of the Tip Top claim. It is unnecessary for me to go into it now. It was debated whether it was necessary to purchase the Tip Top property or not, and different opinions were held. In talking this matter over with Mr. Brotherton, after having gone thoroughly into the question. We insisted some concession should be made, and it was suggested by mutual friends that a compromise should be effected in order to save tedious and expensive litigation. That compromise we stated in our circular, and I will now move—"That the arrangements by the liquidators for the settlement of Mr. Brotherton's claim be, and the same are hereby, confirmed—it being understood that all the costs incurred by the liquidators in opposing the petition will be paid by the petitioner." I would like to take this opportunity on behalf of my colleagues and myself to offer my thanks to those shareholders who supported us so warmly at the time the petition was on, and for the offers of assistance which were received from all quarters. I think you are indebted to the members of the committee for the assistance they also rendered at that critical period. I am sure our friend Mr. Wells developed an insatiable appetite for information while looking into the musty records of Alturas affairs. (Laughter.) Mr. Harding was also with us and willing to take the best views of human nature he could under the circumstances—ever and anon calming those angry passions which will arise in the course of litigation. (Cheers and laughter.) Mr. Leak too was always to the fore, ready with his common sense, and a John Bull style of putting his hand in his pocket for the company when it was necessary to do so. (Cheers.) We had to ask your new directors in the Elmore Company to join us in providing the heavy fees for the registration of the company. We had not the funds at our own disposal, and although Mr. Goschen refers with great suavity to the sum which he has got out of new companies registered (160,000*l.*) I assure you we did not look at it with a like suavity when we had to contribute our proportion. (Cheers.) We are now prepared to give you any information you wish. This matter is entirely in your hands, but acting on the recommendation of the committee, and on our own judgment, we propose that this arrangement should be carried through with your sanction today. (Loud cheers.)

Mr. Biggs: I beg to second the motion.

Mr. Maddock: What is the claim?

The Chairman: 5,000*l.* with interest and costs, but the arrangement is that he allows us a rebate of 10 per cent., and pays the costs of the petition.

HONOUR TO WHOM HONOUR IS DUE.

Mr. Gretton: I must say that I think we are exceedingly indebted to Mr. Smith for his able explanation of the state of affairs, but I rather think he is a little optimistic in his confidence in Mr. Brotherton. I do not wish to say anything against Mr. Brotherton, but he attacked the company at a critical moment, after having given the shareholders assurance in this room that he would not oppose them. A man who does such a thing as that (leaving aside altogether our experience of Mr. Brotherton in the past, because I have no personal knowledge of that) does what is distinctly a disloyal act, and although I will support the arrangement which the liquidator has proposed, yet I must utter these words. It seems to me that the old Scripture text of "Settle with your adversary quickly" is just as true now as it was then, and it is not worth while going into expenses which would be of an enormous character, because no doubt a commission would have to be sent to America to take evidence, and the result of all these things is always more or less doubtful, however good a case you may think you have. I should like to suggest to Mr. Smith that in making this arrangement he should look out for any card which Mr. Brotherton may have up his sleeve. To be forewarned is to be forearmed. I think it will be well to look about, and see whether there is not something that Mr. Brotherton may have ready to spring upon us immediately this arrangement is made with him, and he has got his money. Then he will feel himself all right. As regards the mission of his partner to the States, I know nothing about it, but I would not rely upon Mr. Brotherton for what that mission is. Although Mr. Kemp Vance may have gone out there on some other business, Mr. Brotherton's word as to what that mission is would not have much weight with me. I have this confidence in Mr. Smith, that I believe he has acted for us in a way that we could not have found a better man. (Cheers.)

JUSTICE TO MR. J. H. A. SMITH.

It is doubtful whether we could have found as good a man. Therefore you can leave your interests in his hands with the greatest confidence. I never in all my experience met with a man who showed such devotion to the interests which were put into his charge, such indomitable perseverance and such hard work, and I can say the same of Mr. Biggs. Mr. Smith began it, and rather took the lead; the heavier work and anxiety has perhaps fallen upon him, but at the same time

YOU OWE A DEEP DEBT OF GRATITUDE TO MR. BIGGS.

Money cannot compensate them for their services. But at the same time I should like it to be understood that we wish Mr. Smith to be on his guard as to what may come eventually when Mr. Brotherton has got his money. (Cheers.)

Mr. Houghton: I would like to supplement the remarks of the last speaker—at the same time supporting all that he has said regarding the wonderful amount of work of the liquidators, and the satisfactory manner in which they have done it. I think that in making the agreement with Mr. Brotheton it should be stipulated in the strictest possible terms that Mr. Brotherton undertakes, and guarantees, and is excluded from taking up, at any time, any adjoining properties on either one side or the other of Alturas, until that property has first been offered to the Elmore Company for their acceptance, and that he gives a guarantee that he will not purchase nor take a bond in any manner of any adjoining properties. I know there is an adjoining property to the Elmore, or the old Alturas, that it is very necessary that we should have, and the question is whether the trump card, to which allusion has been made, that he may be prepared to play is not this one, and whether after he gets his money for the Tip Top (which is valueless) he has not already a bond of that property which is right on our boundary, and whether he will not be ready to close us down again.

The Chairman: I believe Mr. Brotherton is in the room. Is it your wish that I should ask him to reply? (Hear, hear.)

MR. BROTHERTON DEFENDS HIMSELF.

Mr. Brotherton: After the remarks of Mr. Gretton, probably no one in the room will be inclined to believe me. I think that the chairman of this meeting stated that owing to a misunderstanding certain things had happened, and if Mr. Gretton had been straightforward to me, he would have taken that into consideration. Mr. Smith has stated that there was a misunderstanding, and I do not think he stated it with any view of covering me. Mr. Smith knows it was owing to a misunderstanding that the steps I took were taken.

Mr. Gretton: I do not know that quite. There is no misunderstanding as to what passed at this meeting when the resolutions were first proposed.

Mr. Brotherton: When I was in this room I stated what Mr. Gretton said—that I should take no steps against the company, nor did I expect them to pay me the money until they could pay after re-construction, but it was because certain things happened in the interval that I took the steps I did. I do not think it necessary for me to state what those things were. It is a question of American law, and it is a thing you would not understand if I explained it. After having a long interview with Mr. Smith and Mr. Biggs, and the gentleman who came in between us, I convinced Mr. Smith, to a certain extent, that I was acquainted with certain facts of which he was perhaps ignorant. I have the law books at my arm in my room, and they were there at the disposal of these gentlemen that they might be regulated in their conduct in every respect. However, the misunderstanding arose, but as soon as we got to talk the matter over, Mr. Smith knows perfectly well that it did not take me five minutes, as a business man, to say

I WOULD WITHDRAW THIS PETITION, PAY THE COSTS,

and make this allowance. I will take everything that Mr. Gretton has said just about as well as any man could, but still I say to Mr. Gretton that though he may have passed an aspersion on my character, perhaps he would find that I am an honest man. With regard to what the gentleman has said respecting the adjoining claims—would he like to dictate to me where I am to go in the United States, and what properties I am to buy? Either the liquidators of this company are honest and straightforward men and believe this debt is due to me, and ought to be settled under the circumstances, or that it ought not, and if it ought not, then it should not be settled; and if it ought to be settled, no such stipulation as that should ever enter into it. I am a very much larger shareholder than these gentlemen, and it is not my interest to do the things they suggest. I say *Honi soi qui mal y pense*. I have assured Mr. Smith, and assure you, that whatever I can do to promote the benefit of the company I will do. If the Elmore Company wants to buy an additional claim, the Elmore, as a stranger, will have to pay more for it than if negotiated through somebody else.

MR. BROTHERTON WILL BE A FRIEND.

Now, I will assure Mr. Smith and the shareholders of this company that if they want any adjoining claim that I believe I am in a position to get for them, they shall have it at the price at which I shall buy it, and that they shall know with whom I deal in respect of it. (Cheers.) I can say nothing more than that. (Cheers.) I give you that guarantee and assurance that as an honest man I will not, nor have I any intention, or desire, to do anything detrimental to the company, despite what has been said about me to-day. (Cheers.) With regard to my partner, Mr. Kemp Vauee, some gentlemen wanted to know why he has gone to America. Well, he lives in America 11 months out of the 12, and has done so every year since we have been in partnership either in Chicago, or in San Francisco, or in New York. Perhaps you want to know what he does in each of these places. Perhaps you would like to know what transactions we have, but if you did I do not think it would assist you.

A Shareholder: We do not expect it.

Mr. Brotherton: You ought not to expect it. Here are your liquidators, who advise you to settle this matter, and they know what they are about.

ALL THE CARDS ON THE TABLE.

As far as any trump card up my sleeve is concerned, they are all on

the table, but I tell you to-day, as I have told Mr. Smith, that if you want any assistance to the company it shall be given by me free of cost, and anything that shall be bought shall be bought at the lowest price, and the company shall take it at the price at which it is so bought. I can say no more. (Cheers.) I wish to say no more, and if you have not the gentlemanliness to believe that I am speaking as an honest man, then I have no more to say.

A SHAREHOLDER: Will you give an undertaking that if you are directly or indirectly connected with properties surrounding this Elmore Company which may have an influence upon it, that you will renounce them for the benefit of this company?

Mr. BROTHERTON: How can I renounce interests which I own? There is not a part of Idaho in which I have not some property.

A SHAREHOLDER: I mean anything which is likely to have an influence on our property?

Mr. BROTHERTON: You mean that I am to renounce it to-day.

A SHAREHOLDER: Anthing that our property may depend upon.

Mr. BROTHERTON: I have an interest in a property which adjoins yours to-day, but that property you have refused to buy, and the chances are that you will not be in a position to buy it, because it will be taken up by Salt Lake people—I refer to the Vishuu property.

Mr. GRETTON: It was offered to us for 20,000*l*.

The CHAIRMAN: I do not wish unnecessarily to continue this argument, but there are just one or two points in Mr. Brotherton's statement I should like to touch upon. One is that of the question of misunderstanding. What I said was, that Mr. Brotherton and his solicitor assured me that the petition was presented under a misunderstanding. I am still in the dark as to how it arose. I think

MR. BROTHERTON HAS GIVEN ALL THAT WE CAN DEMAND AS BUSINESS MEN,

but the liquidators do not wish to influence your judgment. Still, I take it that you look to us in some respects for advice, and the advice of our solicitor, who has worked very hard in the matter, is that in order to save the Elmore Company from beginning with a law-suit we had better clear off the whole of the past. It is probable that the Tip Top bargain is one that would not be made now, and it is probable that other things would not have been done if we had the knowledge that we now possess. It is, however, no use crying over spilt milk—let us look at the position to-day, and if we alter the resolution a little I think it will meet the exigencies of the case. I think we are now strong enough to protect ourselves.

AMENDED RESOLUTION.

The resolution as altered will read thus:—"Mr. Brotherton having undertaken to sell to the Elmore Company any interest he has, or may have, in adjoining claim or claims to the Elmore property, which may be necessary for the working of the Elmore Company, at the cost price he or his firm may acquire them at, it is resolved that the arrangements made by the liquidators for the settlement of Mr. Brotherton's claim be, and the same are hereby, confirmed—it being understood that all costs incurred by the liquidators in opposing the petition will be paid by the petitioner."

Mr. HOUGHTON: I propose that the payment of this money be deferred until such time as the agreement has been subjected to the decision of the shareholders in extraordinary meeting.

The CHAIRMAN: We, of course, do not propose to pay the money to-day, but we propose to take your decision to-day. We have to give an answer to Mr. Brotherton before 4 o'clock, and if this resolution is not come to we shall have to tell him that we decline his terms and go on with the litigation. At the same time, if the basis is to be the resolution I have just proposed, our solicitor will take good care that an agreement is signed by Mr. Brotherton before we part with any money. I would ask Mr. Brotherton if he agrees to the resolution as altered.

Mr. BROTHERTON: I do.

The resolution was then carried unanimously.

A SHAREHOLDER: What is the capital we shall have in hand to work with after these payments are made?

FINANCIAL POSITION CLEARLY STATED.

The CHAIRMAN: The subscribed cash capital now is 45,000*l*. On payment after allotment the sum received will be 22,500*l*. You will have due next week 22,500*l*. cash payable at your bankers. Out of that you have to pay 10,000*l*. on one claim, and 5,000*l*. to Mr. Brotherton, less 10 per cent. rebate. That leaves you with 7,500*l*., and you have 22,500*l*. uncalled. Therefore, the Elmore Company will start with 30,000*l*. clear working capital. We yesterday received a letter from Mr. Watson, which goes into the question of the future operations he proposes. He says:—

"To put the property on a paying basis will require at least four months' time, and an outlay of about $6,000 per month."

He estimates, you see, that he will want 5,000*l*. from you, and at the end of four months he will have placed this mine in a position for working at a profitable rate. Possibly we shall never want to call up more than the amount now called, and in six months we trust we shall be earning dividends even if we are not declaring them.

DEALERS—TAKE NOTICE.

The shares will be dealt in 18s. 6d. paid, and 1s. 6d. liability. 1s. 6d. gives us 22,500*l*., and the premium and rebate from Mr. Brotherton will pay all other charges except the 15,000*l*. You will have 7,500*l*. to go on with, of which the manager will want 5,000*l*. If his estimate proves correct (and I never knew a manager's estimate that did) he will need no further call. (Cheers and laughter.)

A SHAREHOLDER: You will be getting something from the mine.

The CHAIRMAN: I hope not, at present. You ought to go on working for three or four months laying open stoping ground. I think the costs should be reduced from 35s. to 25s. per ton. The next business is the settlement of our remuneration. On this point I have nothing to say. We leave the question entirely in your hands.

EXIT ALTURAS.

I may, however, add that there is still a large amount of technical and routine work to do, which we cannot hope to get through before the end of the year, when we will be able finally to dissolve the company, but, practically, to-day we shall take our farewell of the Alturas Company.

A SHAREHOLDER: How much ground have you in the claims you hold, and how long will it take you to exhaust it?

The CHAIRMAN: The principal need for obtaining an additional property is to sink a new shaft, to communicate the levels at the eastern end of the sett. It is not a question of obtaining more ground, as we can follow the lode for an unlimited distance, but obtaining access to the ground we are now working at the most convenient spot. It would not be wise to discuss that question in public, but I hope you will take my assurance that that matter is receiving careful attention.

Mr. HORSFALL read a most encouraging letter from a correspondent he has in America, the principal point being the great confidence he felt in Mr. Watson, of whose able administration he spoke in the highest terms.

The CHAIRMAN read the paragraph as follows from Mr. Watson's last letter with regard to a new shaft:—

"No heavy expenditure need be incurred in putting down this shaft as the rock is easily mined, and most of the machinery now used at the incline can be used for the new shaft. This will save a large part of the expense. The principal outlay will be for the building over the machinery and timber for the shaft."

LIQUIDATORS' REMUNERATION.

Mr. GRETTON: The question now before us is that of remuneration. Our liquidators have rendered us invaluable services, and I do not know that there is any sum that can repay them for their work. I have some personal knowledge as to the amount of work these gentlemen have undertaken, and it is with great pleasure that I now render them this tribute of my respect. I propose:—"That the sum of 500 guineas be voted to the liquidators, to include all expenses, except out of pocket expenses." (Cheers.)

Mr. HOUGHTON, in seconding the motion, said: I think we are very much indebted to our joint liquidators for the manner in which they have conducted this liquidation.

Mr. FRENCH: I beg to propose as an amendment:—"That Mr. Smith be awarded 300 guineas and Mr. Biggs 200 guineas." I do not wish to say anything invidious with regard to the two gentlemen, or the difference of their work, but it must be obvious to all the shareholders who have attended the meeting, and who know anything about the matter, that without Mr. Smith I do not think Mr. Biggs could have so well carried through this matter. Without casting any reflection on Mr. Biggs, whom I thank most sincerely, I think that a deeper debt of gratitude is owing to Mr. Smith. I think it is only fair that, having greater responsibility, and anxiety, and initiative than Mr. Biggs, these should be recognised. If that can be carried unanimously, I think it is the proper way of dealing with the subject.

Mr. HEWLETT: I have much pleasure in seconding the motion. I have been much impressed by the thoroughness with which Mr. Smith does everything, and the spirit he has thrown into his work.

Mr. MADDOCK: I think this is such a delicate question that we should like to be assisted by the liquidators themselves to a decision.

Mr. BIGGS: You seem to have a desire that I should express my opinion, but I would much rather you had settled it without any application to me. We shall be very pleased to leave the matter entirely in your hands, expressing our great obligations to all the gentlemen who have spoken. Their kindness I regard as not the least part of our remuneration. (Cheers.) It is a great source of satisfaction to have pleased and satisfied you so well. I do not wish to enlarge upon the way in which the liquidation has been carried out. We should have been just as much entitled to our full remuneration if we had not been so successful. It does not follow that because a man fails to be successful that his remuneration is to be gauged by the measure of his success. A man can but do his best, and when he has done that the question of the measure of his success ought not to enter into consideration in determining his remuneration. (Cheers.) As to the division of the remuneration, I should be pleased to accept the mode proposed if that be your wish.

A VIEW THAT MEETS WITH ACCEPTANCE FROM ALL.

Mr. MADDOCK: Under these circumstances I should like to give you (Mr. Smith) 300*l*., and you (Mr. Biggs) 250*l*.

Mr. HARDING (a member of the committee): I can leave myself entirely in Mr. Smith's hands, for I have learnt to respect and esteem him very much. These two gentlemen have worked together in the past, and for some time must work together in the future. After four or five months' intercourse with Mr. Smith I know he is a man I can thoroughly trust—clear-headed, calm-minded, and his judgment pretty correct, if not entirely so, and a man who has had a considerable amount of experience. I am sure Mr. Smith would be the last man to step in and deprive Mr. Biggs of his just reward. He would shrink from that, and I am sure Mr. Biggs would be the last man to grudge it, if a larger share of merit and of payment were made to his colleague. I think the last suggestion is the best—give Mr. Smith 300*l*., and give Mr. Biggs 250*l*. (Cheers.)

The two former amendments were then withdrawn, and that of Mr. Maddock became the substantive one.

On being put to the meeting, it was carried unanimously amidst loud applause.

The CHAIRMAN: We have to thank you for this kind acknowledgment of our services, and although, as Mr. Biggs has said, the result might not have been so favourable, we would still have given the same energy and attention to your affairs. Our strength has been that we have felt all through that on every occasion

WE HAD THE WHOLE BODY OF THE SHAREHOLDERS AT OUR BACK,

and that we were thus prepared to brush away all obstacles as they arose. No colleague could have supported me more faithfully and more energetically and honestly than Mr. Biggs has done. We have worked in entire unanimity, but the work has been excessive. We have been at the office of the company all hours of the night, and engaged elsewhere on the same business. The agreement with Mr. Brotherton was only come to at 11 o'clock on the night previous to the day fixed for hearing the petition. Any discussion that has taken place with regard to giving me extra remuneration I can only regard as personal kindness to myself.

THANKS ALL ROUND.

Mr. GRETTON proposed a vote of thanks to Mr. Smith for presiding.

Mr. FRENCH seconded the motion, which was carried unanimously. He also proposed a vote of thanks to the consultative committee, from whom had come the liquidators, who had given the shareholders so much satisfaction.

Mr. MERCK seconded the motion, which was carried, and the proceedings of a gratifying meeting were then brought to a close.

DURHAM AND LORD BYRON MINING CO., LIMITED.

THE COMPANY, AFTER MANY INITIAL DIFFICULTIES, NOW ON THE EVE OF SUCCESS—MEETING TO RAISE MONEY BY DEBENTURES—THE OVER-DRAFT FROM THE QUEENSLAND NATIONAL BANK—SINGULAR ACTION OF THE BANK—7,000 TONS OF NEARLY 3-OZ. ORE READY FOR WORKING—PROSPECTS GREATLY IMPROVED—20 HEADS OF STAMPS AND THE WHOLE OF THE MACHINERY ERECTED AND READY FOR WORK.

A special meeting of this company took place on Saturday, at Winchester House, for the purpose of authorising the directors to raise a sum of 30,000*l.* upon debentures of the company.

Col. Arbuthnot, the new chairman of the company, presided, and the gathering was of an important character.

The Chairman: Gentlemen, before we proceed to the business of the present meeting, I think a word of explanation is due to you why I am in this position to-day. On the last occasion you had a different chairman, and I wish to explain to you, as there has previously been no other opportunity, how the change has come about. Mr. Balfour found that his numerous business avocations made it impossible for him to devote as much attention to the management of the company as a man in the position of chairman ought to give, and so he made up his mind to retire from the board. Some of my friends came to me and suggested that, as I was a large shareholder, and had narrowly watched the proceedings of the company from the first, I should offer myself as a candidate for the direction, and, accordingly, I did so, and when Mr. Balfour retired, for the reasons I have given, my colleagues did me the honour to elect me their chairman. Now, to take up the chairmanship of a concern like this would be very difficult for one who had not followed its vicissitudes from the beginning, but this I had done—being largely interested in the company myself, and having friends who were also largely interested. Therefore, I feel, as the directors wished me to take this post, I ought not to shrink from it. At the same time I must ask you to remember that I only took this position some three months ago, and that at that time I was sitting where you now are, and not standing where I now am. Hence, in regard to any past action of the directors, I must be viewed from the standpoint of an ordinary shareholder, and not as having been one of the original board, I am, therefore, entirely free from bias in favour of the board, and am perhaps in a better position to calmly review their action. I shall address you further when the secretary has read the notice of meeting.

Mr. Pelham Clinton then read the notice calling the meeting.

Mr. Spencer said the meeting had been called for an inconvenient day, and he intended to move the adjournment to another day, with the view of securing a larger attendance.

Mr. Dutton, of the firm of Wilkins, Blyth, and Dutton, said he would also suggest an adjournment at a later stage, for reasons that he would then assign, but in the meantime he thought it would be well if the chairman made his statement. (Hear, hear.)

THE EXACT POSITION OF THE COMPANY.

The Chairman: I will now proceed with my statement and speak to the resolutions. I was giving just now the reasons that induced me to join the board and assume the onerous position of chairman. In the position I occupy, as explained, I am able to look at things from the outside point of view, and not from the view of those who are responsible for what has gone on in the past.

JUSTICE TO THE BOARD.

At the same time, I must begin by saying that from what I have seen of my colleagues since I became a director, and from what I have read from and heard about the *employés* in Queensland, and also what I have experienced in connection with the entire working of the company—everything has been of the most satisfactory and reassuring kind. (Loud cheers.) I am perfectly certain, gentlemen, that you have in your board at home, and in your *employés* in Queensland, good, honest, hard-working experienced men who have done their best, and who now, at this crisis, have come forward in a handsome way to assist in raising the money we want by debentures. (Cheers.) If the whole of the other shareholders act as liberally as the directors, and their immediate friends have done, we shall pull through with the greatest possible success.

A Shareholder: We mean to. (Hear, hear.)

NO DOUBT OF SUCCESS.

The Chairman: I am glad of that indication of the spirit of the shareholders. I have not the smallest doubt as to the eventual success of the company. To my mind, the success of the company is as certain as that of any mining company can be. I am not speaking the language of excitement, but in terms based upon the facts that have come before me. (Hear, hear.) I assure you when I first joined the board, and heard of that over-draft, it was a *douche* bath to me, and I did not like it at all. When I came to look at the papers, and saw the accounts sent home, it seemed to me as if we were in a very bad way; but since then my views have been considerably changed. My change of view, of course, is based upon what I am told by Mr. Kirby, and as to his *bonâ fides*, you will hear much in the course of these proceedings. His letters bear out our former views. He states that there has been in the past great mismanagement, but that the property is magnificent. Money has been wasted, and the gold has been rushed out anyhow, and so he has been left with a great deal of deadwork to do and no gold quartz immediately available from which to make returns. Therefore, he tells us we must expect great expense for the present, and he has also told us those points from which we may expect the gold quartz by and by.

A PROVED MINE—2 TO 3 OZS. TO THE TON.

This is not the case of a mine where you go merely upon assays to the extent of 3 ozs. per ton, and then, when you come to crushing on a commercial scale, find only half an oz.; we have crushed thousands of tons which have given this quantity, and we may expect it again. Again, we have not to search about and see where such ore can be found, because we know we have a shoot in sight 335 ft. in length, averaging 2 ft. thick, of rich quartz, of exactly the same description as that which has been taken out before, and which averaged in crushings of thousands of tons very nearly 3 ozs. to the ton. On being mixed up with the Byron stone it has averaged more than 2½ ozs., and, in fact, it came to nearly 3 ozs. Mr. Kirby truly says "There are very few mines that give anything like this." Since the last meeting we have discovered the northern shoot, and Mr. Kirby has told us we have 7,000 tons absolutely in view above the 2nd level, and since he told us that we have received a letter, written about the end of January, confirming this. He is perpetually telegraphing to say that the stopes are improving, and so by this time I have little doubt that he has more than 7,000 tons in view, but we know by his letter of January 18th that he then had absolutely 7,000 tons in view. Although at another point (the chairman here indicated this upon the map) the quartz is not so rich, and not so easily extracted as in the northern shoot, we know that the crushing averaged

NEARLY 4 OZS. TO THE TON.

Although, of course, I do not pretend to say that it will all do that. Still, it is very rich quartz, and we have found it in two places. (Hear, hear.) We have two distinct shoots, and all we have to do is to sink the shaft, and drive levels to get under it. I want to draw attention to the wonderful pluck of Mr. Kirby in this matterr. We were very much pressed for money, and he knew it. The natural temptation, under such circumstances, was to extract as much gold as possible. In the first place this would please the shareholders, and it would have relieved the directors from financial embarrassment; but it would have been bad mining. Now, instead of yielding to any such temptation, he has had the pluck to leave that 335 ft. of stoping ground, and has gone on developing so as to sink the shaft and get at it from underneath, and he has also developed additional ground to enable him to attack it with greater advantage in another direction. He has been spending his time and the company's money in order to get a good supply of quartz in the future, so that when we once commence crushing with a 20-stamp mill we may go on. (Cheers.)

MR. KIRBY'S PLUCK.

I want you in this to observe the pluck of Mr. Kirby in sacrificing nothing to the development of the mine in a miner-like way. I will now try to show you why it is we want the additional capital. The best proof of our need will be found in a glance at the accounts. When Mr. Kirby first went there he did his best to put the accounts in order, and he has since sent home accounts which, I believe, are practically correct. At the same time we have given orders for an auditor to go up and audit the accounts, which were, for the most part, before Mr. Kirby's time, and as soon as the result is known the board will communicate it to the shareholders. As far as the accounts go, you know the position as well as the directors do.

THE OVER-DRAFT.

With regard to the over-draft of the National Queensland Bank, in my view, although the bank may have acted with the best possible motives, they have done an illegal act. We have had the case put to counsel here, and also telegraphed out to counsel there, and the view all round is the same. They made this advice not only contrary to the express directions of the board, but contrary to the articles of association, and they told us nothing about it. They have done it absolutely in the face of a letter written by the board through the solicitors in Queensland to them, prohibiting them from advancing more than 1,000*l.* Of course, before taking any such step they should have had our authority, which they had not, or they should have given us the chance of raising the money in England. Instead of that, they suddenly telegraph to us that our account is overdrawn to such an amount, and that they will commence legal proceedings if we do not at once pay the amount. Of course that came as

A TREMENDOUS BLOW TO THE DIRECTORS.

(Hear, hear.) We have had no fees, but I think we have earned at least the gratitude of the shareholders for the way in which we have faced that menacing position during the last six weeks or two months. (Cheers.) We have worked for you to the best of our ability, and we have been most ably assisted by our excellent solicitor, Mr. Norton, who is present. We took the opinion of counsel, and were enchanted to find that this pistol which was held to our heads was

AN UNLOADED PISTOL.

(Laughter.) It will not go off. (Laughter.) I do not for one moment mean by that to say that we are going to act in a mean and shabby manner to the bank, but we will not crouch at their feet for mercy. We will pay them their just claim, both principal and interest, when the accounts are properly looked into, but the payment will be made in our time, and not in theirs. (Cheers.) At the same time, I repeat we do not mean to act in any unfair way to the bank, and if you did you would have to get another chairman, for I would consent to no such thing. (Hear, hear.) At the same time the bank chose to put us in this hole, and we will pay them at our convenience, and not at theirs. It becomes, however, necessary for us at once to raise more capital. The fact of the matter is that we made a mistake at starting; instead of having a capital of 100,000*l.* we should have had one of 115,000*l.* or 120,000*l.*, though I think 115,000*l.* would have been ample under proper management. I do not dispute the good intentions of Mr. Walpole, the former manager, but he did not act wisely, and money was wasted—the result being that we require more capital now than we did in the first instance. My own impression is this, that the shareholders will consent to a certain amount of the bank's claim being paid out of dividends. We will not want more than 15,000*l.* We will supply you with the fullest information, and be guided by

your views. Although I am the chairman of the company, I must say that in this crisis

THE DIRECTORS AND THEIR FRIENDS HAVE BEHAVED VERY WELL,

and we have made a very good start towards finding the debenture money. (Hear, hear.) We hope amongst our own immediate friends to raise several thousands of pounds, but we must really ask the other shareholders to aid us in this crisis. (Hear, hear.) This is a magnificent property, and within six months from the present time it is my firm belief that we shall be in good work, though not paying dividends, but that within 12 months from the present time we shall be paying dividends equal to 10 or 20 per cent., and at the end of that period I feel that we shall steadily be paying 20 per cent. We telegraphed to Mr. Kirby what money he would require to put the mine into a paying condition, and the exact dates on which that money would have to be paid. He has told us, and we are prepared to find the money. We asked him, "When do you expect that you will commence continuous crushings with the 20-stamp mill, and where do you expect you will get the quartz?" He has replied that it will take some time to get the 20-stamp mill to work, and he has indicated unmistakably the points at which he expects to get the quartz—that is from the stopes, and he has told us when it is to come, that is, as soon as the shafting has arrived. He will then be able to crush with 20 stamps. This shafting will go out on the 16th of this month. The fact of the matter is that we have been pursued by misfortune from first to last, but now the tide seems to have turned. In our early days we were most unlucky. Mr. Walpole overlooked his instructions to get the shafting out, and he had to telegraph home to get it from England. It will take two months to get out there, another month to get to the mine, but by the end of August I think we should get the 20 heads fully at work.

A FORECAST OF CRUSHINGS.

That being so, we calculate being able to crush 1,050 tons per month, and at 2½ ozs.—we have crushed thousands of tons that have given 3 ozs.—imagine what an immense profit we shall have to commence with, and that too when the working expenses are extremely high, but which, when the railway comes up will be reduced materially in most items. The railway is being pushed on, and may be expected to reach us in two or three years. That, I say, as the result of inquiries I have made—that the railway will be at Georgetown in about three years.

A SHAREHOLDER: What are the expenses per ton?

The CHAIRMAN: About 4*l*.

A SHAREHOLDER: That being so, we have a property that should turn out very well indeed. What is the claim of the bank?

BANK'S CLAIM.

The CHAIRMAN: 15,000*l*., but we will pay it out of revenue, or by the issue of more debentures, but that is a matter for after consideration. I, personally, am anxious to keep down the capital. We are at present crushing for other companies, which is yielding us a revenue. I have now a word to say as to the

POSITION OF THE AUSTRALIAN SHAREHOLDERS.

They wish to have a registry out there to be able to exchange shares in Melbourne. We referred the question to counsel and found there were legal difficulties, but I am anxious that that should be done. It is an advantage on all hands, and Mr. Norton will no doubt see his way to its being done. We are anxious to let bygones be bygones, and to work harmoniously together, for that is the true way by which this company may be brought to the success that is before it. A gentleman is present who holds a power of attorney for the whole of the Australian shareholders. If he will consult with the board and with Mr. Norton, we may be able to put matters upon a footing that will be perfectly satisfactory to him and his friends. I know in this matter, of all pulling together, the board will do their best, and, personally, having only lately joined the board, I must say that it would be impossible to have pleasanter colleagues to work with. We have a good manager, and I think we are on the eve of success. I now beg to move the resolutions as read by the secretary.

Mr. BARLOW (director) seconded the motion.

Mr. SPENCER proposed the adjournment of the meeting for the reason already specified.

WHY ADJOURN?

Mr. DUTTON: Everyone will be agreed that Saturday is a most inconvenient day on which to hold a meeting like this. A great many people are out of town, and besides, it is a short day on which it is difficult to find time to attend. The evidence of the truth of this statement is to be found in the fact that, notwithstanding the importance of the resolutions to be submitted, we have so small an attendance. I was not aware that there was anybody in this country who held a power of attorney to represent, as a body, the Australian shareholders, the vendors to this company, and who amongst them hold some 10,000 shares. It so happens that a gentleman who occupies the post of local manager, what we understand as secretary, is now on his way to England, and I expect him to arrive on the 7th of May. He has been quite recently to the mine—as recently as February—and, therefore, would have been in a position, if he had been able to attend this meeting, to have afforded us very valuable information as to the present condition of the mine—information which would be material in connection with the passing of the present resolutions. The gentleman I refer to is Mr. Longden. (Hear, hear.) Under these circumstances I think it both reasonable and expedient to suggest the adjournment of the meeting, but if the shareholders are not with me I will not press it, though I cannot see there is such a vital urgency in the matter before us that it cannot be postponed for a few days.

WHY BUSINESS SHOULD NOT BE POSTPONED.

The CHAIRMAN: We did not select Saturday with any idea that it would be inconvenient. We were extremely anxious to have as large and as representative a meeting as possible, and thought Saturday was a slack day. I should be most pleased to hear the views of Mr. Longden, but I do not think that is a justification why we should postpone the urgent business that is before us. (Hear, hear.) I give this advice as holding, with my friends, probably the largest interest in the company of any who are now on the register. Then we must remember that we have the representative of the Australian shareholders, and why then should we put off our business till the 7th of May when we are here to do it now? The board will issue to the shareholders in the form of a circular any information which Mr. Longden may give.

VIEWS OF THE AUSTRALIAN REPRESENTATIVE.

Mr. PARSONS: I represent the shareholders in Melbourne, and have a power of attorney for 40,000 shares. I see no occasion to await the arrival of Mr. Longden. When that gentleman arrives he will simply tell you that it is a grand mine, and he has told us that before. Then, all the reports we have from it speak of it as of the greatest value, and, in fact, you have had proof of that. You have taken out of it

40,000*l*. WORTH OF GOLD IN NINE OR TEN MONTHS,

and there is no doubt you will get far more in the next nine months. (Cheers.) Your funds in the past have been squandered. The Melbourne shareholders are dissatisfied, and that is why they have given me the power of attorney. In fact, I have power of attorney to buy 10,000 shares in this market, so as to remove the company back to Australia, but after the conference I have had with the directors, I am satisfied that they are not to blame. (Cheers.) I am satisfied, so far as the Melbourne shareholders are concerned, with the explanations of the directors, and will vote for the present resolutions. (Cheers.) We should consider this extraction of gold a very good return in Australia. I am sure this is a grand mine, but there has been a terrible waste of money. We expected there would have been 20,000*l*. to divide, but judge our astonishment when we saw the balance-sheet. If we could have had the register in Australia, our shares would have sold for 3*l*. without any trouble—in fact they would have gone to 5*l*.

The motion for the adjournment of the meeting was then put and rejected, and the business was proceeded with.

VIEWS OF AN AUSTRALIAN.

Mr. ROSS ROBINSON: I know the property, and visited it in September or October last. When I came here I recommended my friends to take shares because I knew its value. I knew the mine had been mismanaged, but did not expect to find the state of things as revealed by these figures. I only refer to the bad management in the past to ask you what you are going to do to remedy it in the future. You have told us in the report that you have crushed 5,000 tons, and they have averaged 3 ozs. to the ton; but you have spent 9*l*. for every ton you have raised, and yet you are in debt. To most mining men such a state of things would be incredible. The expenses of the mine, instead of being 1*l*. per ton, are about 8*l*., and such a state of affairs must to a greater or lesser extent reflect upon the directors at home—past or present. The gold averages 3*l*. per oz. when sold. The chairman has not told us the steps by which he proposes to improve the management out there in the future. We are told that Mr. Walpole did not order the shafting, but surely the directors should have known this. If there is incompetence at the head there is incompetence all round. I hope there will be made radical changes in the mine management, but I shall not oppose the resolutions.

Mr. NORTON: I am a substantial shareholder. I will vacate the position I hold here as your solicitor, and will take my place amongst you as a shareholder in order that I may address you in that capacity, and in that capacity alone. Mr. Robinson has condemned the management of the mine under Mr. Walpole, and I will first say a word about that. Before he went out the board made careful inquiries about him, and have made them since. They have heard nothing against his character, but my view is, that, finding himself out there with a large quantity of gold under his thumb at the moment—he is not a mining expert—he lost his head, got out all the gold he could, and thinking he had a tremendous "boom" before him, he so acted, with the results that usually follow from such a misconception. I believe I am right in saying that every £ he got out of the mine cost him as much to extract. The consequence is that so far as Mr. Walpole's work is concerned, we, as shareholders, are neither the richer nor the poorer; but we are the richer in this sense that we know the value of our quartz from actual crushing. The board know now from Mr. Kirby's reports that we have as good, or better, quartz going down as the chairman has shown on the plans.

DIFFICULTIES OF COMMUNICATION.

You must recollect the immense distance we are from the administration there. It takes from five to six weeks to get a letter to or from Brisbane, and three weeks more to get that letter to or from the mines. That is nearly nine weeks, or 18 weeks before we can get an answer. Mr. Walpole began work in October, 1887. The board were dissatisfied from the first with the absence of accounts, and were constantly telegraphing to him. All this I have naturally come to know from my relationships with the board as solicitor. The board were expecting these accounts would come, and at last Mr. Walpole telegraphed "We have sent them off." When they came they were in long sheets like day books. There was no balance-sheet, no profit and loss account, or anything to give us any substantial appreciation of the position of the mine. The secretary and accountants, by dint of great labour, from this mass of incoherent material, digested something like a rough idea of the position, and then in July the board made up their minds that they must get rid of Mr. Walpole. They sought for the best man they could find, and Mr. Bicknell, one of their number, and a gentleman of large experience—(hear, hear)—suggested Mr. Kirby. The directors saw him and I did myself.

MR. KIRBY'S INSTRUCTIONS.

One thing the directors impressed upon him most strongly was that he should not go for large crushings or immediate returns, but that he should develop his mine, and above everything be at least a year ahead of his stamps with respect to his supply of quartz. Those are stiff lines, but they were laid down most stringently, so that the experience with Mr. Walpole might not be repeated with Mr. Kirby. Now, it seems to me that Mr. Kirby has followed these instructions to the letter. We have two levels. We have two deep shoots of ore worth 3 ozs., and a third, apparently worth more than 3 ozs. to the ton, and there is little doubt that we shall strike a third shoot lower down. Our immediate object is to sink both shafts 100 ft., and then drive. We shall then be able to work the ore from above the 3rd and 2nd levels, and we have still untouched ore above the 2nd

level, and also some above the No. 1. Mr. Kirby told us from the first we should want money; therefore, there is nothing new in our asking for this 10,000*l.* or 15,000*l.* The action of the Queensland National Bank has put us in an awkward position, and themselves also. It is not in the ordinary course of business for a bank to lend the manager of a mine 15,000*l.*, and then, when they are covered by the plant on the ground, to telegraph home, "Pay us, or give us further security."

A Shareholder: They want to get the mine.

Mr. Norton: I will not contradict you because I have no evidence to the contrary. (Laughter.) It is obvious that they would never have made that advance upon a bad mine. (Hear, hear.)

A Shareholder: What is their security?

A VIEW AS TO THE POSITION OF THE BANK.

Mr. Norton: I will tell you what is my opinion of this affair. Pay them we cannot. To give them a first mortgage would be to say to the shareholders you must take a back seat to the bank, and take a second security. Fortunately for us we had given to the bank very stringent instructions not to give the mine more than 1,000*l.* credit, and the articles of association prevented the manager from borrowing, and the directors from authorising him to borrow, and I believe my opinion is confirmed by Mr. Buckley, and we have also a telegram from the lawyer there confirming it, that we have the bank at our mercy, and that they are well served. (Cheers.) We now can pay them at our leisure. As to the needs of the mine, Mr. Kirby says he wants 6,000*l.* or 7,000*l.*, and that he will complete the work he is about by the end of June. My experience of mining matters is that estimates of time and money are always exceeded—in collieries (of which I know more than gold mines) by 100 per cent., and I should think in gold mines by 200 per cent. (Laughter.) The board propose to raise, therefore, 30,000*l.* to be well on the safe side, though it may not be necessary to issue more than 15,000*l.* As a shareholder, I strongly recommend my fellow shareholders to pass these resolutions at once, with the slight modification in the last as suggested to me by Mr. Dutton, because that resolution as it stood looked a little wide. The whole object of that resolution, the last, is to enable us to deal with the bank claim.

Mr. Dutton: I hope the directors will take steps to have the reports from the mine, sent to the usual channels of publication. I think the Agent-General might be approached with advantage in the matter of the railway. The whole of the Etheridge goldfields have been handicapped by the difficulty of transport.

The Chairman: Mr. Kirby has full power to deal with his subordinates. He has reduced the expenses of winning the gold from 11*l.* as it was at one time, to 4*l.* so that he has done a good deal for us already. I agree with Mr. Robinson, that the former expenditure was disgraceful. The suggestions of Mr. Dutton, as to approaching the Agent-General, and sending the reports to the press will not be lost sight of.

RESOLUTIONS CARRIED.

The resolutions, as amended, were then put to the meeting as follows, and carried unanimously:—

(1.) "That the capital of the company be increased by the creation of 30,000 new shares of 1*l.* each, and that notwithstanding article 52 of the articles of association the said new shares may be applied by the directors in redemption of debentures of the company, but shall not without the consent of the company in general meeting be issued for any other purpose." (2.) "That in addition to the powers at present vested in the board of directors by the articles of association, the directors be, and they are hereby authorised to issue debentures of the company for any sum not exceeding 30,000*l.*, such debentures to bear interest at such rate, and to be in such form, and for such amounts as the directors think fit, and to be unsecured or charged upon the whole or any part of the company's property, or uncalled capital as the directors may determine, and if so determined by the directors, upon the terms that the same may, at the option of the holders, either at or before maturity, be exchangable for shares of the company credited as fully paid-up." (3.) "That the directors be authorised to pay in full or compromise upon any terms they may in their discretion think advisable the claim of the National Bank of Queensland, and to ratify and confirm either wholly or partially that transaction on behalf of the company, although beyond the limits of the manager's authority."

The proceedings of a lengthened sitting were then brought to a close.

Mr. Henry P. Clinton, the secretary of this company, sends us the following extract from a report received from Mr. Kirby, dated the 13th February:—"I may have to cable you soon for a remittance, and if so trust it will be sent. I repeat there need be no alarm. In the Durham we have one of the finest gold mines in the world. The late management from Melbourne is entirely responsible for the present state of things. If the old style had gone on, and the same work carried on as now, the overdraft would have been at least 25,000*l.* A lot of dead work has been got through lately—winze and shaft sinking, and level driving. We are nearly through in No. 2 level, the dam is repaired, house and store built, and a number of back debts paid off. We are all working hard to get things square again, and the various heads are ably assisting me, especially Mr. Hall, who is bringing the mine round gradually. It was not his fault the taking the eyes out of the mine. Just now all is going well, and I am beginning to see my way out of the wood. A lot of comparatively poor stone has been going through the mill, but it had to be quarried whilst developing, but we have under No. 1 thousands of tons of rich stone. Once the 20 heads are going, and for this I am working, all our trouble will be at an end. I have reduced wages, both the number of hands to do a given work, and the rate; the latter was the most difficult, and about the end of April all the surface hands now erecting machinery, building, working on dam, &c., will be dispensed with. I myself have such confidence in the mine that I purchased at over par 350 of our shares in Melbourne. Railway from Croydon to Georgetown, we are agitating for this; could you not assist us on your side by application to the Agent-General? It is only 100 miles to Croydon, and perfectly flat." Referring to this last clause, the shareholders were informed at the meeting held on Saturday last, that the directors intend taking up this matter.

COLORADO SILVER MINING CO., LIMITED.

SUCCESSFUL RE-CONSTRUCTION — THE MINE IMPROVING — DIRECTORS INTEND TO PURSUE A VIGOROUS POLICY OF DEVELOPMENT.

An ordinary general meeting of the members of this company was held at Cannon Street Hotel on Tuesday—Lieut.-Genl. the Hon. W. H. A. Feilding (chairman of the company) presided.

Mr. Daniel Norris (secretary) read the notice convening the meeting, and the report was taken as read.

THE RE-CONSTRUCTION.

The Chairman: Gentlemen, you will observe that we have been a long time without meeting here—in fact we have not met since the statutory meeting of the present company, four months after the re-construction took place. The re-construction virtually took place in June, 1887, although the agreement was not signed until October of that year. This company, however, practically took over the management of the old company for the three last months of its existence, that is to say from June to September, 1887. Therefore these accounts range over a considerable period of time, and I would ask you to bear that in mind as rather an important factor in what I am going to say to you.

SHAREHOLDERS WHO HAVE NOT COME INTO THE SCHEME.

You will observe that there are 7,976 shares in the old company which have not been exchanged for new shares. Since the date of this report, however, 118 of these have been exchanged. The reason why so many shareholders have not taken up the new shares varies in almost every individual case. Some of the shareholders in the old company—large shareholders too—have not acknowledged the receipt of any of the circulars or notices sent to them, although we posted them as registered letters. The consequence is that the directors are in a very disagreeable and awkward position. We do not like to appear harsh, and at the same time we do not want to inflict an injustice upon those shareholders who have come into the scheme and paid their money months ago, and who naturally say, "We do not see why these people should be let in now on the same terms as ourselves who have borne the burden and heat of the day." (Hear, hear.) There are cases, however, which I think require special consideration. For instance, a shareholder resident abroad may not be cognisant of the law on this side of the Atlantic; he may fancy he is aggrieved by the re-construction having taken place without his having been personally consulted, and it is possible that he may be labouring under some misunderstanding. I am sure, if such be the case, no English shareholders would take advantage of a misunderstanding of that nature but would rather say, "Very well; you understand it now—will you come in? Of course, you cannot expect to receive any dividends that may have been earned from the date when you should have come in, but you may receive a dividend in the form of interest upon the sums of money you have paid, from the time of their payment." That is one way of getting out of it. There are other shareholders whose failure to reply to our circular seems to me utterly incomprehensible. We do not wish unduly to press these shareholders, because it is possible that the company might be let in for legal proceedings, and we require all our spare cash for mining purposes. (Hear, hear.) In consequence of this standing aloof on the part of the old shareholders the operations of the company have been seriously impeded, because the scheme of re-construction was so arranged that by issuing new shares with a liability of 2*s.* per share there would be a certain sum available to continue working the mine. Our operations, therefore, have had to be ruled by the amount of money at our disposal. We expected that all the large shareholders, and most of the small ones, would have thought it worth while to assist us in continuing the work; because we felt sure that people knew their own interests, and having 4,000*l.*, 5,000*l.*, or 6,000*l.* locked up in the company, would not throw their chances away. In point of fact, however, we have 7,976 shares unexchanged, which means so much money that we cannot depend upon.

Mr. Smyth: About 3,000*l.*

POLICY OF THE BOARD.

On taking over the management from the old company, we found (I am speaking in general terms) that the workings were not in really payable ground; that is to say, they were not in ground that would have justified us, with the limited amount at our disposal, in working without the aid of lessees, who would pay us a royalty. We were therefore obliged to adopt a course which I know is repugnant to the feelings of most of the shareholders, and decidedly repugnant to our own, and cut our coat according to our cloth, patiently waiting until we could see that payable ground was reached, so that we could work the mine ourselves. It may be very satisfactory for you to know, as it is for us to be able to tell you, that we are

NOW IN PAYABLE GROUND

in the majority of places that are being attacked by our miners (Hear, hear.) We are working at 21 different points, and with the exception of two or three we are in payable ground at every one of these points. In view of this, some months ago we telegraphed and wrote to our manager to engage us in no more long leases; so that we are at this moment in a position that with the funds in hand, and if we could get the whole of the shares taken up—which Mr. Smyth reminds me would give us about 3,000*l.*—we would be able to work the mine on our own account, and distribute dividends among you instead of allowing the lessees to pocket the large sums they are pocketing.

LATEST ACCOUNTS FROM THE MINE.

You might, perhaps, like to know something about the present state of the mine, and I will, therefore, read you some extracts from letters recently received. These letters were not written with the view of being read at the meeting; for until we cabled it a few days ago nobody over there knew the date of our meeting. They are ordinary

reports written to the directors. When we stopped work at the time of the re-construction—or at the time I ceased to be a director of the old company—about 2½ years ago, work had ceased at the bottom of the Silver Ore shaft. That shaft is, I believe, the deepest shaft in any mine in that part of Colorado. We have got down to the 15th level, and each level is 70 ft. from the other; and the reason why it was stopped was that right and left of that shaft we calculated we were in barren ground—that is to say, that the shoots of ore in the upper level came at such an angle that we should have had to go through a considerable amount of barren ground to the west of the shaft before we could hope to hit upon payable ore; and, as our funds were short, it was thought advisable not to drive west from the 15th level. We had found ore at the 14th level, at a distance of over 200 ft., and about two years ago they sank a winze in the direction of the 15th level in payable ore. That was relinquished until it was unwatered (two months ago) to see what could be done at the bottom of it. Before it was completed pieces were brought up assaying

2 OZS. OF GOLD TO THE TON,

which, however, we did not like to credit, and so we said nothing about it. Our manager, Mr. Cornish, under date the 7th March, sends home the following report:—

"From assays made from ore taken below the 14th level I have every reason to believe that the mineral is increasing in richness, both in gold and silver. I am making every effort to reach and explore the 15th level through the Foley winze, and I certainly would not advise the company to abandon the lower workings in the Terrible." And reports again on 30th March:—

"Moore and Company have sunk the Foley winze to a depth of 83 ft. below the floor of the 14th level providing a sump 13 ft. in depth below the floor of the 15th level. In the bottom of sump the mineral vein is from 2 ins. to 6 ins. wide, and of much better grade than the ore heretofore developed in the 14th and 15th levels; samples assaying as high as 716 ozs. silver per ton. This new find or development of a good sized vein of high-grade mineral below the 15th level is most encouraging, and the question of sinking the silver ore shaft to a greater depth again becomes a matter of paramount importance."

"I have a force of four men raising water from Brown shaft which is now clear to a depth of 21 ft., where stopes and drifts were encountered full of water, and more time will be required to clear the shaft in proportion to the extent of these stopes and drifts. I will push this work to completion as rapidly as possible, and when the shaft is clear of water will examine same and cable result. I am making preparations to start drift on Brown lode east from S. O. Tunnel, and have a force of men putting in air and steam pipes to ventilate workings. The work is being done as rapidly as possible, and when completed, the drift will be started and pushed east by a force of not less than five men working day and night. I have let the contract to drive the drift size 5 ft. by 7 ft., contractors to furnish all supplies and tools, and lay track, at $7 per ft. I would not advise the use of power drills."

The company's assayer, a young Englishman, who has been sent out by the company, and is giving every satisfaction, wrote on 25th March, giving the following assays of specimens taken from the various parts of the Foley winze:—"No. 1: 87 ozs. silver, 2.73 ozs. gold per ton; No. 2: 105 ozs. silver, 1.65 ozs. gold per ton; No. 3: 221 ozs. silver, 1.74 ozs. gold per ton. No. 1 also contained a considerable quantity of quartz; No. 2 a less quantity, and No. 3 only 14.2 per cent. of quartz, there being only a trace of lead in No. 2." Before we actually got at this ore our assayer wrote us to say that "the deeper we go the more gold we shall find, and I should not be surprised if this turns out to be

A GOLD MINE INSTEAD OF A SILVER MINE,

at greater depths." His prediction to a great extent has been verified, and we can only hope that it will continue to get richer. Where iron pyrites is found in conjunction with silver-bearing galena it is almost always an indication of gold; and it is chiefly in this iron pyrites that the gold is found, and not in the galena. (Cheers.) We state in the report that "advances have been made to the board by proprietors of adjacent properties, with a view to ascertain whether proposals would be entertained for

RIGHTS OF WAY THROUGH ONE OF THE COMPANY'S TUNNELS

and upon the surface, also for the purchase of some portion of the property; the matter is, however, as yet in such a crude condition that your directors cannot do more at this time than state the fact." The right of way sought is through the Silver Ore tunnel. Those negotiations are not broken off, and it is possible we may yet bring them to a successful issue. As regards the easternmost part of the property—The "Brown" tunnel—we desired the manager to open up the workings there, and see whether the reports that we have heard as to its richness were true. The chairman here indicated, by means of a large diagram, the workings in the "Brown" section of the property.) Continuing, he said: We desired our manager to unwater that portion of the "Brown" workings known as the Brown engine shaft, the bottom of which has not been seen for 20 years on account of water, but which is said to be very rich. Having unwatered it, he reports that it goes down 50 ft. below the Mammoth Tunnel level, and the drift westward, towards the Silver Ore Tunnel workings, 90 ft.; and in the opposite direction 20 ft.; that there is an irregular streak of solid ore 2 to 4 ins., with a streak of mineralised quartz 6 to 12 ins. also that he has made an important strike in bottom of 15th level—rich ore 2 to 6 ins. wide, assays 764 ozs. silver, carrying considerable gold and lead—present condition and future prospects very favourable—gross receipts March month, $6,000. We have been working with a definite object, and as fast as we could with the means at our disposal. (Hear, hear.) A claim of $35,000 was made against the company for an accident which occurred before the re-construction took place, and which we might very well have defended, but we thought it advisable to settle it out of Court, which we did for $1,750.

THE STAFF.

Some shareholders have had an impression that we did not get the full value of our ore, and the board thought it wise to take steps to ascertain if that was the case. We have, therefore, sent out Mr. Lake, a competent assayer, and it is impossible for the directors to speak too highly of this young man's work. He consented to go out at a small salary, on the understanding that if he made himself valuable to the company the company would treat him liberally; and I am bound to say that so far he has given us eminent satisfaction. As regards the manager—the board have now under consideration a proposal made by him in which he offers to accept a reduced salary on the condition that he receives a percentage upon the profits. That matter, I think, you may fairly leave in our hands to do the best we can for you. (Cheers.) In conclusion, I hope that those of you who have any influence with the old shareholders who have not joined the new company will use it, and thus enable us to develop the property, so that we may reap the benefit of their money in dividends. We are nearer a dividend-paying condition now than we have been for the last three years. It has been a long pull, but the board are all of one mind as to the policy we should pursue, and I am quite convinced that we shall yet succeed in pulling the thing through. I beg to move the adoption of the report and accounts. (Applause.)

A SHAREHOLDER'S CONFIDENCE IN THE PROPERTY.

Mr. Smyth seconded the motion, observing that the company was 21 years old, that it had now arrived at the period of its manhood, and they were about to enter into their estate and receive dividends. (Cheers.) If he had any doubt about that he would not have brought over 10,000 shares in the market recently. At present they had about 7,000*l.* in hand, and no doubt the amount unpaid on calls would soon come in. At any rate, a friend of his would be ready to find 10,000*l.* for the company if necessary.

Mr. Tapp expressed the opinion that the directors should proceed at once against the defaulters who had not paid up the amounts due by them. He was pleased to hear of the re-arrangement in respect to the salaries in Colorado, and he advocated a reduction in expenses in London office, and salary expenses also.

ECONOMIES INSTITUTED.

The Chairman, in reply, said that with reference to the remarks that had been made by Mr. Tapp, he wished to point out that the present accounts were not accounts for a year, but for a period of 17 months. The directors had used the utmost endeavours in their power to keep down the London expenditure. In the days of the old company the expenses were at one time about 700*l.* a year for two clerks and a secretary. Their present secretary, and it would be impossible to get a more able or efficient gentleman, gave them office accommodation and his valuable services for the very small sum of 30*l.* per month, paid monthly.

Mr. Tapp said he wished to express himself quite satisfied with the result stated by their chairman. He had no idea that the London expenses were only the small sum of 360*l.* per year.

After some remarks from Messrs. Fitch, Crane and other speakers,

The Chairman said he wished just to reply to a remark that had been made with respect to the bringing home of ore, as done at one time by the old company. They did not think that this would be necessary, as they hoped to be able to sell ore in bulk instead of small parcels, and to realise higher prices.

The resolution for the adoption of the report and accounts was then put and unanimously carried.

FORMAL BUSINESS.

Mr. Tapp then moved, in eulogistic terms, the resolution of the retiring director, Lieut-Genl. the Hon. W. H. A. Feilding.

Mr. Crickmer seconded.

The motion was carried.

The Chairman briefly returned thanks.

Mr. Fitch moved the re-appointment of the retiring auditors, Messrs. Cooper Brothers and Co.

Mr. Colee seconded.

The motion was carried.

Mr. Smyth moved a vote of thanks to the chairman.

Mr. Tapp seconded.

The motion was carried.

The Chairman briefly responded.

The meeting then separated.

THE NEW GUSTON COMPANY VICTORIOUS.

WESTON V. THE NEW GUSTON COMPANY, LIMITED.

The plaintiff in this action, the holder of 3,950 1*l.* shares in the old Guston Company, sought to have allotted to her the same number of shares in the new company on payment of 2s. 6d. per share, 17s. 6d. being deemed to be paid up, or in the alternative damages estimated at the amount of 2*l.* 8s. 6d. per share. The old company was registered on the 22nd February, 1886, its object being to work a gold mine in Colorado. The company was a failure, and on the 15th September, 1887, a new company was registered, taking over the debts, liabilities, and contracts of the old company, and agreeing to give shares in the new company to holders of shares in the old company. Shareholders, however, were to give notice of their intention to exchange shares in the old company for shares in the new company within a month from the 8th August, 1887. This time was extended to a month from the 6th of March, 1888. A letter was sent to the plaintiff, a lady living in Colorado, but she repudiated the arrangement altogether. The shares of the new company, however, rose in value, and the plaintiff then made a claim for 3,950 shares in the new company, and eventually brought this action.

Mr. Marten, Q.C., and Mr. Warrington appeared for the plaintiff Mr. Rigby, Q.C., and Mr. C. Healey for the company.

Mr. Justice Kay said that in law the plaintiff was bound to give notice within a month that she had intended to take shares in the new company, but it was said that in equity she was entitled to an extension of time. The plaintiff did not get notice of the arrangement within a month, and her acceptance would have dated from the posting of her answer. She, however, did not accept at all, but throughout repudiated the arrangement. Now a person was not entitled to lie by in a case of this kind and see which way a speculative partnership would turn out. On the 20th March, 1888, the shares of the new company were unsaleable. In June they rose to 1s. 6d., in July to 2s. 6d., in August to 5s., in October to 17s. 6d., in November to 2*l.* 8s. 6d. per share. On the 9th November, 1888, the plaintiff made her claim. In his lordship's opinion, the plaintiff could not maintain this action, and it must be dismissed, with costs.

"Colon Gold Mine shares are likely to rise."

"Fair Trade," 15th February.

"The Tetuan Gold shares, which we recommended as a mining investment some week or two ago, have thoroughly fulfilled our prognostication. Colons can be had for 2s. 6d. to 3s. There ought to be a big rush to be in this swim."

"Society Herald," 26th February.

"The interest which has been displayed of late in Colombian Hydraulic Mines continues. The favourite of the hour appears to be the Colon Mines, which are in the immediate vicinity of the Tetuan, Orita, Maravilla, and other famous Colombian mines worked by the hydraulic process. I am assured, on the same good authority which aided me in predicting so accurately the course of Tetuans months ago, that the advance in the price of Colon shares has only just made a beginning, and that they may be expected to cross 20s. within a very short time. Be it observed, I by no means mean to imply that they will not go very much higher than the figure mentioned, but my policy is to advise my readers step by step, so that those who have bought at low prices may turn out their shares whenever they have a good, respectable profit."

"Society," 2nd March.

"Colon Gold shares are likely to have a considerable rise. It is even wise to buy these shares and carry them over from account day to account day. They should, however, be acquired and put by until they show dividends—a time not far distant. The Colon Mines are situated in Colombia, a district now where the mines are significantly productive. All those who are investors should read the report of Mr. Welton, the engineer of the Colombian Hydraulic and Orita Mines. He is a great authority, and in his conscientious statement exhibits what this really legitimate property should produce to the Colon shareholders."

"Stock Exchange Times," 2nd March.

"COLON.—None should stop buying these shares."

"The Hawk." 19th February.

"Colon Gold shares have come with a rush in the last few days. The mine is undoubtedly one of the richest in the gold-paved district of Colombia, consisting of auriferous gravel deposits which are worked on the hydraulic system. It is a near neighbour of the celebrated Orita Mine, already cleaning up to the tune of £1,200 a month. Major Ross, a director of the Orita Mine, has just joined the board of the Colon, and his presence signifies that the works will go forward with redoubled energy."

"Country Gentleman," 2nd March.

"It will be remembered that last week and the week before last I had a good deal to say about Colon Gold mines, and stated that it would not be long before a report, which would astonish even those who believed most firmly in the mine, would be forthcoming. This report is now to hand, and, reading it, it really appears as if the engineer, Mr. W. S. Welton, who is responsible for it, had been drawing upon his imagination; but I am assured that this is far from being the case, and that Mr. Welton has underrated the brilliant prospects of the mine. One thing should be remembered, and that is that Mr. Welton is a well-known and highly-respected gentleman, and anything that emanates from him should be received with the respect that it deserves. Mr. Welton can lay claim to having seen his reports regarding other mines fully borne out by actual results."

"Country Gentleman," 23rd February.

"I can but repeat the advice I gave last week regarding Colon Gold mining shares, and that is to buy them at once. Since I first mentioned them they have risen from 3s. to 11s. 6d., and it is highly probable that they will go as high as 15s. and over. The property, which has only recently come into such great prominence, is situated quite near the famous Colombian Hydraulic and the Orita. It is stated by thoroughly competent authorities that the deposits cover over 1,000 acres, the property really consisting not of one mine only, but of five mines equally rich and promising."

"Country Gentleman," 16th February.

"COLONS.—The jump has been as smart as I prophesied, and I hear that the top has by no means been reached. The mine has suddenly been found to be far richer than was ever believed, and consequently the shares, of which there are not very many about, are in the most active demand. An enormous amount of business has been done in them during the week, and they close to-day very hard and firm. In fact, the movement in Colons has been *the* feature of the week."

"Country Gentleman," 9th February.

"Rumour says strong financial combination has wrought a change in the management of a mine for some time before the public, and that the shares, now at 3s., will have a large and smart rise. My readers will do well to watch for this. I may not mention the name at present, but next week shall be able to give full particulars."

"Financial Chronicle," 20th February.

"Colon Gold shares promise a further advance."

"Financial Chronicle," 23rd February.

"COLONS.—The rise has only begun."

"Rialto," 16th February.

"Colons seem to be good for a big rise in price."

"Bullionist," 2nd March.

"COLONS.—Investors and operators should buy at present prices An excellent report has been received upon the Colon Mines from Mr. W. S. Welton, one of the most experienced hydraulic miners of the day."

"Bullionist," 2nd March.

"Colons are steady, and should be bought. From all we can learn regarding this property, there is no doubt as to its great value, and when the results of the operations now being carried out under the new management become known, we quite anticipate the present price to quickly double itself."

"Stock Exchange."

"Colons will soon be better. Those who should know are buying the shares again quietly. Our readers might do worse than follow this example."

"Stock Exchange," 16th February.

"The feature of this market during the past week has been a great rise in Colon Gold shares. Early on Wednesday morning these shares—then only at 3s. 6d.—began to spring away by leaps and bounds, and in but a few minutes a rise of 5s. was to be recorded. Judging by the prospects of this undertaking, now that some important changes have been effected in the management, the shares ought to have a much further rise, and doubtless but a few days will see them several shillings higher than now."

"Stock Exchange," 23rd February.

"Colon Gold shares have met with great demand during the current week. The reports from the mine are of a very satisfactory character and, we consider, justify a further advance. Reports say that these shares will go a good deal higher."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Iuvestors' Guardian," 23rd February.

"Colon Gold shares are very firm, and there are many iudications of a further advance in price. It would not surprise us to see them go to double the present quotation."

"London and Brighton," 17th February.

"The Colar Mines are of the same nature as the Tetuan, being hydraulic, and comprise something over 1,000 acres close to the well-known Colombiau Hydraulic and Orita Gold Mines. The advantage these cheap-priced shares present to the mining speculator is that there is plenty of room for a rise, while the possible fall is very limited, and at the worst the loss is infinitesimal compared with high-priced shares which, if they have a chance of a rise of one or two points, have also the probable contingency of a drop of four, five, or perhaps more, at any time."

"London and Brighton," 20th February.

"Colon Gold shares are certainly good to buy for a rise."

"Mining News," 2nd March.

"In the case of Colons, one of the popular speculations, we feel sure prices will advance, and these shares offer an excellent investment medium at their curreut price. Colons will go much higher than now selling."

"Stock Exchange Times," 2nd March.

"We are confident that the shares will yet see from £3 to £4 each."

"Court Circular," 2nd March.

"Things speculative have been more or less depressed during the last few days, and even the shares of the Colon Gold Mines have had a slightly backward tendency, in common with the rest of mining investments. This is, however, not a bad thing for those who want to speculate, since the report from the mines would show Colons to be very good business, and, if they are a shilling or two cheaper, all the better for the buyer, seeing that they can be so thoroughly recommended."

"Financial World," 16th February.

"Colon.—A pleasant surprise awaited those connected with this hitherto unknown enterprise last week. Very little has been heard of this modest placer mine, until a demand sprang up in the middle of the week for the shares, which forced them upon the attention of the market, and, as a consequence, the shares rose in one day from the insignificant price of 2s. 6d. to 8s., an advance equally as important as some which have had to be recorded with respect to the Witwatersrand properties, when we consider how little has been done to bring them into prominence. As a thread of the gossamer will show the direction of the wind, the results which have lately been made by several well-known placer properties may be taken as giving in some degree an indication of what is yet in store for those whose faith is pinned to propertics of this description, in preference to those of the quartz mines. A company whose shares can advance in one day 6s. ought to possess a property destined to make some flutter in mining circles."

"Financial World," 2nd March.

"Colons.—These shares, we believe, have now reached their lowest ebb, and those who want to secure an interest in this ought to do so when the price stands at something reasonable. The decline in the price was due to indiscriminate selling by speculators who desired to realise."

"Mining World," 16th February.

"We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulations. We look for a steady advance in the returns in the near future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are managed with honesty and ability."

"Mining World," 16th February."

"Hydraulic mines have been to the fore, and particularly the share of the 'Colon,' of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, began to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success."

"The Capitalist."

"The most remarkable has been Colon Gold shares, which are now quoted 10s. to 11s., with every prospect of a still further rise."

"Financial News," 14th February.

"The feature of the mining market yesterday was the rise in Colon Gold shares. The Colon Gold property is a close neighbour of the Colombian Hydraulic, the Orita, and the Tetuan, and, if we may judge from the reports, a worthy competitor with them. Among the directors of the undertaking we notice Mr. Sankey, of the Colombian Hydraulic, and Major Ross, of the Orita—an ample guarantee that the management will not be lacking in enterprise or intelligence."

"Financial News," 15th February.

"In another column will be found the report of Mr. B. Anderson, a well-known American hydraulic miue engineer, upon the Colon mines, which we had occasion to mention in our yesterday's issue. According to Mr. Anderson, a sampling of the gravel gave, under hand washing, a profit of $1,351 the amount of water used being only 4 to 6 miner's inches. The mine, we understand, has been worked more or less systematically under the hand process, or sluicing, and always with results similar to the above. The new directors of the company have determined to work the mines in a more energetic manner, and have already entered into a contract for the construction of the works necessary to bring 500 miner's inches of water on to the mines at a cost of £14,000, this sum being only half the amount of working capital still remaining intact with the company."

"Financial Chronicle," 2nd March.

"Colons.—We may shortly expect to commence moving again."

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

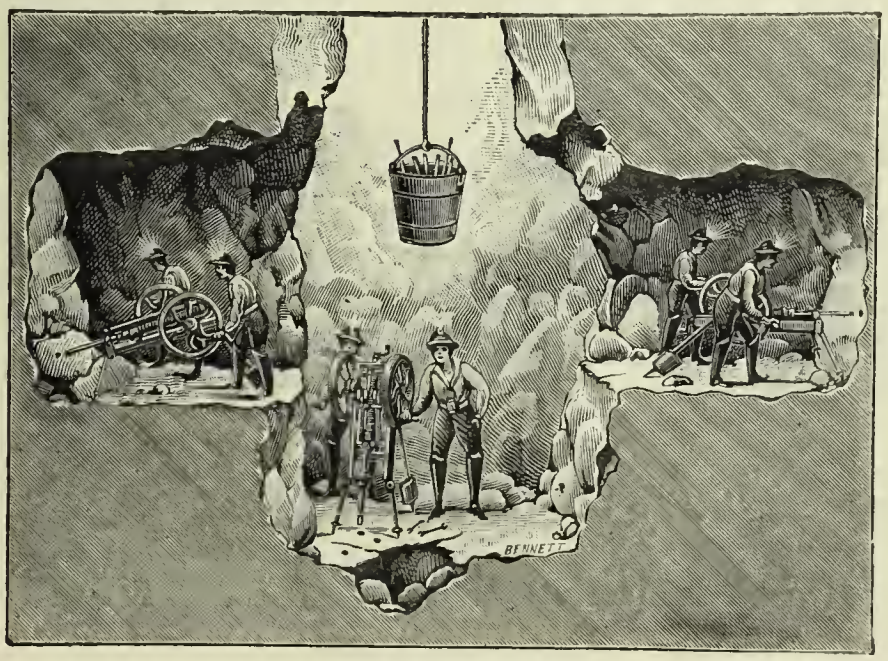
A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, testimonials, &c., to

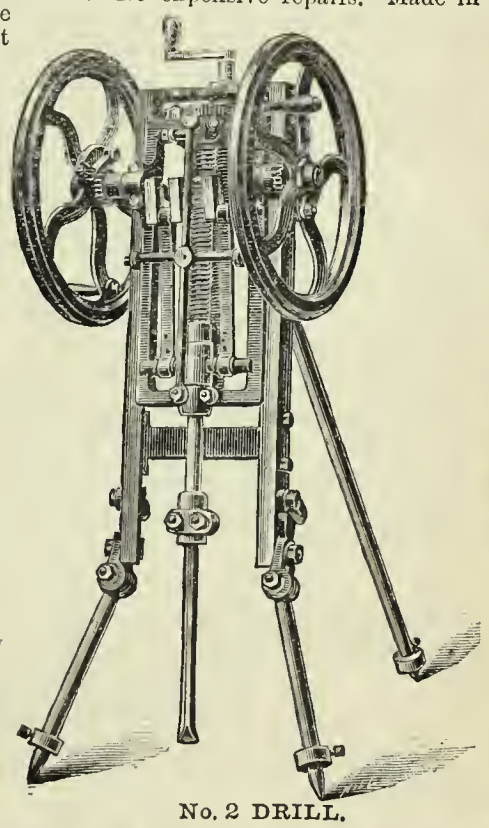
WELLINGTON & CO. (Successors to CLARK & WELLINGTON),

MANUFACTURERS.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.



SHOWING DRILLS AT WORK SINKING AND DRIVING.



No. 2 DRILL.

LOCKWOOD & CO.,

STOCK AND SHARE BROKERS AND DEALERS,

5, THROGMORTON AVENUE, LONDON, E.C.

Read the following remarks; examine the facts; calculate the chances; then act upon your own judgment.

"HUNDREDS PER CENT. WITHIN THREE MONTHS."

THE YURUARI GOLD MINING COMPANY, LIMITED.

SOME STRONG AND ABSOLUTE FACTS THAT CANNOT BE DISPUTED.

THE YURUARI MINE is the fourth greatest gold-producing mine in the world.

THE YURUARI MINE is the immediate neighbour of the famous El Callao.

THE YURUARI MINE for the first six months shows a net profit of 40 per cent. on its paid-up capital.

THE YURUARI MINE will soon be working the richer lodes at a net profit of 100 per cent. and over.

THE YURUARI MINE has amongst its shareholders many of the principal bankers and merchants in the City of London.

THE YURUARI MINE has an exceptionally strong list of 4,000 of the best Scottish and Provincial investors.

THE YURUARI MINE is a *bona fide*, well-managed Company, and will bear, in a remarkable degree, the very strictest scrutiny.

THE YURUARI MINE is destined to astonish even its most sanguine shareholders.

THE YURUARI MINE possesses stores of wealth that surpass the imagination of man.

THE YURUARI MINE can pay dividends that will soar beyond the wildest dreams of avarice.

THE YURUARI MINE possesses a board of directors who have backed their opinion with their money to a very large extent.

THE YURUARI MINE presents such a chance of coining money for its shareholders as occurs once in a lifetime, and once only.

THE YURUARI MINE is being worked on the "three E's" system, viz., Economy, Efficiency and Energy—especially Energy!

Compare the Yuruari with its neighbours; examine their respective merits; and decide upon their value. From the principal gold mines in Venezuela we select the following:—

	Capital actually issued.	Gold produced during last four years.
El Callao	about £1,250,000	about 2 to 3 millions ster.
Venezuelan-Austin	„ 840,000	„ £20,000
Potosi	„ 400,000	„ 10,000
Callao Bis	„ 175,000	„ 5,000
Victory	„ 200,000	„ 2,000
Late New Chile ...	„ 800,000	„ 250,000*
YURUARI (late New Chile)	„ 22,000	„ 24,000†

(Same property, but capital written down.)

* Until May, 1888, when the Yuruari Company took over the assets.

† In six months ONLY.

We venture to say that these figures afford food for pure and simple wonder. Their analysis is simply another case of *reductio ad absurdum*. The result is so utterly at variance with a business-like view of matters that we hesitate to declare it. Suffice it to say that on the average of the last six months the intrinsic value of Yuruari is

168 times that of Venezuela-Austin.
32 „ „ Potosi.
28 „ „ Callao Bis.
60 „ „ Victory.

Whereas the selling values of the shares are as follows:—

Venezuela-Austin	from 7/	to 8/
Potosi	„ 2/6	„ 3/6
Callao Bis...	„ 5/6	„ 6/6
Victory	„ 8/	„ 8/6
Yuruari	„ 2/	„ 2/6

Yuruari has the smallest capital and the largest output of gold.

It is clear that Yuruari must neeessarily rise a thousand per cent. in price.

REMEMBER Mysore Gold at 1s. 6d. per share—now selling at nearly £6.

Remember Nundydroog at 1s. 6d. per share—now selling at £1¼.

Remember Sheba Reef (Old Shares) were unsaleable in the Transvaal four years ago at any price. Six months after they were selling at £80 to £100 per share in Kimberley (Diamond Fields) and in London.

Remember that great and progressive mines are not fairly developed in a day.

Remember the marvellous and totally unexpected yields of the Witwatersrandt Mines.

Remember the actual gold production of the Yuruari Mine.

Digest the preceding remarks; examine the facts; calculate the chances; then act upon your own judgment.

YURUARI SHARES.—The market is short of shares. Thousands have had to be bought in against the sellers, who were unable to deliver. Buy your shares right out, insist upon delivery, and see that you get them.

Do not carry over, and so have to pay contango rates. The shares are so absurdly cheap that it will not pay to do so. Buy them, take delivery, and hold for results.

YURUARI SHARES.—There is no mistake about this Company. It is a going concern, in full working order, with ample reserve capital, and reaping a handsome profit already.

YURUARI SHARES.—The cheapest in the market by hundreds per cent.

YURUARI SHARES.—Handsome yearly profits now being earned.

YURUARI SHARES.—The present profits by no means represent the earning capacity of the mine.

YURUARI SHARES.—Hundreds per cent. in the next few months.

YURUARI SHARES.—Buy before the rise commences in earnest. Buy instantly. Do not hesitate. Large profits will result.

Continuation Days.	Ticket Days.	Pay Days.
Monday, May 13	Tuesday, May 14	Wednesday, May 15
Tuesday, May 28	Wednesday, May 29	Thursday, May 30

Telegraphic Address—

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

MARKETS FIRM, EASTER NOTWITHSTANDING—SOUTH AFRICANS BETTER—MYSORES UP—COPPERS DOWN—BIG MARKET IN YURUARIS—FALL IN EAST POOL.

The majority of dealers, endeavouring to put quotations as far from their thoughts as possible, have spent nearly a week in holiday-making only to return to find those who had remained to attend to their business profiting substantially by their industry. Considering how effectually Easter puts a stop to everything in the nature of share transactions, it is quite phenomenal the extent of the dealings that have taken place since last Tuesday, and particularly yesterday and to-day.

South Africans have improved where they were expected to go down, and Indian shares, in which also a fall was anticipated, have risen—Mysores notably. The report received this week from Capt. Plummer is so important that we have called special attention to it in our leader columns. The arrangement between Eastern Mysore and Colar Central, fully detailed at to-day's meeting of the former company, is of a one-sided character. One is at a loss to understaud how the directors of the Eastern Mysore Company could have come to such an arrangement. Surely re-construction were preferable !

Copper shares have been down, though the market does not close at the worst point. The metal itself has been below 38*l*. Stocks do not appear appreciably to decrease. There is evidently a bad outlook for copper for some time to come. The re-construction of the Comptoir d'Escompte is notified in another column.

There has been an enormous market in Yuruari Shares, which, from 1s. 3d., advanced rapidly to over 2s., but close this evening less firm on the too-preponderating appearance of sellers. It is generally thought that these shares will advance during the week, and that bnyers are wise and sellers otherwise.

The extraordinary state of affairs at East Pool has depressed that company's market, and the shares are decidedly down. We explain that position elsewhere. It cannot be said that the immediate ontlook for home mines is promising.

Africans.

Considering that there have been only four working days this week, three of which have been occupied with the settlement, there has been a fairly large amount of business transacted in African shares ; but, notwithstanding this, prices have been unsteady. City and Suburban made up at 9½, and closed 8½, 9. Crown Reefs at 7, and are this evening 6, 6¼. Heriot at 4½, and close 3¾, 4. Jumpers at 11½, and this evening are 10½, 11, and Wemmers at 8½, close, 7½, 7¾.

A fall has taken place in Horo Exploration of ⅛ ; Bothas, 1/16 Central Langlaates, ⅛ ; Crown Reef, ½ ; De Villiers (Robinson), 2*l*. ; Evelyns, ½ ; Heriot, ¼ ; Johannesburg Pioneer, ½ ; Knights, ⅞ ; Langlaagtes, ⅛ ; Langlaates Block B, ⅛ ; Mays, 20s. ; Moss Rose, ½ ; Royals, ¼ ; Star, ⅛ ; United Langlaagte, ¼. A rise is registered in Johannesburg Waterworks of ⅜ ; Aurora, ⅛ ; Bantjes, ⅛ ; City and Suburban, ⅛ : Cornucopia, ⅛ ; Croesus, ¼ ; Dornkop, 1/16 ; Ferreiras, 20s. ; Golden Kopje, ⅜ ; Henry Nourse, ¼ ; Jumpers, ¼ ; Kleinfontein, ¼ ; Nabob, ½ ; Oosthuizen, 20s. ; Spes Bona, ⅜.

Copper.

There is no active market in Copper shares, but prices notwithstanding keep firm. It would take but very little buying to put this market in a much better condition. The following are the principal changes at the close :—A fall is shown in Bratsberg of 6d.; Cape Copper, ⅛; Copiapo, ⅛; Masou and Barry, ⅛; Namaqua, ⅛; and Tocopilla, 3d. The only rise to record is in Rio Tinto, ¼.

Australians.

There has been but very little business in Australian shares, and prices made up very low on Wednesday, the carrying-over day. A recovery subsequently took place, but in consequence of absence of buyers it was not sustained. Hence prices show but very littlo change. Gympie Great Easteru changed hands at 8s. 6d. yesterday, and close this evening 9s. 6d. to 10s. Why the shares of a mine like this should remain at such a low figure is a mystery, seeing that every month this year there has been made a profit of from 2,300*l*. to 2,600*l*. Day Dawn and Etheridge are worthy of attention. The following are the chief alterations :—A fall is shown in Day Dawn of 6d.; Etheridge, 3d.; and No. 2 Queen, 6d.; whilst Gympie Great Eastern have risen 1s.

Diamonds.

A somewhat firmer tone has been exhibited in the Diamond market yesterday and to-day than has been seen for some time past. Prices coutinue firm, and leave off this evening higher all round than the making-up quotations. The following have risen :—Griqualand West, ⅛ : New Consolidated. ⅛ : Spes Bona, ⅛; United, 1/16; and St. Augustine's, 1s., whilst a fall is showu iu Anglo Africa, ⅜; London and Orange Free Street Exploration, ½ : and Burma Ruby Mines, 1/16. The closing prices are as under :—

Anglo-African	5	—	5¼
Bultfontein, New Shares	4¼	—	4½
Central Dorsfontein	8	—	10
De Beers Consolidated	16⅛	—	16¼
Gordon Diamond	19/	—	21/
Griqualand West	6¼	—	6½
New Consolidated	23/6	—	24/6
New Jagersfontein	13¾	—	14
South African (Pullinger)	16/	—	18/
Spes Bona (Bultfontein)	6/9	—	7/3
United	2 7/16	—	2 9/16
United Jagersfontein	15/	—	17/
London and Orange Free State Explor.	4	—	4½
London and South African Exploration	17	— 17½xd & rights	
Read's Drift Land Co.	1½	—	2
Burma Ruby Mines	1 11/16	—	1 13/16pm

Indians.

A fair amouut of business in these descriptions has taken place. and prices all round have been well maintained. Mysore Golds were in good demand, and the same remark applies to Ooregum, the shares of which eompauy should certaiuly go better. From advices just received we are given to understand that all points of the mine are improviug, and we should uot be surprised to see these shares advauee ere long. A rise has takeu place in Gleurock of 3d.; Mysore Gold, ¼; Ditto Reefs, 6d.; South-East Mysore, 6d.; and Ooregum, 1/16; whilst the following have receded :—Goldfields of Mysore, 1s. : Mysore West, 6d. and Nine Reefs.

Foreign Shares.

There has been a lively business doiug in several of the lower-priced shares, although in many instances quotations have not improved. The principal dealings have been in Elmore, New California, New Russell, St. Augustine, United States Placer and Victory. A rise is shown in Colorado of 6d.: Moute del Oro. 1s. 6d.; Orita, ⅛; Palmarejo, 1s.; Tetuans, 6d.; Viola, 6d., and Yuruari, 9d. A fall has takeu place iu Balkis of 3d.; Chontales, 6d.; Colombian, ⅛; Dickens Custer, 3d.; Don Pedro, 1s.; Moruya, 6d.; New Emma, 3d.; New Organos, 3d.; Osear, 6d.; Uuited Mexican, ⅛; Viso, 6d.

The following list shows the principal changes which have taken plaee :—

LATEST FROM THE MINES.

Indian Mines.

Indian Consolidated.—The directors have sold, through Messrs. Pixley and Abell, the following gold, the result of the February crushings :—From the Phœnix section 97 ozs., which realised 385*l*. 16s. 2d. ; and from the Colar section 98¾ ozs., which realised the sum of 378*l*. 18s. 7d., making a total for the month of 764*l*. 14s. 9d.

Indian (Glasgow).—Telegram :—"Crushed 178 tons, yielding 30 ozs. gold. Stamps only. (The concentrates, blanket sands, &c., are reserved for further treatment.) Heavy rains this week."

Colonial Mines.

Gympie Golden Crown.—A cablegram received from the manager states :—"Have cut lode in cross-cut westward ; showing gold."

Gympie Great Eastern.—A cablegram from the mine, dated 25th April, gives the result obtained during the past month, viz. :—"24 days, 600 tons. 1,077 ozs. ; value, 3,770*l*. ; profit, 2,600*l*." A further cablegram from the mine, dated 26th April, says :—"Very good gold 30 ft. below late (? slate) in the lowest level, old eastern reef."

Midas.—The following cable is from the mine :—"Yield for week, 87 ozs." (356*l*.)

Mount Leyshon.—A cablegram, dated April 23rd, gives the result of fortnightly crushing :—"173 tons, 150 ozs., 10 stamps, 137 hours ; fine rain fallen ; 20-stamp mill running."

Mount Perry.—The following cablegram is from the mines :—"Reid's Creek Mine : The machinery will be finished beginning of next week, thereby largely increasing gold ore."

Foreign Mines.

Carlisle.—A cable from the manager refers to the commencement of the development work from the lowest level, as recommended by Prof. Clayton : —"Carlisle, 21st April : Station has been completed, and winze No. 3 sunk 30 ft. below the lowest level. Vein is well defined. The ore contains a tracc of gold, and $2 to $4 in silver."

Colombian Hydraulic.—Cablegram of the operations for the month of Mareh :—"We have been very short of water during this run."

Consolidated Esmeralda.—Superintendent states by cablegram, April 24th :—"A second remittance of bullion, value $10,000, will be made this month, which, with the amount remitted April 3rd of $7,500, will give a total of $17,500, equal to 3,615*l*. Stopes in the Durand Mine are looking better."

Cordova.—Applications have been received from 242 shareholders in the Union Gold Mine for 113,623 shares in the Cordova Union Gold Company, Limited, allotment letters for which have been posted.

Empire.—At a board meeting, held to-day, Mr. James Hastings was elected chairman in the place of Mr. Francis Joseph Bladou, deceased.

Hamby Mountain.—The manager cabled ou the 20th instant that a nugget had been found in hydraulicing, weighing 504 dwts.

Josephine.—A cablegram from the superinteudent states :—"Yield of free gold for fortnight, $3,000 ; estimated value of sulphurets saved $1,000 net ; tous milled, 500."

La Trinidad.—A cablegram advises the shipment of silver bullion valued at $10,000, the result of eight day's run.

Moruya.—Telegram from the mine:—"North drive, splendid ore showing pure native silver; also south turning out splendid arsenical rich ore; lode now 4 ft. 6 ins. wide."

New Hoover Hill.—The directors have sold, through Messrs. Pixley and Abell, the bullion obtained during the month of March, weighing 258.200, which realised the sum of 870*l.* 6s. 11d.

Orita.—The directors inform us that they have disposed of their gold bars produced during January last, and have realised 1,213*l.* 19s. 6d. for same.

Ouro Preto—.The directors have sold through Messrs. Johnson, Matthey and Co., the gold obtained in the month of February, which realised 3,467*l.* 4s. 7d.

Pinos Altos.—The directors have received telegraphic advice that the out-turn for the week ending 20th inst. was $11,000.

Ruby and Dunderberg.—A telegram from Eureka states:—"108 tons tribute ore shipped; 122 tons tribute ore sold for smelting, producing to company $414."

Silver Wolverine.—A cablegram from the mining engineer states:—"Wolverine solid (very good) struck rich black silver 8 ft. below native (silver), sinking another shaft; first (shaft) still wet.—Roland."

United Mexican.—Telegram:—"San Cayetano property: Gross returns for week ending April 13th, $7,900; total expenses for week ending April 6th, $7,700; loss week ending April 6th, $1,800. El Cubo property: Gross returns for week ending April 13th, $1,090*l.*; expenditure, including capital expenditure for week ending April 6th, $5,950. Mr. Grothe returned to Guanajuato, April 14th."

Home Mines.

Leadhills.—The agent's report concludes thus:—Our dressing and smelting operations are getting on very well just now. I expect to commence the smelting of the year's fume by the beginning of May, and am hopeful of a very satisfactory return. It will be necessary to make substantial repairs, &c., on the flues this summer, which will incur a large outlay.

Wheal Crebor.—The notice for the meeting of May 6th, states that it is "to consider the present position of the company's affairs, consequent on the great decline in the price of copper, and to determine whether the operations shall be continued or the works suspended, and the company's affairs wound up, and to pass such resolutions as may be deemed necessary for carrying out the decision of the shareholders."

SEE PAGES 708 AND 709.

Metals.

Copper has shown an improved tone. A large business has been done in Chili bars and G. M. C. Some heavy realisations have taken place, but all offered was readily disposed of. Chili Bars, 37*l.* to 37*l.* 2s. 6d. cash. Urmeneta, and Tongoy realised 37*l.* 7s. 6d., and Vieuna, 37*l.* Lota's 37*l.* 2s. 6d. G. M. C., sold, from 36*l.* 17s. 6d. to 37*l.* 2s. 6d., cash, and three months from 37*l.* to 37*l.* 5s., and one lot at 37*l.* 10s. W. F. Cake, on warrants, sold at 38*l.*; P. G. S., 38*l.* 2s. 6d. Mersey ingots, at 42*l.*; and C. L. B. S., at 42*l.* 15s., per ton. The market to-day has been strong and a good deal higher. G. M. C. sold from 38*l.* to 38*l.* 5s. cash, and are now held at 38*l.* 10s. Three months done at 38*l.* 5s. to 38*l.* 15s. and 38*l.* 17s. 6d. Australians nominal. We quote English tough, 43*l.* to 45*l.*; best selected, 45*l.* to 47*l.*; strong sheets, 50*l.* to 51*l.*; India sheets, 47*l.*; yellow metal sheets, 5d. to 5¼d.; ore, regulus, &c., 7s. 6d. to 8s. per unit.

Tin has been rather weak. After opening on Tuesday at 92*l.* 12s. 6d. it declined to 92*l.* yesterday, and one lot at 91*l.* 17s. 6d. was done. To-day the market is again lower at 91*l.* 15s. and 91*l.* 12s. 6d. cash. Three months realised about 15s. per ton over cash, and Australian from 20s. to 25s. premium over Straits. The Dutch market has been quiet. Banca sellers, 55½fl.; Billiton, 55¼fl. The Billiton sale went at an average of 63.45 per picul, or 55½fl. per 50 K. or 93*l.* per ton in Holland. English ingots, 95*l.*

Tin Plates steady at 13s. 6d. for ordinary coke Liverpool

Spelter has been dearer at 17*l.* 15s. for ordinary brands, ex ship here.

Lead firm, but inactive. Soft Spanish, 12*l.* 15s.; soft English, 13*l.*; L. B., 13*l.*

Quicksilver quiet. Rothschilds' price, 8*l.*; second hands, 7*l.* 18s.

Antimony firm; 49*l.* to 50*l.*

London Metal Exchange.

4.29.—Closing official report.—Copper: G.M. Brands, cash, 38⅛, 38⅜; three months, 38¼, 38⅝; best selected, 44, 45; strong sheets, 51; English tough, 43, 44. Tin: Fine foreign, cash, 91¼, 91¾; three months, 92, 92½; Australian, 92½, 93; English ingots, 94½.

Glasgow Pig Iron Market.

3.15.—Business at 44s. 5d., 44s. 2d., cash; 44s. 7½d., 44s. 4½d., one month; closing buyers, 44s. 2d., cash; 44s. 4½d. one month; sellers ½d more. Market flat, fair business. Middlesbro' closing buyers, 38s. 9d. cash; 39s. one month; sellers, 38s. 10d. cash; 39s. 0½d. one month. Hematite closing buyers 48s. 10d. cash; 49s. 1d. one month; sellers, 1d. more.

COMMERCIAL NOTES.

Railways.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year:—Increases:—Caledonian, 4,466*l.*; Eastern and Midlands, 55*l.*; Great Northern, 1,023*l.*; Great Western, 10,120*l.*; London and North-Western, 7,343*l.*; London and South-Western, 9,071*l.*; London, Chatham and Dover, 4,360*l.*; Manchester and Sheffield, 878*l.*; Midland, 1,887*l.*; North British, 4,002*l.*; North-Eastern, 7,776*l.*; and North Staffordshire, 24*l.* Decrease:—Hull and Barnsley, 277*l.*

The Brighton Railway traffic return for the past week exhibits an increase of 12,396*l.*; the South-Eastern, an increase of 6,320*l.*; the Great Eastern, an increase of 6,622*l.*; the Lancashire and Yorkshire, an increase of 9,157*l.*; and the Metropolitan District, a decrease of 372*l.*

For the week ended April 7th the Smyrna and Cassaba Railway receipts were 2,367*l.*, against 2,017*l.* last year. The East Tennessee, Virginia and Georgia Railway earnings for the first week in April amounted to $100,360, or $381 more than in 1888. The same company's receipts for the second week in April were $98,255, against $97,925 last year.

The Mexican Railway traffic receipts for the week ended April 20th amounted to 16,000*l.*, against 13,500*l.* last year, showing an increase of 2,500*l.* From April 1st to 8th the estimated earnings of the Ohio and Mississippi Railway were $81,478, or $13,016 more than last year. The Chicago, St. Paul, and Kansas City Railway receipts for the week ended April 14th amounted to $48,147, against $39,953 last year. The approximate gross earnings of the Denver and Rio Grande Railway for the third week of April were $132,000, against $124,500 in 1888.

Tramways.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increases:—North Metropolitan, 92*l.*; London Street, 185*l.*; London Southern, 18*l.*; Provincial, 803*l.*; Belfast, 368*l.*; Southampton, 33*l.*; London, 344*l.*; South London, 78*l.*; Woolwich and South-East London, 52*l.*; Edinburgh, 218*l.*; Bristol, 174*l.*; Hull, 27*l.*; Gothenburg, 9*l.*; Burnley, 117*l.*; and Calais, 2*l.* Decreases:—France, 30*l.*; Calcutta, 84*l.*; and Bordeaux, 33*l.*

THE SCOTTISH-AUSTRALIAN MINING CO., LIMITED.

A good half-year—20 per cent.

The Lambton Colliery was at work in the past half-year during July, part of August, part of November, and the whole of December, or, a period of three months out of the six, and the sales of coal during that time amounted to 71,551 tons. The balance of profit shown by the general revenue account (including 7,477*l.* 6s. brought forward from the previous account) is 31,489*l.* 15s. 6d. This balance, it will be observed, arises to the extent of 15,732*l.* 15s. 8d. from profit on the sale of the Stockton leasehold property, and of a small area of the Lambton freehold property acquired by the Government for railway purposes. These sources of profit are, of course, exceptional in their character. The directors, therefore, propose the payment of a dividend on the paid-up capital of the company at the rate of 20 per cent. per annum, free of income tax, which will require 16,000*l.*; to write off from the amount standing against the East and West Cadia properties the sum of 2,439*l.* 7s. 3d. (thus extinguishing all the expenditure made by the company in recent years on these properties, and leaving them standing in the company's books at 25,000*l.*); to add to the reserve fund the sum of 5,000*l.* (bringing that fund up to 45,000*l.*), and to carry forward to next account 8,050*l.* 8s. 3d.; total, 31,489*l.* 15s. 6d.

A map of Guiana has just been published, compiled by Mr. W. L. Loth, Government Surveyor, and patronised by His Excellency the Governor of Surinam. This map is the first issued, which embraces the goldfields of the three colonies.

Ruby and Dunderberg Consolidated Mining Company.—The directors of this company have issued their fourth annual report and balance-sheet. The result of the year's operations has been unsatisfactory. The total output of ore was considerably less than in the previous year. The mining operations have been devoted almost entirely to the Dunderberg Mine.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (24th April).—There is no important change in the lode at the 40-fm. level east or west of junction. The stopes below the 30-fm. level at the junction contiuues to produce a large quantity of mixed ores, and are gradually inproving. Stopes in back of the 40-fm. level east are prodncing from 8 to 12 tons per fm. Cooks Latc stopes below the 30 level cast of cross-coursc are producing 10 tons of arsenical ores and copper intermixed. "Glassons" new rise in back of the 40-fm. level near the new engine shaft is going up in a good lode. This ground is all entire from this point to the 30, and from the 30 to surfaee ; at preseut it is a point of great interest and of value to the produce of the mine.—T. Gregory.

CARPUAN (23rd April).—We continue to make good progress in sinking the shaft on the south lode, which is now down between 5 and 6 fms., and the lode still produeing splendid lumps of gossan, which is almost invariably a true indication of its being a strong powerful lode. Its value to-day is about 15*l*. per fm.—R. Knott.

D'ERESBY.—The sinking of the Gors shaft will be commenced in a few days. There has been a great deal of ground to cut in order to briug the tramway around the shaft. The three stopes which arc being worked are worth in the aggregate 35*l*. per fm. 20 tons of lead will be sampled next week.

DOLCOATH (24th April).—The lode in the engine shaft sinking under the 400 has improved, and is now worth for 12 ft. long, 40*l*. per fm. The 400 east of new east is worth 60*l*. per fm. The 388 east of new east is worth 60*l*. per fm. The eastern shaft is holed to the 302, and is now sunk 8 ft. below that level. We have also commenced to drive the 352 east of new east by boring machine towards the eastern shaft. The south lode is not yet interseeted at the 338 south of Harriett's shaft, but we think the end is getting very near it. There is no change worthy of notice in the other parts of the miue. The water has fallen off considerably, and we hope to make good progress in sinking the engine shaft.—J. Thomas, J. Johns.

DRAKEWALLS (25th April).—There is no change to notice in the 147-fm. level driving east ; the lode continues to produce 5 tons of mundic per fm., and stones of copper ore. Thc lode in the 147 west will produce 8 tons of mundic per fm., with a little tin in places. In stoping down the mundic on the north part of the lode, at the 147 west, we continue to break some good stones of tin. The lode in the 132-fm. level driving west is still of a highly promising character, and continues to produce some rich stones of tin, but so far it has not formed iuto a regular leader or branch. I have now put the men to drive a cross-cut north to prove if there is a better part standing in that direction. The lode in the winze sinking below the 132 west will produce 12 tons of copper, and mundic ores per fm. for the length, 9 ft., with more standing both north and south. Thc lode in the stope in the back of the 132 west will yield 6 tons of copper and mundic ores per fm. There is no change to notice in Rule's rise in the back of the 117. In the winze sinking below the 90 the ground is favourable for exploration. We have completed the fixing of the small plunger lift at the 80, which I am pleased to say is working well. The fixing of the ironwork of the third caleiner is made eomplete, and the masons will now build the crown aud make the necessary connections. We hope to get this to work in the course of another fortnight. All other surfaee work is being pushed on with as little delay as possible.—H. Rodda.

EAST BLUE HILLS.—There is no ehange in the Pink lode as yet. The 30-fm. level on the Baldhu lode is still 4 ft. wide, opening up good stoping ground. The other section of the lodc in the north cross-cut is expected to be met with this month.

GAWTON (23rd April).—The lode in the rise going up in the back of the 105 east, will turn out 10 tons of mundic per fm. The lode in the 95 east is carried 5 ft. wide, composed of eapel, sulphur, arsenical mundic ; yielding 11 tons per fm. ; the lode in the rise in the back of this level will yield 11 tons mundic per fm. No. 1 stope in the back of the same level will yield 10 tons of mundic per fm. ; No. 2 stope will yield 11 tons ; and No. 3 stope will yield 11 tons of mundic per fm. The lode in the winze sinking below the 82-fm. level east is 5 ft. big, and yielding 11 tons of mundic per fm. The stope in the bottom of the 82-fm. level, east and west of cross-cut, will yield 13 tons of mundic per fm. The stope in the bottom of the 70 east will yield 10 tons of mundic per fm.—G. Rowe.

GLYNDWR.—The reports on this property are most favourable, and if only half the promises contained therein are realised it will not be far behind the celebrated Halkyn, which has just declared a dividend of 120 per cent.

GREAT FORTUNE.—The stopes, tribute and tutwork points are looking better. Every effort is now being made to get a lift down 10 fms. deeper, where a richer class of tin stone is expeeted to be found, and the expenditure is now kept within close limits. An improved state of working will soon be observable.

MID-DEVON (20th April).—Surface : The pumping machinery was stopped on Monday last to take dimensions for a new top-block and brass at shaft-bob connection, and to-day it has been stopped to fix it in the place of the old one, which was broken. Length of stoppage was niue hours ; save this the machinery has done good duty. A shaft : The water is 27 ft. below the 80. C shaft : The 60 east has been driven by six men 3 ft. 6 ins. ; the strata contains more capel, but is still yielding a little copper ore and arsenical mundic in saving quantities. The preparatory work for trip-plat and tramway has been carried on by three men with satisfactory progress.—J. Neill.

MORGAN GOLD.—In view of the recent decision of the board to increase the crushing at the mine, it has been decided to erect for the present only 25 heads of additional stamps, making, with the 15 heads now running, one mill of 40 head of stamps in all. The order for the machinery has been placed with the well-known firm of Messrs. Fraser and Chalmers, of Chicago, I.U., U.S.A., and delivery is expected to be completed within six weeks from the present date. It can therefore be confidently expeeted that thc new machinery will be running in less than four months from the present date.

PRINCE OF WALES.—There is an important change apparently taking place in the lode in the engine shaft, and although valued now for the length of the shaft at 16*l*. per fm., it is believed will prove to be of greater value when fully taken dowu and assayed. Other values are rather improved. The surface works are fast approaching completion. The calciner is all but finished. The winding engine is being repaired and strengthened for the additional winding which will now be required. A shareholder who has recently visited the mine writes most hopefully, aud with a view of encouraging shareholders after their large outlay, I take the liberty of quoting extracts from his letter :—"I weut over the Prince of Wales Mine yesterday, and was much pleased with the progress made at surfaee since I was last there some eight months since. I went over the surface works, which are in every way satisfactory to me. The buildings are of a most substantial kind, and the entire plant well ealculated to do the work for which it is intended. The calciner is in a forward state, and I take it another month ought to see it completed, and as there are on surface a quantity of whits and tinstone to keep the 24 heads of stamps now up working, I trust before our uext meeting we shall have a sale or two of tin. I may say I am very well satisfied." This letter is from au independent shareholder.

PRINCE ROYAL.—The gear work of the engine is being altered in order to work faster, and a new loading built. The water in the shaft is abating, and when they start short work will be made of forking.

ROMAN GRAVELS (25th April).—We have now refixed the ladder-way, put in new main stays, &c., from the day level down to the 65-fm. level, in other words the shaft is in thorough working order between the said points, and this will be completed to the 95 in the course of a few days. The new 60-in. cylinder reached the mine to-day, from Messrs. Harvey and Co.'s works, Hayle. We regret the very considerable delay that has taken place in its delivery, for had it been now in place, as we fully anticipated when we commenced the new work that it would be, the pumping could be resumed on Monday. We are keeping the water from rising above the 95-fm. level by working our old 40-in. Cornish pumping engine at old engine shaft.—A. Waters and Son.

RUSSELL UNITED (17th April).—In the 80-fm. level driving west the lode is altogether from 4 ft. to 5 ft. wide, still carrying a good regular wall, and worth 8*l*. per fm. A rise has been commenced from the back of his level in a lode of similar value to that reported in driving at that point, viz., 5*l*. per fm., by this we hope to communicate with the 67. Not only for ventilation, but to drain the lode, and admit of our stoping the ground thus laid open to a better advantage. The south lode is of a strong masterly character, composed of capels and mundic, with small traces of tin. Machinery all working well.—W. George.

SOUTH CONDURROW (24th April).—Thc 40 end east of King's is worth 10*l*. per fm. The 50 and the 60 ends east are worth 12*l*. per fm. each. The lode in the 108 end west of Marshall's is increasing in size, and letting out more water than usual. The stopes throughout the mine are without alteration to notice.—W. Rich, W. Williams, H. King.

SOUTH DARREN (25th April).—The followiug bargains are let for one month :—To drive the 142 end west by six men, at 9*l*. 10s. per fm. ; the lode looks kindly, with a little lead, but not to value. To strip the lode in this level by four men, at 3*l*. per fm. ; worth 15 cwt. of silver-lead ore per fm. We have now opened 10 fms. of good stoping ground here. To drive the 142 end east by two men, at 7*l*. 7s. 6d. per fm. ; the lode here is getting stronger. To stope in this level by four men, at 3*l*. 12s. 6d. per fm.; worth 15 cwt. of silver-lead ore per fm. To drive the 130 end west by two men. at 6*l*. 5s. per fm. The end is leady all through, and is producing good work, bnt I think the best part of the lode is still to cut. Two men from this bargain have left, but we will get four men to work here as soon as possible to drive the 110 end east by two men at 7*l*. 5s. per fm.: the lode is strong, with spots of lead. To stope in this level by two men at 3*l*. 5s. per fm. and 4*l*. per fm. for rising 1 fm. long ; worth 10 cwts. of silver lead ore per fm. To drive the 100 eud west, by four men, at 8*l*. per fm. ; worth 12 cwt. of silver-lead orc per fm. To stope in this level, by four men. at 3*l*. 10s. per fm., and 6*l*. per fm. for rising 1 fm. long ; worth 10 to 12 cwt. of-silver lead ore per fm., with good copper.—J. Mitchell.

TIN ERA (22nd April).—We continue to force on the cross-cut north as fast as possible, there being no change calling for remark since the date of my last week's report. Present price for driving is 12*l*. per fm., 1 fm. stent.—R. Knott.

VAN (25th April).—Thc lode in the 135 south maintains its value, viz., 40*l*. per fm. No change at other points. The sale this week was 100 tons of lead, at 9*l*. 17s., and 100 tons blende, at 2*l*. 18s. 6d.

WEST CARZISE.—At 40-fm. level a plat is now being cut preparatory to sinking below. In the 30-fm. level west, on Carzise lode, the lode is 1 ft. wide and tinny.

WEST WHEAL GRENVILLE (23rd April).—The forkiug lift has been dropped to about the bottom of the 90-fm. level, and this level is now unwatered. Since doing this the shaftsmen have been clearing the 90 west, and are now wheeling stuff accumulated in shaft into the old workings in bottom of said level. We have found the top of a lift of 9-in. pumps at the 90, whieh is said to be continnous to the 110. The skip road in Harvey's shaft is fixed to about the 20-fm. level.—T. Hodge, J. Skeat.

WHEAL METAL AND FLOW.—The lode in thc 35-fm. level east is yielding stones of tin, and presents the same favourable appearance last reported. It is intended to open a little on the bunch gone down in the bottom of thc level.

WHEAL UNY.—In confirmation of the report published in last week's mining papers, it may be now added that the improvement in Hind's shaft continues, and lookingvery promising. The sale of tin this month is expected to be 16 tons, and when thc 190-fm. level west is holed to the winze in about a week's time, the returns will still further increase.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report for week euding 30th Mareh :—Progress and the different work have been retarded very mueh on account of the "feast" lasting Saturday, Suuday, Monday, and part of Tuesday. Have sunk Balvanera shaft 4 ft. Commenced cross-cut No. 2 west from 50. Have cut 16 ft. with four men and machine drill. Cut 4 ft. of fair metal, then eut 3 ft. of fault or horse, and again struck lode matter, showing more or less mineral stains throughout the breast. Have driven breast 24 north $4\frac{8}{10}$ ft., breast looking well and very encouraging, showing 2 ft. metal in roof, and entire breast showing metal, but scattered. Commenced cross-eut west from bottom No. 7 winze below 24 have driven $6\frac{2}{10}$ ft. ; ground hard ; breast showing some mineral stains. Have placed in main adit some four sets of timbers, and three sets in different parts of the mine where needed. Have examined the San José shaft and found timbers secure. Main shaft is examined every morning ; ladder ways all in good order.—Henry C. Cloud.

ASIA MINOR (5th April).—54 men driving ; value of ends, 6 tons ; 180 men stoping ; value of stopes, 13 tons 5 cwt. ; 10 men sinking, six men rising, 14 men cross cutting, 151 trammers, labourers, &c. The lode in the main adit greatly improved again, and showing ore. The lode in Savalan air shaft, and also in Lower Union, now worth 1½ tons per fm. The stopes, generally, are producing ore of excellent quality, and several new points are showing favourable indications. Pappasawa Mine : The ends here have much improved since last report. The tributers have 35 men at work, and expect to deliver 300 tons of ore to dressing-floors this month. Number of men employed at dressing-floors, 75. Production to 12th April, 2,269 tons crushed ; yielded 262 tons rich silver-lead ore. Corresponding period last year, 2,009 tons crushed : yielded 247 tons.

BALAGHAT-MYSORE.—Report for fortnight ending 2nd April. North engine shaft : We have not yet been able to resume the sinking of this shaft below the 410-ft. level, but hope to do so this week. The 410-ft. level north has been driven 12 ft. 5 ins., or 46 ft. 2 ins. from the shaft ; the lode is large but at present poor. The 330-ft. level north has been advanced 25 ft. 3 ins.. or 414 ft. 6 ins. from the shaft ; the quartz is about 1 ft. wide, and assays 3 ozs. 11 dwts. 14 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 6 ft., or 22 ft. 6 ins. below the level ; the quartz is about 9 ins. wide, and assays 10 dwts. 10 grs. of gold per ton. The stope in the bottom of this level yields quartz of about 10 ins. wide, and assays 1 oz. 0 dwts. 23 grs. of gold per ton. The stopes in the back of this level produce quartz of about 1 ft. wide, and assays 6 dwts. 12 grs. of gold per ton. The No. 3 winze in the bottom of the 270-ft. level north has been sunk 7 ft., or 60 ft. below the level ; the quartz is about 6 ins. wide, and assays 3 dwts. 21 grs. of gold per ton. The No. 2 cross-cut west has been driven 2 ft. 7 ins., or 33 ft. 6 ins. from the shaft. The No. 2 cross-cut east at the 270-ft. level north has been advanced 1 ft. 6 ins., or 75 ft. from the level. The stopes in the back of the 270-ft. level north yield quartz of about 1 ft. wide, assaying 2 ozs. 4 dwts. 10 grs. of gold per ton. The 165-ft. level north has been extended 5 ft. 9 ins., or 476 ft. 6 ins. from the shaft ; the quartz is about 3 ft. wide, but as yet it only assays 1 dwt. 22 grs. of gold per ton. A stope in the bottom of this level yields quartz of about 9 ins. wide and assays 16 dwts. 23 grs. of gold per ton. Surface : The boiler of the mill engine is condemned as unsafe to work, it is, therefore, undergoing repairs. In the meantime I am having an upright boiler from the south engine shaft brought down and fixed at the mill, this I hope to get to work to-morrow when crushing will again be resumed. The clean-up for last month is as follows :—148 tons of quartz yielding 342 ozs. of gold, or an average of 2 ozs. 6 dwts. 5 grs. of gold per ton.—Capt. Pryor.

BRATSBERG (15th April).—Hoffnung Mine : No. 2 adit level is improving, but still only yielding saving work. The winze going down in the bottom of this level has communicated with the rise coming up from No. 3 adit level. No. 3 adit level is now yielding ¾ ton per fm. No. 4 level is producing 1 ton per fm. No. 5 level west being very poor we have here suspended operations. The same level east is not looking quite so well, but still yields ⅓ ton per fm. The mid level at Murchison's is producing 1 ton per fm., and the shallow rise ¾ ton per fm. The level east from the rise is yielding 1 ton per fm. Jahannes Mine : Level west has been bunchy, and very irregular in presence of ore ; at present valueless. The trial of Howard lode has as yet not been extensive enough to allow of any opinion as to its value other than has already been stated. Næsmark Mine : The fixing of the pump and timberwork for same has been completed, and the pump is now in use. The levels going north and south in the shaft show little or no ore, and the whole of the stuff goes to the waste tip. However, not more than 2 or 3 metres have been driven from the shaft, and we are in hopes of meeting with a good transverse vein shortly. Surface work and remarks : Ebenezer has been loaded and sailed. The dressing machinery has been running, but not much despatch has been made, in consequence of the frozen state of the water-courses and channels.—T. D. Holman.

BRITISH BROKEN HILL PROPRIETARY.—The mine manager's report for week ending March 13th states :—Main shaft sunk 5 ft. ; depth from surface 326 ft., and from plat 114 ft. Ground still very hard, with no indications of change. 212-ft. level south advanced 6 ft., making 61 ft. from cross-cut, and leaving other 24 ft. to drive to connect with the north level from No. 3 shaft. Silicious galena in both the ends referred to. No. 2 shaft : South level 188 ft. extended 24 ft., making 165 ft. from shaft, and completing contract. Good carbonate ore driven through. Extension of level to main shaft will be done on wages. Western cross-cut from same level north extended 20 ft., and is now in clean country ; total distance, 144 ft. No. 3 shaft : Commenced breaking ore to send to Dry Creek for smelting ; startiug-point for the square sets the western cross-cut from the 224-ft. level ; first now fixed, and opening out north and south ; will begin filling railway trucks to-morrow. Old footway taken out of shaft, and latter adapted for double-winding. 224-ft. level north driven 4 ft. ; total, 145 ft. No. 6 shaft : Cutting up bottom of previous workings to put in square sets, preparatory to stoping the carbonate ore. Winze sunk 13 ft. Putting engine for concentration plant into position. Ereeting ore bins, from which railway trucks will be loaded.

CORTEZ (7th April).—For past week work at the mines has been as follows :—Boss tunnel advanced 29 ft. ; ground now very favourable for ore. Main tunnel : East drift advanced 6½ ft. Middle tunnel, west : Stoped 30 tons of ore, averaging 50 ozs. silver per ton. North-east upraise : Stoped 87 tons of ore, averaging 50 ozs. per ton of silver. North-west upraise : Stoped 60 tons of ore, averaging 150 ozs. per ton of silver. East drift, north-west : Upraise extended 9 ft. Development tunnel advanced 20 ft. Ore hauled to mill, 197 tons ; ore treated at mill, 178 tons ; assays show same to contain 55 ozs. silver per ton. We have not made any shipment during the week.—Welsh.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 2nd March.—No. 1 shaft—Underlie : This shaft has been sunk a further depth of 9 ft. for the fortnight, making total depth below No. 7 plat 68 ft. ; the reef with the formation is now fully 7 ft. between the walls. There are 2 ft. of good mundie stone, worth 2 ozs. per ton. No. 7 level east : The contractors have driven a further distance of 20 ft., making total distance from shaft 85 ft. The reef will average 2 ft. in thickness ; worth 15 dwts. per ton. We shall reach the P.C. boundary in another 15 ft. No. 7 level west : The contractors have driven a further distance of 19 ft., making total distance from shaft 28 ft. There is a decided improvement in the reef, it being now 4 ft. thick, and worth 1½ ozs. per ton. No. 6 level west : The contractors have driven a further distance of 17 ft., making distance from shaft 250 ft. No. 6 level east : We have eight men employed stoping above this level on a reef 3½ ft. thick, worth 22 dwts. per ton. No. 5 level west : The reef in the stopes above this level is looking better on the hanging wall. No. 4 level west : The reef will average 4 ft. in thickness, worth 1 oz. per ton. No. 3 level west : The cross-cut has been extended a further distance of 7 ft., making total distance 15 ft. The country is more favourable for a reef at present. No. 2 level west : There are two men employed on the hanging wall reef on a reef 2 ft. thick, worth 1 oz. per ton. This ground is easily worked, and pays well. No. 3 shaft : This shaft has been sunk a further depth of 15 ft. by the contractors, making total depth from surface 490 ft.

DAY DAWN P.C.—Report for the fortnight ending 2nd March :—The output of quartz is 1,811 trucks, estimated at 900 tons. The amount of quartz hauled from each level is as follows :—No. 11 level, 110 trucks ; No. 10 level, 605 trucks ; No. 9 level, 468 trucks ; No. 8 level, 267 trucks ; Nos. 6 and 7, 361 trucks ; total, 1,811 trucks. The drays have taken five loads of quartz to the Defiance mill. No. 2 underlie shaft has been sunk a further depth of 20 ft., making a total depth of 220 ft. from the surface ; ground still about the same as last report. Rock-drills and machinery working fairly well, and we expect still to make better progress next fortnight.—T. Lester.

DEVALA-MOYAR (1st April).—The pyrites winze is now down below the deep tunnel 41 ft. 6 ins. ; the improvement on the footwall side of the lode still continues, and will yield for the length of winze (12 ft.) 3 tons pyrites to the fm. We are unable to report on the other portion of the lode standing to the south, but will do so when cut through at the next level. The deep tunnel driving east of pyrites winze has now been driven 11 ft. ; this end has a better appearance, producing pyrites worth 1 ton to the fathom : the lode is very regular, but the walls are not well-defined. One machine is engaged stripping down the side of level, and a large quantity of quartz is broken from this place for the mill ; the lode is very large, but I am of opinion it is of low quality. The other machine is now engaged in the tunnel west of cross-cut driving on the south part of the lode, worth 1 ton of pyrites to the fathom. Winze sinking in bottom of the 48 west has now been sunk 13 ft. ; the lode is still very good, worth 6 tons pyrites to the fathom. This is opening up a fine piece of stoping ground. Assays for the past fortnight :—East of cross-cut, 2 dwts. 14 grs. and 1 dwt. 17 grs. ; pyrites winze, 6 dwts. 23 grs. and 2 dwts. 14 grs. ; 48 west winze, 14 dwts. 19 grs. and 16 dwts. 23 grs. ; deep tunnel east, 8 dwts. 17 grs. and 1 dwt. 17 grs.—J. Williams.

EAST AREVALO (MEXICAN).—The directors have received a report from their mine manager, Capt. H. Prideaux, dated April 5th, which states :—Since my last we have driven the No. 2 level 4 ft. ; the lode is very hard, and showing a little ore. The No. 3 level : The No. 1 north cross-cut has been extended 4 ft. 6 ins., but as yet have not reached the footwall. The lode, however, has much improved, the richest pieces of ore assaying 23 marks per montone ; a mark of silver is 8 ozs. and a montone 3,000 lbs. The No. 3 level : No. 2 north cross-cut is being driven into the footwall a distance from No. 1 cross-cut. My object is to cut a parallel lode about 50 ft. distant ; this cross-cut has been extended 8 ft. The lode at No. 3 level is looking very well we can have cut into the ore 6 ft., and as yet we are not through it ; we are about 12 ft. from the footwall, and it may or may not continue that distance, as it is 6 ft. of ore is very good. No. 4 level has also been driven east 16½ ft. I have this day discontinued driving east, and let a contract to cut through the lode, which is about 25 ft. thick, and I hope it may prove valuable. The No. 5 level : I have at this level let two contracts to cut through the lode north and south. This is the deepest point yet reached in this district, and I shall look forward with much interest to the result. Our neighbours have had good metal to the west of us, and I hope we shall also be so fortunate. The lode in the bottom of the mine, the 5th level, is being cut through with all speed, but as yet of no value ; other points about the same. I am cutting through the lode at the 4th level, under where I have the metal at the 3rd level. I expect it will extend in that direction.

GARFIELD (6th April).—The mill : The five stamps commenced dropping again on morning of 1st inst., and have been doing good work since.—Hooper.

GOLDFIELDS OF MYSORE (2nd April).—Fortnightly report : The west cross-cut at 165 ft. in bridge shaft has been advanced 4 ft. ; total distance from shaft 20½ ft. The end is now in country. The north level at 105 ft. has been advanced 2¾ ft. ; total distance, 76½ ft. The end is in country. The south level at 105 ft. has been driven 3¼ ft. ; total, 65¾ ft. There are 2 ft. of quartz in the end, worth by assay 3 dwts. The rise in the back of the south level at 105 ft. has been advanced ¾ ft. ; total, 4¼ ft. It has now holed into old workings. Driving north of middle shaft at 175 ft., an advance of 5¾ ft. has been made ; total distance 82½ ft. from shaft. There are 2 ft. of lode in the end, worth by assay 6 dwts. per ton. The south level at 175 ft. has been advanced 5 ft. ; total distance 77½ ft. The end is being turned to the west to get the lode. The west cross-cut from this level has been advanced 5¼ ft. ; total, 9¾ ft. The end is in mixed quartz and country. The north level at 108 ft. has been driven 4¾ ft. ; total distance, 143½ ft. ; the lode in the end is now 2½ ft. and worth by assay 6 dwts. per ton. The new shaft south of middle shaft has been sunk 6 ft. ; total depth, 101¼ ft. ; the bottom is in country. The new shaft south of bridge shaft has been sunk 1¾ ft. ; total depth, 78½ ft. ; the bottom is in country. The east cross-cut at 75 ft. has been driven 1¾ ft., and the end is in country. Champion lode : Coromandel shaft has been sunk 4¾ ft. ; total depth, 178¼ ft. There is a small branch of low grade quartz in the bottom. Driving the west cross-cut at 150 ft., an advance of 3 ft. has been made ; total, 51½ ft. The end is in country, and was stopped last week. Driving north from this cross-cut, an advance of 16½ ft. has been made ; total distance, 33½ ft. There are three small stringers of low grade quartz in the end. The winze in the bottom of the south level at 100 ft. has been sunk 14 ft. ; there are several stringers of low grade quartz in the bottom under the old workings. Prospect shaft has been sunk 2½ ft. ; total depth, 207½ ft. The bottom is in country. The north level at 200 ft. has been driven 4½ ft. ; total, 10½ ft. The end is in country. The branch of quartz has pitched away in the hanging. Prospecting shaft, near Balaghat : The west cross-cut at 40 ft. has been advanced 14 ft. ; total distance, 36½ ft. The end is in country. The east cross-cut at 40 ft. has been driven 10 ft. ; total distance, 33 ft. The end is in country.—J. Samborne.

GYMPIE GREAT EASTERN (7th March).—During the past fortnight the drive north at the 634-ft. level has been extended 7 ft. ;

total, 50 ft. There is a large body of crushing stuff in this level showing a little gold. The south drive has been extended 9 ft.; total, 81 ft. The reef is about 15 ins., and shows a little gold. The stopes above those levels north and south are showing a large amount of crushing stuff, and some of them show fair gold. The stopes above the 500-ft. level north and south are all showing fair gold, and those above the 364-ft. level on the Old Eastern reef are all showing a little gold. The winze at the 580-ft. level in the eastern cross-cut, to cut the I South Great Eastern reef, has been sunk 17 ft.; total, 110 ft.; the country is good slate. At this point we cut what I believe to be the reef that I South Great Eastern are working, as it seems to have the same underlay to the west, and is dipping north. The quartz is from 1 to 4 ins. thick, showing gold, and at the western side of the winze in one place there is about 10 ins. of a mixture of crushing stuff. We shall know more about it in another week. To work this reef we shall have to sink the main shaft 100 or 120 ft. from the present depth, and cross-cut to the east at a distance of about 450 ft. to strike the reef we have got in the winze, as the winze is 500 ft. from the shaft in a direct line. For the four weeks ending 27th February 600 tons of quartz were raised and crushed, for a return of 989 ozs. 10 dwts. of smelted gold. Everything about the mine, winding engine and battery, is in good working order. There are 78 men employed—68 at the mine, and 10 at the battery.—J. James.

MESQUITAL DEL ORO.—Mine captain's report dated 29th March. Work done in the mine during the week was as follows:—Aeerada, east of Sans: Four men; driven 9 ft.; total, 159 ft. 6 ins.; reef, 2 ft. 6 ins. thick; very much broken up with country rock at present. Aceradа winze A.: Four men; sunk 4 ft.; total, 4 ft.; reef, 3 ft. 6 ins. thick, of a fair quality ore. 85 level east: Four men; driven 5 ft.; total, 599 ft.; reef, 5 ft. thick, of good milling ore. 85 East Sans winze: Four men; sunk 5 ft.; total, 24 ft. This winze is communicated with 137 rise B—another good stope west of Sans shaft home to Trinidad shaft. 137 level east: Four men; driven 5 ft.; total, 581 ft.; reef, 3 ft. 6 in. thick, of very fair average ore. 137 East rise B: Four men; risen, 3 ft. 6 ins.; total, 30 ft. 6 ins.; reef, 5 ft. thick, of good milling ore. 190 level east: Four men: driven 2 ft. 6 ins.; total, 396 ft. 6 ins.; reef 3 ft. thick, of rather low grade ore, but looks kindly for an early improvement. 190 east winze B: Four men sunk 3 ft.; total, 38 ft. 6 ins.; reef 4 ft. thick of good average milling ore. The 190 level west (south part): Four men; driven 5 ft. 6 ins.; total, 316 ft. 6 ins.; reef 5 ft. thick of good milling ore and looks well. The 256 level east: Four men; driven 2 ft. 6 ins; total, 265 ft. 6 ins.; reef 4 ft. thick, of a very fair average ore, but an increase of water. The 256 level west: Four men; driven 6 ft.; total, 221 ft. 6 ins.; we are carrying the reef 5 ft. wide, and still more standing to the south of us. South Michael Tunnel: 14 men; driven 9 ft. 6 ins.; total, 1,781 ft. 6 ins. Stope B, 137 east: 22 men; reef 6 ft. thick, of good milling ore. Stope in the back of 190 west (south part): 8 men; reef 6 ft. thick, of fair quality ore. Stope B, 85 east: Eight men; reef 2 ft. 6 ins. thick, of low grade.

MONTE CHRISTO.—The manager reports under date 25th February:—The 36 tons from West Monte mentioned in last report yielded 14 ozs. 6 dwts., or about 8 dwts. per ton. As there were some stones of really good quality in it a better result was expected. Main shaft was sunk 3½ ft.; total depth, 375 ft., with no change. The water has increased from 2,000 gals per hour to 3,000 gals. The capacity of the pump is 4,500 gals. per hour. The continuance of the lode, small though it is, is an encouraging indication. East drive has been driven 9½ ft.; total, 191 ft. Endeavour shaft: The boiler is now in position, and will shortly be ready for work. I hope to commence sinking in a fortnight. Norton shaft has been sunk 9 ft.; total depth, 30 ft.; no improvement. The rich shoot which is believed to be dipping towards this shaft may be struck in a few feet.

MONTE DEL ORO (16th April) Fortnightly report:—Taylor's engine shaft: During the fortnight the 186-ft. level south of the cross-cut east was extended 17½ ft., and thus its present total length is 230½ ft.; the lode for this drivage has averaged in width from 12 ins. to 18 ins., and is composed principally of quartz with, however, a little soft slate or flookan intermixed. Good progress is made with the 186-ft. level north of the cross-cut west, 27½ ft. being driven since my last report, the level being now 58 ft. long; in the past few days the lode has become small, and just now can scarcely be termed anything more than a wall, although previously it varied in width from 12 ins. to 2 ft., and was composed of solid white quartz. Shaft No. 6: The men are making capital speed in cleaning out the old workings north of this shaft, 35 ft. being cleared in the fortnight, making a total distance of 150 ft. from the shaft. Solid ground has been reached on the east side, and it contains a small vein of quartz near the hanging-wall. Shaft No. 5: In the end north of the shaft the quartz has cut out, the lode, which is composed of softish slate, varying from 4 ins. to 6 ins. in width. I am hoping the change which has occurred is only a temporary one, and, in fact, believe we shall meet with quartz again very quickly. Shaft No. 2: The intermediate level has a total length of 60 ft., of which 33 ft. were driven in the past fortnight; the lode matter is about 3 ft. wide, and contains branches of quartz.—J. Roberts.

MOUNT MORGAN EXTENDED.—The board of directors have received the following telegram from the local committee at Rockhampton, dated 23rd April:—"Refer to my letter, 1st March paragraph 11. The width of the vein is 4 ft.; assays made on ore from depth of 68 ft., 1 oz. 15 dwts. 5 grs. per ton; certain average, 9 dwts. per ton; ore is good, and will pay; likely to improve; have every hope; maps shipped yesterday. The paragraph 11 above referred to reads as follows:—On the 26th February, the well was 56 ft. deep, and after 40 hours the water rose 18 ft., being at the rate of 69 gals. per hour. The increase may probably be attributed to a lode which we struck at about 56 ft., carrying a defined hanging-wall, and running in the direction of our other lodes, consisting of a nice white quartzite, considered by some to resemble the stone in the Annie reef at Cawarral, which is a rich ore. We have thus a reasonable hope as we deepen our well, not only of obtaining a sufficient supply of the much needed water, but payable gold therewith.

MYSORE (2nd April.)—Mining operations: In the last month the rock-drills did very good duty; all the work in Taylor's and Plummer's shafts is going on in a satisfactory manner. The assayer has been a good deal engaged about the plans and sections, and I find that no assays of ore have been made from any of the stopes this week. The 466-ft. level north of Taylor's shaft was driven last mouth 70 ft. 2 ins., total 532 ft. 3 ins.; there is a good-looking lode, 2 ft. wide, assaying 11 dwts. 18 grs. The 400-ft. level north of Taylor's shaft was driven in the early part of the month 14 ft. 10 ins.; total 622 ft. 2 ins. The men are now rising in the back of the level to form a portion of Rowse's shaft. The end and rise cannot be carried on at the same time, but after the rise is put up through to the 296 the driving will be resumed. The 296-ft. level north of Taylor's shaft has been driven 35 ft. 4 ins.; total 618 ft. 2 ins.; the lode is split; the portion we are carrying is 1 ft. wide, the other portion is in the hanging side; the assay value is 9 dwts. 19 grs. The 236-ft. level north of Taylor's shaft was driven 65 ft. 8 ins.; the lode is 2 ft. 6 ins. wide, assaying 1 oz. 6 dwts. 3 grs. The quartz in the 466, in the 296, and in the 236 is good-looking, and I do not think the assays represent a fair value. There is no change in the 236-ft. level south of Plummer's, it was driven 7 ft. 4 ins.; total, 220 ft. The driving below the 400 north of Taylor's shaft was not continued beyond the first fortnight; 16 ft. were cut; the lode is without change. The 173 south of Williams' shaft was driven 9 ft. 6 ins.: total 202 ft. 6 ins.; the end is barren. The 152 south of McTaggart's was driven 28 ft. 10 ins.; total 383 ft. 6 ins.; the lode is 15 ins. wide, assaying 9 dwts. 19 grs. The 220 south of Schaw's was driven 7 ft.: total 63 ft. 6 ins.; the lode occasionally shows speeks of gold, it is 5 ft. wide, assaying 13 dwts. 1 gr. There is no change in the 160 cross-cut south of Schaw's shaft; it continues so hard that the coolies are of little use; it was driven 4 ft. 4 ins.; total 90 ft. 10 ins. Driving the 180 ft. south of Tennant's shaft, 9 ft. 3 ins. were cut; total 73 ft. 9 ins.; the vein is 12 ins. wide, assaying 4 dwts. 4 grs. Stopes: No assays have been made, but the lode generally looks much the same as it did a month ago. Above the 466 ft. north of Taylor's shaft, south of the cross-cut, 15 fms. 4 ft. 7 ins. were cut; there is a good-looking lode 3 ft. wide. Two Italians with one rock-drill cut in the stope in the back of the 400 ft. north of Taylor's shaft 23 fms. 1 ft. 2 ins.; there is a strong, good-looking lode 5 ft. wide. Below the 296 north of Taylor's shaft 14 fms. 2 ft. 4 ins. were cut; it contains a lode 4 ft. wide of rich-looking quartz. In the bottom of the 296 south of Plummer's shaft 2 fms. 1 ft. 8 ins. were cut; the lode is 3 ft. wide, worth about 1 oz. to the ton. In the bottom of the 296 north of Plummer's shaft, north of the winze, 2 fms. 3 ft. 8 ins. were cut; the lode is 15 ins. wide, worth about 1 oz. to the ton. Sinking: Very good speed was made in sinking Taylor's shaft, 22 ft. 6 ins. were sunk; total 553 ft. 6 ins.; the rock is quite barren. It is now down 87 ft. below the 466 ft.; the sinking is suspended, and we have commenced to drive a cross-cut to the west. Sinking in the 466 north of Taylor's shaft on the west branch, 10 ft. 6 ins. were sunk; total, 20 ft.; the lode is 6 ft. wide, assaying 13 dwts. 1 gr. Sinking a winze in the bottom of the 466 north of Taylor's shaft below the Italian stope, 33 ft. 3 ins. were cut; total, 40 ft. 8 ins.; the lode is 3 ft. wide, assaying 1 oz. 6 dwts. 3 grs.; it will not be sunk any deeper until the level is driven below. In sinking the 296 south of Plummer's shaft on the west branch, 13 ft. were sunk; there is a lode 4 ft. wide, assaying 13 dwts. 1 gr. Sinking Rowse's shaft, 28 ft. 10 ins. were sunk and secured with timber last month; the total depth is 107 ft. 10 ins. We think the rock is a little softer, and that we shall continue to maintain this good speed. Sinking Schaw's shaft below the 220 ft., 16 ft. 9 ins. were cut; total, 74 ft. 6 ins.; there is a good-looking lode 4 ft. 6 ins. wide, assaying 13 dwts. 1 gr. In the last day or two the bottom of this shaft has produced some exceedingly fine stones of gold. I do not think I ever saw richer stone anywhere, but whether it is only a pocket I am not yet able to inform you. Usually the gold is found mixed through the whole width of the quartz, but in this instance it is found on the footwall side mixed in country rock, a little quartz, arsenical pyrites, and galena. I hope I shall be able to give more definite information in a week or two. The rich stones of ore referred to above were broken after the samples were taken, and no portion of it is represented by the assay. Tennant's shaft was sunk 10 ft. 6 ins.; total, 224 ft.; there is a good-looking lode of quartz 2 ft. wide, assaying 6 dwts. 12 grs. Rising: The rise in the back of the 400-ft. level north of Taylor's shaft was put up 30 ft.; the lode is 2 ft. wide, assaying 1 oz. 19 dwts. 14 grs. The rise in the back of the 296-ft. level cut into old workings a month ago; since then the ends of the shaft have been squared out to a height of 74 ft. from the back of the level. Old workings still exist for 40 ft. beyond, making a total height of 114 ft. The portion of the lode left by the old men varies in width 1 ft. 6 ins. to 3 ft., assaying 4 ozs. 1 dwt. 11 grs. The incline plane below the 466 ft. has been cleaned out, and the timber put in, and sinking resumed yesterday. We shall sink it 20 ft. deeper, then cross-cut to the east to the lode known as the Italian stope, where we expect to meet with rich quartz.—B. D. Plummer.

MYSORE WEST (2nd April).—Fortnightly report.—Walker's, 300 north: This heading has been advanced 12 ft. 6 ins., making 45 ft. 2 ins. from shaft. This is still in the fault, although producing occasional bits of quartz and pyrites which show a trace of gold in the assay. The 300 south: This heading has advanced 7 ft. 8 ins., making 39 ft. 4 ins. from shaft; the quartz here is 4 ft. thick, showing a trace of gold in the assay. The 300 west: This cross-cut has been advanced 5 ft. 7 ins., making 14 ft. 10 ins. from shaft. There has not anything been interseeted, and it is becoming doubtful whether there is any more reef in this direction; I would continue this cross-cut a few feet more. The 225 north: This heading has been advanced 7 ft. 6 ins., making 139 ft. 8 ins. from shaft; the vein here is 5 ft. thick, unproductive. The 225 south: This heading has advanced 5 ft. 6 ins.; the reef here is very large, 5 ft. thick of quartz being carried in the level, and still more standing on the east side; this quartz produces a trace of gold. The 159 north: This heading has been advanced 17 ft., making 419 ft. 6 ins. from the cross-cut at Walker's. The reef here is 1 ft. thick of quartz, producing a trace of gold only in the assay.—Capt. Tregay.

MYSORE-WYNAAD CONSOLIDATED.—Report for the fortnight ending April 2nd:—Engine shaft: The working barrel was broken in two parts in blasting on Wednesday afternoon last, which considerably impeded the sinking. The shaft has been sunk 3 ft. 3 ins., making 106 ft. 5 ins. from surface. The rock is getting rather more favourable for sinking. Conducting pipes: These from the compressor have now been covered to a great depth with earth for the greater part of the distance, thereby lessening the expansion, and lessening the difficulties of keeping the connections in a perfect state, and economising the compressed air used. Central 100 cross-cut west: This has been advanced 8 ft., making 14 ft. from shaft; there has nothing been intersected, and we do not calculate on meeting with anything of consequence for 100 ft. Nevertheless, I should con-

tinue it to prove the point whether the Mysore West Reef is in existence here or not.—Capt. TREGAY.

NEW EBERHARDT.—The mine manager reports under date March 30th, as follows :—South drift : There has been assorted and put on the ore dump 10 tons for the week. Assay value of the same, $50. This place remains about the same as last reported to you. North shaft No. 1 : The sinking of this shaft has been advanced 6 ft. ; total depth, 89 ft. We are coming into porphyry in this shaft, and should no change come in the next day or two, we will start a drift to cross-cut the porphyry. North shaft No. 2 : Drift westerly from the bottom of the shaft has been extended 6 ft. ; total length, 77 ft. No change from last week. East drift from bottom of Gore incline has been advanced 11 ft. for the week ; total length, 197 ft. The quartzite in this drift has been broken up for the last week, and we have an open break on the south side of the drift which accounts for making so much better headway. Hauling : We started the team at hauling ore on the 27th, as our dump on the south side is small and could hold no more. The team now is hauling about 9 tons per day.

NINE REEFS (2nd April).—Mining operations.—Malleson lode : Main shaft 310-ft. level south bas been advanced 1 ft. 6 ins. ; total distance from shaft. 6 ft. 6 ins. The branch of the vein in this drift is about 1 ft. wide. Besides doing the above work, the men have been employed in stoping the back of the 310-ft. level north. Morrison shaft sinking under the 185-ft. level north has advanced 4 ft., a total depth of 50 ft. The portion of the vein being carried in this shaft is about 3 ft. 6 ins. wide. 310-ft. level north of Baynard shaft : Driven 3 ft. 8 ins., a total distance from shaft of 60 ft. The portion of vein carried in the drift is about 4 ft. wide. Stopes :—No. 1 stope in the back of the 185-ft. level north of main shaft : Vein 6 ft. wide. No. 2 stope in the back of the 185-ft. level north of main shaft : Vein 6 ft. wide. No. 3 stope in the bottom of the 185-ft. level south of Baynard shaft : Vein 4 ft. wide. No. 4 stope in the bottom of the 185-ft. level south of main shaft : Vein 4 ft. wide. No. 5 stope in the bottom of the 185-ft. level north of main shaft : Vein 6 ft. wide. No. 6 stope in the back of the 310-ft. level north of main shaft : Vein 6 ft. wide. Champion lode, Vyvyan shaft : 145-ft. level cross-cut east, 70 ft. south of shaft, driven 4 ft. 6 ins. ; total length of cross-cut, 13 ft. We have met with several small branches of quartz in driving the above distance of 4 ft. 6 ins. Stopes : North end of the south stope in the back of the 145-ft. level ; vein 2 ft. 6 ins. wide. South end of the stope in the back of the 145-ft. level south of Vyvyan shaft : Vein 2 ft. wide. North stope in the back of the 145-ft. level north of Vyvyan shaft : Vein 1 ft. 8 ins. wide. No. 2 lode, new shaft : Sinking from surface has advanced 3 ft. 6 ins., a total depth of 50 ft. This shaft appears to be still in the old workings. Milling : The quantity crushed during the month of March has been, quartz from main shaft, 675 tons 16 cwt. ; from Vyvyan shaft, 54 tons, and concentrates. 9 tons 9 cwt., a total of 739 tons 5 cwt. I regret that I cannot furnish the assays of the vein in the different workings of the mine. The cause of this has been that there are no crucibles in store. We have endeavoured to obtain some. but they have been delayed.—Capt. BENNETTS.

NORTH MEXICAN MILLING (29th March).—The ground is getting firmer as we go down, and there is not much water. The Cusi Company had soft ground above the same level we are now. By to-morrow night the shaft will be finished to the lowest work, and then we will begin to sink again on new ground.—R. S. CARLISLE.

NUNDYDROOG (2nd April). — Mining operations : There is nothing new to report from the underground development. Webb's shaft is down from surface 407 ft. 6 ins. ; the bottom is in barren rock. Taylor's shaft is down from surface 364 ft. 6 ins. ; there is no improvement ; the rock is hard and barren. The cross-cut in the 370 north of Webb's shaft has been driven a total distance of 27 ft. 6 ins. ; there is no change in the rock. The new shaft near the northern boundary is down 32 ft. ; at present there is no appearance of old workings. The stope in the bottom of the 370 south of Webb's shaft contains a lode, in some parts 3 ft. wide, at other places it is narrow ; the ore assays 1 oz. 7 dwts. 6 grs. per ton. The stope in the bottom of the 300 contains a lode 3 ft. wide, assaying 3 ozs. 16 dwts. 6 grs. In the intermediate level it is 1 ft. 8 ins. wide, assaying 6 dwts. 18 grs., and the stope in the bottom of the interme diate level is in a lode 1 ft. 8 ins. wide. assaying 8 dwts. 18 grs. In the bottom of the 230 it is 1 ft. 8 ins. wide, assaying 1 oz. 3 dwts. The middle level contains a lode 1 ft. 8 ins. wide, assaying 1 oz. 7 dwts. 6 grs. The lode in the stope in the bottom of the 166 is 1 ft. 6 ins. wide, assaying 1 oz. 16 dwts., and in the rise in the back of the 230 north of Webb's shaft it is small. assaying 1 oz. 0 dwts. 18 grs. Assay of weekly samples from the mill : Rough quartz, 3 ozs. 10 dwts. 18 grs. ; smalls, 2 ozs. 14 dwts. 12 grs.—B. D. PLUMMER.

OOREGUM (2nd April).—Fortnightly report.—Main shaft : The 250-ft. level south bas been driven 17 ft., or 231 ft. 11 ins. from cross-cut west ; the lode is 2 ft. 6 ins. wide, and yields, as per assay, 8 ozs. 5 dwts. 11 grs. of gold per ton of quartz. The 250-ft. level north, 9 ft. 6 ins. have been cut, or 158 ft. 8 ins. from cross-cut west. A sample was taken from two small branches of quartz, which we think will improve as we drive on them ; this sample gives an assay of 10 dwts. 21 grs. of gold per ton of quartz. The stope in back of the 250-ft. level south of cross-cut west, 82¼ superficial ft. have been cut ; the lode for length of stope, 33 ft. long, will average 2 ft. 3 ins. wide, and gives an assay of 4 ozs. 7 dwts. 2 grs. of gold per ton of quartz. Low's shaft : By the breaking of one of the Plummer blocks at the pumping engine here we have not been able to measure the work done in the 270-ft. levels, or in the shaft sinking below the 270-ft. level. The lode in the 270-ft. level north of shaft is 1 ft. 3 ins. wide, and gives an assay of 1 oz. 2 dwts. 21 grs. of gold per ton of quartz. The lode in the 270-ft. level driving north, south of sbaft, is the same as last reported on. The 200-ft. level driving north of shaft, 6 ft. 3 ins. have been cut, or 296 ft. 6 ins. from shaft ; the rock has the same kindly appearances, but is without quartz. The winze sinking in bottom of the 200-ft. level north, 4 ft. 4 ins. have been cut, or 54 ft. below the level ; the small branch of quartz has improved in size, now 4 ins. wide; a sample taken from it gives an assay of 15 dwts. 16 grs. of gold per ton of quartz. No. 2 winze sinking in bottom of the 200-ft. level, south of shaft, 4 ft. 10 ins. have been sunk, or 14 ft. 8 ins. below the level ; the lode is small and pinched ; an assay made from it gives 13 dwts. 2 grs. of gold per ton of quartz. The 200-ft. level driving south of shaft, 10 ft. 9 ins. have been done, or 166 ft. 4 ins. from cross-cut west ; the lode is 3 ft. 6 ins. wide, and gives an assay of 4 ozs. 3 dwts. 20 grs. of gold per ton of quartz. Stope in back of the 200-ft. level south of shaft : The lode is 3 ft. wide, and gives an assay of 1 oz. 6 dwts. 2 grs. of gold per ton of quartz. Stope in bottom of 200-ft. level south of shaft : The lode is 1 ft. 9 ins. wide, and gives an assay of 1 oz. 10 dwts. 12 grs. of gold per ton of quartz. Stope in back of 200-ft. level north of shaft : The lode is 1 ft. 6 ins. wide, and yields, as per assay, 10 dwts. 21 grs. of gold per ton of quartz. Probyn's shaft has been sunk 4 ft. 3 ins., or 35 ft. below the 300-ft. level ; the lode is 3 ft. wide, and gives an assay of 4 ozs. 13 grs. of gold per ton of quartz. The 300-ft. level north has beeu advanced 2 ft. 6 ins., or 21 ft. 9 ins. from shaft ; the lode is the size of the level carried 4 ft. 6 ins. wide, and yields, as per assay, 5 ozs. 19 dwts. 18 grs. of gold per ton of quartz. The 300-ft. level has been driven south 3 ft. 9 ins., or 22 ft. 7 ins. from shaft ; the lode is 2 ft. 6 ins. wide, and yields, as per assay, 1 oz. 6 dwts. 2 grs. of gold per ton of quartz. The 230-ft. level south has been driven 2 ft. 6 ins., or 99 ft. 10 ins. from shaft ; the lode is 2 ft. wide, and gives an assay of 1 oz. 5 dwts. of gold per ton of quartz. The 230 winze south of shaft, 5 ft. have been sunk, or 31 ft. 3 ins. below the level ; the lode is 2 ft. 9 ins. wide, and yields 1 oz. 19 dwts. 4 grs. of gold per ton of quartz. The 230 winze north of shaft, 2 ft. have been sunk, or 47 ft. 5 ins. below the level ; the lode is 2 ft. wide, and yields 19 dwts. 15 grs. of gold per ton of quartz. The 166-ft. level driving south, 6 ft. have been cut, or 214 ft. 9 ins. from shaft ; the lode is 6 ft. wide, and gives an assay of 1 oz. 6 dwts. 2 grs. of gold per ton of quartz. The 2 rise in back of the 166-ft. level south of shaft is 8 ft. 6 ins. above the back of the level ; the lode is 2 feet wide, and yields 10 dwts. 21 grs. of gold per ton of quartz. The No. 2 winze in bottom of the 166-ft. level south of shaft, 5 ft. have been sunk, or 27 ft. below the level ; the lode is 2 ft. 6 ins. wide, and yields 12 dwts. of gold per ton of quartz. The stope in bottom of the 166-ft. level north of shaft, 110¾ superficial ft. have been cut ; the lode is 1 ft. 6 ins. wide, and yields an assay of 2 ozs. 3 dwts. 13 grs. of gold per ton of quartz. The stope in bottom of the 166-ft. level south of shaft, 192¼ superficial ft. have been cut ; the lode is 1 ft. 6 ins. wide, and gives an assay of 2 ozs. 16 dwts. 14 grs. of gold per ton of quartz. The stope in back of the 166-ft. level south of shaft, 77¼ superficial ft. have been cut ; the lode is 1 ft. 8 ins. wide, and yields an assay of 1 oz. 8 dwts. 7 grs. of gold per ton of quartz. The stamps are idle—cleaning up. The result for month of March is good, which we value over 1,100 ozs. of gold. The actual result will be sent you by the next mail. All our pit work and machinery continues to work well, except Low's shaft pumping engine. The engineer is engaged erecting the new pumping engine here, which will be pushed on with all speed.—W. MARTIN.

OSCAR (18th April) —Oscar lode : We have been stoping some quartz from the footwall in bottom of shaft, and treating it separately in the mill. Judging from the plates and our assays, we think there is slight improvement. The 400-ft. level west is producing a good deal of quartz, but it is poor. We shall stop it for a short time, and put the men in the shaft as a few of our miners have left us. The No. 3 lode is looking well, yielding about the same quantity of quartz as when last reported. We have not seen any visible gold, but the plates show about the same quantity of gold as last month. Daw's lode : The lode in the shaft is producing more quartz than hitherto, but in the 420-ft. level south we have no alteration to which to call your attention. The 370-ft. level has somewhat improved, and the stopes above are getting into wider, and we think better, quartz. There is also a slight improvement in 270-ft. level south. The stopes in back of 170-ft. level are producing a good deal of quartz, but it is not rich. We hope soon, however, to be able to report an improvement.—J. DAW, jun.

ROCKY BAR WIDE WEST.—Report for week ending March 31st :—Stopes Nos. 1 and 2 : Have shown some improvement during the past few days. The greater portion of the ore milled from this part of the mine during the month has averaged low grade, caused by the lode being irregular and broken. Extension west level No. 2 : These stopes are looking well, and have produced considerable good ore all through the month. Extension north cross-cut has been extended 18¾ ft. ; total, 33¾ ft. ; having passed through several stringers of quartz, but nothing sufficiently large to justify drifting on. East level No. 1 has been driven 53 ft. ; for the month, 124 ft. ; total, 220 ft. The ground is becoming much softer, showing mineral stains and making considerable water. The formation corresponds exactly with that in the adit level just west of the wide west pay chute. This level is being pushed ahead as rapidly as possible, and when the pay chute is reached better returns may be expected. Winze No. 1 has been sunk 12½ ft. ; total, 68 ft., making connection with No. 1 level, affording splendid ventilation. This air-current will enable us to drive to the old Wide West winze some 285 ft. further east. West level from north cross-cut No. 1 has been extended 29 ft. ; total, 45¼ ft. In the bottom of this level there is a promising vein of quartz, some of it carrying considerable value in gold. Mill : Everything is in good working order, and 15 stamps have been kept running steadily during the month. Machinery : All in this department is in first-class repair, and being run with economy. The decrease in March returns was due to the change in the main stopes caused by a break in the lode, and the increase in expenses was owing to the large amount of necessary deadwork. April pay-roll will show a reduction in expenses.—H. N. THOMAS.

RUBY AND DUNDERBERG CONSOLIDATED.—Report for the week ending March 31st.—Dunderberg : No change since my last communication to you ; this week the Richmond furnaces will resume buying ores, and we will ship what ore we have broken in the mine, consisting of about 300 tons. Eagles drift : We have advanced 7 ft. during the week in the upraise, making a total of 170 ft. raised. We have 22 tributers and six contractors at work. Lord Byron : This mine has improved slightly, and we have now 12 tributers here, and about 100 tons of ore broken.

WEST ARGENTINE EXTENSIONS.—Extract from manager's letter, 16th March :—New Carolina adit advanced 33 ft. ; total, 159 ft. At 62 ft. a reef was struck. This reef has not been mentioned before as nothing on surface indicated its existence. The appearance at 30 ft. from surface is highly encouraging. The vein consists of silicious slate-bearing pyrites and rotten clay, slate-bearing galena and zinc blende ; its width is 2 ft. A flat seam, filled with clay and pyrites, has also been followed for the last 15 ft. ; it has a varying thickness of from 1 to 6 ins., and dips slightly west. Too much importance must not be attached to these reefs, it is probable that they will enrich the fissure vein on which our most important workings will be directed.

The first batch of letters of allotment to applicants for shares of the new issue in the Javali Co. have been posted.

REPORT OF MEETING.

EASTERN MYSORE GOLD CO., LIMITED.

COLAR CENTRAL DICTATES TERMS—A GREAT MINE BUT SHAREHOLDERS SPIRITLESS—EFFORTS TO RAISE CAPITAL FAIL —REGRETTABLE DECISION.

An extraordinary general meeting was held at the Cannon Street Hotel, yesterday, for the purpose of passing a special resolution—Sir William Cunninghame, chairman of the company, presided.

Mr. C. F. Tombs (secretary) read the notice calling the meeting.

The Chairman: Gentlemen, my duty to-day is not very difficult, although in some respects not altogether satisfactory. It is to propose to you and to advocate that you should accept the resolution, of which you have had notice in a circular which has been issued. That resolution will require certain amendments of a verbal character, which our solicitor will presently explain. I think I need not in the circumstances say about the position of the company; at the same time there are some facts that you ought to know and keep in mind, in considering whether you will or will not adopt this resolution.

CONSIDERABLE PROGRESS.

I would like to say that our progress has been very considerable. We have four shafts sinking, exceeding 100 feet in depth, with lengthy drives and works of that description. The shafts are very well made and the mine well provided with machinery of all kinds, except rock-drills, and I think the progress has been satisfactory. At the bottom of all the shafts reefs have been struck, which show gold more or less —some to a considerable extent. I wish also that you would remember that although we have done a good deal we could have done still more if we had had a little capital at our disposal.

WANT OF CAPITAL.

What has kept us back has been the impossibility of providing rock-drills. In the case of the Moscrom pit, where the lode has been cut off by a hard wall of volcanic rock, hard labour has been almost unable to cope with the ground. The progress has been slow, and the amounts have not been at our disposal to push matters on with the desired rapidity. If we had had rock-drills I have no doubt the position of the company would now be more favourable than it is.

FUTILE EFFORTS TO RAISE CAPITAL.

Not having sufficient working capital we entered into communication with a neighbouring company who desired to add to their property some part of that which adjoined it, and which was apparently promising. I am talking, of course, of the Colar Central Company. Their exact position I do not know, but I take it that at present they are in some difficulty as to finding a reef. In saying this I do not think I am uttering more than the circumstances warrant. They think it will be advantageous to acquire a neighbouring property which shows richness in their direction. We want working capital. That being so, it seems only natural that we should amalgamate with them for our mutual benefit. Nobody would, I think, have any objection had the terms been everything that one could wish. The board have had long negotiations with the Colar Central, and the terms which are outlined in the resolution in the circular you have heard read are the most favourable Colar Central is willing to give us. It is, of course, in the power of the meeting to accept or reject them.

COLAR CENTRAL TERMS.

They are, practically, that each of our shareholders will receive very nearly two shares in Colar Central Company, whose capital will be increased to 200,000*l*., in place of 150,000*l*. as at present.

Major-Genl. Beresford (director): It will not quite run to two shares, but very nearly so.

The Chairman: That is in lieu of the shares which they now hold. The exact number of shares that Colar Central proposes to give is 57,356, which, of course, will be divided amongst the whole body of our shareholders *pro rata* after all our liabilities are satisfied. As far as I can judge there will be a very small deduction, if any, required from that number of shares in order to clear up our transactions from the date at which this amalgamation will take place, viz, April 1st 1889.

THE CHAIRMAN'S DIFFIDENCE.

I confess honestly I have some diffidence in recommending the meeting to adopt these terms, because I have great faith in the prospects of our company. This agreement seems to be, to some extent, sacrificing a large part of our interest; yet, I advocate it on the ground of necessity. We have endeavoured by every means to provide working capital. We have sent out circulars endeavouring to get debenture capital, but in vain, and much delay has been caused by the action, on two distinct occasions, of two distinct individuals who thought they could raise capital for us, but who wholly failed to do so. Whilst we were waiting for these arrangements to come to fruition, our capital was becoming exhausted, and the position was becoming worse. But for the delusive hopes held out of raising fresh capital, and the time the negotiations occupied we should have called you together considerably sooner — in fact, two or three months ago; and it is only this very day that the agreement has been finally adjusted, because it depended to some extent upon the news we received by telegram—unluckily misunderstood. However, that news has arrived in time, and the directors of this company and the directors of the Colar Central Company have agreed upon terms, and so far as they are concerned, matters are settled, but they await the confirmation of the respective bodies of shareholders.

UNDER THIS ARRANGEMENT

Colar Central will have the right to occupy and work our property for two months, and then to decide whether it should or not finally purchase it from us as arranged. Colar Central has also the right to say whether they will postpone a final decision for another month, that is to say, they must definitely decide this question within two months at the latest. For our part we must decide whether we will accept the agreement or not, though it is subject to confirmation by another meeting. Our duty to-day is to consider whether we will give the first decision in favour of the arrangement with the Colar Central Company on the basis of the terms which I have mentioned. I will now ask the solicitor to read the resolution, into which he has found it necessary to introduce certain verbal amendments, and that resolution I propose.

THE RESOLUTION.

The Solicitor said the resolution as submitted would be—"That the agreement entered into between the Eastern Mysore Gold Company, Limited, of the one part, and the Colar Central Gold Company, Limited, of the other part, for the sale of the mines, mining rights, undertaking, assets, and other effects belonging to the Eastern Mysore Gold Company, be confirmed." He explained the resolution was practically the same as that of which notice had been given, but in its new form was made clearer.

COLAR CENTRAL HAS A REEF.

Major-Genl. Beresford: I think our chairman made a slight mistake in saying the Colar Central had no reef. They have a reef, and one that in depth will no doubt prove as valuable as others in the vicinity. They have not only a reef, but by sinking deep enough they will undoubtedly come upon other reefs that run through the Eastern Mysore and South-East Mysore, because they dip into this property. The shareholders of Colar Central, like those of this company, will have to be called together, and we have given them two months from the 1st of April, and another month if necessary. The Colar Central is in a very good position with money to work both their own property and ours.

A Shareholder: How much have they?

THE COLAR CENTRAL COMPANY'S CASH.

Major-Genl. Beresford: The last balance-sheet showed 40,000*l*., but I suppose they have spent some since then. Meanwhile they will take the property from the 1st of April. If the "deal" does not come off, no harm will be done. We give them a mortgage on our property for the money they spend upon it.

A Shareholder: Do you mean that there will be a mortgage given for the working expenses.

Major-Genl. Beresford: Yes, for the expenditure they may have upon the mine.

A Shareholder: Are we to understand that by passing this resolution we commit ourselves, whereas the Colar Central Company will not be committed for two months to come.

The Chairman: We partially commit ourselves, but not wholly until the confirmatory meeting. We certainly do so, providing Colar Central agrees. We have received proxies from shareholders holding 27,000 shares in favour of this arrangement.

A Shareholder: How much is Colar Central prepared to spend upon our property?

The Chairman: We have no assurance at all, but, of course, they will treat the matter to the best of their power, for their advantage as well as ours.

Mr. Dettmar: The Colar Central seems to have everything in its favour.

The Chairman: That is the fact. They have a period of two months to make up their minds.

Mr. Dettmar: It seems to me if our property turns out good Colar Central will take it, and if the reverse it will throw it back on our hands.

The Chairman: It is difficult to see how it could have been arranged otherwise.

A Shareholder: What is the present value of Colar Central shares?

A Voice: 4s. 6d. to 5s.

Mr. Dettmar: The whole thing seems out of proportion.

Mr. Swinborne: You should remember Colar Central has that 4s. 6d. at the present time in cash, and we have not a penny. (Hear, hear.) I am a large Colar Central shareholder, and think this scheme very much to the advantage of this (Eastern Mysore) company. I hold in both companies or I should not be here. The market price does not count for anything. (Hear. hear.)

The Chairman pronounced the resolution carried with three dissentients. He also announced that it was unnecessary to-day to proceed with the appointment of a liquidator.

AN IMPORTANT QUESTION.

A Shareholder asked if a director of this company would be on the board of the Colar Central Company?

The Chairman: I believe not. They think it unnecessary to add to their directors. I believe their board to be very strong and sufficient for all purposes. No member of this board is at present a director of the Colar Central Company.

A Shareholder expressed some surprise that Mr. Rayner St. Stephen was not present at the meeting.

The Chairman said that he would endeavour to arrange for that gentleman's presence at the confirmatory meeting, but being no longer in the service of the company he had no control over him.

The meeting closed with a vote of thanks to the chairman.

CORDOVA UNION GOLD MINE, LIMITED.

The manager writes under date of 5th April as follows:—Centre shaft: On Monday, the 1st inst., this shaft was sunk to a total depth of 92 ft.; a cross-cut was then commenced east across the ledge, and has been driven about 9 ft., all in ore. To-morrow drifts will be started north and south along the ledge; we shall most likely recommence sinking in about a week's time. Orchard shaft: A total depth of 160 ft. 6 ins. was obtained in this shaft up to the 1st inst.; a drift south along the ledge has since been driven 15 ft.; a short cross-cut will be put in east and west to-morrow. We shall probably restart sinking shortly. The new mill started regular crushing on the 2nd inst., and has been running steadily since. Five stamps are working on ore from the dump near Union shaft and five on ore from centre shaft. The engine and hoisting machinery are working beautifully. General satisfactory progress has been made all round during the past week.

Proposed Slate Syndicate.—We hear, on good authority, that steps are being taken with the view of forming a combination amongst the slate quarry owners of North Wales. The slate trade has been in a very depressed condition for some time past; in consequence of which a number of the smaller quarries have been shut down completely, and many of the larger ones have been compelled to work only three or four days a week. Now, however, that business generally is showing unmistakable signs of improvement, it is thought that the slate industry cannot fail to participate in it, and we understand that a meeting of the principal quarry proprietors was held recently in London, when the proposal met with general approval.

STRANGE STATE OF AFFAIRS AT EAST POOL MINE.

GREAT excitement was occasioned in West Cornwall on Thursday, in consequence of the refusal of large numbers of men employed in East Pool Mine to resume work underground, their reason being that it is dangerous to do so, and that they refuse to risk their lives. It appears that in consequence of a misunderstanding relative to water charges that has arisen between the committees of East Pool and Wheal Agar, two of the most extensive tin mines in Cornwall, the pumping engine at Wheal Agar is kept idle, and as a result large quantities of water are running into East Pool and completely covering the lower levels. So strong is the feeling, that on Thursday some 600 or 700 men, headed by delegates from Carn Brea, South Crofty, and East Pool Mines, marched in a body to the house of Mr. Pearse Jenkin, agent for Lord Robartes, the owner of Wheal Agar, and begged him to use his influence to get the engine put to work not later than next Saturday. Mr. Jenkin promised that he would go to London and do his best to bring about an amicable settlement of the difficulty, so that the men might be able to resume work as soon as possible. Leaving the residence of Mr. Jenkin, the men marched in a body through the town of Redruth, but beyond cheering occasionally, they behaved in an orderly manner. It is feared, however, that unless the Wheal Agar engine is soon set to work serious disturbances may arise, as many men are thrown out of employment in consequence of the dispute.—Another telegram says: Later in the day Mr. T. Bedford Bolitho, M.P., who has an interest in Wheal Agar Mine, arrived at Redruth from Penzance, and, proceeding to the Mining Exchange, received a deputation of working miners, who made known their grievances to him. They stated that several dams had been erected in East Pool Mine to keep back the water from Wheal Agar, but they did not consider these dams were safe, and should either of them give way it would result in great loss of life, while large numbers of men would be thrown out of employment. They saw no reason why the Wheal Agar engine should not be put to work, especially as in addition to their own grievance 200 Wheal Agar men were also thrown out of employment. Subsequently an open-air meeting of over a thousand miners was held in the Fair Meadow, and Mr. Bolitho announced that, having been in communication with Lord Robartes' agent, as well as with the chief shareholders in Wheal Agar, who had given him authority to use his own discretion, he would take upon himself the responsibility of requesting Capt. White, the manager of the mine, to put the engine to work at once, it being understood that the whole matter in dispute between the two companies should be referred to arbitration. This announcement was received with loud cheering, and Mr. Bolitho was cordially thanked for his kindly intervention.

NORTH TOLIMA SILVER MINES, LIMITED.

23rd April.—A certain programme was determined upon at the last general meeting for opening out the mine, so that reserves of ore might be laid open, and taken away in a miner-like manner and at a minimum of cost. That programme has been strictly adhered to, with the result that already there are 559 fms. of ground laid open in the Esperanza Mine, and 255 fms. in the Fortuna: total, 814 fms., estimated to produce 20,000*l.* mineral. There are several important cross-cuts in progress, which are certain shortly to come upon fresh sources of mineral. Should no unforeseen hindrances occur, it is the opinion of the directors that towards the end of the present year sufficient exploratory work will have been done to enable the reserves to be commenced upon, and continuous monthly shipments of ore made, sufficient to leave a fair margin of profit.—SYDNEY A. COBBETT. Secretary.

A NEGLECTED INVESTMENT.

ENGLISH investors in Witwatersrandt Gold Mines have apparently not paid sufficient attention to the report of the statutory meeting of the Red Reef Gold Mining Company. We learn that Continental investors have looked into the merits of this company's claims, and have secured already a fair interest in the concern by picking up every share offered on the market. The 1*l.* shares are now dealt in, we are informed, at about 35s., and it is not likely that the recent purchasers will sell out for the present, believing the property to be as good as any on the Randt.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

THE SOUTH BANTJES GOLD CO., LIMITED.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—I see in the MINING WORLD of last week, with regard to this company, that I am described as the manager of the Jumpers Company. I beg to state that I do not hold that position, but was visiting consulting engineer to the company until the appointment of a qualified resident manager.

By noting this in your next issue you will greatly oblige.—I am, &c.,

ARTHUR H. KINGSLEY.

144, Buckingham Palace Road,
April 25th.

REPUBLIC GOLD MINING SYNDICATE—RE-CONSTRUCTION.

SIR,—May I, with your courteous permission, suggest that my fellow-shareholders in the Republic Gold Mining Syndicate should support the scheme of re-construction propounded by the board in South Africa. It means, in effect, an addition of 10,000*l.* to the nominal capital, and an assessment of 2s. 8d. per share. Proxies are urgently requested in order to carry the scheme by a legal majority.

Shareholders should send their proxies so as to reach Barberton by 11th June, and at same time remit 2s. 8d. per share and apply for two preferent shares for each three shares now held.

Unregistered shareholders should take precisely the same steps, and, in addition, should forward their share certificates for registration. In the re-construction, two preferent shares and one ordinary share will be given for each three shares now held in the syndicate provided the formalities and payments I have detailed have been duly complied with. It should be distinctly understood that unregistered holders have no voting power, and are liable to be knocked out in the re-construction, but these can be obviated by sending to Barberton as above.—I am, &c.,

M. N. S.

N.B.—The 2s. 8d. is payable in respect of the existing shares, *i.e.*, 4s. each for the preferent shares.

23rd April, 1889.

THE ANTIOQUIA (FRONTINO) CO., LIMITED.

THE BEST REPORT THE COMPANY HAS ISSUED FOR MANY YEARS.

The quantity of mineral stamped during the year and the produce thereof was as follows:—Number of tons, 3,496; produce of gold, 3,206 ozs.; average produce per ton, 18¼ dwt. The above return shows an average produce per month of 267 ozs. against an average produce per month of 125 ozs. for the previous year, and an average of 170 ozs. for the year 1886. The value of the gold produced in the year was 8,862*l.* 12s. 6d., being the largest return ever made by the company in one year. It shows an increase of 4,864*l.* 1s. 1d. over the produce of the previous year, which amounted to 3,798*l.* 11s. 5d., and an increase of 3,286*l.* 2s. 4d. over the produce of the year 1886, which amounted to 5,376*l.* 10s. 2d., and which was then the highest produce in any one year. The total value of the gold produced during the 14 years and eight months over which the published accounts extend has been 48,423*l.* 13s. 3d. The revenue account now submitted shows a profit of 3,264*l.* 2s. 9d., but as a sum of 1,422*l.* 11s. 6d. is charged for interest accrued on the debentures of the company during the year, the actual profit on the mining operations has been 4,686*l.* 14s. 3d. The report is in every sense favourable. It will be proposed on May 14th to raise 25,000*l.* more working capital.

TRIBUTE TO THE LATE MR. BLADON.—At the ordinary general meeting of the Odessa Waterworks Company, Sir Peter Spokes presided, and said: "Before commencing the business of the day, the painful duty devolves upon me of announcing the death of one of our colleagues, after a short illness. Mr. Bladon, who had been ailing a day or two before the Easter holidays, has passed from among us: and I am sure it will be to you, as it is to the directors, who, of course, knew him more intimately, a great grief. Mr. Bladon was an upright and honourable man, a loyal colleague, and a warm friend; and his ability and untiring energy rendered his services most valuable to those who succeeded in enlisting them, and I need hardly say his services to this company at a critical period of its history were shown in a very marked manner. I might say more—I cannot say less—of our departed friend." (Hear, hear.)

TASMANIAN MINES.—The following details, showing the total average yields, as well as the dividends paid by the Tasmania and Florence Nightingale Companies, and also the amounts since their amalgamation, may prove interesting, not only to Tasmanian, but to Victorian and other readers interested in gold mining. No Australian quartz reef at present working has exceeded the gross yield during the same period:—The Florence Nightingale Gold Mining Company, Registered, crushed before the amalgamation, 9,139 tons of quartz for a return of 22,250¾ ozs. gold, being an average of 2 ozs. 8 dwts. 11½ grs. to the ton. Gold obtained by tributers from northern reef (tons not given), 3,621 ozs.; total, 25,871¾; amount paid in dividends, 26,000*l.* Tasmania Company, 176,273 tons crushed before amalgmation return, 212,009 ozs.: 16,134 tons crushed since amalgamation, 25,815 ozs. 10 dwts. 12 grs. (192,407 tons) for a total of 237,824 ozs. 10 dwts. 12 grs., being an average of 1 oz. 12 dwts. since the amalgamation, or 1 oz. 4 dwts. 17¼ grs. to the ton for 11 years and 3 months. Crushing from the Tasmania, showing an average of 1 oz. 6 dwts. 4 grs. to the ton for 201,546 tons crushed by the amalgamated claims. The Tasmanian Company paid in dividends prior to the amalgamation 475,500*l.* Amount paid since on 45,000 shares, 52,875*l.*; total, 528,375*l.* The old Tasmania Company was formed in October, 1877, and paid first dividend November, 1878, has paid monthly dividends since.—*Tasmanian Mail*, Feb. 23rd.

JUST PUBLISHED. Crown 8vo. Price, 2s. 6d.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, erial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

PARIS - - - 224, Rue de Rivoli.
NICE - - - 15, Quai Massena.

Subscriptions will also be received at the same addresses.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

Mahratta (C. H.)—Yuruari, Victory and Emma are worth purchasing.
L. Bowler.—We certainly should not advise a purchase.
Dubious.—Send us a list of your holdings.
Reader (X. Y. Z.)—The shares are £1 each fully paid.
Triumphant.—Call at these offices on Monday.
Regency (Willesden).—He is to be trusted, as we have already informed you.
Grand (B. A.)—We think it is one of the best properties in the district.
Subscriber (Exeter).—You are liable for the calls.
Recorder (Gateshead).—Certainly. Buy a few more.
L. S. A. (Utah).—The meeting was to have been held last month, but was postponed for the lack of a quorum.
R. L. (Bath).—We advise you to sell.
John Bertram.—They are good to keep for better prices.
Nitre (S. B.)—No. 1: You have no remedy. Nos. 2 and 3 can be purchased at low prices. See our Share List.
T. White.—We do not believe that you will get any satisfaction from them.
Trail (Suez).—No. 1: Buy at once, but sell 2, 3 and 4.
Business.—Take your profit.
A. Howard.—You must sign a fresh transfer and get it certified by the company.
Importance (R. A.)—Nos. 1, 2 and 3 pay dividends, but Nos. 4 and 5 do not, and are not likely to.
H. G. B. (Malvern).—A letter must be written to the secretary, stating the facts.
J. S.—Not in the London Directory. Send the papers to us for inspection.
Russ.—Certainly you may tell him what you say.
Grange.—Cannot answer without fee, as stated above.
Southerner (X. A.)—The shares are worthless.
Bright.—Mysore Gold, Ooregum and Mysore West should be held for higher prices.
Hydraulic (Monmouth).—There are several—which one do you mean?

The Mining World.

LONDON: SATURDAY, 27th April, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

A POINT IN CAPT. PLUMMER'S LAST REPORT.

The last report of Capt. Plummer anent the Mysore Mine is regarded as unusually important. In Schaw's shaft he says there is a good looking lode, and in the bottom he has found some exeeedingly fine stones of gold. He goes on to remark :—"I do not think I ever saw richer stone anywhere, but whether it is only a pocket I am not yet able to inform you." The gold, instead of being disseminated, as ordinarily, through the quartz, is found on the footwall side mixed in country rock, a little quartz, arsenical pyrites and galena. He promises more information in a week or two, and for this the shareholders should wait with an eagerness born of hopeful expectation.

THE COMPTOIR D'ESCOMPTE.

The old established institution, which lately came to grief through the utter collapse of the copper market, has been merged into a new undertaking bearing the same name, and the deeds transferring the title, connections, &c., were signed yesterday. The present shareholders will receive 10,000 founders' shares, with a right to 20 per cent. of the profits, and the premises will be purchased for seven million francs.

REDEMPTION OF CONSOLS.

The Treasury notify that all holders of Three per Cent. Consols on Saturday, the 6th July next, will be paid off at the rate of 100*l.* for 100*l.* stock, with accrued interest then due. Holders, however, who may desire payment in advance of this date can do so on the 14th May by notifying the Bank of England by the 9th May, and will receive 100*l.* for their 100*l.* stock, with 1*l.* 6s. 8d. in consideration of accrued interest, which will be subject to income-tax. Applications will be received to the extent of 15,000,000*l.* It is thus apparent that the Chancellor is prepared to pay off this amount by the 14th May, and will issue Treasury Bonds for the balance of the money not in hand.

COLAR CENTRAL v. EASTERN MYSORE.

Colar Central has money, and a lode of unproved value; Eastern Mysore has no money, but a lode of a value alleged to have been demonstrated. Colar Central with its money-bags, represents the strong man armed; Eastern Mysore, the mining gladiator exhausted in financial combat. Colar Central will lend its aid to Eastern Mysore but on terms grievous to be borne. If the Eastern Mysore shareholders had the spirit of mice, they would work out their own salvation by providing funds to work their mine. As it is, they have for a mess of pottage, practically handed over the whole affair, stock, lock and barrel, to Colar Central, which will first of all take a mortgage on the property for what they may spend during the next two months, and then throw up the whole affair if they find it does not answer their purpose to continue it. As a shareholder pathetically remarked, "If, after their two months' experimenting on our property, it is shown to be good, they will take it; and if the reverse, they will throw it back upon our hands." We congratulate the Colar Central Company upon the bargain they have made, though it is a hard one; but we can scarcely understand the directors of the Eastern Mysore Company consenting to terms of almost unparalleled humiliation. The hereditary bondsmen of Eastern Mysore should know that if they would be free they themselves must find the cash. This is what we are disposed to recommend them to do in spite of the resolution passed today. Not even a director of the Eastern Mysore Board will appear on the Colar Central Board to watch the interests of the former company.

COPPER COMPANIES AND THE SYNDICATE.

The Tharsis is the first of the big copper companies that have held their meeting since the failure of the syndicate, and its position may be taken as not only showing how it has been affected by recent events, but also as typifying that of its contemporaries. The whole of its production was sold for the years 1888, 1889, and 1890 to the Société des Metaux and the guarantee of the Comptoir d'Escompte. These bodies fulfilled their engagements for 14 months out of the 36 of their contract, and then broke down. All the copper delivered up to that time had been paid for at agreed prices, and as the result a

double dividend—in other words, 20 per cent., as compared with 10 per cent. for the preceding year—was declared at the Tharsis meeting this week. This was a bigger dividend, with one exception, than had ever before been declared in the 22 years of the company's existence. The loss of the company now will be the difference between the price the syndicate contracted to pay them, and the price they may now be able to get in the market, which is miserable beyond description. Tharsis starts well on the new year, though the outlook is gloomy. After writing off 20,000*l.* from the railway and pier, and 20,000*l.* from the mine, it carries forward to the current account a balance of 27,527*l.* It talks of increasing its output of copper, but we hope in this direction its proceedings will be confined to talk. What the market most wants is time to digest the enormous supplies that are on hand, and so far it is the naked truth to say that the proclivities of the ostrich have not yet developed themselves.

DEATH OF MR. FRANCIS JOSEPH BLADON.

Mr. Francis Joseph Bladon died on Saturday last, at his residence at Norwood, after only a few days' illness. The deep regret we feel in making this announcement will, we are quite sure, be shared by a very large number of our readers. Mr. Bladon for the last six or seven years occupied a prominent place in City affairs, and was a familiar figure at the meetings of many of the more important mining companies, with some of which he was identified in either the capacity of chairman or director. He held the post of chairman in connection with Day Dawn P.C., Carlisle, Empire, Gympie Golden Crown, and New Eberhardt; and he was also a director of Callao Bis, the English Association of American Bond and Shareholders, the Goldfields of Uruguay, the London Financial Association, and the Odessa Waterworks. In presiding over meetings his conspicuous ability was universally recognised, and in this capacity the majority of his contemporaries might, with advantage to themselves and their shareholders, imitate his methods. He was a fluent speaker, and excellent in the manner in which he marshalled his facts, and brought home to the minds of his hearers the salient points which it was necessary they should understand. His eloquence was at once forceful and persuasive, and, moreover, it was practical. We have heard many a speech in our time in which the latter element was deficient. He never shirked facts, because they were unpleasant, nor did he lay too much stress upon those which were agreeable. His desire was always to anticipate questions by giving full information at the outset, and in this way his meetings were shorter than those of most mining companies, where the opening speeches are rambling, and where the minimum of fact is clothed in the maximum of verbiage. He was always anxious to give the fullest explanation alike to the smallest and to the largest shareholder, as well as to leave the ultimate decision to the common sense of his hearers. Though sometimes harshly attacked at meetings, and notably at those recently held by Callao Bis and Carlisle, he never allowed himself to respond in the same spirit of bitterness—feeling certain that, as distinguished from the conduct of the very few, he could rely upon the generosity of the great majority as to the purity of his motives and the justice of his cause. Before Mr. Bladon became so largely identified with mining he had retired from business—having made a handsome competence as a member of the Stock Exchange. A life of idleness was, however, ill-suited to a man of his active temperament, and once again he began, in a sort of tentative way, to mingle in City affairs; but circumstances soon forced him to the front. He became a shareholder in the Eberhardt Company, and it was, we believe, at one of this company's meetings that he first appeared as a speaker. On this occasion there fell from him that germ of re-construction which has since been so much elaborated by him, and also by Mr. Snell, and which has proved the salvation of many a promising mining concern. He was asked to come to the front and save the Eberhardt, and right well did he justify the confidence that was placed in him. He has been connected with many re-constructions since, and in not a single case can it be truly said that the shareholders have had reason to be other than glad that they followed his advice. The last re-construction he successfully accomplished was that of Callao Bis, to the success of which to-day's market bears witness. After the Eberhardt, other engagements pressed upon him, until at the time of his death the companies that claimed his services, and received them to the full extent of their needs, embraced the list we have already given.

It is said that blood poisoning was the cause of poor Mr. Bladon's death, but we, who knew him well, and who had seen his manful struggles in recent months with difficulties which he was powerless to prevent, feel sure that it was anxiety, worry, and over-work that brought to a premature close his useful life. Mr. Bladon was a man of enormous energy of character and buoyancy of spirit. The former enabled him to discharge with perfect efficiency a mass of work that would have overwhelmed an ordinary man; the latter sustained him when managers were faithless alike to their promises and their reports, and when critics were often as unjust as they were severe. To say that Mr. Bladon will be missed in mining circles is but feebly to express the loss which we feel this industry has sustained. We shall miss his cheery presence at the meetings, and the hopeful spirit he was wont to infuse into his addresses, but we shall sorrow most of all because we shall see his face no more.

On Thursday, the mortal remains of Mr. Bladon were committed to the tomb in Lower Norwood Cemetery, in the presence of a large number of sorrowing spectators. Amongst those present were Mr. Septimus Bladon (brother of the deceased), the Rev. George Bladon (nephew), who conducted the service, Mr. J. R. Clipperton (an old schoolfellow, who had enjoyed the close friendship of the deceased for the last 30 years), and other private friends. The Callao Bis Company was represented by the chairman, Mr. Charles Ronaldson, Mr. J. H. Mackay, a director, and Mr. J. H. Thornton, the secretary. The Carlisle and Empire Companies were represented by Mr. W. G. Cavendish, Mr. Hastings, Mr. Crick, and Mr. H. Cameron Richardson, the secretary. Mr. B. Peyton Ward, secretary of the Day Dawn P.C. and Gympie Golden Crown, represented those companies, and Mr. Forrest was present, as secretary of the Odessa Waterworks.

CORDOVA UNION GOLD MINE, LIMITED.

INTERVIEW WITH THE NEW MANAGER.

The Union Gold Company, like the early Christians, has passed through much tribulation. It had a bad name, and, very wisely, a little while ago it changed it, and, therefore, exit Union—enter Cordova Union Gold Mine, Limited. The old company, like Marley, is dead, and upon its ashes has risen the Cordova. About last October the company was in the acute state of the disease known as impecuniosity, and the familiar process of re-construction was successfully resorted to. A new face has been put upon matters by this proceeding, and the company can now, for this reason, and for others which are embodied in what follows, hold up its head with most of its contemporaries on the mining market. The capital of the old company was 170,000*l.*, of which 153,603*l.* was issued; the capital of the new company is 200,000*l.* Applications have been received from 242 shareholders of the old company for 113,623 shares in the new company, and letters of allotment have already been posted. The lists are still open for shareholders who wish to take up the holdings to which they are entitled, and who if they do not will suffer two losses: first of all, that of every penny they put into the old company; and next, the chance of participating in what promises to be a most decided mining success. We say this for the reasons given by Mr. T. A. Rickard, the manager, with whom one of our representatives had an interview yesterday. We may add that a strong board has been formed, and that the company's offices are at 110, Cannon Street. Mr. Rickard is a young gentleman, though considerably experienced in mining matters. The only thing against him is his youth, but that is a fault that is mending every day.

We are anxious, Mr. Rickard, to put before our readers the true facts as to the Cordova Mine, and incidentally as to the past proceedings of the Union. Please enlighten us.

In the first place, I should say that the mine is in Calaveras County, California, near San Andreas, and 14 miles from the railway. The mine that we are working now is not the old Union, but the Cordova, which we discovered while we were negotiating for some extra ground. The remarkable feature is that the new mine has nothing to identify it with the old, though it is only at a comparatively short distance. Whereas the old mine was distinctly "pockety," and was bought at a time when the owner was working out one of these pockets, the Cordova Mine possesses one large steady producing vein such as has made California so well known as a quartz mining district. We are on the Mother lode, or rather I should call it, the great gold bearing belt of California, which would be a more accurate definition. The point most interesting to us is that we are on a continuation of the great Amador belt, respecting which the State Mineralogist says in his report, that within 15 miles there are 20 large companies engaged in vein mining. These mines, I know from having visited them, are remarkably like ours. Our nearest neighbours are the Sheep Ranch and the Esmeralda, which must not be confounded with the Consolidated Esmeralda. One of these mines is down 1,100 ft.

The Sheep Ranche has paid dividends for the last 15 years, though the exact figures are not exactly known, as it is a close corporation, but its ore is of a high grade and extracted from a lode parallel with that of Cordova. While the old Union Mine showed a sort of greyish-looking slate, the Cordova has a graphitic slate, altogether similar to the casing of the Amador Mine, as well also as having from 6 ins. to 2 ft. of black gouge, which helps so much to make the extraction economical. The lode is particularly strong, and I have followed the quartz (croppings) across the country for upwards of 3 miles.

How do you propose to go to work?

To carry on the work started already, and to open up the mine as speedily as possible, I should explain that we have three shafts; the Cowland and the Orchard, with the Centre (properly named) between the two. The distance from the Centre to the shafts on either side is 650 ft., and the quartz can be followed through the whole 1,300 ft. in a band, with a minimum width of 8 ft. These shafts will be sunk simultaneously, but after a time the Centre shaft will be pushed down

more rapidly, as that will form the pumping shaft. We shall then connect with the other shafts by means of levels.

Have you the same lode at both extremities?

The Orehard shaft has begun to show improvement, which has led me to think that the ore body will continue from the Centre to the Orehard shaft, and we hope as the Cowland goes down that the same will hold good. At present the quartz does hold down, and the question is—Will the good rock go with it? We think it will. A great many people have asked how it was that this mine was not discovered before, and how we came to secure it, as it were, by haphazard. In this district the people have been used to placer mining and pocket hunting, so that vein mining is in its infancy on account of the necessity of erecting big stamp mills, which you can dispense with in the other cases. Then the out-cropping of this lode, though large, looked hungry, and was considered unfavourable. When the negotiations commenced for the purchase of adjoining territory, which was necessary for dumping ground (this Cordova ground was not bought originally for mining purposes at all)—struck by the appearance of the out-crop, some exploratory work was done. There was already a shaft about 30 ft. deep. We cleared it out and continued sinking, and 10 ft. lower down struck valuable quartz, which has had the effect of altering the whole policy of the company. The deepest shaft is at present the Orehard (160 ft.), where the lode is so big that the shaft cannot be sunk so as to carry its full width: we have therefore cross-cutted, and found it 15 ft. wide. When I left, the ore was hardly paying, and now it is from $5 to $8 rock. The cost of working, including mining, management, milling, &c., I estimate at from $2½ to $3 per ton with a 30-stamp mill.

In America the cost is usually more?

I am aware of that. I was in Colorado State for two years, and the cost there, after exercising the greatest care, could not be reduced below $6 or $7 a ton. You may ask how we can do it for about half that at Cordova? Now, in Colorado we can only treat eight-tenths of a ton to the stamp in 24 hours in California, but we can do from 2 to 3 tons in a similiar time, because *our ore is entirely free milling*, and theirs is refractory, which makes all the difference. Labour is the same, and so are the general conditions, but the difference in the ore accounts entirely for the difference in price. Our veins are far larger than the average of those in Colorado. The ore is very readily broken, owing to the fact that slate seams run through the quartz, and of course a large amount of blasting powder is saved. I worked Union rock last year for $3 a ton, and, therefore, anything over $3 is absolute profit. We have wholly abandoned work on the Union for the present, for the reason we have found that after exhausting the pockets, which only extended to the water level, we should have to go several hundred feet deeper, whereas at a depth of 40 ft. we have something much better in the Cordova. At the same time it is proposed to keep the Union Mine in reserve. The Cordova is about 2,000 ft. from the Union—a parallel lode approximately—but one might be in Japan and the other in Timbuctoo for any similarity that exists between them. It is the intention to concentrate the whole of the money raised by the re-construction upon the Cordova Mine, though I do not think that much of it will be required.

What machinery have you?

We have 30 stamps. The mill is first-class, but faults occurred in the erection at Union which will not be repeated now that it is removed to Cordova. We have already moved 10 stamps from the Union and placed them at the Centre shaft to avoid tramming, and now we are testing rock broken from that shaft. The 10 stamp mill forms a complete plant, with rock-breaker, having a separate engine, and a shaking table for concentration. We have some 150 tons at surface, which will run about half an ounce of gold to the ton. The gold fetches about $17½ to the ounce after retorting. From this you will see that we have a reserve of 20 stamps, which we can erect at our leisure, and they will be placed below the Centre shaft. The prospects of the mine are such as justify us in believing that we will not require a large sum for development purposes. The character of our vein is that of the veins of the Amador County—they hold down to great depths, even to 2,000 ft., without giving out.

Generally, what facilities have you for working?

Apart from those already referred to—notably the ease with which the ore can be treated—we have plenty of labour of good quality. There is sufficient water for battery purposes, though not to work by water-power. Steam, though rather more expensive, is more reliable. We have machinery capable of carrying the Centre shaft down 1,500 ft., with hoisting plant at all three shafts. In fact, the machinery is complete, and what money is required will be wholly devoted to underground working. We have 160 acres of timber-land, and firewood and mining timber are both plentiful and cheap.

When do you expect to make returns?

Next month. With our 10-stamp mill we can put through 600 tons a month which, at a low estimate, will pay our expenses. Of course, with 30 stamps at work we shall turn that into a fine profit. I think the chances exceptionally good for making this mine a success, though we are suffering from the sins of our predecessors, and from the measure of distrust which exists in the minds of those unacquainted with the facts as they exist at present. This ignorance I trust, through the medium of your paper, will now be dispelled. I leave for the mines on May 11th. The views I have generally expressed have been confirmed by the report of Mr. Charles Cowland, of London, but better known to mining fame in Melbourne. He is now looking after the property in my absence.

By way of summary, what have you to say?

I think the position and prospects of the mine may be fairly grouped under seven headings:—(1). Our vein is very similar in size and character to the veins of the best producing county in California—Amador. (2). Its size renders its exploitation very economical. The minimum width has been about 8 ft. (3). The cost of working will be unusually small, because the ore can be so easily treated that even when of low-grade it can be profitably worked. With a 30-stamp mill anything over $3 will be profit. (4). We have already proved the continuity of the quartz course. (5). The mine is fully equipped with machinery, and can be developed with rapidity and economy. (6). We have means for accurately testing it as we proceed by actual returns from the 10-stamp mill, which are wholly different and infinitely more reliable than mere assays. (7)—and lastly—the shareholders have a better opportunity than ever they have had before of recouping themselves for the losses they may have sustained in the Union.

YURUARI PROSPECTS.

The rise in Yuruari shares, taking place in a week which is usually devoted to holiday-making, and when the state of the market ordinarily represents the absence, rather than the presence, of business, is a proof of the sensitive character of this stock, and of the general impression that prevails as to the value of the property. This impression rests upon premises which are so reasonable and so reassuring, that we have felt justified, on several previous occasions, in calling attention, first, to what we held to be the intrinsic merits of the property, and next, to the absurdly low price of the shares. This week it is not too much to say that tens of thousands of shares have changed hands, and after a dispassionate look at the facts which follow, we believe our readers will be of opinion that the buyers are more fortunate than the sellers.

Before proceeding with a description of the present underground workings and surface deposits of the Yuruari Company, we may mention that the assay taken by Messrs. Johnson, Matthey and Co. of the new lode, discovered by the late Capt. Pearce, to the eastward of the Cenicero shaft, gives 259½ ozs. of gold and 37 ozs. of silver to the ton. This lode has been since traced from No. 12 level up to Nos. 11, 10 and 9 levels successively, or upon a face of quartz amounting to quite 400 ft. While the lode has varied in these levels it has given every indication (as Capt. Pearce prognosticated) of being a continuous vein. He was very much struck with its appearance, as hitherto the lode to the eastward of the property had pinched away. The value of this discovery will be understood when we state that managers have reported the company to have sufficient ground eastward to keep the mill going alone with 60 stamps for seven years. We have inspected the plans to date which show the developments to the westward of the Cenicero shaft, which is now within about 200 ft. of the lay of the Water shaft. According to the last report, the mining captain has put rock-drills in the Water shaft to complete the connection now being made, also with drills from the Cenicero shaft. It is hoped that this work will be completed within a month or six weeks from date, when access to the surface will be available from both shafts, and with such a connection formed this result is certain, that within the 200 ft. above mentioned there will be struck the celebrated Peru lode, formerly worked by the Potosi Company. A large amount of ground remains still undeveloped between the Water and Cenicero shafts, both eastward and westward of the late Potosi Company's ground, which gave very high results. To the westward of the Water shaft operations have been on a somewhat limited scale, but during the old company's time the ore was worth over 1 oz. to the ton. To the westward the company's property extends practically for miles. The Potosi land intervenes, but according to Venezuelan law the company will be entitled to drive through a neighbouring property to reach another of its concessions beyond. The company, practically, can mine for miles to the westward, and we do not think the opinion of Capt. Pearce was exaggerated when he stated that from what he knew of the property he could safely assure the management that there was sufficient ore on this one concession of the property to last at least half a century.

We think it no breach of confidence to say that the directors are daily expecting a telegram with regard to the development works now proceeding with vigour in the Water shaft. About 30 ft. of sinking in this shaft will bring it to a level with the No. 9 west of the Cenicero level, which has given the best returns yet produced from the mine, and it is not too much to forecast that running to the dip it ought to improve in value, as the Chile lode has hitherto invariably done. Although the printed report promised with regard to the tailings has not yet been handed to the secretary by the assayers, who are preparing it, they have already, we are informed, expressed verbally their opinion to the effect that undoubtedly the tailings will pay to treat. The quantity of ore raised from first to last, it is believed, has exceeded 500,000 tons. The tailings, therefore, upon a reasonable deduction, should amount to from 300,000 to 350,000 tons—that is allowing more than 25 per cent. for loss; but inasmuch as this loss, arising from the oxidisation of the atmosphere, only tends to consolidate the

gold in the remaining rock, and facilitate the process of extraction, no loss in gold can be said to have resulted from the tailings having remained at surface, in some cases for as loug a period as eight years. We have always maintained the value of this property ; and while we have no wish to generate inflated views respecting it, we think investors should be made acquainted with the actual facts. Most of these are strikingly set forth in the circular of Messrs. Lockwood and Co., which appears in another column. This circular, though not devoid of the ornate language of similar productions, yet furnishes a series of strikiug details which the reader should peruse with care, and which the investor may act upon with profit.

THE NOTTINGHAM AND DERBY WATER-GAS CO., LIMITED.

The esteem in which water-gas is held by the public is shown by the price of the shares of the British Water-Gas Syndicate. The application of water-gas is capable of such enormous expansion, and its position as a commercial success is so assured, that the plan of granting to subsidiary companies the use, for a consideration, of its patent rights, is one that must commend itself as judicious both from the business and the economical point of view. It would be impossible for a single company to overtake the immense amount of work which the possession of a patent like this, if properly manipulated, would involve, and therefore the delegation of its powers to distinct districts is, as we have intimated, advisable from every point of view. The latest comer is the Nottingham and Derby Water-Gas Company, Limited, which has been formed with a capital of 151,000*l*., in 30,000 shares of 5*l*. each. A strong local board has been formed, with a knowledge of the district, and what is, perhaps, of more importance, with a knowledge of business. The object of the company may be briefly stated to be the purchase for the sum of 101,000*l*., the patents of the British Water-Gas Syndicate for the largely-populated and industrial counties of Nottingham and Derby. We have on a former occasion pointed out that these patent rights secure to the company the means of providing, at a cost for manufacture of 4d. per thousand cubic feet, a light superior to coal gas, and yet having all its convenience of application, and "rivalling in brilliancy the electric light." Then from its heating side this gas is the most powerful at present known, and has produced economical results equal to a saving, in one establishment alone, of 10,000*l*. per annum. It was at the Leeds Forge that this revolu tion was first demonstrated on a practical sale. Coal gas was formerly employed at the very low cost of 1s. 10d. per thousand cubic feet, but the saving before referred to was effected when the British Water-Gas Syndicate's patents came iuto vogue. Hence water-gas, as patented by this particular syndicate, may be said to have passed beyond the stage of experimeut, and to have blossomed into that of complete commercial success. Refereuce is made in the prospectus to the generators of Mr. Alfred Wilson, of Stafford, and 1,000 of them are now employed in steel, iron, copper, brass, glass, foundry, and a vast number of other establishments. The services of this gentleman have been secured as general manager and chief engineer to the British Water-Gas Syndicate, Limited, for a term of five years. Of the purchase-money (101,000*l*.) 50,000*l*. will be paid in cash, 50,000*l*. in fully-paid ordinary shares, and 1,000*l*. in 200 fully-paid founders' shares of 5*l*. each. Of the successful floatation of the company no doubt is entertained. The lists will open on Monday, and close on Tuesday afternoon. The shares of the present company were about 10 premium at one time during the week.

THE VON DAHMEN "SAFETY DYNAMITE" AND EXPLOSIVES CO., LIMITED.

This company has been formed for the purpose of acquiring and working the English and French patents of Baron von Dahmen for improvements in the manufacture of Safety Dynamite, and other Safety Nitro-Glycerine Explosives. It is claimed that the dynamite manufactured by this process possesses all the good qualities of ordinary dynamite, while it is not so sensitive to concussion, and can be transported with comparative safety. It is further stated that the article is unaffected either by exceptional cold or exceptional heat. The purchase price for the English and French patents has been fixed at 50,000*l*., and the company has the right to purchase the patent rights for all other countries and colonies in the world for a further sum of 150,000*l*. The capital of the company is 100,000*l*., in 100,000 shares of 1*l*. each. The subscription list opens to-day, and will close on or before Tuesday, 30th April.

THE MONEY MARKET.

City, Friday Evening.

The Money Market has been extremely easy, but the tendency now is undoubtedly harder, as has always been the case of late on the occurrence of the settlement. The little extra pressure which this imparts tells upon the available supply ; but although the market is subsequently eased, it is evident that the capital afloat must be limited. The Bank return, in fact, indicates this week by week, and it is probable that the present rate of 2½ per cent. may yet prove the lowest of the year, as we have before predicted. Business and trade generally is improving, and with the numerous heavy calls upon the public purse will keep the supply short, in spite of the release of capital locked up from time to time. Discount has been done under 1½ per cent., but the quotation for bills is now 1½, ⅝, and money offering at 1 per cent. is now 1¼, with 1½ per per cent. for loans over the settlement, or for a week. The exchanges have declined, with a good demand for all, but the German, owing to the lower value of money here than on the Continent. The new Indian Three per Cent. Loan for 3,500,000*l*. has been announced. The minimum price is 99 per cent., and tenders are invited for the 30th inst. The Bank return, in spite of a further influx, shows a reduction in the bullion, but as the note circulation has contracted, the reserve is greater at 42⅜ per cent. of the liabilities. The private securities, owing to repayments to the Bank, have fallen off 870,000*l*., and the private securities a million. So scarce has money been to-day that the Stock Exchange settlement virtually dried up the open market, and even necessitated borrowings at the Bank, which is all the more remarkable considering that upwards of 200,000*l*. in gold has arrived from Australia and the States. Short money has fetched 1¾ to 2 per cent., and the minimum charge for discounting three months' bank bills has advanced to 1¾. The Bank to-day received 160,000*l*., chiefly in sovereigns, from Australia. Bar silver was higher at 42⅞d. per oz., but Rupee Paper showed dulness.

At the Stock Exchange the past week, owing to the Easter holidays, has been a broken one, and to add to the general restriction of business, the arrangement of the fortnightly settlement has been in progress. The rates for carrying over speculative bargains ranged from 2 to 3 on Foreign Government Bonds, and from 2½ to 3½ per cent. on American Railway Securities, while on Home Railways the rates were decidedly stiffer, ranging from ¾ per cent. on Brighton "A" downwards, but this was mainly owing to this being a 19-day account. Political affairs have been a little more lively, and General Boulanger has sought an asylum on our hospitable shores, after being quietly requested to "move on" by the Belgian authorities. In Vienna the authorities are troubled by the riots in connection with the tramway strike, but the disturbances must be laid at the door of the Socialists. The Funds have finally closed unaltered, but rather dull in tone, as the Chancellor intends to raise money on Treasury Bonds in order to pay off Consols and Reduced Three per Cents. Colonial Inscribed Stocks, together with Indian Government Securities, have been very firm, and several of the former have risen ½ to 1 per cent. Foreign Government Bonds, like the rest of the markets, were dull during the first two days, but gradually hardened under the combined influences of cheaper money and Continental buying, and prices have risen on the week about ¼ to ½ per cent. The strongest market, however, has been South American descriptions, and the gold premium has now declined to 56 per cent. Home Railways were dull throughout, and there has been an almost general reduction of ½ to 1½ per cent. The holiday traffic returns were good, but the effect had already been discounted, and those who are purchasing on the strength of the Paris Exhibition will in all probability find that the increased receipts derivable from that quarter have also been fully allowed for. American Railway Securities have gradually picked up, and on the week there is an average gain of ½ to 1, with exceptional advances of 2 to 3 in Denver, Louisville, Norfolk and Western, Texas, Pacific and Wabash Issues. Grand Trunk Stocks rallied on the traffic return, while the dividend on Mexican Second Preference, at the rate of 6 per cent., together with ⅝ per cent. on account of subvention, came quite as a "startler" to the "bears" who hastened to close their accounts, making the price rise over 5 per cent. on Thursday, completing a rise of over 7 per cent. on the week, and 3 to 4 per cent. in the other issues. Miscellaneous Securities were good, but the feature was the rise in Nitrate descriptions and Anglo Cable Stocks, where the "bears" have also been caught "napping."

The Stock Exchange settlement was satisfactorily concluded this afternoon. Business in the various departments was active, and beyond a relapse in Home Railway Securities prices were well maintained. The Funds closed practically unchanged, but firm in tone. Foreign Government Bonds have responded to the higher prices cabled from the Continent, but the feature has been the buoyancy of the low-priced South American Bonds. Guatemala Internal rose 2 ; Honduras, 1¼ ; Mexican Internal, 1¾ ; and Peruvian, ¾ ; but Cedulas were rather weaker. Home Railways have again shewn exceptional weakness, and after some rather sharp fluctuations closed with a considerable loss on the day, ranging from ½ to 1 per cent. on all the active descriptions. American Railway Securities were quite lively, and prices were forced to considerably over New York parity. Cable advices, however, from the other side this evening caused a relapse of ¼ to ½, but still retaining an advance of 8½ to 81 on the day. Denver preferred were particularly in favour, and rose 2 ; Canada Pacific, 1½ ; and Atlantic Firsts, 1¼. Norfolk Preferred at one time was bid for at 55¼, but reacted to 54¾, or still 1 up. Grand Trunk Stocks hardened in sympathy, but the best values were not maintained, while Mexican have given way after the smart advance of yesterday. Anglo-Cable Stocks were easier, but there was a brisk demand for United Telephone Shares, which rose 1, and more activity was displayed in the Nitrate Groups, but the closing was much below the best.

Annexed are the final quotations to-day :—Consols Account, 98 5/16, 98 11/16 ; Egyptian Unified, 92⅛, 92⅜ ; Egyptian Preference, 102⅞, 103⅛ ; French Four-and-a-Half per Cents., 104¾, 105¼ ; Hungarian, 87⅛, 87⅜ ; Italian, 96¼, 96¾ ; Mexican Internal, 34, 34½ ; Peru Five per Cents, 15¼, 15⅜ ; Peru Six per Cents., 17⅛, 17¼ ; Russian, 1873, 103, 103¼ ; Portuguese, 68, 68¼ ; Spanish, 76½, 76⅝ ; Turkish, 1871, 91¾, 92¼ ; Turkish Defence, 100¾, 101¼ ; Caledonian, 117½, 117¾ ; Great Eastern, 76⅛, 77⅛ ; Great Western, 156½, 156¾ ; Brighton "A," 154⅛ 154¾ ; North-Western, 182¾, 183 ; Metropolitan, 89½, 90 ; Metropolitan District, 37½, 38 ; Midland, 144⅜, 144⅝ ; North British, 56¾, 57 ; North-Eastern, 171¾, 172 ; South-Eastern "A," 115⅛, 115⅜ ; Grand Trunk, 10⅝, 10⅞ ; Ditto First Preference 69⅛, 69⅜ ; Ditto Second, 49¼, 49½ ; Ditto Third, 26⅜, 26⅝ ; Guaranteed, 75⅛, 75⅜ xd ; Canadian Pacific, 52⅞, 53⅛ ; Mexican Second Preference, 89, 89¼ ; Denver Preference, 48⅜, 48⅝ ; Erie, 29¾, 30 ; Milwaukee, 66⅞, 67⅛ ; Lake Shore, 105, 106¼ ; Louisville, 69¾, 70 ; Atlantic First, 32⅛, 32⅜ Ontario, 17⅝, 17⅞ ; Ohio, 23¼, 23½ ; Norfolk and Western, 54⅜, 54⅝ ; Reading, 23⅛, 23⅜ ; Reading Bonds, 84¾, 85¼ ; Union Pacific, 62½, 62¾ ; Wabash Preference, 28⅝, 28⅞ ; Ottoman Bank, 12⅛, 12¼ ; Anglo-Telegraph, 52¼, 52¾ ; United Telephone, 16⅛, 16⅜ ; Hudson's Bay, 21⅛, 21⅞ ; Suez Canal, 94, 94½ ; Guinness, 31⅛, 31⅜ ; Allsopp's, 8¾, 9 ; Bryant and May, 13⅜, 13⅝ ; Primitiva Nitrate, 27, 27½ xd ; Nitrate Railways, 23¾, 24¼ ; Water-Gas, 11¼, 11¾ prem.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Wemmer.—The London Agency advises the receipt ex Trojan s.s., of three boxes native gold, containing 1,219 ozs.

Gordon Diamond.—Return of work done at miue for week ending 20th inst. :—Blue ground hauled, 4,900 loads; blue ground washed, 5,700 loads ; value of diamonds produced, 1,800*l*.

Durban-Roodepoort.—The directors propose declaring an interim divideud of 20 per eent. for the eurrent year, at the first annual meeting on the 1st proximo.

South African.—The following particulars of work relate to the week ending March 23rd :—Blue ground hauled, 6,760 loads ; blue ground washed, 5,083 loads ; diamonds obtained, 1,394 carats ; estimated value, 1,394*l*.

Randt Coal.—The directors of the Randt Coal Mining and Land Company, Limited, have received advices from Pretoria that the property purchased by the company was duly trausferred on the 18th inst., and arrangements are made to work the same forthwith.

Johannesburg.—The African Gold Share Investment Company, Limited, have been appointed agents in London to the Johannesburg Coal Company, Limited, and the Monarch Gold Mining Company, Limited. The letters of allotuent to applicants for shares have been posted.

Manica Ophir.—The following telegram has been received from Mr. Arthur Vaughan Williams, the company's representative :—"Arrived at Kimberley ; engaging mining expert and arranging expedition. Will proceed forward at once to Matabeleland *en route* for Manica."

New Akankoo.—The company have sold, through Johnson and Matthey, 155½ ozs. gold, which realised 587*l*. 4s. 8d. Owing to the foundation of the mill having become seriously deteriorated during the long time it has been idle, it could only be worked at half-speed, and was stopped a fortnight for repair. A subsequent telegram advises :—Crushing has now been resumed, and it is hoped will continue without interruption, there being plenty of quartz available.

Ziervogel.—Mr. Beauchamp O. C. Orlebar has been appointed secretary of this company, and the offices have been removed to 209 and 210, Gresham House, Old Broad Street, E.C. We are sure that this appointment will give great satisfaction to those of the shareholders who may have known Mr. Orlebar in connection with the Eaglehawk Consolidated Company. Capt. J. T. Richards, an experienced and successful miniug engineer, has been appoiuted manager of the Ziervogel Gold Mining Company, Limited, and, accompanied by picked miners from Cornwall, leaves for the Cape to-day by the s.s. Norham Castle, to take charge of and to continue the active operations at the company's mines in the Witwatersrandt district, which have been proceediug since the transfer of the property.

Transvaal Gold and Exploration Land.—The following particulars are from manager's advices of 25th March.—Mines : Theta veiu : During week 100 tons were extracted from this vein, assaying 4 ozs. 10 dwts. gold per ton. The vein had improved considerably in size at No. 1,062, and measured 9 ft. thick at some places ; average thickness about 7 ft. At No. 1,061 the stripping had not then got down to the main vein. Beta vein : The weight extracted here during week was 5 tons, assaying 1 oz. 14 dwts. per ton. A paddock was being stripped which was expected to reach the ore next week. Columbian Hill : Several prospecting trenches were cut during week, and numerous veins and leaders had been found, but so far none of them had proved of any practical value, as where not too poor they were too small. Brown's Hill mill : Battery : The battery was at work 118 hours and crushed 143 tons of Theta ore, assaying 3 ozs. 8 dwts. gold per ton. The usual clean up of plates yielded 540 ozs. of amalgam. Pans : The pans were at work for 101 hours and treated 34 tons slimes from Theta ore, assaying 2 ozs. 8 dwts. gold per ton.

Mr. Kynoch, M.P., on Transvaal Gold Shares.—"There is a great depression in gold shares, which will alarm investors in England (writes Mr. Kynoch, M.P., in a just published letter from the Transvaal). The mines are good enough to pay well, generally speaking. I can only hear of some doubtful ones, but they take a longer time to develop than people seem to imagine. Two years with good management, I think, is the minimum time to give a mine a fair chance, and people who can give fancy prices should be prepared to hold on that time. I have visited the Murchison Range, and I find the country grand, very healthy, and rich beyond anything knowu in the world in gold and other metals. A more splendid place for emigration could not be imagined. At the moment there are only a few Kaffirs, who are very civil and attentive, and fully alive to the value of a shilling. There were very few white men, except prospectors, but on my return I met them in increasing numbers. The ground is now pegged off to the extent of 20 miles. There are, however, many more reefs to he found, and as soon as the grass is burnt off (at present it is 7 or 8 ft. long) many more mines will be found. In noue did I find less than 2 ozs. to the ton, and in more than one instance I found over 200 ozs. to the ton. Of course, these last are from selected specimens of quartz, but in each case from one piece weighing several pounds." Mr. Kynoch, M.P., has sent a letter, dated 21st March, to the *Birmingham Gazette*, on the prospects of the emigrating artisan in the Transvaal goldfields. As Johannesburg, the place from which he writes, is increasing rapidly, here must be, he says, "a great and continuous demand for skilled labour ; besides there are many towns springing up in rich mineral centres. For example, Klerksdorp—which had only a few houses in December—is now a considerable place. Boksburg dates from same month, Pietershurg and Snitsdorp from January, and Haerentsburg was begun in February. I know these places and know they are so situated in rich mineral centres they are sure to become important places. Not ouly masons and carpenters are wanted, but every kind of workman. Tailors, shoemakers, milliners, dressmakers, and even clerks are at present in great demand. The difficulty in transit is the only cause to prevent this place having 15,000 people about it before the end of next year. 500 stands for houses were sold for 150,000*l*., and a ground rent of 3,000*l*. a year. In 1885 this land was not worth 5*l*. That will give you an idea of the progress being made."

NOTES ON THE TORREON MINING DISTRICT, PROVINCE OF CHIHUAHUA, MEXICO.

By J. H. Collins, F.G.S.

Situation and Physical Description.—The Mexican Central Railway, on leaving the valley of the Rio Grande at El Paso, runs for over 500 miles through a succession of plains, which are so slightly separated from each other by occasional gentle elevations and depressions as to seem practically one. The surface of the plain, gradually rising from a little over 3,700 ft. above sea level at Paso del Norte (now the City of Juarez), reaches an elevatiou of 5,448 ft. at Gallego, 140 miles to the south, and, after several almost imperceptible undulations, falls again to 3,725 ft. at Lerdo, in the State of Durango, which is over 500 miles south of El Paso.

The average width of this extended plain is from 10 to 15 miles, and it is for the most part bounded by mountains of fantastic form, but moderate elevation on both sides. To the traveller by rail or road these mountains seem much smaller and uearer thau they really are, owing to the prevailing clearness of the atmosphere. Terrazas station, 25 miles north of the city of Chihuahua, is something over 5,000 ft. above sea level, aud here, among the hills on either side of the railway, a new miuing district is being gradually opened up, which bids fair to become of considerable importauce in the immediate future, both for lead and copper, the ores of both being largely enriched by the presence of notable proportions of silver.

Stratigraphy.—The surface of the plain is, like that of most other extensive plains, composed of detrital deposits, aud the detritus is very deep in most places. In some parts it is merely loose sand and gravel, but mostly it is covered by good "buffalo" or other grasses, aud affords sustenance to large herds of cattle. At Terrazas, which is situated midway between two gentle depressions occupied by the rivers of Sauz and Sacramento, a well was sunk some few years ago to a depth of 150 ft. through gravels and sands. On reaching this depth a sort of "hard pan" was broken through, and the water immediately rose to within 70 ft. of the surface, at which depth it is now nearly constant at all seasons of the year, although the annual rainfall is very variable, and in some seasons uo rain falls for many months together. In other places, however, nearer the hills, the detritus is very much thinner, or even altogether absent, and here the strata are seeu to consist of nearly horizontal beds of limestone, precisely similar to that which forms part of the eastern border of the plain in this neighbourhood, and which has been described as Jurassic by the Goverument geologists from the city of Mexico. In this limestone certain fissures have been found containing bones of the horse, deer, and ox, together with those of smaller quadrupeds, and of many birds. Up to the present, I believe, these bones have not been reported upon by any competent paleontologist.

The hills referred to rise to heights of from 600 to 1,200 ft. above the plain. Some are composed of the limestone already mentioned, but tilted up at considerable angles, apparently by intrusions of light-coloured felspar-porphyry and felsite. Others, again, are composed of masses of this same porphyry. Of the up-tilted limestones the hill known as the Cerro de la Cruz is a good example, while the neighbouring Cerro de Magistral is a fine example of the larger felsitic intrusions. Both limestone aud porphyry have been disturbed by subsequent intrusions of garnet-rock, which is in some places, and especially on the hill, known as El Cumbre, almost stratified in appearance, and inclined eastward at a high angle.

General Character of the Ore Deposits.—All the hills in the neighbourhood of Terrazas station seem to be more or less metalliferous, ores of lead, copper, and iron, all more or less highly argentiferous, and some very highly so being found in each of the rocks mentioned, while occasional pockets of true silver ores of great richness have been met with from time to time. The ore occurs in all the rocks, but mostly in close proximity to the garnet-rock intrusions. The porphyry is often stained with copper in various forms, and occasionally distinct ore-masses occur in it, but only near the garnet, and as a rule it is not highly cupriferous. The limestone contains copper in fissures and cavities, where it comes in contact with the garnet, and occasionally elsewhere, but it is rarely cupriferous to any important extent, although some very promising veins of lead ores occur in it.

A great many mines are now being prospected in the foot-hills bounding both sides of the plain, by Mexicans, Americans, English, and even Chinese, and some of these have given tangible results of considerable promise. The most important of the lead mines as yet discovered occur in the group known as La Estrella, now owned and worked by the Kansas City Smelting Company, but the owners of several others have "shipped" one or more car-loads of ore to the El Paso Smelter. The Victorino, lying about 8 miles west of the railway, and lately worked by the Smelting Company of Mexico, is for the present stopped. Copper has been prospected over a considerable area, but the only important workings are those of Messrs. Gosch and Russell. These are known as the Torreon Mines and Smelter ; they are situated about 1 mile from Terrazas station, on the east side of the railway. Here the explorations, though shallow, are of very considerable extent, about 30,000*l*. worth of ore having been raised and sold from workings which are nowhere so much as 100 ft. in vertical depth.

(*To be continued.*)

The National Mortgage and Agency Co. of New Zealand notify their change of address, on and after the 23rd inst., from 37, Lombard Street, to No. 8, Great Winchester Street, E.C.

REPORTS OF MEETINGS.

NEW FLAGSTAFF MINING CO., LIMITED.

THE COMPANY WILL RE-CONSTRUCT—SUCCESS BELIEVED TO BE CERTAIN—MR. BACON AND MR. HOPKINS DO JUSTICE TO PROF. VINCENT—BETTER NEWS FROM THE MINE. AND EVERY ENCOURAGEMENT TO PROCEED.

AN extraordinary general meeting of the shareholders of the New Flagstaff Mining Company was held on Tuesday at Winchester House, Old Broad Street—G. W. Bacon, Esq., in the chair—for the purpose of considering resolutions for the liquidation and re-construction of the company.

Mr. G. T. VERNEY (the secretary) read the notice convening the meeting.

OBJECT OF THE MEETING.

The CHAIRMAN: Gentlemen, my duty as chairman to-day is only formal. You are all aware that at the last meeting a committee was appointed for the purpose of conferring with the board in order that they might arrive at a decision as to the best course for getting the company out of its present difficulties, especially financial. The result of their conferences with the board is the scheme which is set forth in the circular which was sent out on April 13th, together with the resolutions on which the scheme is based. I may say that the board and committee are entirely unanimous in the belief and conclusion that some such scheme is the only way out of our present difficulties, and the only way to preserve the property and provide working capital for carrying on the work of the mine. (Cheers.) Before calling on one of the committee to give you their views I think I ought to notice a short paragraph in a mining newspaper of Saturday, which says :—"A good deal of interest has been aroused, and numerous inquiries are being made of us as to the position and prospects of the New Flagstaff Company. 'Where has all the money gone?' asks one; but the chorus is, with strange unanimity,

'WHERE IS PROFESSOR VINCENT?'

One shareholder would like to know 'what salary or amount of expenses Prof. Vincent has had out of the concern?' Perhaps Mr. Bacon, or someone in authority, will say, and satisfy the pertinent curiosity of our correspondents. Perhaps the information will be forthcoming at the meeting on Tuesday next. As to Prof. Vincent, our information is that he is in, or on his way to, Dakota. His absence is awkward. People will make significant references to rats and sinking ships." In the first place, where has all the money gone? All the money that the last company raised on the mortgage, within a very small sum, has gone to the mine. 4,000*l*. was cabled to the mine within a few days, from its being received. What amount of money has Prof. Vincent had out of the concern? Of course, every balance-sheet has shown every amount Prof. Vincent has had in the past. Since the re-construction of the company he has made one trip to the mine. for which he received the exact amount of his expenses, estimated at 100*l*. That is the total amount he has received since the last re-construction.

JUSTICE TO AN ABSENT MAN.

People will talk of references to sinking ships in connection with Prof. Vincent being obliged to sail for Dakota at a critical moment. In justice to him I may say it was a struggle for him, but he has gone out on probably the most important professional mission he has had. His people first wanted him to go on March 1st, but he said he could not get the Flagstaff on a satisfactory financial basis in that time, and they gave him two weeks. Then he told them he was unable to keep that date, and they gave him till March 27th, when he expected it would be all right. A day or two before the 27th he saw matters were not going to be completed, and I never saw a man more distressed than he was between keeping an engagement entered into, and leaving England before he had got matters settled with regard to the Flagstaff. I want to say one word in regard to

THE DEBENTURE SCHEME

by which the whole debenture debt was converted into shares, because I have received some letters of complaint. Shareholders who converted their debentures into shares will naturally feel disappointed when seeing their shares dropping down to a very low figure, but the following quotation from Prof. Vincent's speech at the meeting on April 24th, 1888, will throw some light upon this point:—"It is a matter of great importance and gratification that the debenture-holders have agreed with cordiality, and not with coercion and hesitation, to take three shares, at the rate of 6*s*. 8*d*. a share, in lieu of every 1*l*. of debentures." A little further on he says that he held 1,740*l*. debentures, and that he saw his way to getting his money back by a short cut by taking shares at 6*s*. 8*d*. The scheme was suggested by the largest debenture-holders." In addition to the 1,740*l*. there were sufficient debentures held by the members of the board to make nearly 4,000*l*. which is almost one-fifth of the entire debenture debt, so that this scheme converts the debentures held by the directors to the extent of nearly 4,000*l*. into shares. I will now call on one of the committee to express his views, or give their views, and any further advice. (Cheers.) It will thus be seen that the directors did not ask the shareholders at large to adopt a scheme which they themselves were not willing to submit to to the extent of their holdings in debentures. This was the best possible evidence they could give of their good faith. (Cheers.)

VIEWS OF AN EXPERIENCED MINING DIRECTOR.

Mr. GEORGE HOPKINS, C.E., said he had been requested by the other members of the committee to report to them verbally the proceedings of the committee since the general meeting. The result of these meetings they had in the circulars which had been sent to them, and which contained the resolutions which would be proposed to them. As matters were very urgent the committee held their first meeting on the same day they were appointed; and, having ascertained the exact state of the company, and being convinced that it would be useless to try to raise sufficient money for what was wanted by way of debentures, they came to the conclusion that the only way money could be raised was by liquidation and re-construction, and the question then arose what amount of further capital was necessary. It was quite evident from the recent letters of the manager—which everyone now regretted were not published from time to time—and also from persons who had visited the property, that it was too good to be abandoned. In a letter which had only come that morning, but which was written before these proceedings commenced, there were satisfactory statements which led them conclusively to the opinion that money only was wanted for further development. The total indebtedness of the company, including the amount borrowed on mortgage and interest accruing, directors' fees, and the account overdrawn from the bankers in America, was a little under 7,000*l*.—in fact, exactly 6,934*l*. That included everything up to this time. Now, as there were 240,000 shares issued by the present company. the committee thought that if a new issue was made with 1*s*. credited on each share—that was giving the new company 2*s*. per share on a total of 24,000*l*.—it would be ample for all purposes; because, after paying off the mortgage, which would be the first thing to do, and their debts, there would be 17,000*l*. left in hand for further operations. They did not discuss the question of whether the tunnel which was spoken of should be made or not, as they thought that question might very well remain till sufficient ore bodies had been discovered. Their view was that there should be

DOUBLE THE AMOUNT SPENT IN EXPLORATION

than there had been hitherto. They had spent 400*l*. a month, but they thought that might be well increased, because it was not worth while spending more time over the developments than necessary, and if that was increased to 800*l*., or even 1,000*l*. a month, there would be sufficient for a year or 18 months' working. Speaking for himself, he should say that if with the money which was proposed to be raised the Flagstaff could not be put into a profitable state, it would be just as well to drop it and look upon it as a bad debt. Having come to that conclusion, the committee had very little to do but to lay their views before the directors, who at once instructed their solicitor and secretary to take the necessary steps to prepare the resolutions and forward them to the shareholders. It would be no part of his duty to move these resolutions—that would more properly come from the chairman; and he would say this, that being the recommendations of the committee they were anxious and desirous that these resolutions should be passed, and they hoped unanimously.

THE MORTGAGE.

They had not gone into the question of the mortgage or how it was brought about, whether regularly or irregularly, as they thought it was hardly worth while. If irregularly it was done in good faith; because out of 4,500*l*. which had been raised, part on mortgage and part otherwise, 4,000*l*. of the amount had been cabled to the mine for the purpose of laying in supplies and coal for the winter, without which the mine would have had to be shut down. He need not enlarge on what the chairman had said about Prof. Vincent. He knew that he was very much annoyed at having to leave the company in a critical moment, but he had entered into an engagement to go out, and was disappointed at not having raised the money as expected, and was very vexed that he was obliged to leave England at that particular moment.

THE NEW BOARD.

One important question that was referred to the committee was the strengthening of the board of directors, and they thought it was very desirable that some of the gentlemen who had been in office for some time, and knew all the details of the work of the company, should be appointed directors to the new company, and the committee recommended that, in addition to Mr. Bacon, Dr. Dunhill, and Mr. Burnell, four members of the committee should be appointed. Those four would be Messrs. Bolton, Partridge, Urwick and Zuccani. That would give them seven directors. Prof. Vincent would most likely be away for six months, and, therefore, they thought it would be desirable for the present to leave his name out. He was sure he would not take umbrage at that. They all knew what a child this Flagstaff Mine had been of his, how he had laboured for it, and how sanguine he had been—at times, perhaps, too sanguine. But he was always sincere, and conscientiously believed that the mine would become a very valuable property, and he was sure he would think so now. He thought with the gentlemen he had named they would have a good strong board, some having had experience of the mine, and others who had had extensive experience with the management of other mines, and who would bring to the board a very considerable amount of ability.

A SHAREHOLDER suggested that it would be interesting to hear the last advices from the mine to which reference had been made.

The CHAIRMAN said they had just received a letter from the foreman. which more than corroborated the previous reports handed them at the last meeting. He would ask the secretary to read the letter.

LATEST NEWS.

The SECRETARY then read the following letter :—"Flagstaff Mine. Alta, Utah, April 6th, 1889. Sir,—In the last week the operations have been continued in the following places: Level No. 7 No. 2 west drift north is in 125 ft., and good ground continues. Cross-cut No. 2 south is in 183 ft.; the soapy limestone is all gone, and there is at present very hard ground. It is my opinion that after going through this belt of hard rocks we shall come into ore grounds. Level No. 8: The Bonanza drift is up 23 ft. (drift and incline together 74 ft.) It is very good looking for getting ore. This morning we found some pieces of rich ore; again, the formation is more broken up than it has been, but the main streak continues. Bonanza drift west, which I started last Saturday morning, is in 15 ft, and has very good appearances of getting ore. I also found silver-lead ore in this place this morning. According to the appearances, I think that I can for sure say that a body of rich ore is to be got on the lode, but whether I can best find the body by drifting. raising, or sinking, is a question which I cannot answer; but that there is ore I am sure. The black winze is down 25 ft.; the ground is very tough. and there are sand-holes in the rocks, which give a lot of trouble, because when such a hole is struck with the drills we cannot drill any deeper. and very seldom this hole breaks when blasting. Level No. 9 north cross-cut is in 292 ft.; the ground is very good, and the lode continues. This morning I did find several pieces of silver-lead ore in the place also, and the general appearance is very good.

The water is increasing, but not to do us any disturbance yet, and I do not think that it will be necessary this spring to move out from No. 9 on account of the water. The weather is very good, and the snow on the Flagstaff Hill is almost gone ; there is good reason for thinking the tramway will be opened about May 1st.—Albert Hagen, Foreman."

RESOLUTIONS AND THANKS.

The Chairman then moved : "That the New Flagstaff Mining Company, Limited, be wound up voluntarily, under the provisions of the Companies Acts, 1862 and 1867."

Mr. Bolton seconded the motion, which was carried unanimously.

The Chairman next moved : "That, pursuant to section 161 of the Companies Act, 1862, the liquidator be, and he is hereby, authorised to sell and transfer (subject to one provision being made for dissentient shareholders, if any) all the property and assets of the company to a new company upon the terms of the scheme of re-construction now submitted to the meeting and identified by the signature of the chairman, and to enter into all necessary agreements for that purpose."

Mr. Bolton seconded, and the resolution was carried unanimously

The Solicitor (Mr. Snell) then read the terms of re-construction as referred to by Mr. Hopkins.

A Shareholder asked if there was any certainty that all the shares in the new company would be taken up, so as to give the whole 24,000*l.* capital ? Also whether Prof. Vincent, who was abroad, would be able to take his quota of the new shares ?

The Chairman replied that there were parties ready to take any shares that might through any cause be forfeited, and that Prof. Vincent, after all his years of persistent efforts in the company, was the last man to let any of his shares be forfeited.

Mr. Snell remarked that arrangements would no doubt be made to meet any special case where the shareholder was abroad by giving the necessary extension of time for them to be communicated with.

Several shareholders having come forward with calls in advance to meet current expenses at the mine, the meeting closed with a vote of thanks to Mr. Bacon for presiding, and one to the board and the committee.

MARKE VALLEY MINE.

IMPROVED POSITION—A CHAIRMAN WHO VISITS HIS MINE—CALL OF 1s. 6d.—PROBABLE JUNCTION OF LODES.

The quarterly meeting of this company was held at the Offices of Wheal Grenville Mine on Wednesday—Francis G. Lane, Esq., presiding.

The notice calling the meeting was read by the Secretary (Mr. John Harding.)

The accounts show that the tin sold realised 1,270*l.* 12s. 11d. ; the shares relinquished yielded a profit of 6*l.* when sold, as compared with the amount due upon calls, and the balance against the mine was 125*l.* 12s. 5d. ; the balance due to the bank was 341*l.* 19s. 1d. ; and the calls in arrear were 216*l.* 6s. 10d.

Mr. Schofield : What is the difference in the returns ?

Capt. George : About 1½ tons on the quarter.

GOOD FINANCIAL POSITION.

The Chairman : Gentlemen, you have heard the statement of accounts read to you, and also the report of the agents. Comparing the present accounts with those of the previous quarter, I think we may congratulate ourselves that we are in as good a position as we expected to be at the last meeting. We then owed to the bank a balance of 1,020*l.* 4s. 7d. We took credit for a quantity of tin which was about to be sold, but had not been realised. The estimate given was 850*l.*, which at the time was a very fair one. That tin realised 871*l.* 5s. 7d., therefore, we ought to give our agents credit for not over-estimating the returns, as is so frequently done in other cases. Then we took credit as assets for 433*l.* 15s. 10d., upon calls in arrear and due on relinquished shares. It was doubtful at the time whether anything like the amount owing on the relinquished shares would have been returned. However, your committee decided to offer the shares to the existing holders at the amount of money then due upon them. It is satisfactory for us to inform you that the number of shares applied for was nearly double the number that had to be allotted. Consequently, many had to go very short, and therefore, the committee had to use a great deal of discrimination in allotting to the old shareholders in as fair a proportion as they possibly could—knowing their shares had cost them a very large sum. After the allotment, further applications for these shares were made to the secretary, and consequently we now find ourselves with the calls in arrear amounting to 216*l.* 6s. 10d., as per audited account. Since these accounts were made up about 30*l.* has been received ; therefore, the amount of calls in arrear stands in a very favourable position as compared with the previous meeting. Our tin sales have not amounted to the quantity we calculated upon at the last meeting ; neither has the price obtained by us been as much as we anticipated. In fact, the falling off of the price obtained for our tin between this and the previous quarter is nearly 4*l.* per ton. The quantity of tin sold was about 1½ tons less than in the previous quarter. This I will account for when I deal with the report, but for this decrease in the sale of tin and the amount realised being so much less than in the previous quarter, our accounts at the present time would be about even, our liabilities and assets would just about balance, so that there would be no balance against the mine, as, unfortunately, there is at the present time.

Mr. Schofield : What was the balance in favour of the mine last time ?

APPROACHING AN INTERESTING POINT.

The Chairman : We are about 320*l.* worse than last time. Now, as regards the position of the mine itself—at the last meeting we held out hopes that our shaft would be going down, after certain preparatory work, at what we were led to expect would be a rapid rate, and we were also induced to believe that in the 15-fm. level driving east we should meet with a junction of the south lode and a lode we were then driving upon. Unfortunately, we have had a very wet season. It affected our stopes in the back of the adit, where we were getting a very fair return of tin, by a run from surface down to the adit, of several hundred tons of stuff. This stuff falling down choked up the level. The water got into our shaft, and for some days—in fact, for nearly a fortnight—so that our operations were limited to getting the water out of the shaft and clearing the stuff out of the level, to enable the men to go thoroughly to work in a proper manner. In our adit level driving west, and our midway level, and our 15-fm. level, we have three very good ends. In the 15-fm. level we have driven through a course of tin from 10 fms. to 15 fms. in length. Our 25-fm. level coming up towards this piece of ground we now find to be on a part of the lode, which has not proved to be productive—therefore, we are driving a cross-cut which we expect in 2½ fms. further driving to intersect the course of tin driven on in the adit, the midway and the 15-fm. level. Should it turn out anything like we have in the levels above it will place us in a very good position, and there is every prospect that it will do so. The cross-cut is behind this course of tin ground.

JUNCTION OF LODES.

In the 15-fm. level east we have driven 8½ fms. The lode has been changeable, although at times producing ore. The ground is favourable for driving, and estimating the south lode to continue in the same bearing as that already opened on, we expect to reach the junction of the two lodes. The south lode has proved to be productive. We drove upon that lode at the 15-fm. level just a few fathoms nearer the shaft. If this lode in forming a junction with the main lode should alter its character, as we believe it will, and lead to a bunch of tin, we have great prospects then for driving our bottom levels—the 25, the 36, &c. Our eyes will be opened as to what we may expect in depth in the eastern part of the mine. In the shaft a course of elvan has come in during the past month, and has given us some trouble. We are free through that now, and in a beautiful course of granite. The granite in the bottom of the shaft is favourable, and I believe that the prospects of our finding a good lode at the next level, which we anticipate, when we hope to be under all the decomposed granite we have hitherto had, and under that heavy course of unmineralised ground which has given us so much trouble—I say, we have now the prospect of a very different state of things coming about. I think we can congratulate ourselves that the mine is in a much better position than formerly. We are being enlightened as to the prospects of our workings. I do not think I can say anything more respecting the mine except that our machinery (I was on the mine this week) is in a very excellent position. We are now working with only 48 heads of stamps.

CRUSHINGS.

We are crushing from 275 to 300 tons of stuff per week ; unfortunately, our tinstuff only turns out about 20 lbs. of tin to the ton, though last quarter it was only 18 lbs., but our present appearances in the western part of the mine, and the hope we have in the eastern part at the junction of the lodes, give us the prospect that we shall get into more congenial ground, and that the tin will be more valuable. We hope a continuous prosecution of the mine will show it to be much better than it has been in the past, and consequently we may expect better returns than we have hitherto had. With these remarks, gentlemen, I beg to propose "That the statement of accounts now presented, together with the agent's report, be received and adopted.,'

DISCUSSION.

Mr. William Bellingham seconded the motion.

Mr. Schofield : I suppose that tinstuff is worth only about 10s. the ton ?

Capt. George : About that now. I should like to prove the two lodes at the junction, because it will throw light on our deeper workings. Then there is the 25 west, which we have reason to hope and believe will reveal a very good lode. From the back of the adit to the 15 the lode has held down, and has never looked better than it does now. The cross-cut is being driven on to get to that. Going east is a speculation, but one that is perfectly justified and legitimate. The lodes are coming together under the most favourable conditions.

Mr. Schofield : Phœnix Mine is deeper than ours.

Capt. George : Yes, they are down to 220 fms. It is not more than a quarter of a mile from us, and only one piece of ground intervening. They are selling 60 tons a month.

Mr. Schofield : How much did we sell last quarter ?

RETURNS WILL BE KEPT UP.

Capt. George : 28½ tons, and we fully expect to keep it up. Indeed if we cut the lode going east we hope considerably to increase the returns. The Phœnix lode is parallel with ours.

The Chairman : We are in a thoroughly mineralised district with tin mines on either side.

Mr. Bellingham : Has the Wheal Jenkin Mine ever been proved to be rich in any other mine than Phœnix ?

Capt. George : It has been worked on a long adit level, but never systematically in depth.

The report was unanimously adopted.

The Chairman : Your committee have gone into an estimate regarding the requirements of the coming quarter. We always like to be on the safe side. We do not like to ask you for too much, and we hesitate to ask you for too little. Our workings during the next quarter will be upon a little more extended scale than in the past, and we hope we shall not be delayed by unforeseen events such as we have had to experience during the last few months. We calculate we shall require from 600*l.* to 620*l.*, besides the returns of tin ; therefore if we make a call of 1s. 6d. per share it will be fully sufficient to pay our costs and keep us with a clear book. I therefore beg to propose a call of 1s. 6d. per share. Everything is charged up to the latest possible date, and these accounts are made to the 19th April. Our tin being sold by ticket, we are obliged to sample a few days before our cost is met. The tin was sampled on the 16th April, although the money was only obtained last Saturday, but the labour costs and merchants' bills were made up to the 19th April.

Mr. James Read seconded the motion, which was carried.

The Chairman : If it had not been for the fall in tin and the interruption of working, a call of 1s. would have been sufficient. We are doing a very large amount of exploratory work, and our shaft,

which is bringing us no return whatever, is costing about 100*l*. a month.

Mr. Schofield: How deep do you propose to go before making another level?

Capt. George: To the 100.

KINDLY FEELINGS TOWARDS THE SECRETARY.

The Chairman: Under the old company's deed we had certain resolutions passed only at annual meetings. At these it was necessary to elect the auditor and secretary. For some time past the election of auditor was dropped, and it was only at a meeting six months ago that it was decided to resume the practice. To-day it will be necessary to re-elect our secretary for the next 12 months. I think Mr. Harding has always performed his duties most efficiently. (Cheers.) During the 20 years I have been connected with the mine I have never heard a complaint against him. (Hear, hear.)

Mr. Schofield: I have great pleasure in moving that resolution. I am sure that what the chairman has said will be endorsed by us all. Mr. Harding is always courteous, and ready to answer all enquiries. He does so in a most comprehensive and satisfactory manner. How many years have you been with us?

Mr. Harding: 43. (Cheers.)

The motion was carried unanimously.

Mr. Harding: I am very much obliged to you for the confidence you have always placed in me during the 43 years it has been my pleasure to serve the company. I hope I shall continue to do my duty in a way that will satisfy both the shareholders and the committee.

PLEASING REMINISCENCE.

Mr. Pegler: During that time Mr. Harding has had the pleasure of paying the shareholders very large dividends, and I hope that that time will recur. The mine used to pay 4s. and 5s. per quarter, mainly out of copper. (Hear, hear.)

Mr. Harding: 7*l*. 19s. per share, or over 70,000*l*.

Mr. Schofield proposed, "That the next general meeting be held special for the purpose of forfeiting all shares on which two or more calls may then be due, and that the secretary be instructed to give the necessary notice to the parties concerned, in accordance with the Stannaries Act."

The motion was seconded, and carried unanimously.

The meeting was then made special.

The Chairman called attention to the share register, and said that special notice had been given to all those in arrear of call. The shares they held numbered 456, and it was distiuctly notified that the power to forfeit at this meeting would be exercised. He proposed "That the shares now in arrear of two or more calls, and in respect of which notice of forfeiture had been given, pursuant to the Stannaries Act 1869, be, and are hereby, declared forfeited, and that the said shares be carried to the forfeited shares account, pursuant to the said Act, and be sold and otherwise disposed of in such manner, and at such prices, or upon such terms, as the committee may determine."

Mr. Pegler seconded the motion, which was carried.

Mr. Pegler proposed a vote of thanks to the chairman for his great attention to the affairs of the company, one proof of which was that which he had just mentioned—that he had visited the mine.

Mr. Schofield seconded the motion, which was carried.

The Chairman: I shall continue to do my best for the benefit of the adventurers—for in working for them I am working for myself. I trust that we may all witness a return of the former prosperity of the mine.

The proceedings then closed.

LATEST REPORT.

22nd April.—Gentlemen, since the last meeting the preparatory work then referred to, as requiring to be done before the sinking could be resumed, has been completed, and the shaft has been sunk 3½ fms. below the 84; the necessary ground cut for pole connection, as well as for bearers and cistern, &c., and although the progress has not since been quite equal to our expectations, it is to be accounted for by our having had a troublesome run of ground by the side of the shaft requiring to be close timbered, while the ground in the shaft has been solid granite; however, we hope in future to benefit from this, having underlayed out in the shaft, and when the plunger lift has been fixed we expect to make better progress. Having found the course of the drivages on the most productive parts of the lode, as recently opened on in the adit, midway, and 15-fm. levels, to be altogether south of the 25, we have driven a cross-cut south from the end 6½ fms., and after calculating on a fair underlay, expect to intersect the same part by driving 2½ fms. further, and seeing the 15-fm. level has been driven through a profitable run of ground about 15 fms. in length, we consider this a very important point to reach, and it will also throw some light on the deeper workings. The 15 east has been driven 8½ fms., where the lode has been changeable, although at times producing some good samples of tinstuff; the ground continues favourable for driving, and assuming the south lode continues the same bearing as already opened on, we expect very shortly to reach the junction of the two lodes. The 15-fm. level west has been driven 5 fms. 1 ft., where the part of the lode carried is worth 6*l*. to 8*l*. per fm. A pair of men are employed in stripping down the side and stoping the back some distance behind the end, which is worth 15*l*. per fm. The midway level east has been holed to a former stope, the men having since been employed in stoping the back; worth 6*l*. per fm. This level has been driven west 9 fms. 1 ft., which has laid open some profitable ground, while the lode in the present end is disordered and unproductive; but judging from the level over, we expect an early improvement. There is one stope being worked below this level worth 10*l*. per fm., and two above worth 10*l*. and 12*l*. per fm. The adit level has been driven west 5 fms., laying open stoping ground, and is at present a very promising looking end. There are two stopes being worked below the adit east, worth 10*l*. and 12*l*. per fm. On reviewing the work of the past quarter, we regret that the returns have not been equal to the former, but this has to be accounted for from circumstances over which we had no control. A very heavy fall of snow, followed by a rapid and sudden thaw, caused a rush of water to flow down through the old men's workings, and carrying a large quantity of stuff into two of our principal stopes, which is being cleared, and we hope soon to resume the workings.—W. George, F. Renals.

HILL'S WATERFALL ESTATE AND GOLD MINING CO., LIMITED.

THE TITLE SECURED—40 HEAD OF STAMPS SENT TO THE PROPERTY—APPOINTMENT OF MANAGER.

The first ordinary general meeting of the shareholders in Hill's Waterfall Estate and Gold Mining Company, Limited, was held at Winchester House, Old Broad Street, on Tuesday, the 23rd April.—Mr. D. King presided.

Mr. J. Jameson Truran (secretary) read the notice convening the meeting.

THE TITLE TO THE PROPERTY.

The Chairman: Gentlemen, doubtless you are aware this is a statutory meeting, which we are compelled to hold according to the Act of 1867. Therefore, we have not much to bring before you, but we think it right that you should know what we have done since the formation of the company. The company was registered on the 2nd January, and allotment was made on the 15th January. As soon as the company was formed, the first thing your directors did after they assumed authority was to see that we had a proper title to the property. We put ourselves at once in communication with Messrs. Cooper and Schultz, the solicitors in South Africa, who, we believe, are second to none. Mr. Cooper at that time happened to be in London, and hence it is that we had two or three interviews with him, and he endeavoured to put us straight wherein we might have been wrong. He recommended that 25,000*l*. should be sent at once through the Bank of Africa, which was done, in order that it might be paid to those from whom the property had been bought. The 25,000*l*. was sent out, and was lodged in the Bank of Africa, at the disposal of Messrs. Cooper and Schultz, to see that a proper title was given to the property. There was some considerable delay before this was accomplished. The person who was entitled to the money at that time was away, and that is how the delay took place. However, the solicitors there ultimately got the freehold of the estate transferred to the company, and we felt a little easier in our minds that we had got so valuable a property under our control. Seeing we had got the property transferred to the company, we endeavoured at once to put ourselves in touch with the local committee, both by telegrams and letters. We waited long and patiently, but received no reply either to our telegrams or our letters, and some considerable time elapsed before we could get any account whatever from them. We did ultimately, however, get a short letter from Mr. Thomas, stating that he had surveyed the property, and that he would send us full instructions as to what was needed for the work in the way of machinery, so that we might get to work as soon as possible.

APPOINTMENT OF MANAGER.

Seeing that we were in this dilemma—not being able to get any of our telegrams answered—we thought to save time—and as a very suitable man offered, that we could not do better than engage Capt. Pascoe to become manager of the property. We had already contracted for 20 stamps, and those stamps were shipped on the 28th February, and arrived there about 30th March, and I am happy to tell you the manager would arrive there about the same time. He went out by one of the mail packets. Seeing that the stamps arrived there on 30th March, we hope shortly to hear that they have arrived upon the estate, and that the manager will be able to employ labour and get the machinery fixed. We are anxiously waiting for this, and we hope in the course of five or six days, or a fortnight at the most, that we may have news of the machinery being put upon the property. We were all the more anxious to get the machinery out, because we had an eye to the dry season which sets in about the latter part of this month, and will last until the beginning of September, during which time very little can be done in conveying heavy machinery from the railway terminus to the waterfalls, as in the dry season the bullocks can get no fodder, and hence cannot work. For you must bear in mind that from the terminus to Johannesburg is a distance of about 140 miles, and hence it is that the machinery has to be conveyed by bullock vans, and transportation takes some considerable time. You must also bear in mind that they do not move so fast in South Africa as we do in England, and hence the delay. You may, however, rely upon it, that as far as the directors are concerned,

NO TIME WILL BE LOST,

and everything will be done, to facilitate our business in South Africa. I said we wrote to the committee out there on the 18th January and got no answer. The first letter we got from Mr. Hosking was received on the 16th April, and if we had not taken the bull by the horns we should have been a very long way behind, but we thought it best to engage freight and send out machinery at once. The manager we have engaged has been connected with mining from his boyhood, and we think in him we shall have a very useful man, and we trust by and by good results will accrue. I might here state that

THE WATERFALL IS A SPLENDID PROPERTY.

On all sides I have been told by men acquainted with it that we have got a very valuable property. In the prospectus you will see the wood upon the property was said to be worth 40,000*l*., but one of my co-directors has heard, on good authority, that it is worth from 60,000*l*. to 80,000*l*. Therefore, we are in a splendid position. The manager we have sent out has got full instructions from us to survey the property, and send a report advising what part of the property, if any, we should dispose of, or whether we had better stick by it and wait results. By and by, no doubt, we shall have great results arising from so great and valuable a property. I do not know that I have anything else to state. We have no reports to give you. We simply come to you with a statement of what we have done, and we have done it to the best of our judgment, and hope it will be satisfactory to you. (Cheers.) With regard to the letters, I might say that those we sent out on the 18th January miscarried, and Mr. Hosking did not receive them until a month or two after.

Mr. Arnold: It would be very satisfactory to the shareholders if

you will be kind enough to read the reply of Mr. Hoskings of the 16th April to your communication.

The Chairman: Certainly, the secretary will read the letter if you wish it.

The Secretary then read the letter.

MISCARRIAGE OF LETTERS.

Mr. Pike: Will you explain why the letters were not correctly addressed?

The Chairman: We believe they were properly addressed.

Mr. Pike: Then how do you account for their non-delivery?

The Chairman: The delivery of letters in South Africa is very different to what it is in England.

Mr. Pike: One would have thought that the address of every mining company would have been known to the post-office.

The Chairman: They were addressed to Hill's Waterfall, but letters there are not delivered by a postman, but everybody has a box, which is numbered, and the letters are sent for.

A Shareholder: Will you be good enough to inform us where your manager previously worked—in what country?

The Chairman: In Australia.

HALF-YEARLY MEETINGS.

A Shareholder: I should like to know when you propose holding your next meeting, and whether the meetings will be aunually or every six months?

The Chairman: The articles provide how we are to hold the meetings, aud we should naturally hold them in accordauce with the articles.

The Shareholder: It is more advantageous to the sharcholders to have meetings every six months. (Hear, hear.)

Mr. Henwood (director): I may, perhaps, be allowed to state that the articles provide that the next meeting shall be held 12 months after this. I think, however, it is very desirable the directors should be kept in frequent touch with the shareholders, and personally I shall be pleased to have meetings every six months. (Cheers.)

The Chairman: If it is the desire of the meeting we shall be pleased to fall in with it. Those who are in favour of holding a meeting every six months please siguify the same. It is carried unanimously.

A Shareholder: I suppose, Mr. Chairman, it will be necessary to alter the articles of association?

The Chairman: Not at all.

In reply to a question,

The Chairman said it sometimes takes months to get goods up to the mine. They had given instructions for it to be sent at once, but they could not do impossibilities.

A Shareholder asked what sale Mr. Hosking referred to. Was there an offer made or not?

The Chairman: After the allotment we had an offer for two plots—that is, I think, about one-fifth of the property; but we were not then in a position to deal with it. The property had not been transferred to us, and we should have been acting in the dark. I think it was from three weeks to a month before we got a telegram to say the property had been transferred and a proper title given.

The Shareholder: Is the person who made the offer willing to renew it?

The Chairman: No, sir.

THE MANAGER EULOGISED.

Mr. Hosking (shareholder): I should like to make an observation respecting our manager, Mr. Pascoe. I know him to be a man highly respected in the county of Cornwall. His father was the manager of South Frances, and was looked upon as holding the foremost position in the county. I believe the son is equally capable with the father. and I have no doubt the property under his management will be developed as well as it is possible for it to be done. I quite sympathise with the remarks of the chairman as to the difficulties attending the transit of goods from the port to the goldfields. The distance is certainly very great, and I know that the difficulties are sometimes almost insuperable, and it is sometimes months before they arrive. I hope our machinery is there now.

DIFFICULTIES OF TRANSPORT.

Mr. Henwood: It may be satisfactory to shareholders to know something of the difficulties with regard to the transport of goods. A railway in Natal runs up 200 miles, but there is some difficulty in getting the goods up that line as, during the past year, the traffic has more than doubled. When we get to the terminus of the railway we have to use bullock waggons. The transport has to be done between the months of September aud May, or June. During the other months there is no food for the oxen, and therefore goods can scarcely be transported. We are hoping to save this season. I do not expect we shall get any practical results for at least six months, perhaps nine months, so I think we had better be prepared to wait patiently.

A Shareholder: Might I suggest, inasmuch as the difficulties are so great in forwarding the stamps from Natal, our directors may set about sending out the 100 stamps, as I understand only 20 stamps are gone out.

The Chairman: 20 stamps more have gone out, making 40 in all. We have not sent any more because we should not like them to be lying about in the sun, waiting transport.

Mr. Mainwaring: I should like to ask a question about the development of coal — whether you propose to do anything with reference to the development of coal mines? Whether you propose to do it simultaneously with the development of gold; or whether you intend to leave it in abeyance for the present?

The Chairman: We think it best to be content with the gold. By and by, when the thing gets further developed, we might perhaps then think about coal, but we should not think of it without consulting the shareholders. We shall take the shareholders into our confidence in everything.

The Chairman, in answer to another question, said they had sent out the machinery by the shortest route. The manager had full instructions to inspect the entire property and report the same. He (the chairman) hoped in six months' time they would be able to give the shareholders more information than they had to-day. There would be nothing wanting on the part of the directors, and they had nothing to hide from the shareholders.

Mr. Hosking: I should like to suggest that when that report comes to hand it should be circulated amongst the shareholders. (Hear, hear.) If it be agreeable I will move that such be done.

The Chairman: We shall do it without a resolution being passed to the effect.

A Shareholder: A wire came to hand about Christmas time that a new reef had been found. Has that been confirmed?

The Chairman: That was a cable to Mr. Hill.

The Shareholder: Then we have every reason to believe it was quite right.

The Chairman: Yes. I have told you that from all accounts our property is very highly spoken of.

DIRECTORS ARE NOT PROPHETS.

Mr. Gordon: Assuming you get over all these difficulties, what about the prospects of the company? I should like to know what we are going to find there. (Laughter.)

The Chairman: You do not expect the directors to give you an answer to that?

Mr. Gordon: Certainly I do.

Mr. Hosking: I have been over this property more than once, and I broke off portions of the reefs, which you can see as you pass along, which we have washed in the pan, and have seen a very fair show of gold.

Mr. Gordon: How much?

Mr. Hosking: I could not say that. But I do know that the further you go down the richer it is. We do not expect to get very much at the surface.

GOOD ADVICE.

Mr. Seaber: I think it is not wise as shareholders to criticise this property adversely. We are all partners, aud I believe there are a number of gentlemen in the room who know the property well, and it is to me astonishing that any gentleman should expect the directors to tell us what gold is in it. They believe they have got a valuable property, and, as shareholders. it seems to me great folly for us to depreciate it. Let us wait patiently and see.

Mr. Hosking: I have seen specimens of the quartz. Capt. Thomas said that the quartz he received from the Hill's Waterfall was quite equal to that of the City and Suburban.

THANKS TO THE DIRECTORS.

Mr. Green: I should like to propose a vote of thauks to the directors. I must congratulate this meeting upon having on the board a gentleman I have known for many years as a practical man, and thoroughly acquainted with mining. I mean Mr. Henwood, aud I feel quite certain we have a capital pilot on the board. His business experience will be very much at our service, and it is a very great benefit to have him sitting there. Our chairman will also have at his elbow my friend Mr. Hill (the vendor), and from my knowledge of that gentleman, any experience he can impart will be very much at our service. As regards the non-delivery of letters—that is not astonishing to me. There are boxes at Johannesburg, and unless a number is placed upon the letters they do not go into that particular box, aud that is one of the reasons those letters were not delivered. The number was not on them, and they did not get into the company's box. I beg to propose a vote of thanks to the directors for their labour in presiding here to-day.

Mr. Hosking seconded the resolution, which was carried unanimously.

The Chairman, in reply, said they would do the best they could to serve the shareholders.

The proceedings then closed.

THARSIS SULPHUR AND COPPER CO.

EFFECTS OF THE COPPER COLLAPSE—CONTRACTS FULFILLED FOR 14 MONTHS—A DOUBLE DIVIDEND.

The annual meeting was held on Wednesday afternoon in the Merchants' Hall, Glasgow. Sir Charles Tennant, Bart. (chairman of the company), presided.

The Chairman, in moving the adoption of the report, alluded to the contract concluded by the directors a year ago with the Société des Métaux for the whole of their copper production for 1888, 1889 and 1890 at very favourable prices. They had obtained, he mentioned, the guarantee of the Comptoir d'Escompte de Paris, one of the best knowu banking institutions of France, and therefore had every reason to regard their position as perfectly assured. Both these companies, however, after fulfilling their obligations for nearly 14 months, had been compelled to suspend payment, What the ultimate result of the judicial proceedings since instituted might be they could not yet conjecture. In the meantime, it was satisfactory to know that they had been paid in full for all the copper they had delivered, so that their loss was confined to the fall in price—viz., to the difference between their contract price of 68*l.* 10s. for tough copper aud the price which they might be able to realise. This difference on the quantity the company were to take from them for this and the next year—viz., about 21,000 tons—would amount to a serious sum. But for this catastrophe the directors would have been in a position to pay the largest dividend, with one notable exception, ever received by the shareholders. As it was,

THE PRESENT DIVIDEND WAS DOUBLE THAT OF LAST YEAR.

and was higher than the average of the whole 22 years of their history. In addition to their ordinary depreciations, they had written 20,000*l.* off the railway and pier, and 20,000*l.* off the mine. They carried forward 27,527*l.* to the credit of the current year, so that the record for the year was not altogether unsatisfactory. At Tharsis they had pushed on with energy the development of the

LARGE DEPOSIT OF CUPREOUS SCHIST,

which they now regarded as a valuable feature in their property. They were taking from it about 1,000 tons a day, and they had placed upwards of 300,000 tons under treatment for the extraction of the copper. This process was a slow one. Last year they obtained upwards of 800 tons of copper, this year they looked forward to more. In the north lode at Tharsis they had large masses of ore too poor in copper to admit of profitable treatment by calcination. They were now engaged in experiments on these with the view of discovering a simple and economical method of extracting their copper. At Calpas, the uncovering of the lode had gone on vigorously: 320,650 cubic metres of overburden had been removed, and

198,040 tons of mineral raised, against 67,020 last year. The costs of the mine were, as near as possible, the same as those of last year. The costs per ton of mineral delivered in this country were just a farthing per ton less than in 1887. Their deliveries to consumers had been 258,367 tons, against 275,835 in 1887, a decrease of 17,468 tons. Of purple or iron ore they had delivered 189,720 tons —about 22,000 tons in the form of bricks—against 214,463 tons in 1887, and the price obtained had been 1s. 1d. per ton. The yield of silver had been rather less, the Calanas ore being poorer than Tharsis. The mines stood at 300,000*l.*, against 320,000*l.* last year. They had laid out about 10,000*l.* on railway extensions at Calanas, and an increased rolling stock, so that with the depreciation of 20,000*l.* already referred to, the railway and pier stood at 9,834*l.* less than at last balance-sheet. As regarded works, buildings, machinery, they had laid out in Spain about 13,000*l.* on houses, railways, and cementation plant; but they had written off about 20,000*l.*, so that this account stood now at 7,258*l.* less than last year. On the metal works there had been no capital outlay, so that with the usual depreciation they now stood at 9,141*l.* less, being a total reduction on this asset of 16,399*l.* for the year. Stocks-in-trade in Spain were less this year by 2,500*l.* In Britain they amounted to 195,210*l.*, against 257,842*l.* last year, a diminution of 61,632*l.* due to the much reduced values of copper in process. On the other side of the balance-sheet the position of their capital account was unaltered. They had not parted with their 37,670 unissued shares, and it was their intention to hold them for the present. The large item of "deposits at interest," which stood at 219,607*l.* in the last balance-sheet had disappeared, the whole of this amount having been paid off. The railway to Calanas had cost upwards of 138,000*l.*, and for this they deemed it best to have recourse to their powers of increasing their debentures, which were unexhausted to the extent of 188,600*l.* The sales of pyrites were on the same conditions as those of last year. Of iron ore they had nearly placed their whole estimated production for 1889, and hoped, also, to have an opportunity of disposing of part of their old heavy stock. Of copper, their production both here and in Spain was likely to exceed that of last year, and, with an abundant supply of water, their costs should compare favourably. They had enjoyed the benefit of the French contract for about six weeks—viz., up to February 14th, having under it been paid for 935 tons. The remainder of their output would have to be sold, he feared, at the current market values, and what these might be it was impossible to predict.

M. de Berby seconded the motion.

Mr. Todd and the "Overburden."

Mr. David Todd said he had read the report, and taken it *ad avizandum*. (Laughter.) He would, therefore, ask a few questions. In the first place, what was meant by "overburden" at the beginning of the report?

Sir C. Tennant said that "overburden" was the sterile which they took from the top of the mineral.

Mr. Todd then came forward to the platform, stating that "he could stand up before any man," and repeating his question as to the overburden.

Sir C. Tennant explained that it was the sterile which was removed from the mineral that was the earth and stones.

Mr. Todd said he did not believe in that. He only believed in what he could handle, and he could not handle stones or rubbish. (Laughter.)

Sir C. Tennant: Is it the wish of the meeting to hear anything further? (Cries of "No, no.")

Mr. Todd (continuing) asked what was the meaning of the word Calanas, as they were not Portuguese. (Oh, oh.)

Sir C. Tennant: Do any other gentlemen wish to make observations?

Important Questions.

Dr. Carnachan, after referring to the lamentable fiasco made of their arrangements, said that he understood from Sir Charles's remarks last year that their extra profits were likely to amount to 241,500*l.* from the better price they were going to get for their copper. That, as the chairman had said, had been loyally carried out in the past year. Therefore, he thought he was not far wrong if he should have expected that with the net profit for the year added to that, there should have been 386,000*l.* of profit if they got the sum.

Sir C. Tennant: We did not get it, because the production of copper should have been 10,500 tons, and it fell very short of that.

Dr. Carnachan: By 500 tons?

Sir C. Tennant: Very much more, and the value of the stock made a difference of 90,000*l.*

Dr. Carnachan asked where the money came from to pay off 219,000*l.*

Sir C. Tennant: From the current funds.

Mr. Thomson, the secretary, said that instead of putting the money in the bank and receiving only about 2 per cent., they had paid off these loans for which they had been paying 4 per cent.

Dr. Carnachan then stated that he noticed from last year's list of shareholders that 2,665 shares were in the company's own name.

Sir C. Tennant thought that that must be a mistake, and he was sure Mr. Thomson would explain it to him after the meeting.

Dr. Carnachan then expressed pleasure that the shares had not been increased, as had been proposed, and said that if the company wanted money he should like that they issued preference or debenture stock yielding 5 or 6 per cent., so that they might get the benefit of it.

Sir C. Tennant thought the suggestion a good one, but in the meantime they would not issue these shares, unless in the interest of the company.

The report, which declared a dividend of 20 per cent., free of income tax, carrying forward 25,527*l.* to next account, was then unanimously agreed to.

Mr. Collins moved, and Mr. Kincaid seconded, that Mr. Hallbrook Gaskell, Sir James King, Bart., Mr. William M'Ewen, and M. B. De Berby be re-appointed directors, which was agreed to.

Mr. Alex. More, C.A., and Mr. Walter Mackenzie, C.A., were re-appointed the auditors of the company, and

A vote of thanks to the chairman terminated the proceedings.

THE GOLD HILL MINING CO., LIMITED.

Re-construction Resolutions Confirmed.

An extraordinary general meeting was held at Cannon Street Hotel yesterday, for the purpose of confirming as special resolutions the resolutions which were duly passed at an extraordinary general meeting of the company, held on the 29th day of March, and for the appointment of a liquidator or liquidators to carry out the winding-up and re-construction of the company. These have already appeared in the Mining World. Fredk. William Snell, Esq. (chairman of the company), presided.

Mr. R. L. Hobbs (secretary) read the notice calling the meeting.

The Chairman: This meeting is called for the purpose of carrying out the resolutions unanimously adopted on March 29th. The scheme of re-construction was thoroughly discussed at the last meeting, and it is quite unnecessary that it should be referred to now. It presents to the shareholders

The Only Course Conceivable

of saving the money they have put into this mine and possibly of adding to it. The position of the mine is the same as at the last meeting. We have had further news from Mr. Harvey, who says he is quite prepared to carry out any scheme for the further development of the mine which the directors may determine upon. We shall adopt the course which received the unanimous approval of the shareholders at the former meeting—namely, to unwater and sink the Barnhardt shaft, to discover the gold vein which was there at the time Capt. Rickard left, and which he so well described to you at the last meeting. The chairman then proposed the confirmation of the resolutions as passed at the meeting of March 29th.

Mr. Thomas Tregelles seconded the motion, which was carried.

Appointment of Liquidator.

The Chairman proposed the second resolution appointing Mr. Francis Cooper, of 14, Great George Street, liquidator.

Mr. E. S. Holland (director) seconded the motion, which was carried.

The Chairman, in closing the meeting, said that every expedition would be used by the directors so as not to lose the benefit of the fine weather they might expect in America, and which was necessary for the efficient working of the mine.

NEW TERRAS TIN MINING CO., LIMITED.

A Curious Meeting—Proposal to Change the Management.

An extraordinary general meeting of the New Terras Tin Mining Company, Limited, called upon the requisition of Messrs. J. S. Murray and Thomas Fairgrieve, was held at the Cannon Street Hotel yesterday, "for the purpose of making a change in the management of the affairs of the company, either by increasing the number of the committee of management, by discharging the present general managers, or otherwise as may be deemed desirable."

Mr. Fairgrieve proposed that Mr. Murray take the chair.

Mr. Smyth seconded.

Genl. Beresford moved, as an amendment, "That the articles of association been adhered to, which provide that the chairman of the committee of management, or, in his absence, one of the other members of the committee, shall take the chair." He believed the chairman of the committee of management was Capt. Bullock.

Mr. Simpson (solicitor), read from the articles of association the clause referring to the subject, and subsequently Capt. Pelham Bullock was voted to the chair.

The Secretary was called upon to read the notice calling the meeting, but that gentleman stated that he had received no notice to convene it.

Mr. Smyth read the notice, after which

The Solicitor, on behalf of the committee of management, read

A Protest

against these proceedings on the ground—firstly, that the requisition for the meeting had been withdrawn; and, secondly, that the requisitionists had not paid the application or allotment money on the preference shares allotted to them. The committee also protested against Messrs. Murray and Fairgrieve being present and voting, inasmuch as the calls due, and payable in respect of the shares above referred to, were not forthcoming.

The Chairman: Gentlemen, this meeting has been called and opened; we are now at liberty to hear what the requisionists have to say, although we adhere to the protest which has been read to you by the solicitor.

Mr. John S. Murray denied that he had withdrawn the requisition for the meeting.

The Chairman reminded him that at the committee meeting he (Mr. Murray) called upon the then secretary, Mr. Lamb, to produce the letter asking that this special meeting be convened, and that gentleman, after fumbling about in his pocket, discovered it. Although he (the chairman) had been in the office attending to the business of the company, he had never seen that letter until Mr. Lamb produced it from his pocket, nor had the subject even been mentioned. Upon its being produced, however, he (the chairman) asked Mr. Murray if he wished the letter entered on the minutes, but that gentleman replied, "No, I withdraw it," and he put it in his pocket, and that was the last they saw of it.

Mr. Smyth: We are here to-day; can we not go on with the business?

The Solicitor: The committee contend that this meeting is illegal, and intend to protest against all that is done.

Mr. Murray Explains the Object of the Meeting.

Mr. Murray said he was the largest shareholder in the company, and was very much dissatisfied with the management. He joined the company understanding that there was a good lode there, worth from 20 lbs. to 30 lbs. of tin to the ton, and he did not know that it was not so until three years ago, when he joined the committee. He visited the property, but things were always explained away nicely. At last he succeeded in getting a secretary of his own appointed, and he then began to get accurate information respecting the mine. That

nformation was so disappointing that he called this meeting to consider as to the advisability of changing the management, believing that until that was done the mine would never prosper. He had had to find the best part of the money to carry on the mine, and he wished to have it managed in a proper manner. The mine had been examined by a competent man on his (Mr. Murray's) behalf, and the opinion of the expert was that there was a possibility of the thing succeeding, but not so long as the present management had the control. He proposed that Mr. James be removed from the committee of management.

Mr. Smyth asked that the expert's report should be read.

Mr. Murray at first objected, but subsequently did so. The report was made by Mr. Edwards, of St. Austell.

MR. MURRAY FAILS TO BRING A CHARGE AGAINST THE MANAGEMENT.

The Chairman said that Mr. Murray had failed to bring one single charge against the management. (Hear, hear.) He wished to ask Mr. Murray if the lease of the mine was in his possession?

Mr. Murray replied in the affirmative, and said he had paid for it.

The Chairman said that negotiations were being carried on with the landlord, with the view of obtaining a reduction of the royalties and the lease was handed to Mr. Murray, as a member of the committee, who undertook to feel the pulse of the landlord. A new lease had been granted, and it was in Mr. Murray's possession.

MR. MURRAY'S CALLS.

Mr. Murray had not paid his calls, and it was impossible to carry on the company if the funds were not available. A writ had, however, been issued, and it would be served upon that gentleman before he left this room.

After some further discussion a vote was taken on the motion of Mr. Murray that Mr. Jones be removed from the committee of management of the company, and the motion was lost.

A poll was demanded, but the solicitor objected to the proxies and votes given for Mr. Murray on the ground that that gentleman's calls were not paid.

A Valuable Invention.—An invention of Mr. T. J. Murday, of Felton, Northumberland, was recently exhibited. It is intended to record the indications of a barometer, thermometer, steam gauge, water gauge, or any other measuring instruments situated at a distance from the observer. It consists (says the *Newcastle Daily Chronicle*) essentially of a clock situated at the observer's station, with an electro-sympathetic dial fixed in front of the dial of the recording instrument. When an observation is to be taken, the clock hand is brought to zero, and the clockwork train started. The hand on the sympathetic dial and the clock hand move together, as in the A B C telegraph instruments, and as soon as the hand on the sympathetic dial reaches the indicating hand on the barometer or other instrument a contact is made whereby a second current is brought into action and the clock is stopped by an electro-magnet, while a second magnet releases the train of the sympathetic dial, and a spring causes the hand of the dial to return to zero ready for another observation. The hand on the clock dial remains pointing to the same figure as that on the barometer, or other instrument, until it is reset to zero by the observer. The apparatus might be readily employed to record the depth of water in wells or reservoirs or tide gauge, and might possibly be of use in reading electrical instruments such as ampere meters and volt meters at distant stations where current for electric light is distributed over large areas.

THE ANGLO-MEXICAN MINING CO., LIMITED.

REPORT OF THE DIRECTORS.

The directors submit the accounts to 30th September, 1888:—The bullion produced during the year 1887 realized 105,587*l.* 16s. 8d., and for the first nine months of 1888, 81,546*l.* 11s. 9d.; total, 187,134*l.* 8s. 5d. It has been a matter of great regret and annoyance to the directors that, notwithstanding the above output, they have not been in a position hitherto to declare a dividend. On reference to the accounts it will be seen that between 1st January, 1887, and 30th September, 1888, 18,326*l.* 5s. 3d. has been expended on machinery, furnaces, leaching works, &c.; during the same period the debts in Mexico have been reduced from 7,999*l.* 15s. 11d. to 2,222*l.* 11s. 1d., and in London, from 27,614*l.* 16s. 1d. to 10,869*l.* 10s. 10d. The situation of the property demands a very large outlay in the purchase of stores and supplies, which cannot be brought in during the rainy season; and it will be seen from the accounts that the stock of these on hand at the mine on 30th September, 1888, amounted to 25,016*l.* 12s. 2d. The arrangements made with the vendors to take fully-paid shares at par, in lieu of cash, for the balance of purchase-money, have relieved the company of the very serious item of 85,484*l.* 2s. 3d., which stood as a debt owing by them on 31st December, 1886; the 325 founders' shares of 1*l.* each have been surrendered and cancelled, in exchange for 65 ordinary shares of 5*l.* each, fully paid; and the debenture debt and interest, which stood at 19,097*l.* 15s. 2d. on 31st December, 1886, now stands at 10,000*l.* It will thus be seen that the financial position of the company is in a very different position now from what it was formerly; instead of being in debt, both in London and Mexico, the company has balances to its credit in both places, in addition to several consignments of precipitate (silver) unrealised, and the mine is producing steadily and well every month.

The directors are now able to present a profit and loss account, and it will be seen from this that on the 30th September, 1888, there was standing to the credit of revenue a balance of 29,334*l.* 2s. 11d.; since this date the directors have received 6,295*l.*, the proceeds of 54 cases of precipitate (part of the July output), sent from Mazatlan to Hamburg direct, for realization, and two remittances of 5,000*l.* and 4,000*l.* from New York, and it is expected that from this time forward remittances will be received regularly.—G. Hopkins, H. Hopkinson, Directors, J. Ford, Secretary.

LATEST REPORT.

The superintendent, in his report for the week ending 16th March, says:—In the Ultimo winze there is 5 ft. of good ore in sight, but as we have not yet struck the footwall this width is likely to be increased. I consider that the appearance of the bottom of the mine is decidedly encouraging. East drift from No. 1 cross-cut 572-ft. level shows 2 ft. of good ore. East drift from No. 4 cross-cut 572-ft. level shows 3 ft. of ore. West drift from No. 4 cross-cut 572-ft. level shows 3 ft. of ore that looks well. The drifts on the footwall vein 506-ft. level are not looking well. A prospecting winze has been started 50 ft. west of San Marcos shaft. We have struck a well-defined footwall with 5 or 6 ins. of high grade ore; the indications are by no means unfavourable. Work on the main shaft is progressing satisfactorily. We are extracting ore from east side of No. 2 winze 572 ft. level, which furnishes about 42 tons per day. East side of No. 1 winze, 506-ft. level, about 25 tons per day. The balance of our ore comes from west side of No. 2 winze 572-ft. level, and the winze is below the same level. All the stopes are looking well. The weather is much more favourable.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of hard quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms :—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.

"New Mill crushed 29,000 ,, 25 ,, ,, 8.60 fcs. per ton.

"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, APRIL 27, 1889. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE UNITED STATES GOLD PLACERS, LIMITED.

A VIGOROUS EFFORT TO PLACE THE COMPANY ON A SOLID BASIS—RE-CONSTRUCTION A SUCCESS—A VALUABLE PROPERTY—IMPORTANT TESTIMONY—THE MESSRS. GILBERT ADVANCE £18,000.

AN extraordinary general meeting of the members was held at the Great Eastern Hotel, Bishopsgate Street, on Wednesday, "for the purpose of receiving a report of the directors, and to consider, and, if deemed expedient, pass the following resolution, which is intended to take effect under sub-section 3 of section 129 of the Companies' Acts, 1862:—'That it has been proved to the satisfaction of this meeting that the United States Gold Placers, Limited, cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily, and that William Scott, of 3, Broad Street Buildings, London, E.C., the secretary of the company, be, and he is hereby appointed liquidator.'"

The CHAIRMAN: Ladies and Gentlemen, we have met to-day in order to carry resolutions to re-construct the company, but before making any further observations I will call upon the secretary to read the notice calling the meeting.

Mr. WILLIAM SCOTT read the notice.

HOW THE COMPANY HAS BEEN SUPPORTED.

The CHAIRMAN: We have met to-day under rather painful circumstances, probably, to some of us here. It is necessary to find a considerable sum of money in order to place the company in a position to make such returns as would realise the reports we have hitherto had. This company so far has been supported in the past by about 20 people. They have found the money necessary to carry on the works to the present time. We have arrived at this position now through unforeseen circumstances in America, that the ditch not being of the stability we could have wished it was necessary to find money to improve and enlarge it with a view to giviug us a return three times larger than we could possibly have had before. I do not know that I can do better than recapitulate the report which has beeu issued to the shareholders. There have been great changes in the board—changes which have thrust me into this position. We have lost oue valuable colleague in Admi. Soady—a man whom most of you knew—a very good man—and a man to whose memory this slight tribute is due. (Hear, hear.) Circumstances have thrust me into the position of your chairman, and I will do the best I can to elucidate the facts in connection with the company. I have been secretary up to a certain point, and now I have had conferred upon me the honour of chairmanship. It was impossible, as I soon found, to go on without money.

PROPERTY RICH BEYOND DOUBT.

We have proved beyond doubt that the property is rich, that the gold is there, aud that it is to be obtained, but it is no use attempting to get it without capital. That goes without saying. I have struggled myself with a few friends to supply the necessary means. At the present time I am at least 12,000*l.* out of pocket, and my son is 6,000*l.*, so that you see we have had faith in the company. (Cheers.)

12,000*l.* WORTH OF FAITH.

I have 12,000*l.* worth of faith in it, and I am sure that if we carry this re-construction we shall be in such a position as will bring about the divideud for which we have been so long and so anxiously waitiug. I beg to move the resolution as read by the secretary. (Cheers.)

Mr. BYRNE: If you have advanced 18,000*l.*, how will 21,000*l.* supply us with the requisite capital?

The CHAIRMAN: I may say that I will leave my 12,000*l.* until the shareholders can conveniently pay them. (Loud cheers.)

Mr. BYRNE: Has that been advanced in cash?

The CHAIRMAN: All in hard cash.

Mr. BYRNE: Is the company liable for the immediate payment of it at call?

GENEROSITY OF THE CHAIRMAN.

The CHAIRMAN: Certainly the company is liable to me for 12,000*l.*, but I am not going to press for it. That is the object of the re-construction. If I felt inclined to press the company for that 12,000*l.*, and the other claims, I should have wound it up loug ago, but I have not wished to do that—my desire being that every shareholder should step in and reap the future advantages this company will afford. (Cheers.)

Mr. WILSON: I have no hesitation whatever in seconding this resolution. I do not see what else we can do. If we fail to carry this resolution our money will be lost. I have not been at all satisfied with the working of the company from the beginning. I think the directors have been very short-sighted, and ought to have rendered a better account of their stewardship than they have done. Still, facts must be faced, and unless we face them to-day, I repeat, our money will be lost. The scheme of re-construction seems to be very good, and I take as its guiding point that Mr. Gilbert, jun., has advanced 6,000*l.* I am strongly of opinion they would not have done so if there had not been some grounds for their confidence. If for no other reason than this I would second the resolution. (Hear, hear.) If the comany fails Mr. Gilbert will lose his money, but he has beeu on the spot, and, recognising the value of the property, he has advanced 6,000*l.* I do not know that whether out of the 21,000*l.* sought to be made by this scheme the 6,000*l.* has to be paid, or whether Mr. Gilbert, jun., will be as forbearing as Mr. Gilbert, sen., and whether he will wait for the results of the mine before he seeks a return. I earnestly trust the shareholders will support this re-construction scheme, because if they do so it will put the company on a better basis than it has ever occupied before. (Cheers.)

A GROUNDLESS FEAR.

Mr. FIELD was anxious to know whether shareholders would be liable for the 15*s.* credited as paid on each 1*l.* share. There was some doubt about it.

Mr. CHAVE (solicitor to the company): No such obligation will come under this re-construction. This scheme has been very carefully settled by counsel. I have had the opinion of the best counsel of the Bar upon it, and possibly I have avoided several difficulties which other companies have fallen into. (Cheers.) I have uo hesitation in saying that any shareholder who joins this scheme will not be liable to pay up the 15*s.* a share.

The motion was carried *nem. con.*

SHAREHOLDERS' MOTTO—"SUPPORT YOUR MARKET."

The CHAIRMAN: That resolution being passed, you have arrived at this point, which I beg you to not lose sight of—that our shares have been dwindling down, aud the reason of that I will explain. Unless you support your market the shares must go down. I could not support your market and the company too. Gentlemen, I supported the company. (Cheers.) The market had to go. The stockbrokers are very cute gentlemen, and knew we were living from hand to mouth, and that consequently there was no backbone to the company. Well, that sent the shares down. Now, if the re-construction be carried through you will put your company on a splendid basis. You will not only let the stockbrokers and the market, but the public generally, know that we have money at our back. aud then your shares will rise. They will never be so low as they have been, and in all probability they will rise to par. That is a matter of certainty. Most of you understand the market, and you will readily agree with me when I say that with a good reserve of capital at our back the shares will be worth three times the amount of money that they would be without it.

Mr. BYRNE: Where will the reserve come from when we have 18,000*l.* of debts?

The CHAIRMAN: You have a reserve of 2*s.* uncalled. I do not suppose it will ever be called up, and the last report of Mr. Madden is very satisfactory. That being so, I thiuk you may look upon the 2*s.* in the light of a reserve fund.

Mr. BYRNE: If the shareholders could be assured that the 21,000*l.* would be used for the benefit of the company entirely, there would be no difficulty in having the whole of the shares immediately subscribed.

PLAIN FACTS.

The CHAIRMAN: I will answer that very simply. I think I have shown my honesty of purpose by advancing this money in the way I have done. (Cheers.) If I had not advanced it I could have sold the company up 12 months ago, but I have not done so. If I had intended that, why have I called you together now? I need not have asked you to subscribe. I would rather have the property, but I do not want it. I want you all to have the benefit which we know must come if the property be worked. Here is Mr. Deacon, who has visited it at his own cost. aud he can substantiate everything that has been said about it. What are the debts besides the 18,000*l.*?

The CHAIRMAN: About 6,000*l.* at the mine. There was something wanted only a short time ago, because men cannot work without funds. Mr. Madden in his report refers to the progress uade, and incidently remarks

VIEWS OF THE MANAGER ON MARCH 21st.

"It may now be well to say that I am taking steps to push on the fluming of the ditch. I have carpenters on the work, and as soon as possible will put labourers excavating, and shall prosecute the work with all possible despatch. If I can get this done this spring, it will effect a saving of fully $15 daily, besides extraordinary expenses at times. When this improvement in the ditch, and the bed rock cut which we are now working at, are completed, we shall be in a position to wash off large quantities of gravel daily from the High Bar or Little Eva claim, and if this bar pans out as good throughout as that portion did which we have washed off, the returns must and will prove very satisfactory indeed. I wish to make no promises that I

will not be able to fulfill, and under this reserve I will say that if you furnish the means of carrying out the different works required promptly, the work will be carried on with that end in view, that both you and the stockholders will receive back the full amount of your investments, with satisfactory interest added."

They have had no wages since January, and yet the mine is going on. I do not want to be egotistical, or to sound my own trumpet, but, gentlemen, 1,000*l*. went out on Saturday. (Cheers.)

A SHAREHOLDER SPEAKS WHO HAS SEEN THE PROPERTY.

Mr. Deacon : I am one of the few shareholders who have visited the property, and it is just for the purpose of giving you my views that I venture to address you at the present time. As to the muddles of the last two years I regret the result of them, aud have suffered as much as any one present, but the scheme of re-construction, I think, is the best way of getting out of the difficulty, because it is at any rate fair and equitable all rouud. I will give you a few of the impressions made upon me by my visit to the property. I went there last October in company with Mr. Norman. I had leisure at that time, and had always wished to see the United States, aud wheu there took the opportunity of visiting the property. I had from Mr. Gilbert letters of introduction to Mr. Madden, the working mauager, who offered me every facility for examination during the best part of the fortnight I was there. I was thus able to satisfy my natural curiosity, and he assisted in showiug me the property from beginning to end. There are two series of bars running along the banks of the river something like 3 miles. The lower series of bars forms the bank of the river, and along another series of bars from 100 ft. to 150 ft. above runs a ditch, which supplies the water for hydraulic purposes. With regard to these bars I should think that they would last the best part of the century, but as a matter of fact during the three years that this work has beeu going on the first bars have only just beeu tapped. There was an attempt made to work the lower bar, but that was found to be impracticable on account of the water in the river. When I arrived the upper bar had only just been beguu with a very small force of water. Mr. Maddeu was doing his utmost to produce, what ultimately was produced, in the short time the weather permitted—in other words 25c. per square yard, or 1,000*l*. Mr. Norman aud I took paunings in several directions, and always found a percentage of gold. That is, in my opinion, the crucial point of the whole affair—the gold is there. (Cheers.) Not only my owu personal observation but that of other gentlemen combined with the testimony of tradesmen in Montrose, aud people by the countryside with whom we couversed, and from independent sources ou every hand.

THE TESTIMONY WAS CONCLUSIVE

as to the great auriferous valley of the whole of the gravel bars in that imuediate neighbourhood and on that property. I am giving you the results of my own personal observations. I think there is no doubt that Mr. Madden's estimate of 25c. a yd. is very moderate, and I should say that the fairer estimate would be 35c.; and if you make a calculation at auything like 35c. a yd. you get with 5,000 yds. a day, which the new ditch will very easily do, a net result of something like 50,000*l*. a year, but it is possible that he has rather understated than over-stated the facts, so that probably instead of 25c. it may approach between there and 50, but with 25c. there would be a net result of 50,000*l*. a year for working for 250 days. Such is my opinion as to the productive nature of the auriferous bars on that property. The ditch then was only defective for about a mile, and I compare it with the weak link in a chain. The rest of the ditch was in a very fair coudition. Through the want of water in the previous summer there was a little leakage, but, virtually the ditch was in a very fair condition, and later improvements would increase its power amazingly. With the enlargement and thorough repair of the ditch there will be no other expense wanted for 10 years at least. This will absolutely finish the whole of the expense that will be required. There are good roads formed all through the property. There is a good plaut, good head quarters, stores, barracks for the men, an ice house, carpenter's shop, blacksmith shop, lumber yard, a saw mill, a large office, a dwelling-house iu Montrose, and a ranche, which will supply the meu with potatoes for 12 months, and also forage for the cattle, which is a matter of very great importance. All these things are actually there, and the whole may be described as a going concern. The next important point is the character of the present manager. From what I heard in Montrose and elsewhere, the lack of discretion, business tact and ability, on the part of the late manager, led largely to the position to which the company was subsequently reduced. I know Mr. Gilbert worked hard to prevent the present state of things, aud many of you may have been in this room at the beginning of last year, and have heard the somewhat brilliant statements he made. Well, I am firmly of the view that he was under the impression that the reports and telegrams he had received were correct. I can never believe that he was intentioually deceiving you, but that he was deceived by the man he ought to have beeu able to trust—who was largely interested, and that the statements he made at that time he believed to be correct. (Hear, hear.) I believe there is no man iu this room interested in the company who was more chagrined and pained by what happened than Mr. Gilbert himself. Now, what is the character of Mr. Madden, for that is a point of very great importance. (Hear, hear.) The character of the manager of these properties is of vital importance, as we have seen in Alturas, West Argentine and various other mining properties. I was in intimate association with Mr. Madden for the best part of a fortnight—sufficient for a man of the world to be able to judge anyone.

MR. MADDEN.

My opinion of Mr. Madden is that he is not only thoroughly competent (perhaps no one has had more experience in Placer mining than he) but that he is intelligent, very straightforward, and a man to be thoroughly depended upon. He possessed great energy of character, and to my knowledge he was offered a salary three times greater than we are paying him, but he was thoroughly convinced that by pulling this company through he could hereafter command a very much better position even than at the present time. I am glad he has been appointed manager. I have the greatest confideuce in his general ability and in his iutegrity. The report that he seut home will give you an iudication of the energy with which he has carried through the work since he has taken possession of this property. By the end of June, if you will support him, the company will be in full working order, and by the end of the working year the result will be such as will astonish not only the shareholders, but the market. (Cheers.) These remarks are not offered for any purpose, except to give you my plain, truthful opinion as to what I have seen as to the intrinsic value of the property. (Loud cheers.)

HOW RE-CONSTRUCTION HAS BEEN RECEIVED.

The Chairman : You have now heard that testimony. We have never had a doubt about the value of the property from the beginning ; otherwise we would not have made the advances I have named. Perhaps you would like to know how the re-construction scheme has been received by the general body of shareholders. We have between 500 and 600 shareholders. We have here the proxies from shareholders representing close upon 100,000 of our 150,000 shares. I only mention that to show you how warmly the re-construction has been received. The shareholders now know the value of the property, and their interest is to come forward and support the scheme. (Cheers.)

The meeting was then made special, in accordance with the following notice :—

"That the United States Gold Placers, Limited, be re-constructed under Section 161 of the Companies Acts, 1862, by the transfer of its property and assets and liabilities as a going concern to a new company intended to be formed (the draft of whose memorandum and articles of association is now submitted and signed by the chairman of this meeting for the purpose of identification) upon the terms set forth in a draft agreement to be made between the liquidator of the United States Gold Placers, Limited, of the first part, the said United States Gold Placers, Limited, of the second part, and the new company of the third part (the draft being also signed by the chairman of the meeting for the purpose of identification), and that the liquidator be, and he is hereby authorised to enter into an agreement iu accordance with such draft or as near thereto as may be."

SOLICITOR EXPLAINS AGREEMENT.

Mr. Chave first read the salient points of the agreement, and then explained that the memoraudum and articles of the new company were almost precisely identical with those of the old. It had always been found advisable in re-constructiou schemes that the seven signatories to the articles should appoint the new directors. And for this he had made provision, though the ultimate decision rested with the shareholders. Something had been said as to the value of new blood on the old board, and there was a good deal iu that ; but he thought if the shareholders left the seven largest of their number to appoint directors, it was perfectly certain they would exercise that power in the interests of the whole body. There were applications for a number of shares at a premium, but it had been decided first to offer the shares ot the present holders, and any balance could be tendered for by a special form of tender which had been prepared. Of course shareholders would have the prefereuce over those outside the company. This was only fair and just, and justice and fairness were the principles upou which the old company had been, and the new company would be, couducted. (Hear, hear.)

The Chairman then moved the resolution.

Mr. Klenck seconded the motion, which he hoped would be carried unanimously.

Iu reply to the suggestion of a Shareholder,

Mr. Chave stated that the agreement iu its full text could be read by any shareholder at his offices.

A Shareholder : If any doubt had remained on my miud as to the value of this property, it would have been removed by the speech of Mr. Deacon ; and I have very great pleasure in supporting the resolution, because, presided over by such a chairmau as we have, success will in all probability attend our efforts. I wish to record my personal thanks to the chairman for what he has done.

Mr. Carpenter, in a hearty speech, supported the motion, and predicted a brilliant future for the company, with dividends of at least 40 per cent., though he modestly said he would be content with one half to begin with. (Laughter.)

The resolution was carried unauimously.

CHAIRMAN THANKED.

The Chairman : That concludes our business, but a formal meeting will be held on the 13th of May, at which I shall be glad to see you. I hope, before the close of the year, we shall have such a meeting that you will be ready to take me by the hand and thank me for what has been done.

Mr. Twist moved a cordial vote of thanks to the chairman, which Mr. Klenck seconded, and it was carried unanimously.

The Chairman : I beg to thank you very much. We have had a great struggle ; but, painful as re-construction must have been to you, it has been doubly so to me. Had matters been managed better, I think we ought never have come to it. I hope from this time forth that we shall be able to give a good accouut of the company. (Cheers.)

The meeting then closed.

AFRICAN GOLD SHARE INVESTMENT CO., LIMITED.

THE COMPANY MAKES A GOOD START; THEY MEAN TO "HELP LAME DOGS OVER STILES"—A GOOD FIELD FOR THE OPERATIONS —A START MADE.

The statutory general meeting of the company, in accordance with the requirements of the Companies Act, 1867, section 39, was held at the Cannon Street Hotel, Cannon Street, E.C., on Thursday. The notice further announced that immediately after such meeting an extraordinary general meeting of the company will be held, when the subjoined resolution will be proposed. Should the resolution be passed, with or without modification, by the required majority, it will be submitted for confirmation as a special resolution to a second extraordinary general meeting which, in the absence of further notice, will be held on Friday, the 10th day of May, 1889, at the same time aud place.

RESOLUTION.

"That the articles of association of the compauy be altered as follows :—1. Article 83 shall be expuuged, and the following article

shall be substituted:—The qualification of a director shall be the holding of shares of the company of the nominal value of 250*l*. A first director may act before acquiring his qualification, but shall, in any case, acquire the same within one mouth from his appointment, and unless he shall do so, he shall be deemed to have agreed to take the said shares from the company, and the same shall be forthwith allotted to him accordingly; 2. In Article 84 (*d*) the words, 'or do not acquire the same within three months after electiou or appointmeut,' shall be expunged."—Mr. E. J. Carson presided.

The Secretary read the notice calling the meeting.

The Chairman: Gentleman, in accordance with the provisions of the Joint-Stock Companies Act, which requires that the shareholders in a company should be called together within four months of the date of registration, we would have been compelled to trouble you to meet us before long, and it was considered advisable to do so thus early to enable us to secure a Stock Exchange settlement and quotation without delay, and to ask you to assent to a very slight modification that the Committee of the Stoek Exchange have required us to make in our articles. A resolution to that effect will be laid before you immediately after this meeting. Our prospeetus was issued, as you will doubtlessly remember, at the end of Jauuary of this year, and the company was started not to purchase any particular property, but for the purpose of investing iu such mining or other ventures as the directors should deem advisable within certain limits; that is to say, we are bound not to place more than 10 per ccnt. of our capital in any one concern. This being the class of busiuess the company was formed to transact, the applications for shares were made, not upon the strength of any property we possessed, but on the general feeling that great opportunities for successful investment existed if care and good judgment was exercised in selecting the best, aud I may add that the total of the

APPLICATIONS FOR OUR SHARES WAS ALMOST UNPRECEDENTED.

We have recognised this, and shall always feel that the success of the company is an individual matter with the directors, and we have done, and I can assure you will do, our utmost to justify the confidence you have been good enough to iu us. I must tell you that we are going very cautiously to work. As you are aware we have up to now only called up one-fourth of the subscribed capital of the company, preferring to watch the development aud study the subject thoroughly before investiug deeply in South African gold mining shares. We have now decided upon making a call of 5s. per share with the object of being in a position to take advantage of the thoroughly depressed state of the market, many of the shares in the leading South African mines having, in our opiuion, fallen below their intrinsic value. Referring to our organisation in South Africa, I think that we may say that our sources of information, checked as they are by two thoroughly competent localdirectors, are very good indeed, and as to the arrangements in London, you will, I am sure, be pleased to hear that our offices in Old Jewry, lately occupied by a banking establishment, the business is carried on, not only at no cost to ourselves, but, by reason of the sums paid by the various companies connected with South Africa, for whom we act, with a very handsome profit, aud we are informed by our agents on the other side that

A CONSIDERABLE NUMBER OF NEW AGENCIES HAVE BEEN SECURED.

for us and the remuneration received for them will be all profit. (Applause.) These agencies, in addition to formiug a source of fixed income to the company, give us the advantage of heing in a position to watch closely the progress of the companies for whom we act, and to make selections for investment, but in order that our credit may be in no way impared it will be our policy only to take the agency of such companies as we have reason to believe are really

BONA FIDE MINING VENTURES.

Referring now to our iuvestments, those we have made have been spread over a large number of companies. Part of the shares we hold have been acquired by underwritiug on the Randt, and in Loudon, partly by purchase at reduced prices in blocks, in what we believe to be thoroughly good concerns and a very small proportion by shares purehased in the opeu market on the recommendation of our local directors. It will be our aim to get our capital iuvested as nearly as possible in ventures that, to use a phrase known in mining circles, are considered as being close to bedrock. Shares acquired in this manner we would realise in part as soon as they were put in the market, aud improve in value, thus further reducing the cost of the balance retained by way of permanent iuvestment. In finishing my remarks in reference to our investments you will understand from what I have said that only a small part of our capital has yet been iuvested. Our company was launched at a time when most South African mining shares were, as it is termed,

BOOMING,

but notwithstanding that I am quite satisfied that the share we hold show a very substantial margiu on the prices of the day over what we paid for them, and, speaking generally, I may say that our confidence in the future of South African gold mines is unshaken. (Cheers.) There are good and bad mines everywhere, but we believe that the South African gold industry is at the present ouly in its infancy, and it will be our duty to select the wheat from the chaff, and invest to the very best of our ability the money entrusted to us, and, gentlemen, I hope and fully believe that you will reap the benefit of the confidence you have placed in us. In eonclusion, I should mentiou that our prospectus was issued by the South African Gold Trust and Agency Company, and I take this opportunity of thanking the directors of that company for the cordial and valuable support they have given us, and I can assure you, gentlemen, that it is of the utmost importauce to us to be working side by side and harmoniously with such a company. (Cheers.) We have

ACCESS TO ALL THE SOURCES OF INFORMATION

possessed by them, and they are by no means inconsiderable. I do not know that I can give any further information, unless shareholders have any questions to ask. (Cheers.)

No questions being asked,

The Chairman said that Mr. H. E. M. Davies wished to offer a few remarks upon a point that he (the speaker) had omitted.

"TO HELP LAME DOGS OVER STYLES."

Mr. H. E. M. Davies said that one of the objects of the company was the helping of "lame dogs over styles." A good many companies started without having sufficient capital—workiug capital. Of course, directors ought to make it a rule not to go to allotment unless a certain amount of capital was subscribed, but many did go to allotment with insufficient capital, and this company made it its business to look into the affairs of such companies and to ascertain that they were *bonâ-fide* concerns, only wanting really a little financial help to make them a great success. That was what this company proposed to do. They were already making arrangements in respect to two very large and important companies, and they would be shortly in the position of being enabled to offer the balance of the capital. They believed that this operation would prove satisfactory to the companies themselves, and that a considerable sum would accrue to the African Gold Share Investment Company. (Cheers.)

The Chairman said that if there were no questions to be put the meeting was at an end.

THE QUESTION OF A CALL.

Mr. Sutherland: How soon will a call be made?

The Chairman: Payable during May.

SPECIAL MEETING.

The business of the ordinary meeting having terminated, the meetiug was then made special for the purpose of consideriug and, if approved, passing the following resolution, viz.:—

RESOLUTION.

"That the articles of association of the company be altered as follows:—1. Article 83 shall be expunged, and the following article shall be substituted: 'The qualification of a director shall be the holding of shares of the company of the nominal value of 250*l*. A first director may act before acquiring his qualification, but shall, in any case, acquire the same within one month from his appointment, and unless he shall do so, he shall be deemed to have agreed to take the said shares from the company, and the same shall be forthwith allotted to him accordingly.' 2. In Article 84 (*d*) the words, 'or do not acquire the same within three months after electiou or appointment,' shall be expunged."

The Chairman called upon the secretary to read the notice.

The Secretary read the notice and the above resolution.

The Chairman formally put the motion to the meeting.

Mr. H. E. M. Davies seconded.

Mr. Stobart: Before you put the resolution, Mr. Chairman, will you read the resolution it is proposed to expunge.

The Secretary then read the article which stated, "The qualification of a director shall be 250 shares in the company."

Mr. Stobart: And it now reads——

The Chairman: "Shares of the company of the nominal value of 250*l*."

The Secretary having also read the clause "d," in article 84, aud pointed out the words proposed to be expunged,

Mr. Stobart said: I do not see we want any resolution, Mr. Chairman. The directors are qualified, of course.

The Chairman: Undoubtedly, sir. The committee of the Stock Exchange require it.

THE DIRECTORS LARGELY INTERESTED.

Mr. Davies: The directors are the largest shareholders. (Cheers.)

The motion was then put to the meeting, and unanimously carried.

The Chairman stated that that concluded the business.

THANKS.

Mr. Stobart, in moving a vote of thanks to the chairman, took occasion to remark that the South African Gold Trust and Agency Company had the good fortune to be able to declare to its shareholders a very satisfactory dividend for the first three months' working. He supposed that the shareholders in this company could hardly expect such a very early result, although they had many of the same directors.

A Shareholder seconded the vote of thanks, which was put and carried.

The Chairman, in reply, thanked the shareholders for their confidence, and promised to do all in his power to get them an early dividend.

The meeting then separated.

Notice is given that the coupon, due May 1st, 1889, of the Five per Cent. Obligations, series B. of the Banque de Crédit Foncier et Agricole de Santa Fé will be payable in London at the office of the Imperial Bank, 6, Lothbury, E.C.

Holloway's Pills.—Sudden transitions from heat to cold, or from raw inclement weather to oppressive climates, favour the development of manifold diseases, which may in most instances be checked and rendered abortive by an early resort to these purifying, regulating and strengthening Pills. This well-known and highly-esteemed medicine affords a safe and easy remedy for almost every constitutional wrong which unhealthy climates, rapid changes, or dietetic errors, can engender, and effectually removes any weakness self-indulgent habits may have induced. In all conditions of the system bordering on disease such as are indicated by apathy, listlessness, and restlessuess, Holloway's Pills will prove especially serviceable in begetting the vivacity of mind and body appreciated by both sound and sick.

STOCK & SHARE AGENCY.

W. DUNBAR QUINLAN

(PROPRIETOR.)

Telegraphic Address:—"QUINLAND, LONDON."

ESTABLISHED 1871. **BANKERS—ALLIANCE.**

SOUTH AFRICAN SHARES.

GREAT CAUTION NEEDED — APPLY TO THE AGENCY FOR BEST ADVICE.

INDIAN MINES.

Greatly Improved Position. Write for Information as to the Best.

CHEAP SHARES.

The position, financial and otherwise, being known to the Agency, a good choice can be made of Cheap Shares, costing from 2s. to 7s. The Agency will give advice on Application.

NEW COMPANIES.

Great care should be exercised to avoid loss. Experienced advice required to secure profits

WIRE TO THE AGENCY BEFORE INVESTING.

PROFITS MADE BY JOINING RE-CONSTRUCTION SCHEMES.

The special information required is supplied by the Agency.

CLOSING PRICES.

A List of Prices, as the Market closes, can be sent to Clients on Application, who are also kept advised as to the variations of the Companies in which they are interested.

ADVANTAGES.

SHARES CAN BE BOUGHT BY CLIENTS FOR FORWARD DELIVERY ONE, TWO, OR THREE MONTHS, ON PAYMENT OF A DEPOSIT OF 20 PER CENT. CLIENTS CAN SELL SHARES FOR IMMEDIATE CASH AGAINST CERTIFIED TRANSFER.

All communications should be addressed to

W. DUNBAR QUINLAN,

PROSPECTUS.

THIS Company has been formed for the purpose of acquiring, working, or otherwise dealing with the English patent rights (the provisional specification for which has been deposited and already accepted), as well as the French patent of Baron von Dahmen for improvements in the manufacture of "Safety Dynamite" and other Safety Nitro-Glycerine Explosives, and all improvements he may make therein, as far as England and France are concerned.

The Company has also the right to purchase the patent rights for the said invention for all other countries and colonies in the world, for the further sum of £150,000, which may be paid or satisfied wholly in cash or shares, or partly in cash and partly in shares, as the directors may determine.

It is claimed by the "Safety" process that a dynamite can be produced which is uncongealable, and that, consequently, not only is the danger arising from the actual manufacture reduced to a minimum, but that the article produced is practically safe to use and transport, while at the same time its explosive energy is increased. The accompanying reports of the experts, in the opinion of the directors, conclusively establish this claim.

A proposal, in writing, has been received from the representatives of a German Syndicate for the purchase of the German and Austrian patent rights, which, if accepted, will ensure an immediate and substantial cash payment, and, in addition, a permanent income from royalties.

Messrs. Abel and Imray, the well-known patent agents, have made an exhaustive search and investigation as to Baron von Dahmen's process, and in their report say that they "are of opinion that the patent will not only be perfectly valid, but also of considerable valuc and importance."

The "Safety Dynamite" has been subjected to a test as to temperature rarely, if ever, met with in practice, and has been found apparently unaltered either at—25° Celsius, or 60° Celsius, *i.e.*, 45 degs. below freezing point (Fahrenheit), or 140 degs. Fahrenheit, *although exposed to those temperatures for 24 hours, for three or four times in succession.* It, may, therefore, bc truthfully said to be safer to manufacture, handle and use than any other dynamite.

From the accompanying reports of Mr. Napier Hake and Mr. Nursey, it will be seen that the thawing of dynamite, after setting hard or freezing, is a fruitful source of explosions. Mr. Nursey says that "Baron von Dahmen has succeeded in producing an uncongealable dynamite, inasmuch as the freezing point could not be reached." When it is borne in mind that the number of deaths and injuries from dynamite mining explosions has been (according to the annual report of Her Majesty's Inspector of Explosives for the year 1887, Blue Book [1888], Explosives Act, 1876) during the last 10 years, in the United Kingdom, 108 deaths and 219 injuries, it will at once be seen how great is the importance of Baron von Dahmen's discovery to the entire civilised world. It is considered that accidental explosion by the safety nitro-glycerine is almost impossible.

Railway companies now hesitate to carry dynamite, but as the "safcty" product has been shown to be considerably less sensitive to concussion than ordinary dynamite, it may be safely assumed that it will be accepted by public carriers for transport by rail.

As to the probable profits arising from the working of Baron von Dahmen's process, it is estimated that "Safety Dynamite" can, at the present price of raw materials, be made at a cost of less than £50 per ton. The present market quotation for dynamite is about £120 per ton. These figures would therefore give a profit by this "safety" process of at least £70 per ton. Assuming, however, only one-half of this profit is realised, viz., £35 per ton, a sale of only 1,000 tons per annum would produce £35,000, a return of 35 per cent. on the entire capital of the Company, and this too without in any way anticipating income from royalties, which should be very considerable.

"Safety Dynamite" as a military explosive has, it is believed, a great future before it, as it is considered to be peculiarly suitable for purposes of shell charging and other military uses, being, according to the reports accompanying the prospectus, apparently uninfluenced by weather or temperature. Its value therefore in this respect is difficult to over-estimate.

The subjoined statement, gathered from the reports of the Dynamite aud Explosive Companies therein mentioned, showing the dividends paid by them in 1886, 1887 and 1888, will be interesting as showing the results of similar companies :—

	1885-6.	1886-7.	1887-8.
Hamburger Dynamit Act: Gesellschaft, Hamburg	6½ %	13 %	Not yet ascertained.
Nobels Explosive Company, Glasgow ...	20 %	15 %	22½ %
Rheinische Dynamit Fabrick, Opladen ...	20 %	25 %	38 %
Deutsche Sprengstoff Act: Ges, Hamburg ...	19 %	21 %	22 %
Dresdener Dynamitfabrik, Dresden	—	14 %	18 %

The directors invite a careful perusal of the accompanying reports, made by the well-known experts, Mr. C. Napier Hake, F.I.C., and Mr. Perry F. Nursey, C.E., Past President of the Society of Engineers, from which the directors consider that the following conclusions in favour of the "Safety" process are fully justified :—Increased explosive energy. Economy, in point of time, in production. Unaffected by exceptional cold, viz. : 25 degs. Celsius equals 45 degs. below freezing (Fahrenheit) or exceptional heat, viz., 60 degs. Celsius equals 140 degs. Fahrenheit. Reduced sensitiveness, and, therefore, increased facility for transport. Special suitability as a military explosive. Process of manufacture more simple and less dangerous than that of ordinary dynamite.

The inventor, Baron von Dahmen, gives the Company the benefit of his future researches and improvements in nitro-glycerine explosives, and the Company have also the right to require him to personally supervise any experiments in, or the manufacture of, any explosive of which "Safety" nitro-glycerine shall form an ingredient.

The vendors have fixed the purchase price for the English specification and patent rights, the French patent, and the option to purchase the patent-rights for all other countries in the world, at £50,000, payable in cash, or cash and shares, as provided in the contract dated 29th March, 1889, mentioned below.

The following contract has been entered into, viz :—An agreement dated the 29th day of March, 1889, between Hans Ritter von Dahmen, A. Strauss-Collin, and W. R. Brander, of the one part, and this Company of the other part.

The vendors pay all expenses of every kind up to allotment, in connection with the formation and promotion of the Company, and for this purpose have entered into arrangements with third parties, which may technically be considered as contracts within the meaning of Sec. 38 of the Companies Act, 1867. Applicants for shares will be deemed to have accepted the above statement as sufficient notice of such arrangements, and to have expressly waived any further compliance with such section in respect thereof.

In the event of no allotment being made, the sum paid on application will be returned in full without reduction. If a less number of shares be allotted than is applied for, the excess paid on application will be credited against the amount payable on allotment.

It is proposed to make an application to the Stock Exchange for a quotation in due course.

The memorandum and articles of association of the Company, and the contract and reports above referred to, can be seen at the offices of the Compauy's solicitors.

Prospectuses and forms of applications for shares can be obtained from the Company's bankers, brokers, solicitors, aud auditors, and also at the Company's office.

April 27th, 1889.

WATER-GAS PROVED A COMMERCIAL SUCCESS. A SAVING OF £10,000 PER ANNUM IN ONE WORKS ALONE.

THE BRITISH WATER-GAS SYNDICATE, LIMITED.

WATER-GAS.

The following extract from the *Times*, of January 2nd, 1889, relative to the manufacture and application of Water-gas, is reprinted for general information.

WATER-GAS.

"For many years past attempts have been made at intervals to produce what is known as water-gas—that is, gas resulting from the decomposition of water. Experimentally there have been several successes, but practically and commercially up to the present time, as far as we are aware, these have been only failures. These failures have mainly arisen from the difficulty experienced in separating the water-gas from the other products. This difficulty has now been overcome, not by one invention, but by the combination of the best features of several inventions having for their object the manufacture of water-gas. What is more, the patented inventions which have been combined in the new process are not those of one inventor or of one country, but represent several inventors and several nationalities—namely, England, Germany, America, and Sweden. The amalgamation of these various patents and the beneficial results which have accrued therefrom came about by reason of the exigencies of manufacture of corrugated boiler flues and press-flanged steel frame plates for railway rolling stock at the Leeds Forge Company's Works, Leeds. The metallurgical operations carried out there demanded fuel of a higher calorific intensity than could be obtained from either the generator gas of the Siemens' producer, or ordinary coal gas. Mr. Samson Fox, the managing director, therefore turned his attention to water-gas, and, having carefully considered the whole question, decided upon putting down a water-gas plant at the Leeds Forge. The works were begun on September 29th, 1887, and on March 29th, 1888, plant capable of producing 40,000 cubic ft. of water-gas per hour was started, and has since been in constant operation with perfect success, and without interruption. The gas produced gives every satisfaction, not only for metallurgical, but also for lighting purposes, the whole of the works being supplied with it.

"Water-gas is the result of a chemical re-action which takes place in passing steam through incandescent carbonaceous matter, and may be considered as the practical result on a wholesale scale of the ordinary laboratory experiment of decomposing water by passing steam through a highly-heated iron tube. In the water-gas apparatus the fuel, which at Leeds Forge is coke, is raised to a high temperature in a generator by the aid of an air blast. The blowing is continued for about 10 minutes, by which time the fuel has reached a dull red heat. During this period what is known as producer-gas is given off, and this is led away to a range of Lancashire boilers, where it is utilised in raising steam for the engines in the works. At the end of 10 minutes the valves are reversed, the air-blast being stopped, and the further exit of producer-gas to the boilers prevented. Steam is then admitted at the top of the generator for four minutes, and, passing down through the incandescent fuel, becomes decomposed, and a fixed gas results. This gas as formed passes away to a scrubber, where it is treated much in the same way as ordinary coal-gas. From the scrubber it passes to the gas-holder, where it is stored for use for metallurgical purposes in the works, such as heating and welding. For indoor illuminating purposes a portion of the gas is conducted from the gas-holder to the purifiers, where its purification is effected by means of oxide of iron. It will thus be seen that the process consists of alternately blowing the generator hot and making gas, and that a run of gas is made every 15 minutes, during which time the yield from each generator is about 17,500 cubic feet of producer-gas and 5,000 cubic feet of pure water-gas for heating and lighting purposes. The gas is also used most successfully for driving gas engines.

"The metallurgical purposes to which the water-gas is applied at the Leeds Forge are various. In the first place, it is used in the heating furnaces in the plate mill, where the steel ingots are rolled into plates for the manufacture of Fox's corrugated boiler flues. It is also used in welding these tubes and heating the plates for Mr. Fox's flanged frame-plates for railway rolling stock, and for his flanged boiler-fronts, besides which it is utilised in various other similar operations throughout the works. In the application of water-gas to the manufacture of Siemens' steel there is a marked improvement in the quality as well as the quantity of the product. With this gas 30 charges of steel per furnace per week can be turned out, as against 11 charges per furnace per week from furnaces of equal capacity using gas from Siemens' producers. Besides being used for metallurgical purposes, the offices and various parts of the works are lighted with water-gas, the burners employed being arranged on the Fahnejelm system. Burnt in the ordinary way, the water-gas gives a blue flame, but by suspending a comb composed of thin magnesia rods in the flame the filaments are quickly heated to a white heat, producing a bright glow light of high illuminating power, but which is neither unpleasant to the eye nor prejudicial to the sight. The heating power of water-gas was very great, as was demonstrated upon our recent visit to the Leeds Forge Works, where we inspected the method of its manufacture as well as that of its use in the various departments. To give one instance only, a piece of copper wire placed in an ordinary coal-gas flame was only made red hot. A similar piece of wire placed in a water-gas flame issuing from a similar burner was quickly and perfectly fused.

"An important consideration in the adoption of any new system is, of course, its cost; and in this respect water-gas comes out well. Its production per ton of fuel is about 30,000 cubic ft., and with fuel at 8s. per ton, labour at 3s. 6d. per man per day, and the production going on continuously, it is found that the gas costs slightly less than 4d. per 1,000 cubic ft. The experience of nine months' working at the Leeds Forge has led to the conclusion, based on carefully-ascertained data, that the saving effected on the whole works is about £10,000 per annum. Looking at the advantages of water-gas for illumiuating purposes, it is to be observed that, besides giving an agreeable light, it does not develop any noxious fumes, nor does it produce smoke; health and cleanliness being thereby preserved, and paintings, furniture, and decorations remaining uninjured. For lighting mansions this would prove a boon, while the producer-gas can be utilised for heating purposes. Similarly, a mill-owner laying down a water-gas plant for lighting his factory will obtain gaseous fuel for steam-raising purposes practically for nothing. For small towns also the lighting could be carried out with water-gas, the producer-gas being used for steam-raising and manufacturing purposes generally. Although the installation of this water-gas plant at the Leeds Forge is the first in England, the system is being largely adopted in America and on the Continent, both at steel works and for illumiuating purposes."

In addition to the above extract, the following papers have recently commented favourably on water-gas.

REPORT OF SIR DOUGLAS FOX, C.E.

To the British Water-gas Syndicate, Limited. 28, Victoria Street, Westminster, March 28th, 1889.

Gentlemen—I have carefully examined the process of Water-gas as carried out at the works of the Leeds Forge Company, Limited, and herewith enclose my report thereon. I have, from the experiments made on my behalf, come to the conclusion that Water-gas has a great future for manufacturing, heating, and lighting purposes, and that it can be produced at a cost, at present prices, of about 4d. per 1,000 cubic feet. It must, under many conditions, prove a formidable rival to ordinary coal-gas.

Yours faithfully, DOUGLAS FOX.

An order to inspect the Plant in work at the Leeds Forge Company may be had on application to the Secretary.

Water-Gas proved a commercial success. (See report enclosed.) A saving of £10,000 per annum in one works alone.

THE NOTTINGHAM AND DERBY WATER-GAS COMPANY, LIMITED.

(INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1887.)

CAPITAL, £151,000, IN 30,000 SHARES OF £5 EACH.

Payable—10s. on Application; £1 10s. on Allotment; £1 in one month after Allotment; and the balance two months after allotment. And 200 Founders' Shares of £5 each, which Founders' Shares are entitled to receive one-half of all profits in any one year after 10 per cent. has been paid on the Ordinary Shares.

ABRIDGED PROSPECTUS.

The object of this Company is to secure licenses to work in Nottinghamshire and Derbyshire the well-known water-gas patents for improvements in the manufacture of gas for illuminating, heating, welding, and all metallurgical purposes, subject to the reservations, licenses, agreements, rights, and conditions contained or referred to in the purchase agreement of the 25th April, 1889, mentioned below, lately owned by the Europaischen Wasser Gas Actien Gesellschaft in Essen for the United Kingdom of Great Britain and Ireland, and numbered 2,249, dated 9th June, 1877; 173, dated 14th January, 1878; 5,310, dated 29th December, 1879; 4,907, dated 9th November, 1881; 5,965, dated 14th December, 1882; 8,757, dated 9th June, 1884; 15,706, dated 21st December, 1885; 15,707, dated also 21st December, 1885; and the Fahnejelm Magnesia Comb Patents, numbered 5,646, and dated 5th day of December, 1883; and No. 7,573, dated 22nd June, 1885; and Wilson and Dawson's Patents, numbered 3,949, dated 12th October, 1876; 1,699, dated 8th April, 1882; 4,697, dated 3rd October, 1882; 5,980, 15th May, 1885; 3,583, 5th March, 1888; 6,514, 2nd May, 1888; together with such rights as the British Water-Gas Syndicate have purchased to use the inventions of the well-known gas engineer, Mr. A. Wilson, of Stafford, and also the patent rights of Mr. Bernard Dawson, C.E., of 110, Cannon Street, London, in connection with such inventions, as limited by the purchase agreement, which will place this Company in a commanding position in respect to water-gas plant, and also enable them to procure for the counties of Nottingham and Derby the most improved type of gas generator and furnace plant.

Hitherto all attempts in this country to manufacture and apply water-gas on a commercial scale for heating, smelting, and illuminating purposes by simple and economical means, and without the use of skilled labour, have failed; but, after application and use upon a large scale, these inventions have proved beyond all doubt that pure water-gas when used as an illuminating medium in combination with the Fahnejelm Magnesia Comb, the Nottinghamshire and Derbyshire rights of which are secured to this Company, gives a light superior to coal gas, and yet having all its convenience of application, and rivalling in brilliancy the electric light, can be manufactured at under 4d. per 1,000 cubic ft., after allowing for cost of production, wages, wear and tear of plant, and all contingencies.

The greater heating power of this gas, as compared with any produced by present known means upon a commercial scale, gives a mode of application to the industries of steel manufacture, &c., and is of the greatest possible value in its power to produce economical results over the present systems, and it is also for the purpose of developing and extending these various uses in Nottinghamshire and Derbyshire that this Company is formed. The European patents have been secured in influential hands, and their application has been attended with the greatest success. The first plant in this country has been erected by Mr. Samson Fox, Mem. Inst. C.E., J.P., at the Leeds Forge, and has revolutionised the previous means of working mild steel, the production of steam, and the illumination of the works. Hitherto those works were supplied with ordinary coal gas by the Leeds Corporation, at a cost of 1s. 10d. per thousand cubic ft., which was almost the lowest price charged by any gas company in the United Kingdom, yet by the adoption of water-gas the power of rapid production of finished material is greatly increased, and taking all advantages into consideration, a saving has been effected of over £10,000 in the first year of its use.

Water-Gas has already been extensively adopted in many of the large manufacturing towns in Germany with eminently satisfactory results. Among others may be cited:—

Essen—At the works of Herrn Schulz Knaudt and Company, for welding, and lighting private houses and street lamps, and gas engine driving, calcining magnesia, &c. Hoerde—The Hoerde Mines and Ironworks Company for open-hearth and crucible steel melting, re-heating furnaces, lighting, and heating. Witkowitz, Austria—Baron Rothschild's Iron and Steel Works, for open-hearth steel melting, lighting and heating, and for gas engine driving, the town is lighted with water-gas, including the church, streets, and hotels. Gandersdorf, near Vienna—For lighting, heating, and brazing. Furtstenwalde—At the works of Herr Julius Pintsch, for welding buoys, &c., brazing, lighting, and heating. Gelnhausen—For glass-blowing, for electric incandescent lamps, where it has been adopted principally on account of the great purity and clearness of the flame, a necessity where great clearness of material is required. Konigszelt—For lighting and heating a large railway station and switch lamps—700 flames. Frankfurt—The Frankfurt Metal Company, for smelting and refining precious metals. Warstein, for illuminating a large stalactite and stalagmite cavern belonging to the town of Warstein, where water-gas has been preferred to coal-gas and electric lighting; Hameln a/d Weser, at Dr. Lohmann's Chemical Works; Winterthur, in Switzerland, at the works of Gebruder Sulzer, for welding, lighting and heating purposes; and in other important manufacturing towns in France, Italy, Russia and America.

In England it has been in use not only at the works of the Leeds Forge Company, but for many months at the works of Mr. Alfred Wilson, at Stafford, and it is also exclusively employed in Mr. Wilson's and Mr. Fox's private residences for lighting, heating and cooking, and for any purpose to which solid fuel and coal-gas has hitherto been applied.

Applications have already been received from a large number of the most important manufacturers who are anxious to adopt water-gas in their manufactories, not only for illuminating purposes, but also for motive power, smelting and metallurgical purposes, and arrangements are in progress to grant licenses.

Mr. A. Wilson has for many years been recognised as one of the first experts of furnace gas in this country, having been engaged in the business for upwards of 16 years, and the value of his inventions and knowledge may be judged from the fact that his generators have already been adopted by most of the leading railways, iron and steel manufacturers, copper and brass smelters, glass manufacturers and boiler makers, foundry men, chemical manufacturers, sugar refiners, oil refiners, brewers, paper manufacturers, colliery owners, &c., &c., who have had erected upwards of 1,000 generators.

The vendors have reserved the right of using and granting licenses for the use of the patents for purposes connected with the manufacture of glass.

The services of Mr. A. Wilson, Memb. Inst. Mech. Eng., have been secured as general manager and chief engineer to the British Water-Gas Syndicate, Limited, and this Company will have the benefit of his advice and assistance in all matters appertaining to their business for a term of five years.

The purchase price of the rights in connection with the water-gas patents and all improvements thereof for the counties of Nottingham and Derby agreed to be sold by the agreement mentioned below, has been fixed at the sum of £101,000, payable as to £50,000 in cash, £50,000 in fully paid-up ordinary shares, and £1,000 in 200 fully paid-up founders' shares of £5 each. All the expenses of the formation of the company up to allotment, including the underwriting of a portion of the Company's capital, will be paid by the vendors out of this sum.

The following agreement has been entered into: An agreement, dated the 25th day of April, 1889, between the British Water-Gas Syndicate, Limited, of the first part, John Charles Cottam, of the second part, and Alfred Charles Dockerill, as trustee on behalf of the Company, of the other part.

Application will in due course be made to the London Stock Exchange for a quotation of the Company's shares

If no allotment is made, the deposit paid on application will be returned in full.

Prospectuses and forms of application can be had at the bankers', brokers', solicitors', and at the offices of the Company.

Application for shares may be made upon the form accompanying the prospectus, or by letter addressed to the secretary, briefly stating the number of shares required, and accompanied by a remittance of 10s. per share.

Copies of the memorandum, articles of association, and agreement may be inspected at the offices of the London solicitors of the Company.

The third annual report of the President of the Board of Trade, Port Arthur, has been issued, bearing date January 31st, 1889, from which the following, under the head of mining, is taken :—"The sanguine views and expectations which I expressed in my last annual report appear to have been more than realised.

"As is well known, silver is our chief product. I will not enumerate the various other minerals that are found here. You all know them, and you all know further with what success they may be mined.

"I will say, however, that the silver, native and black, as found here are not exceeded in quantity or richness in any other known part of the world; and I have yet to learn of a mining district that has ever produced a mine which, within 12 months of commencing active operations, has produced and shipped silver enough to pay the cost of the land, the surface improvements, mining work, to build a silver mill, and return as much as is invested in this work and improvements in cash to its owners. This is the history of the Badger."

The West Beaver adjoins the Beaver Mine and Mill on the west. The Silver Creek Mine adjoins on the south, while south-west of it adjoining Silver Creek Mine is the Porcupine Mine. All rich mines. These marvellously rich silver bearing lodes are a guarantee of what may be expected of the West Beaver when worked as a mine should be ; I am satisfied it can be relied upon to produce by proper development as rich ores as any of them, and in much greater quantities than the smaller ones, which have produced so well in this section. (See report of Mr. A. W. Daby, M.E., enclosed with the prospectus.)

THE WEST BEAVER, LIMITED.

Adjoining the Beaver, and about half-a-mile from the Badger. New Silver Region Thunder Bay, Canada.

INCORPORATED UNDER THE COMPANIES ACTS 1862 TO 1886.

CAPITAL, £150,000, IN SHARES OF £1 EACH,

ISSUE of 100,000 SHARES, payable 5s. on Application, 5s. on Allotment, and the balance in two calls of 5s. each, at two and four months from the date of allotment.

PROSPECTUS.

This Company has been formed to acquire and develop the freehold property, containing 149 acres, free from Crown dues and royalties, and known as the West Beaver Silver Mine, situate in the township of O'Connor, province of Ontario, Dominion of Canada. It is surrounded by several rich mines, and adjoins the celebrated Beaver.

The vendors not being in a position to provide the required capital for the erection of machinery and further development of the mine, offer to sell part of their interest to furnish the same. It is anticipated that when the requisite capital has been so applied, results similar to the rich surrounding mines will be attained.

The property is admirably situated in every respect for cheap and economical working, timber, fuel, and water being abundant ; while the located line of the Port Arthur, Duluth, and Western Railway, to which a Government subsidy has been granted, will pass through the property, from which there is a good waggon road to Murillo Station, on the Canadian Pacific Railway.

The directors not having personally visited the property, rely on the following eminent scientists, civil and mining engineers, and experts, who have reported on the West Beaver silver vein, and extracts from whose reports are given in this prospectus. The original reports may be seen at the offices of the solicitors :—

Dr. Alfred R. C. Selwyn, C.M.G., LL.D., F.R.S., Director of the Geological and Natural History Survey of Canada.

Mr. Elfric Drew Ingall, geologist, of the Geological Survey of Canada, and Associate of the Royal School of Mines, England.

Mr. Thomas A. Keefer, of Port Arthur, member of the British Association. Acknowledged by the Geological Corps as an authority on the silver veins of Ontario.

Mr. Walpole Roland, civil and mining engineer, and topographical surveyor ; also examiner and valuer of the Land Department of the Canadian Pacific Railway Company, Port Arthur.

Mr. Charles Brent, M.A., mining engineer, Gillies, Ontario.

Mr. A. W. Daby, mining engineer, Port Arthur.

Mr. Samuel Brady, mining engineer, graduate of Freiberg School of Mines, and superintendent of the Alto Mining and Smelting Company's Mines, Detroit.

Extracts from Mr. Elfric Drew Ingall's Report, dated 7th March, 1889.

"The work done to test this vein consists of three small tunnels driven into the base of the bluff to cross-cut the vein at about 40 ft. below its outcrop on the side of the ridge. These are about 200 ft. apart, and from their ends a small amount of drifting has been done on the vein, amounting in all to about 60 ft.

"It is in the same formation as is a similar vein to those now successfully worked at the Beaver and Badger Mines in its vicinity, and there seems to be no reason why sufficiently extensive and plucky development of this vein should not be crowned with success as in the cases mentioned."

Dr. A. R. C. Selwyn's Report, dated 7th March, 1889.

The following is a copy of the opinion of Dr. A. R. C. Selwyn, C.M.G., LL.D., F.R.S. :—

"I am say that I entirely concur in the remarks made by Mr. Ingall respecting this property."—Alfred R. C. Selwyn, 7, 3, 89.

Extracts from Mr. A. W. Daby's Report, dated 16th February, 1889.

"The West Beaver is the largest vein yet discovered in this section of the district, and is a true fissure vein 4 ft. to 6 ft. in width, and is geologically in the same formation as the rich mines in its immediate neighbourhood. It is rich in native silver in itself, carrying also the sulphides of iron, copper, and zinc in the form of blende and galena, all argentiferous, in a gangue composed of calcite fluorite and quartz, with occasional bunches of baryta and 'mountain tallow,' which in the other mines of the district have been found to be so very rich in silver. The silver produced from the vein is similar to that from the adjoining mines, and occurs as native silver and as argentite in union with the sulphides named, making good grades of ore for profitable mining."

"The developments that have been made on the vein are sufficient to enable an estimate to be made of its size, character, and producing capacity. The outcrop has been exposed by test pits, and there are three cross-cuts from 200 ft. to 250 ft. apart from the base of the hill towards the vein, and these cross-cuts have been driven to the vein, where drifts easterly and westerly have been started in two of them. The vein being intersected in the cross-cuts at such distances apart give its general direction, and expose a lode of great strength and capacity as a producer."

Mr. Thomas A. Keefer's Report, dated 14th February, 1889.

"It has a large true fissure vein traversing the centre of the property.

"The developments have exposed one of the largest true veins to be seen in this neighbourhood, averaging over 4 ft. in width, and ores taken from it show native silver, argentite, and rich silver bearing sulphides such as galena, zinc blende, and pyrites. The gangue of the vein is similar also to those of the working mines in the neighbourhood, being composed mainly of quartz, calc, and fluor spar with the minerals mentioned associated with it, the silver, besides making the sulphides valuable, appearing also as leaf silver, and as nuggets of native silver and argentite.

"Immense quantities of ore can be raised by developing this large vein, sufficient in quantity to supply a mill of its own as large as, and even larger than that of the Beaver, and, with similar development, I know of no reason why its ores should not be uniformly as rich as those of the other rich mines in the same silver belt."

Mr. Samuel Brady's Report, dated 8th January, 1889.

"Regarding the West Beaver Mining location, it belongs to the same group of properties as the Beaver, Badger, Porcupine, and Silver Creek Mining locations, being situated west of the Beaver and north of Silver Creek, adjoining both. Its geological position being identically the same as that of the above-mentioned locations.

"The developments on this property have resulted in the exposure of one very promising vein, and from which some very fine silver has been taken."

Mr. Walpole Rowland's Report, dated 4th March, 1889.

"It is the largest true fissure or 'mother lode' of the vicinity, excelling in size the veins of the adjoining mines, and those of that vicinity which has been the recent chief ore producing portion of the Thunder Bay district.

"The West Beaver vein varies from 4 ft. to 8 ft. in width. It is a remarkably strong true vein, adjoining rich mines, and rich itself in argentite (black) leaf and native silver, with the usual rich black and highly argentiferous blendes peculiar to the other mines of this vicinity.

"It has produced the ordinary milling grades of ore, and very high grades of smelting ores (as shown by assays) yielding several thousand dollars to the ton.

"I strongly recommend it as one of the most desirable mining properties in the Thunder Bay district, being a most complete location in itself and capable of yielding magnificent returns on a large capital."

Mr. Charles Brent's Report, dated January 28th, 1889.

"The West Beaver location is situated north of the Silver Creek, and west of the Beaver.

"The vein runs approximately east and west, has a dip of about 75 degs., and is the strongest and widest lode in the district.

"The vein, which is developed by a series of short tunnels running into the West Beaver Hill, shows an average width of some 4 ft. 6 ins. of thoroughly mineralised veinstuff carrying the characteristic silver and silver-bearing minerals of the country.

"The West Beaver is among the most promising of the mines in this district, and will, without doubt, upon development, become a very valuable property."

Assays.

Certificate of ores taken at the mine and assayed by Mr. Charles Brent, M.A.M.E., assayer, Gillies, Ontario, February 22nd, 1889.

No. 1.	Ounces of silver,	2,341	per ton of	2,000	lbs.

,, 4.	,,	1,402	,,	,,	

Certificate of assay by Messrs. Johnson, Matthey and Co., of Hatton Garden, March 28th, 1889, of selected specimens from the West Beaver vein, certified by Mr. Walpole Roland, C. and M.E.

No. 1.	Ounces of silver	27,930	per ton of	2,240	lbs.
,, 2.	,,	8,232	,,	,,	
,, 3.	,,	25,675	,,	,,	

Continued on next page.

THE WEST BEAVER, LIMITED.

(Continued from previous page.)

EDWARD BALBACH AND SON'S REPORT.

Messrs. Edward Balbach and Son, Newark Smelting and Refining Works, New Jersey, referring to the character and grade of ore from the Thunder Bay Silver Mines, report as follows:—"The general character of the ore, as far as we have had occasion to judge from shipments received from Thunder Bay district, Canada, show very much similarity, the various lots ranging from 75 ozs. to over 500 ozs. of silver per ton. An average of 250 ozs. possibly fairly represents the yield."

The following quotations given of the leading Australian Silver Mines will show the high value placed upon them by the Australian public; and it may be stated that the average of silver to the ton of rock in the following properties is from 40 to 200 ozs. only.

From the *Financial News*, March 8th, 1888.

Name of Mine.	Nominal Capital.	Share.	Price.	Value of Mine at present Market Price.
Broken Hill Proprietary...	£320,000	£20	£285	£4,500,000
British Broken Hill	1,200,000	5	5	1,200,000
Broken Hill, Block 14	500,000	5	10	1,000,000
South Broken Hill.....	100,000	1	17	1,700,000
Central Broken Hill.....	75,000	1	11	825,000
Broken Hill Junction	100,000	15s.	4	400,000

The directors are of opinion, based on the numerous reports coupled with the information at their disposal, that this property will yield very satisfactory results on further development, and that by the appointment of an influential local advisory board the directors will have exceptional advantages in the management and development of the property.

A map showing the position of the property accompanies the prospectus.

The vendors, who are the promoters, have fixed the purchase-money for the whole freehold property at £95,000, payable as to £50,000 in fully paid-up shares (this being the largest amount allowed by the rules of the London Stock Exchange, in order to obtain a quotation for the Company's shares, which the directors will apply for in due course), the remaining £45,000 in cash. The balance of authorised capital, viz., £55,000, remains for working purposes, but this sum is considerably over the amount deemed necessary.

The vendors pay all expenses up to the allotment of shares.

During the first two years the directors have declined to take any fixed remuneration from the Company, but will be entitled only to 1 per cent. on the amount exceeding 10 per cent. paid in dividends. The vendors have arranged to compensate them by transferring 1,000 fully-paid shares to each of them. They depend, therefore, for their remuneration during this period entirely upon the success of the mine.

It is intended to commence operations as soon as possible after the allotment of shares.

Where no allotment is made, the application money will be returned in full, and where a less number of shares are allotted than those applied for, the amount overpaid on application will be carried to the amount payable on allotment.

The following contracts have been entered into:—A contract, dated the 5th day of April, 1889, between Arthur Henry Elco Spong, of the one part, and A. F. Noel and Company, Limited, of the other part; and a contract, dated the 9th day of April, 1889, between Thomas Ambrose Gorham, of the first part, the Shuniah Manufacturing, Land, and Development Company, Limited, of the second part, A. F. Noel and Company, Limited, of the third part, and Edward Nicholls, as trustee for the Company, of the fourth part.

The vendors have entered into arrangements with reference to the issue of and guaranteeing subscriptions for the capital of the Company. These arrangements having been made by the vendors only, it is considered unnecessary to give any particulars of them in this prospectus. But to prevent any misunderstanding, applicants for shares must be deemed to have had notice of them, and to have waived compliance with section 38 of the Companies' Act, 1867.

Prospectuses and forms of application for shares can be obtained of the bankers, brokers, solicitors, auditors, and at the offices of the Company.

Extract from *Canadian Gazette*, 28th March, 1889, published since the prospectus was settled:—

"Mr. Dawson, M.P. for Algoma, says: 'He has received encouraging reports from all parts of his constituency as to the mining prospects, and also states that all the mines that have been fully developed are paying handsome dividends.'"

May, 1889.

NEW YORK, ONTARIO & WESTERN RAILWAY COMPANY.

ISSUE OF $2,500,000 CONSOLIDATED FIRST MORTGAGE 5 PER CENT. GOLD BONDS (part of an authorised issue of $10,000,000, of which $4,400,000 are reserved to retire outstanding Bonds.)

Principal and Interest payable in New York, in United States Gold Coin, or in London in Sterling (at the fixed rate of 4s. per Dollar).

Interest due 1st June and 1st December. Principal due 1939 (but redeemable on or after 1st June, 1899, at 105, at Company's option.) Interest accrues from 1st June, 1889.

MESSRS. FOSTER and BRAITHWAITE and MESSRS. SATTERTHWAITE and CO. are prepared to receive applications for the above-mentioned bonds, at 93 per cent., or £186 per $1,000 bond, and £93 per $500 bond, payable as follows:—

£5	per $500 bond, or	£10	per $1,000 bond	on application.
15	,,	30	,,	on allotment.
73	,,	146	,,	on 15th June.
£93	per $500 bond, or	£186	per $1,000 bond.	

The bonds are of $1,000 (or £200), and $500 (or £100) each, to bearer, but can be registered at the offices of the Company in New York.

They are secured by a consolidated first mortgage upon the entire main line, branches, and property of the New York, Ontario and Western Railway Company, and are further secured by the deposit with the trustee of the mortgage of all the $3,000,000 of securities (except $5,000 of stock retained for purposes of organisation) created on the Ontario, Carbondale and Scranton Railway Company.

The outstanding six per cent. bonds (which are the only charge ranking before the bonds now offered) are quoted on the New York Stock Exchange at 112, equal to about 115 London price. These bonds can be paid off at the option of the Company at 110 at any time by giving six months' notice, and provision for this purpose is made in the consolidated first mortgage, which will then become the first and only mortgage upon the whole property of the Company.

The subscription list will be closed on or before Wednesday, the 8th May, 1889.

A simultaneous issue is made in New York by Messrs. Poor and Greenough at 91 per cent., being about the currency equivalent of the London price.

The New York, Ontario and Western Railway system extends from Oswego, on Lake Ontario, to tide water at New York Harbour, with branches and leased lines to various important points; the total mileage being 424 miles, of which 320 are owned and the remainder leased or worked under running powers.

This mileage will be increased to 478 miles by the extension to Scranton now in course of construction.

The Company has for about 200 years the right to use the West Shore Railroad Terminals and connecting facilities at New York City.

The common stock of the Company is for $58,113,982.84, having a market value of about $10,000,000.

Referring to the extension to Scranton, the president of the Company, in his circular to the stock-holders, requesting their authority for the creation of the new mortgage, stated:—"That the line at Hancock, New York (State), is distant about 30 miles from the anthracite coalfields of Pennsylvania, and a road from Hancock, *viâ* Forest City and Carbondale to Scranton, a distance of about 50 miles, will reach, at the latter point, the centre of the Wyoming coal basin, from which was shipped more than 22,000,000 tons of coal during the last year. Between Forest City and Scranton, it would pass through a thickly settled valley, which furnishes a large local traffic to and from Scranton, a city of nearly 100,000 inhabitants, and would also reach a good market for large quantities of dairy and farm products from the North."

In a letter which accompanies this prospectus, the president gives a detailed description of the road and its affairs, and states that:—"Contracts for a large coal tonnage have already been secured, sufficient to justify the building of the new extension and to assure a fair surplus over the interest upon the capital required for its construction, those already signed exceeding half a million tons per annum."

He further states that "the gross earnings for the fiscal year ending 30th September, 1888, equalled 5,262 dols. per mile of railroad owned," and that "the three years ending 30th September, 1888, show a net surplus" (after payment of all interest charges) "of $236,566, which sum has been expended in betterments," also that "the Company has no car trusts," and that "the main line and branches are now laid entirely with steel rails, and the tract is in excellent condition. There have in the last three years been considerable additions and improvements to the equipment, which has placed the Company physically in a position far superior to that formerly occupied, as is set forth in the report to the stockholders at the close of last year. This report shows that 42 per cent. of the freight tonnage of last year was derived from the Company's then existing coal traffic."

The objects for which this $10,000,000 mortgage has been created are fully set forth in the President's letter.

A copy of the mortgage can be seen at the offices of Messrs. Blewitt and Tyler, solicitors, 79½, Gracechurch Street, London, E.C.

Applications on the form accompanying the prospectus, with a deposit of £10 per $1,000 bond, or £5 per $500 bond, must be made to Messrs. Foster and Braithwaite, 27, Austin Friars, London, E.C.; or to Messrs. Satterthwaite and Co., 6, Austin Friars, London, E.C., where prospectuses and forms of application can be obtained.

Where no allotment is made, the amount paid on application will be returned. Failure to pay any instalment when due renders all previous payments liable to forfeiture.

The bonds will be ready for delivery soon after the date fixed for the payment of final instalment.

Discount at the rate of 3 per cent. per annum will be allowed on payments made in full on allotment.

Austin Friars, London, E.C.,
3rd May, 1889.

THE TAVISTOCK IRON WORKS, ENGINE WORKS, FOUNDRY, & HAMMER MILLS

TAVISTOCK, DEVON.

ESTABLISHED 1800.

JOSEPH MATHEWS & CO.

ENGINEERS, BRASS AND IRON FOUNDERS BOILER MAKERS, AND SMITHS.

MAKERS of CORNISH PUMPING, WINDING and STAMPING ENGINES, STEAM CAPSTANS and CRUSHERS, WATER WHEELS PUMP WORK, SHOVELS and HAMMERED IRON FORGINGS of every description.

Also of SPUR, MORTICE, MITRE, BEVIL, and other WHEELS, of any diameter up to 12 feet, made by Scott's Patent Moulding Machine without the aid of patterns, and with an accuracy unattainable by any other means.

MACHINERY FOR FOREIGN MINES CAREFULLY PREPARED Second-hand Mining Machinery in good condition always on Sale at Moderate Prices.

THE RISE IN YURUARI SHARES.

The reason why these shares have advanced 66 per cent. in the last week, and the reason why their advance will be increased day by day, as the facts become more thoroughly known to investors.

LOCKWOOD & CO.,

STOCK AND SHARE BROKERS AND DEALERS,

5, THROGMORTON AVENUE, LONDON, E.C.

Telegraphic Address:—"PERSONIFY, LONDON."

THE YURUARI COMPANY is the successor of the New Chile Company, which was obliged to liquidate on a technical point of law, owing to the decision of the High Court of Justice in regard to the issue of shares at a discount. It owns the famous Chile Mine, which has produced in all a sum of gold amounting to close upon one million sterling. It also owns some 13 concessions in the immediate vicinity of the Chile, and in the very heart of the great gold belt that stretches through British Guiana and Venezuela for a distance of about 400 miles. The Company is working the Chile lode, which is proved to exist throughout the property for a distance of 1½ miles. This lode alone ensures continuous supplies of ore for the next 50 years certain. There are three other lodes which can also be worked if necessary. It will not be necessary to work them in our generation, at all events. The Company possesses 100 excellent stamps, all in thorough order, and good for 20 years' continuous working. The mine can now produce and crush 4,500 tons per month, at a cost not exceeding £6,000. If the stamping power be increased to 100 heads, this capacity will rise to 8,000 tons monthly, at a proportionately less cost. In making this statement we are adhering to the theory that as the scale of work increases, the average expenses per ton will be reduced. This is a mining axiom that will not be disputed by those who have had any practical experience. The flooding of the "Water" shaft has for a long time debarred both the New Chile and the Yuruari Companies from getting at the very rich rock that was worked in the old days. The shaft has now been effectually drained, and will be continued down to the same level as the Cenicero shaft at the other end of the mine. Tunnels will then be driven to connect those two main shafts, and the result of this really clever manœuvre will be to open up a mass of virgin rock equal to no less than 3,000,000 to 4,000,000 tons. This will occur in what has always proved to be the richest part of the mine, and will probably be accomplished within six months from date.

WE are not strangers to the profession of gold mining, but in the whole course of our experience we have never been confronted with a more astonishing prospect than this. Since December, 1884, upwards of 96,000 tons of ore have been raised and crushed. The yield of this tonnage realised close upon £300,000. The paid-up capital of the Yuruari Company is £22,000, and in the first six months of its existence it has produced no less than 6,000 ozs. of gold at a net profit of 20 per cent. for the half-year. It is safe to say that if this had been a South African mine the shares would have jumped to a premium of 1,000 per cent. It is clear that the Yuruari Company will produce more than its paid-up capital twice every year. Some mines have done such an extraordinary thing as this before to-day, but the instances are few and far between, and when they did occur the mining world immediately rushed into a state of delirous, maddening excitement. Every dog has his day. The date of the Yuruari excitement is not far off. It is the simple theory of cause and effect. There is no effect without a cause, and a cause must necessarily have an effect. These two are inseparable. They form a philosophical fact. There is not much philosophy about the Yuruari Mine, but there is enough of the "cause and effect" element in it to make its shareholders dance with frantic joy within the next few months. Let us pause for a moment and fully calculate the actual position. The Yuruari (late New Chile) Company has acquired the mines and concessions already mentioned. This is a bare statement that seems to carry no more than ordinary importance. We have to look deeper for the wealth of hidden meaning that lies behind it. Well, we look deeper. What do we see? We see that the Company has acquired not a large tract of valuable land which, however valuable it may be, has yet to be opened and developed at a gigantic cost, but they have actually acquired a property upon which no less a sum than £500,000 has been spent by its predecessors. The Company has actually bought for an old song not merely a most excellent property, but it has had thrown at it—like so much dirt—a sum of money in permanent improvements and developments that reaches the fabulous figure of half a million of money. It is our desire to be strictly accurate and straightforward in bringing this Company into the prominent position which it deserves, and we have placed this latter amount at £500,000; but we believe, as a matter of fact, that the more correct amount is nearer £1,000,000 than £500,000. We challenge any living soul to point in the annals of gold mining to such a case as this. It is a case as isolated as it is extraordinary, and its contemplation ends in a whirlwind of irresistible conviction.

ARE the public so blind that they cannot see these things for themselves? During the last six months they have been frantically manœuvring to lay hold of the silver cross that swung above them, far beyond their reach, while at their very feet, unheeded and unknown, sparkled a golden crown! At this point it may be convenient to compare the Yuruari with its neighbours; to examine their respective merits, and to decide upon their value. From the principal gold mines in Venezuela we select the following:—

	Capital actually issued.	Gold produced during last four years.
El Callao	about £1,250,000	about 2 to 3 millions ster.
Venezuelan-Austin	„ 840,000	„ £20,000
Potosi	„ 400,000	„ 10,000
Callao Bis	„ 175,000	„ 5,000
Victory	„ 200,000	„ 2,000
Late New Chile ...	„ 800,000	„ 250,000*
YURUARI (late New Chile)	„ 22,000	„ 24,000†

(Same property, but capital written down.)

* Until May, 1888, when the Yuruari Company took over the assets.
† In six months ONLY.

WE venture to say that these figures afford food for pure and simple wonder. Their analysis is simply another case of *reductio ad absurdum*. The result is so utterly at variance with a business-like view of matters that we hesitate to declare it. Suffice it to say that on the average of the last six months the intrinsic value of Yuruari is

168	times	that of	Venezuela-Austin.
32	„	„	Potosi.
28	„	„	Callao Bis.
60	„	„	Victory.

WHEREAS the selling values of the shares are as follows:—

Venezuela-Austiu	from	7/	to	8/
Potosi	„	2/6	„	3.6
Callao Bis...	„	5/6	„	6.6
Victory	„	8/	„	8.6
Yuruari	„	2/	„	2/6

YURUARI has the smallest capital and the largest output of gold.

IT is clear that Yuruari must necessarily rise a thousand per cent. in price.

EL CALLAO we leave out of the question, partly through modesty and partly because it is a near neighbour, which has done most excellent work, and which, we expect, will have to take a back seat in favour of Yuruari as a dividend-paying concern before many months are over.

IT may be asserted that the above figures are figures only. They are figures, it is true; but they are facts none the less for that. The above analysis is based upon the six months' returns of the Yuruari, as against a *pro rata* amount of the four years' product of the other mines. The inverse ratio of the issued capitals is calculated as an asset of the Yuruari in the comparison, and that ratio is multiplied by the said *pro rata* product of the other mines. It is a rough comparison, it is true, but to make it doubly sure, and to avoid doing an injustice to the others, we have deducted 50 per cent., and the above figures are the result.

IT is not possible to get at a strictly accurate analysis of this kind, but we consider 50 per cent. to be a generous allowance, and one that will much more than cover a possible error. In any case, even if we allow a still more liberal margin, the figures are amply sufficient to startle mining investors generally into a fit and proper appreciation of the actual state of things.

WE confidently invite contradictions of any of the foregoing facts if contradiction be at all possible, and we will certainly acknowledge them if they be proved. We have not rushed lightly into this matter, and have given it a searching investigation before moving one single inch. Our main object in bringing the matter forward is to increase our *clientèle*, and to make money for those ladies and gentlemen in Great Britain and on the Continent who have already favoured us with their business. A broker is no broker who does not make money for his clients; he is an intelligent machine and no more.

SOME STRONG AND ABSOLUTE FACTS THAT CANNOT BE DISPUTED.

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

DULL MARKET — SOME GENERAL OBSERVATIONS — YURUARI—QUEENSLAND, INDIAN AND SOUTH AFRICAN SHARES.

We do not know what would have become of the Mining market had there been no Yuruari. The record, but for the enormous dealings in this company's shares, would have been as nearly nil as possible—of course, partly owing to the intervention of the Stock Exchange holiday on Wednesday. If Yuruari shareholders—that is those who took up the shares at 1s. 6d. each a little while ago, had held more firmly to them, instead of trying to snatch a 6d. or 9d. profit, the general opinion of dealers is that the market would have been 3s. or more by this time. As it is, although the market has had Yuruari for breakfast, for dinner, for tea and for supper, its digestive apparatus has not been strained and its powers of absorption have not been too severely tested. The general opinion is that the market is likely to rise. That opinion also holds good with regard to Colon, Tetuan, Esmeralda, West Argentine, Callao Bis, Eberhardt, Emma, Victory, and Jay Hawk, with a few other concerns, hitherto neglected, now going at break-up prices.

Australian shares are also thought to be worth picking up, and some remarks below, anent Gympie Great Eastern, speak the voice of the market, and, it seems, from the surrounding facts, of common sense.

The position of Indian mines is exceedingly good, and taking them as a whole, there is not a better class of investment now in the market. The Ooregum return, which has already come to hand, is exceedingly good, and bears out the encouraging reports we have from time to time published. The Nundydroog dividend has also imparted strength to the market, for its announcement was not anticipated. Mysore shareholders are expecting a substantial dividend, and they want the directors to know this. One enthusiastic investor has even declared that the directors have 4s. in hand which they might divide. The wish is father to the thought. The meeting is called for the 16th, and we believe it will be heralded towards the beginning of next week by an improved return from the mine for April.

The prospects of South African shares are generally held to be better, and an improvement in prices is anticipated. Some important remarks were made by a Dutch shareholder, a director of the Durban Roodepoort, at that company's meeting.

The only hopeless feature of the Mining market at present seems to be from its British side. Home mines are deplorably neglected, but, as we point out in our article on the royalty question, the remedy, at least to some extent, is within our own grasp.

Africans.

The week's business can be summed-up in two words as regards South African ventures, namely—"Nothing doing." We are given to understand the chief cause of the recent heavy drop in shares was on account of failures in South Africa, and the decision of the bankers there not to advance loans on stocks; the shares, therefore, were sent to England to realize the best they could, and hence the present heavy fall.

The following show a considerable fall all round :—Elwin Bray, of $\frac{5}{8}$; Republics, 1s.; Revolver, $\frac{1}{16}$; Bankets, $\frac{5}{8}$; Bixley, $\frac{1}{8}$; Central Langlaagte, $\frac{1}{4}$; Cornucopia, $\frac{1}{4}$; Croesus, $\frac{3}{8}$; Dornkop, $\frac{1}{8}$; Ferreiras, 20s.; Geldenhuis, $\frac{1}{4}$; Goldfields of South Africa, $\frac{3}{16}$; Goldfields of South Africa (New), $\frac{1}{4}$; Golden Kopje, $\frac{1}{4}$; Great Britain, $\frac{1}{8}$; Heriot, $\frac{1}{4}$; Jumpers, $\frac{1}{4}$; Kleinfontein, $\frac{1}{4}$; Langlaagtes, $\frac{1}{8}$; Langlaagtes Block B, $\frac{1}{4}$; Main Reefs, $\frac{1}{8}$; Main Reefs United Roodepoort, $\frac{1}{8}$; Modderfontein, $\frac{1}{16}$; Morkel, $\frac{1}{8}$; Moss Rose, $\frac{1}{4}$; Nabob, $\frac{3}{8}$; New Grahamstown, $\frac{1}{8}$; Oosthuizen, $\frac{1}{2}$; Randfontein, $\frac{1}{8}$; Royals, $\frac{1}{4}$; Salisbury, $1\frac{1}{2}$; Simmer and Jack, $\frac{1}{4}$; Spes Bona, $\frac{1}{8}$; Stanhope, $\frac{1}{2}$; Star, $\frac{1}{8}$; United Langlaagtes, $\frac{1}{8}$; Vogelstruis, $\frac{1}{8}$; Western Langlaagtes, $\frac{1}{8}$; and Wemmers $\frac{1}{4}$. The only rise being in Wolhuters of $\frac{1}{8}$.

Copper Shares.

There has been but very little business transacted in the shares yet—in several instances prices have improved, and, as we stated last week :—"It would take but very little buying to put this market in a much better condition." The following are the principal alterations :—A rise of ⅛ has taken place in Cape, Libiola, and Mason and Barry, whilst a fall is shown in Quebrada of ⅛ ; Tharsis, ½ ; and Tocopilla, 6d.

Australians.

There has been a considerable amount of business doing in several of the Australian shares this week, foremost amongst which has been Gympie Great Easterns, which have declared another 1s. dividend, making 3s. in all this year. It appears strange that a mine that has done, and is still doing so well, should still be selling at about 40 per cent. discount. The shares have been as high as 12s. buyers, but do not close quite as good. There are at present several companies in Australia whose shares are well worth picking up at low-quoted prices. A rise is shown in Day Dawn of 1s. 6d. ; Day Dawn "P.C.." 1s. ; Gympie Golden Crown, 1s. ; Gympie Golden Crown, Great Eastern, 2s. ; Mount Shamrock, 6d. ; and a fall of 6d. in Moruya.

Diamonds.

The market has been very dull this week, and very little doing. Prices, therefore, show a tendency to fall, and from the present tone there appears to be no prospect of an immediate revival. A fall is registered in Anglo Africa of ½ ; Bultfontein, ¼ ; De Beers, ¼ ; Griqualand, ½ ; New Consolidated, 1s. ; New Jagersfontein, ¼ ; United, 1/16 ; London and South African, ⅛ ; and Burma Ruby Mines, ¼.

Anglo African	4½	—	4⅝
Bultfontein, New Shares	4	—	4¼
Central Dorsfontein	8	—	10
De Beers Consolidated	15⅞	—	16
Gordon Diamond	19/	—	21/

New Jagersfontein	13½	—	13¾
South African (Pullinger)	16/	—	17/
Spes Bona (Bultfontein)	6/6	—	7/6
United	2¼	—	2½
United Jagersfontein	15/	—	17/
London and Orange Free State Explor. ...	4	—	4½
London and South African Exploration ...	16⅞	—	17⅛xd & rights
Read's Drift Land Co.	1½	—	2
Burma Ruby Mines	1 7/16	—	1 9/16pm

Indians.

At the commencement of the week there appeared to be a fairly good demand for shares, and in consequence prices slightly improved, but yesterday and to-day considerable selling orders have come from Scotland, causing quotations temporarily to weaken ; but on the dividend in Nundydroog being known, and the rumoured dividend in Mysore, which, it is said, will shortly be declared, prices have hardened somewhat, and do not leave off at lowest. The following have fallen :—Balaghat, 6d. ; Goldfields of Mysore, 2s. ; Mysore Gold, ⅛ ; ditto Reefs, 6d. ; ditto Wynaad, 3d. ; Nine Reefs, 6d. ; Nundydroog, 1s. ; Ooregum, 1/16 ; and South East Mysore, 6d.

Foreign Shares.

There has been a very dull week in most foreign shares, if we except Callao Bis, Victory, and Yuruari. In these companies (notably Yuruari), many thousands of shares have changed hands. In the case of Yuruari the dealings have been very great, and the shares close on the week at a rise of 6d., with a very strong market. A rise has taken place in Monte del Oro, 1s. ; Richmond, ¼ ; Santa Barbara, 3s. ; Plumas Eureka, 1/16 ; Venezuelan-Austin, 6d. ; Viola, 1s. ; and (as we have said), Yuruari, 6d., on this week. A fall is shown in Balkis of 9d. ; Barrett, 3d. ; Callao Bis, 6d. ; Colon, 1s. ; Don Pedro, 2s. ; Frontino, 6d. ; La Trinidad, ⅛ ; New Eberhardt, 3d. ; New Lisbon, 1/16 ; New Russell and Spitzkop, 3d. ; Palmarejo, 6d. ; Tetuan, 1s. ; Potosi, 6d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

Indian Mines.

Indian Consolidated.—A telegram from the Colar section of their property announces that during the month of April 447 tons of quartz were crushed, which yielded 83 ozs. of gold.

Nerbudda.—The sales of coal for the mouth of March last amount to 1.528 tons.

Nundydroog.—The directors have declared a dividend of 9d. on the fully paid shares, and 5½d. on those partly paid.

Ooregum.—A telegram dated May 3rd gives last month's return of gold as follows :—585 tons of quartz produced 1,255 ozs. of gold.

Colonial Mines.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight ending 27th instant is as follows :—1,184 tons crushed. Yield of gold, 1,149 ozs. ; approximate value, 3,975*l*. ; fortnight's expenses, 2,170*l*.

Day Dawn P.C.—Mr. Sinclair MacLeay has been elected chairman of this company in place of the late Mr. Francis Joseph Bladon ; and Mr. George Henry Maxwell Batten has been appointed to the seat on the board, which has become vacant by the death of Mr. Bladon. A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending April 27th, viz. :—"815 tons 1,284 ozs., including public mill returns. Lost four days, breakdown machinery. Have finished the repairs." (Estimated value, 4,365*l*.)

Gympie Great Eastern.—The directors have declared an interim dividend of 1s. per share, free of income-tax. It will be payable on the 25th May.

Midas.—The secretary has received the following cable from the mine :—"Yield for four days, 83 ozs. (340*l*.)

Mount Morgan.—Messrs. Laughland, Mackay, and Baker have received the following telegram from the Mount Morgan Gold Mining Company, Limited, Queensland :—"We pay 100,000*l*. next Wednesday, being 2s. per share for the month of April."

Port Darwin.—The secretary informs us that cablegram has

been received advising the safe arrival of the director, who started for the mines in February last, and as soon as letters from him come to hand a circular will be issued to the shareholders.

FOREIGN MINES.

BALAGHAT MYSORE.—The directors have sold the gold produced at the mines in March (342½ ozs.) for 1,300*l.* 0s. 4d.

ELMORE.—The first ordinary general meeting of members of the above company is to be held at Winchester House, Old Broad Street, on Monday, 13th May, "for the purpose of electing directors and auditors, and other business (if any)." The affairs of this company are evidently being managed with great spirit and energy.

CARLISLE.—Mr. W. George Cavendish has been appointed chairman to this company, in place of the late Mr. Francis Joseph Bladon.

DENVER.—The directors have made a call of 6d. per share, payable on or before the 24th May next, making the shares fully-paid.

LISBON-BERLYN.—The board regret that the applications for shares in the proposed Orion Gold Mining Company, Limited, have not been sufficient to justify them in making an apportionment. The board have therefore resolved to cancel all applications received, and to make a second offer to the shareholders of the Lisbon-Berlyn Company, for the purpose of placing the shares in the proposed Orion Company at par.

ORITA.—Cablegram of the returns for the month of March :—"We have cleaned up after a run of 640 hours. The gross returns are 1,300*l.*; the net profit is 1,000*l.* We shall re-commence washing on the 4th."

SANTA BARBARA.—A cablegram from the mine, dated Rio de Janeiro, 29th April, advises that the repairs to the No. 3 stope were expected to be finished by 1st May, and that the lode in the No. 4 stope had improved.

UNITED MEXICAN.—The directors have to-day received the following telegram :—"San Cayetano property : Gross returns, weeks ending April 20th and 27th, $9,600 ; expenditure for week ending April 13th, $8,100 ; profit, week ending April 13th, $100. El Cubo property : I have stopped Cubo Rescates. Expenses, including capital expenditure, week ending April 13th, $4,450."

YURUARI.—The manager reports that he has cut the Potosi lode in the Water shaft.

ZARUMA.—The following was received on the 29th April :—520 ozs. *en route*, produce to end of March from 550 tons, equal to 0.94 ozs. per ton. This return is exclusive of gold from blanket sand, which will be forwarded later on.

HOME MINES.

DEVON CONSOLS.—At the 160-fm. level at Watson's shaft a valuable copper lode has been discovered, worth 4 tons of rich copper ore per fm.

TICKETING FOR TIN ORES.

A tin ticketing took place at Redruth on Tuesday last, when 195 tons were offered (average standard 88.89), with the following results :—

VALUE OF ORES SOLD BY EACH MINE.

	Tons.	Cwts.	Per ton. £	s.	d.	Value. £	s.	d.

LONDON METAL EXCHANGE.

4.20.—Closing official report.—Copper : G.M. Brands, cash, 39⅜ ; three months, 39⅜ ; best selected, 44, 5 ; strong sheets, 50 ; English tongh, 43, 4. Tin : Fine foreign, cash, 90½ ; three months, 90¾, 1¼ ; Australian, 90⅜, ⅞ ; English ingots, 93½, 4 ; Spelter, 17½, ¾.

METALS.

COPPER has been steady. The business in G. M. C. copper has not been large, and prices declined from 38*l.* 10s. to 37*l.* 10s. cash, improving again to 38*l.* 7s. 6d., and closing at 38*l.* cash, 38*l.* 5s. three months. Chili Bars have been sold at the same price, and in some instances at 2s. 6d. more than G. M. C. copper. Chili Charters nil. The statistics are rather more favonrable. Stocks in England and France are given as 118,847 tons against 118,101 on 1st April. Visible supply, 124,447 tons, against 124,876 tons. The deliveries in April were 8,509 tons, against 4,398 tons in March, and 1,397 tons in February. Australian nominal. We quote English tough, 43*l.* to 45*l.* ; best selected, 45*l.* to 47*l.* ; strong sheets, 50*l.* ; India sheets, 46*l.* to 47*l.* ; yellow metal sheets, 5d. to 5¼d. ; ore, regulus, &c., 7s. to 8s. per unit.

TIN has been rather pressed for sale. Straits declined from 91*l.* 10s. to 89*l.* 12s. 6d., improved again to 91*l.*, but eased to 90*l.* 10s., and closes at 90*l.* cash ; three months realised 15s. over spot, and Australian 10s. to 15s. premium over Straits. The stock on the 1st inst. was 6,014 tons ; arrivals in April, 3,067 tons, and delivery 2,097 tons, of which 700 tons went to America. The visible supply in England, Holland and America is given as 15,832 tons on 1st May, against 15,203 tons on 1st April and 23,995 tons last year. English ingots, 93*l.* 10s. The Dutch market was steady. Banca, 55¼fl. ; Billiton, 55fl.

TIN PLATES are steady at 13s. 6d. for ordinary coke Liverpool.

SPELTER easier ; 17*l.* 10s., 17*l.* 12s. 6d. for ordinary brands, ex ship here.

LEAD quiet. Soft Spanish, 12*l.* 12s. 6d. ; soft English, 12*l.* 15s., 13*l.* ; L. B., 13*l.*

QUICKSILVER. Rothschilds' price, 8*l.* ; second hands, 7*l.* 16s. to 7*l.* 17s. 6d.

ANTIMONY firm ; 49*l.* to 50*l.*

RAILWAYS.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year :— Increases : — Caledonian, 5,584*l.* ; Great Northern, 2,126*l.* ; North-Western, 6,939*l.* ; South-Western, 10,693*l.* ; Sheffield, 657*l.* ; Metropolitan, 580*l.* ; Midland, 4,343*l.* ; North British, 2,149*l.* ; North-Eastern, 11,362*l.* ; Eastern and Midlands, 178*l.* ; and Hull and Barnsley, 91*l.* Decrease :— North Staffordshire, 131*l.*, and Metropolitan District, 179*l.*

The Brighton Railway traffic return for the week ended April 27th exhibits an increase of 12,899*l.* ; and the South-Eastern, an increase of 4,698*l.*

The gross earnings of the New York, Lake Erie, and Western Railroad, including the New York, Pennsylvania, and Ohio Railroad, for the month of March, 1889, were $2,113,190, the working expenses, $1,358,212, and the net earnings, $754,978, or less proportions due to leased lines, $558,937, showing a decrease, as compared with the same period of last year, of $80,884. For March the Philadelphia and Reading Railroad earnings amounted to $1,364,172, and the expenses to $864,857, leaving a surplus of $499,315, against a surplus of $653,452 in 1888. The Coal and Iron Company's receipts were $838,204, and the expenditure $1,032,747, or a deficit of $194,543, compared with a surplus of $289 last year. The Wabash Western Railway earnings for the week ended April 14th were $96,941, against $95,450 in 1888. For the two weeks March 25th the Lima Railway receipts amounted to 2,771*l.*, against 2,748*l.* last year.

The revenue statement of the Canadian Pacific Railway Co. for the month of March shows an increase in gross earnings of $160,000, and a decrease in working expenses of $35,000, making an increase in net revenue of $195,000.

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results :—Increases :— North Metropolitan, 1,850*l.* ; London, 1,151*l.* ; London Street, 558*l.* ; London Southern, 98*l.* ; Provincial, 1,167*l.* ; Belfast, 845*l.* ; Southampton, 75*l.* ; North London, 124*l.* ; Gothenburg, 43*l.* ; West Metropolitan, 258*l.* ; Burnley, 10*l.* ; Southwark and Deptford, 86*l.* ; Stockton and Darlington, 15*l.* ; North Staffordshire, 167*l.* ; Woolwich and South-East London, 130*l.* ; Edinburgh, 306*l.* ; Bristol, 652*l.* ; Bordeaux, 326*l.* ; Continental Metropolitan, 737*l.* ; Calais, 35*l.* ; Sunderland, 162*l.* ; France, 129*l.* ; Hamburg, 202*l.* ; Germany, 702*l.* ; Calcutta, 43*l.* ; South London, 324*l.* ; Swansea, 251*l.* ; and Imperial, 220*l.* The Buenos Ayres and Belgrano Tramway receipts for March were $48,798, against $42,765 last year. For the week ended March 18th the Anglo-Argentine Tramway receipts amounted to 5,335*l.*, against 4,337*l.* last year. The London Road Car Co.'s receipts for the week ended April 27 were 2,703*l.*, being 595*l.* more than in 1888.

MISCELLANEOUS.

The African Gold Share Investment Co. have been appointed agents of the Violet Gold Mining Co.

The Burma Ruby Mines announce that share certificates (10s. per share paid) will be ready for delivery on and after Thursday, May 2nd, at the company's office, in exchange for the letters of allotment.

We are informed that the applications for shares in the Nottingham and Derby Water-Gas Co. were for seven times the amount offered by the directors.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING MAY 4TH.

Carried forward.

Anglo-Mexican Mining	—	3s. per share.
Bank of New South Wales ...	—	15 per cent.
Bank of New South Wales ...	—	bonus 2½ per cent.
Bank of New Zealand	55,000*l.*	7 per cent.
British Borneo Trading Co. ...	—	6 per cent.
Brazilian Imperial Central Bahia Railway	—	3 per cent.
Boston Deep Sea Fishing and Ice Co.	—	3 per cent.
Commercial Bank of Manitoba ...	—	7 per cent.
Emu Bay and Mount Bischoff Railway...	—	7 per cent.
Gympie Great Eastern Gold Mining	—	1s. per share.
Porto Alegre and New Hamburg Brazilian Railway	—	2½ per cent:
Scottish Provincial Assurance ...	—	20 per cent.
Tuscan Gas Co.	—	8 per cent.
Union Debeuture Co.	—	5 per cent.
West India and Panama Telegraph	1,154*l.*	12s. per share.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (1st May).—The lode in the 40-fm. level east of junction produces 7 tons of mixed ores per fm., together with good tin work. In the same level west, the lode produces 6 tons per fm. The stopes below the 30 west at the junction are producing a large quantity of mineral, and steadily improving. Glasson's new rise, in back of the 40 at the new engine shaft, is going up in a productive lode, and is opening profitable stope ground. Cook's late stopes below the 30 east are producing from 10 to 12 tons of mixed ores per fm., and good work for tin, intermixed with blende. Eastern stopes in back of the 40 east are producing fairly well for copper and arsenical ores. In the eastern part of the mine the lode has considerably improved for tin.—T. Gregory.

D'ERESBY.—At the No. 9 the lode is again yielding lead by the side of the Gors shaft. The various points in operation are of the same value as reported last week. 20 tons of lead ore will be sold on the 8th inst.

DRAKEWALLS (2nd May).—The lode in the 147-fm. level driving east is showing more capel and quartz, and will now produce 4 tons mundic per fm., and stones of copper ore in places. In the 147 driving west we are now going through a cross-course, and hope to see the lode again in the course of a few days. We continue to break some good stones of tin work at the 147 west on the north part of the lode. In the 132-fm. level west the lode in the cross-cut driving north (to which I referred in my last week's report) is improved for tin ; worth 8*l*. per fm., and is looking very promising for further improvement. In the winze sinking below the 132 west the lode continues to yield 12 tons of copper and mundic ores per fm. for length, 9 ft. In the stope in the back of the 132 west the lode will produce 6 tons of copper and mundic ores per fm. In Rule's rise in the back of the 117 west the ground is favourable for progress. Fair progress is being made in sinking the winze below the 90-fm. level west. All our surface operations are being got on with all possible despatch.—H. Rodda.

EAST BLUE HILLS.—The Pink lode is showing signs of improvement. It is better defined than at any time since they commenced driving on it. A bunch of tin may be cut at any moment.

EAST GRASSINGTON.—The following report, dated May 1st, has been received from the manager :—Hammond shaft : The 47-fm. level west has been communicated with No. 3 sump, which has greatly improved our ventilation, and enable us to push this end forward with a full pare of men to more rapidly develop the western part of the mine. The lode in the end is fully 2 ft. wide, composed of lime spar, sulphate of barytes, intermixed with patches of lead ore, worth 10 cwt. per fm. A stope in the back of the level, in a lode 2 ft. wide, and producing 8 cwt. of lead ore per fm. In the drivage west of No. 2 sump, below Amy's workings, the lode is upwards of 2 ft. wide, and producing 20 cwt. of lead ore per fm. In the same level east the lode is 2½ ft. wide, and producing 10 cwt. of lead ore per fm. A stope in back of the 37-fm. level is worth 10 cwt. of lead ore per fm. The water level is being placed in thorough repair. Harris's main engine shaft : This shaft is down 21 fms. below the water level, or 48 fms. from surface. On Monday next we commence cutting plat, and afterwards proceed to cross-cut the lode at the 47 and 37-fm. levels simultaneously. Surface and dressing operations in full swing. We commence smelting another parcel of lead ore on Monday next.

GLYNDWR.—The reports of the value of this property are fully confirmed by a mining engineer of repute, who inspected the mine when the lead was cut in the bottom cross-cut, and had it not been for the inefficiency of the then pumping machinery it would have been one of the greatest successes of the day. The shares have been well applied for, and the requisite capital is now assured. Operations will at once be commenced by the erection of the necessary pumping machinery, and also by the raising of lead in the flats above the water level.

GREAT FORTUNE.—The preparatory work for draining the deeper workings is now nearly completed, and by the end of the present month they expect to commence pumping. The aggregate value of the different points remains about the same.

MELLANEAR (1st May).—The lode in the winze in bottom of the 140-fms. level east of Grundy's engine shaft, is 6 ft. wide, and yielding 2 tons of copper ore per fm., and also worth 6*l*. per fm. for tin. The lode in the 150-fms. level east of Gundry's shaft is 5 ft. wide, yielding good stones of copper ore, and saving work of low quality for tin. The part of the lode carrying in Gundry's engine shaft, sinking below the 150 is 6 ft. wide, and yielding copper and tin ores, but not enough to value. There is no change in any other part of the mine. —J. Gilbert.

MID-DEVON.—Report for week ending 27th April :—Surface : The pumping machinery has given extra trouble this week, having had two breakages in the alignment of rods, causing rather long stoppages ; it is now doing good duty. A shaft : The water has risen to within 3 ft. of the 80. C shaft : The 60 east has been driven by four men 2 ft. 3 ins. ; total distance from shaft, 37 fms. 5 ft. 6 ins. ; the strata is more favourable to progress, having less capel and more garnet, axinite and chlorite, intermixed, carrying a little copper ore. The preparatory work for trip-plat and tramway, wrought on by two men, is about ready for laying the tram rails.—J. Neill.

MORGAN.—A fire broke out on the morning of the 30th April at a building upon this company's property, occupied as a changing-house and smith's shop ; the fire was confined to this building, which was destroyed. This in no way affects the general working of the mine and machinery, which proceeds as usual. The buildings destroyed were fully insured in the Alliance Assurance Company of London. The management is now actively engaged in excavating the site for the reception of the new machinery, part of which is already on the way.

PHŒNIX UNITED (30th April).—The setting report is to hand. Seccombe's engine shaft : The water is now down below the 170-fm. level. We have at various points throughout the mine 12 pitches, at tributes varying from 7s. to 11s. in the £ for tin.

PRINCE OF WALES.—The underground operations are without change, the drivages being by the side of the lode. The surface works are proceeding favourably, the main parts of the calciner are completed, and the building of the stack is now in progress. The new loadings for the winding engine are now ready for the putting together of the engine, which will be finished without delay.

ROMAN GRAVELS (2nd May).—We have now finished all the work in the shaft connected with the fixing of the new pitwork, and shall be able to start pumping as soon as the new 60-in. cylinder for our Cornish pumping engine supplied by Messrs. Harvey and Co. of Hayle is fixed. We are still able to keep the water from rising above the 95-fm. level by working the old engine. We hope to commence pumping next week.—A. Waters and Son.

SOUTH CONDURROW (1st May).—Good progress is being made in sinking Marshall's shaft below the 108-fm. level. The 108 end west is in a large lode, but it is without tin to value ; the rise in the back of this level yields low quality tinstone. The ground is moderately easy for working in the rise towards Pendarves's shaft. The 93 east of King's on the main tin lode is worth 8*l*. per fm. The back of the 80 east is worth 7*l*. per fm. The 70 east is worth 18*l*. per fm. The 60 end east is worth 12*l*. per fm. The 50 east is worth 12*l*. per fm. The 40 end east is worth 10*l*. per fm.—W. Rich, W. Williams, H. King.

SOUTH DARREN (2nd May.)—The 142 ends east and west are without change, both cuds look promising, but are without ore to value. As we are rather short of men to stope, we have to day put the west end men to stope a little back from the end where the lode is worth 2 tons of silver-lead ore per fm. The shipping in this level is still turning out very well ; worth 17 cwt. of silver-lead ore per fm. The drivage in the 130 west is proceeding but slowly, but is improving as the lode is cut into. The 110 east is in a hard lode without ore to value. The 100 end west is worth 12 cwt. of silver-lead ore per fm. This end has a very promising appearance. There is some lode and lead left in the side ; we intend to prove this with a cross-cut next month. There is no change to notice in any of the other points.—J. Mitchell.

TIN ERA (30th April).—In the past week the men have been engaged fixing new air pipes and fitting up the old ones. The ventilating machinery continues to do its work well, and the men are again in the end, in which there is no change to report to-day.—R. Knott.

WEARDALE.—Report on the Weardale Company's mines for the week ending 27th April.—Ore raised for week, 80 tons ; ore dressed for week, 98 tons ; ore, &c., smelted for week, 120 tons, producing 64 tons of pig lead.

WEST CARZISE.—The load in the 30-fm. level west on Carzise lode is looking better, and so also is the lode in the shaft on the old workiugs. In the engine shaft the ground is changed, the operations, apparently, have been in an unproductive piece of ground below the 20-fm. level, and there is now every appearance of an important change for the better. In the old Carzise part the agent writes that he will soon be breaking tin.

WEST WHEAL GRENVILLE (30th April).—The *debris*, &c., found at the 90 in engine shaft has been cleared, the forking lift dropped, and water drained to about 9 ft. below the 90. Some repairs have been done in the 90 west, and said level cleared for about 25 fms. to find room for putting stuff from engine shaft. Shaftsmen are now clearing stuff from under the 90, and hope when this is done to find lift is low enough to admit of fixing cistern, &c., in which to place standing drawing lift from the 90 to the 70 fm. level. At Harvey's shaft the men have been taking out old bed planks, &c., cleaning down attle lying on foot wall, and depositing the same in the 40 level, and have fixed Skip-road to about 3 fms. under the 28 or 46 fms. from surface. —T. Hodge, J. Skeat.

WHEAL GRENVILLE (2nd May).—We met with a slight accident to our pitwork on Monday last, which caused the water to rise to the back of our bottom level. Everything is working well now, and forking satisfactory. No change in the bargains worthy of note. —T. Hodge.

WHEAL METAL AND FLOW.—The Metal lode in the bottom level is still disordered by capel, but producing a little tin. Some good stones of tin have been broken from the bottom level, about 2 fms. behind the end.

WHEAL UNY.—The prospects here are still good. The 193-fm. level east is improving as it advances under the rich ground passed passed through in the 180-fm. level. The stopes in the bottom of the 200-fm. level still continue very good.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (6th April).—Have driven breast 24 north 6 ft. 6.0. Metal scattered all through breast, until Friday, 5th, when the metal dropped from front to a well defined slip to the west. I then put two shots in slip, and found metal full depth of drill-holes —2 ft. On Monday, April 8th, as per Mr. Sanchez' instructions, will cross-cut 6 degs. north of west. Have driven cross-cut west from the bottom of No. 7 winze 24, 5 ft. 9.10 ; ground hard ; no indication of metal. Have sunk Balvanera shaft 5 ft. 9.10 ; depth of shaft from 50, 56 ft. 8.10. Have driven east cross-cut No. 3 50, 19 ft. 5.10, with four men and machine drill, distance driven being in the lode : showing very little mineral. Have secured pump 50-fm. level by placing new support timbers ; shaft and ladder ways in good order ; San José ventilation shaft secure.—H. C. Cloud.

— Ore product for five weeks ending 30th March :—Rough output—From 24-fm. level north, San José, 54 tons ; from 50-fm. level north, Mina Grande, 31 tons ; total, 85 tons. Yield from same :—1st class ore from 24, 1¾ tons, at 99.2 ozs. per ton, equal to 173 ozs. troy ; * 1st class ore from 50, 1¼ tons, at 83.4 ozs. per ton, equal to 104 ozs. troy ; lead ore from 24, 1 ton, at 40.3 ozs. per ton, equal to 40 ozs. troy ; 2nd class ore from 24, 10 tons, at 43.1 ozs. per ton, equal to 430 ozs. troy ; * 2nd class ore from 50, 2 tons, at 35.9 ozs. per ton, equal to 71 ozs. troy ; mine smalls from 24, 8 tons, at 24.5 ozs. per ton, equal to 196 ozs. troy ; total, 24 tons, yielding 1,014 ozs. troy ; gross value, at $1.216 per oz., $1,233. Average ley, 42.2 ozs. per ton. Estimated reduction loss and expenses, at $30 per ton, $720. Estimated net value, $513.—J. R. Sanchez. (* N.B.—The ore from the 50-fm. level comes from the lowest level in the Miua Grande Miue yet reached, and as the assay for 1st class ore from this level averages 83 ozs. to the ton, as above, and for 2nd class ore 35 ozs. to the ton, it is evident that this ore is of a superior quality.)—Secretary.

CALLAO BISI (4th April).—Mine—Unda shaft : The drift in No. 1 stope has been driven 8 ft., making its length 43 ft. 6 ins. No change ; the quartz considerably mixed with blue stone. We drove into the foot 13 ft. and found the wall very irregular. The cross-cut south-east at the 550-ft. level has been driven 6 ft. 6 ins. ; total distance 52 ft. from shaft ; ground still very hard, no signs of water or mineral yet. The cross-cut north has been driven 9 ft. ; total, 45 ft. from shaft. We are making fair progress at this point. Sosa-y-Mendez : We cut the lode in the shaft on the south side of the croppings, but was found small and broken, and rather disappointing. I therefore started to sink on the dip of the lode at a distance of

about 1,000 ft. from the boundary line; and we have a fair-looking lode about 3 ft. thick at 20 ft. depth. After all, I hope it will turn out satisfactorily. Some few stones show visible gold now and then, but the most part is very fine. The prospect I mentioned in my last at the Azules has been worked on about 10 ft., but has pinched very small; the pump and machinery working well.—G. W. Eustice.

BRATSBERG (22nd April).—Owing to holidays observed in this country during Easter very little has been done during past week, hence there is practically no change since last report.—J. D. Holman.

BRITISH BROKEN HILL PROPRIETARY.—Concentrating plant: Fixing engine and constructing the large iron tanks. Small ore bin alongside tramway completed, and in use. Erecting large one north of No. 3 shaft, into which ore from it and from main shaft will be shot.—T. Eyre.

CENTRAL ARGENTINE.—Extracts from Mr. Mellor's report:—Alluvials: The Canada Hondar contains alluvials to the extent of about 254 acres of what I find, from careful examination, and testing by trial holes and washings I have made, may be termed pay dirt, such as will prove remunerative in washing. I annex a list of these tests and the weight of each sample of gold taken. I could not get down to the bed-rock in many places, because of the water being under the level of the bed of the river. Average yield, 14 dwts. 2 grs. per cubic metre. (2*l.* 9s. per cubic metre.) Lodes: In the southern portion of the property, about 10 miles from the Canada Honda proper, there are several distinctly defined lodes. One at Paso del Rey crossing the Canada Honda traceable for some distance on the hills on both sides. There are also lodes at Cerrilos Negras, about half a mile from Paso del Rey, also the Poterillos vein in the same neighbourhood, and from the surface assays were as follows:—Paso del Rey, 3ozs. 2 dwts. 19 grs. per ton of ore; Cerritos Negras, 17 dwts. 23 grs. per ton of ore; Proterillos, 11 dwts. 10 grs. per ton of ore. In my opinion these veins will show better results if they are properly costeened to some depth below surface, and average samples taken across the lodes. Cerros del Oro: The ore, judging from its soft nature, will be mined and milled at a cost of about 5 or 6 dwts. per ton. The immense height of "backs" will allow of four levels for stoping of 30 metres each above adits, and should the ore assay well (which I believe it will) there will be enough to keep 50 stamps going for 30 years from these adits alone.

COLAR CENTRAL (9th April.)—Low's engine shaft: 200 ft. east cross-cut has been advanced 8½ ft., making a total length of 205 ft. from shaft. There is hardly so much water here at present, but the ground continues much the same as when last reported on, and not good for boring in. Driven by one rock-drill. South drive from east cross-cut has been put in 14 ft., making a total length of 37½ ft. The quartz we were following has pinched clean out, and as the ground is hard, and poor, with no indications of a wall, I do not purpose continuing this drive much further unless there is a change. Driven by one rock-drill. 200 ft. west cross-cut has been advanced 10 ft.; total length from main shaft, 208 ft.; there is no change to notice here. Driven by one rock-drill. Underlay shaft: 171-ft. level east has been driven 5 ft. by hand labour; total length, 88½ ft. The cross-cut north through this drift was put in 4½ ft., also by hand labour, but nothing has been met with. East boundary shaft: West cross-cut has been driven 10 ft.; total, 33 ft. East cross-cut has been driven 11 ft.; total, 26 ft.; both by hand labour. The ground here is not so hard, though up to date we have not come across any quartz worthy of notice. Trial shaft: This is the trial pit I mentioned in my letter as being cleaned-up; its original depth was 26 ft., with quartz about 2 ft. wide in the bottom. We have fixed a tackle, and propose following this on the underlay, and have sunk 7 ft. during the past eight days, making total depth of shaft 33 ft. So far the quartz is holding, and looks fairly promising, but I should like to follow it further, and see if it holds when it meets the harder rock. Machinery at surface is working well, and the laying of air pipes to underlay shaft is being pushed on.—A. S. B. Oakley.

COLOMBIAN HYDRAULIC (19th March).—The following are the details of the operations during the month of February:—Run No. 154: Owing to shortness of water it was not considered advisable to clean up in February; consequently the present run extended over 1,159 hours, and we made a clean up on the 15th March, with the following result:—From the sluice $22,703.20, and purchased gold $708.55, which has produced six bars of gold, worth $23,411.75. The costs for the two months have been $7,109.15, which leaves a profit of $16,302.60, or about 3.260*l.* The rich streak, though perhaps not quite so rich as originally, still looks like lasting for a long time. It has been drifted to the extent of about 90 cubic yds. during the run; and to that I attribute about 1,400*l.* of our present returns. The monitor has not given as large results as it sometimes does, but that is attributable to the fact that we have never once had our full supply of water during the two months. Notwithstanding this, our clean up is the largest ever made, and is equal to one-sixteenth of the company's whole capital. I arrived on the 23rd of February, and found that Mr. Sharman had not made a clean up for that month, in consequence of the very dry weather that seems to have prevailed. The dry season still continues and our pipes are never full; but in the ordinary course of events we ought to have rain before the end of the present month.—E. A. Oakes.

COLVILLE.—The company's agent at Coromandel writes on March 23rd:—East Kapanga: The tributers are getting through a deal of dead work, prospecting in the line of reefs. They believe there is a rich stone in their immediate locality. North Coromandel: The tributers are working vigorously, trenching on the surface. The great depth of clay on the bed rock makes prospecting very tedious. Another party of tributers intend driving a tunnel under the Albion Hill, which will give them about 50 ft. of backs. They will extend the level towards the Coromandel Company's boundary, in hope of striking some of their reefs.

COROMANDEL (21st March.)—Report for four weeks ending March 16th:—The 80 ft. cross-cut south: This was extended 11 ft. in a good channel of country, now temporarily suspended until we ventilate the level. The vein passed through in 80 ft. cross-cut, referred to in my last, is named Lynch's reef, and has been driven on by two men northwards 14 ft.; average width, about 9 ins. I anticipate cutting gold here shortly; the reef looks well. The winding-engine is now roofed in and nearly completed, and the stamps, boiler and stamps, with reduction department, being got ready in case of emergency to start stamping. We should soon cut the Black reef at our 280 north; this done, no time will be lost in driving to our cross reef; with this reached our three reefs should be drained sufficient to commence operations on them below our 180 ft. level. We must then increase hands, and commence preliminary stamping. Pumping and winding is being carried on with regularity, and all points of development anxiously watched for good discoveries, of which I hope soon to be enabled to communicate to you.—F. Hodge.

CORTEZ (13th April).—Work on the mines for week ending this date has been done as follows:—Boss tunnel: Advanced 24 ft. Main tunnel: East drift advanced 6 ft. No. 1 centre (just south of T table) stoped 1 ton of ore, about 10 ozs. per ton. Middle tunnel: West drift stoped 21 tons of ore, containing 100 ozs. silver per ton. North east upraise: Stoped 88 tons of ore, containing 60 ozs. per ton of silver. North-west upraise: Stoped 44 tons of ore, containing 100 ozs. per ton of silver. North-east drift: Advanced 3 ft. Development tunnel: Advanced 32 ft. Ore hauled at mill, 250 tons; ore treated at mill, 175 tons; the average assay of which is 71$\frac{55}{100}$ ozs. silver per ton. Bullion shipped, 10 bars containing 10,932$\frac{93}{100}$ ozs. silver, and 7 ozs. of gold.—Welsh.

CUMBERLAND (5th March).—After describing the mining operations for the month of February, the manager writes:—New battery: We have at last made a start to crush, but not a permanent one, as, after starting, there were several small defects found that required putting right or altering, which is almost always the case in starting a new plant of this kind. The greatest drawback has been in connection with the feed-pump not being able to keep the three boilers supplied with water, so that after crushing a few hours we had to stop the battery till the boilers were filled up, then start again and crush for a few more hours. But we are making alterations now in connection with the feed-pump, which I think will remedy the defect, and that by to-morrow we will be able to go on crushing continuously.—W. Straughan.

DENVER (12th April).—We have a cheering outlook in the upper workings at about 200 ft. from the surface on the west side of the main shaft, where a party of tributers in their recent retrial have found a little "pay," which we are following up. The vein is of a promising nature, and more definite remark on this point will be made on receipt of further mill returns; at present, suffice it to say, that as the ground around this level stands intact, any discovery here would be additional importance on that account; we are hoping that it will lead to good ground.—A. Rickard.

— (18th April).—I am very hopeful that the cross-cut at the 1,050 level will open up some good ground, and that the vein at 200-ft. level will be of paying grade; but until this is realised, we cannot do any better.—A. Rickard.

DEVALA-MOYAR (8th April). We are now sinking the pyrites winze on the north part of the lode; width of the winze, 7 ft. We are unable to give you any information of the south portion, as no hanging-wall has been seen since it was left some distance above. There is not much difference in the appearance of the quartz—pyrites disseminated through it, and will produce from 2 to 3 tons to the fm. for the length, 12 ft., but I regret to say at the present time the assays are rather low. The deep tunnel driving east of pyrites winze will yield 1 ton to a fm. This end is looking very promising indeed. I am most anxious about this point as a new discovery in this direction will greatly enhance the value of the mine. One machine is now engaged in stoping the bottom of the deep tunnel, raising quartz for the mill. This stope washes much better for gold than the side. One machine is engaged in driving the tunnel west of cross-cut. We have abundance of quartz here, but I think from appearances it is of low quality. I am pleased to inform you the 48 winze west continues to open out well and will produce 7 tons pyrites to a fm. All the machinery is working satisfactorily.—J. Williams.

EAST AREVALO (MEXICAN) (8th April).—Since my last report, which was dated March 30th, we have cut through the lode at the No. 2 level a further 2 ft. The ground is very hard; the ore from the lode is worth about 4 marks per montone, and shows indications of improvement. The No. 1 cross-cut at the No. 3 level has been extended 3½ ft. in good ore; this makes 6½ ft. of metal. We have about 9 ft. further to reach the footwall of the lode, and I am hoping the ore will continue until it reaches this wall, in which case we should have a very large body of ore to stope, and which would yield an exceedingly large body of metal. The metal which I discovered in the No. 2 level some time ago was more or less in small deposits, but it is, I think, the copper portion of the ore now discovered in the No. 3 level. You will see my reports at the time anticipated some such thing as this. The No. 2 cross-cut No. 3 level has been driven into the footwall 2 ft.; this, although I was sorry to do, I had to discontinue for the present on account of the air and drawing power which is all required for the working on the ore and other places. I have no doubt the continuation of this cross-cut will intersect a vein of very rich metal, and if I remained in this company's employ, I should continue it at the first opportunity. In the No. 4 level we have driven north into the lode 3 ft. 9 ins., my intention is to cut through the lode to the footwall, and, as it is just under where we have metal in the No. 3 level, it is very probable we shall have metal at this level also. I, however, have to discontinue this important point while I am proving the lode in the 5th level near the bottom of the shaft. You will understand that of late I have been driving rapidly east on the soft part of the lode, so as to get out of the dead piece of ground which extends for about 100 ft. east of our shaft. Having done this, I am now cutting through the lode at different points in the No. 2, No. 3, and No. 4 levels. At the No. 5 level, which is 120 varras 330 ft. from the surface, and the deepest level in this district, we have cut into the lode north 3 ft. 9 ins., and south the same distance, making a total with the width of the shaft of 15 ft., but it is of no value. I shall continue these levels for another week, when we shall be nearly through the lode, and if no metal is cut I shall discontinue working here, because if I cut into the soft lode I shall, with our present machinery, be drowned out, not being able to keep the water: and, furthermore, it is not for the present wise or important to work below the No. 4 or 100 vara level. We are to-day putting in a new floor in a larger metal house, and shall remove to this place the ore on hand. Last week we hoisted some ore from the third level, and to-morrow we shall commence drawing the best ore. We have again commenced dressing to-day, and I shall soon be sending metal to the reduction works.—H. Prideaux.

ETHERIDGE UNITED.—The mine manager reports under date 23rd February:—During the last fortnight we have been crushing quartz, or as I generally term it, stone from the Canadian west, which

is looking very well. I should not be at all surprised if we come into some very rich ore at a depth of about 300 ft. At present the best mundic stone is very patchy, and in shoots, but in sinking I think it would become more regular. When the dry season sets in I should like to put the shaft down another 200 ft., bnt until then the levels will keep the battery going. Lord Nelson (Lighthouse) : This is the mine you had assayed from mundic quartz ; there is very little done in it at present. Working levels are at 100 ft., with 17 ft. of water lodgment ; total depth of shaft, 117 ft. Western drive, 58 ft. ; reef 2 ft., 5 ft. 6 ins., and 6 ft. in differeut places, all the stoping done yet is 6 ft. high and 34 ft. in length. Eastern level, 53 ft. ; averaging from 3 to 4 ft. of reef. The battery (Lighthouse) has been going last week, as I stated in my last report. I intend to keep it going on the brown stone. What is termed brown stone is quartz that is free from mundic, and can be treated with very little grinding, and is always found above water level ; there is plenty of it, so I hope it will be payable. In the meantime I am waiting your orders to take over the duplicate grinding plant from Goldsmith Creek, so as to have it put np in readiness for treating the mundic stone.

FRYERSCREEK.—The directors of this company have received the following advices, dated Fryerstown, 21st March :—During the past fortnight we have extended the 520-ft. level south a further distance of 21 ft., making 112 ft. from cross-cut. We have not met with any stone as yet in this drive, any more than small veins of quartz in the footwall in hard substance. Ground very changeable ; hookan very small and tight just now, the footwall falling back to the east of south, which might make a change for the better. We have four men working in this drive. We are getting on very well with the repairing of the 420-ft. level. I think we shall be up to the end in another fortnight. The timber is very much broken up in the last 100 ft. towards the face of the drive. I can see quartz standing in several places where the hookan has fallen down from the back of the drive, and the western or hanging-wall has the appearance of stone close by. We are making very slow progress with the 260-ft. level going north. The ground in the face is very hard. We extended this level 6 ft. for the past fortnight by two men ; total, 76 ft. from the winze. The 320-ft. level, western line of reef : We are stoping the back of this level for about 6 ft. in height. Above this the lode is all mixed up with slate, sandstone, and quartz, but I think it will change again in a foot or two more. We are rising north of the stopes in the mixed country, but we cannot see any gold in breaking. I have not crushed the stuff broken from the rise. We shall put from 20 to 30 tons of this stuff through the battery next week to see if it is worth crushing. I have cleared up the lot of 26 tons crushed last week for a yield of 4 ozs. 7 dwts. retorted gold. I have crushed another lot of 16 tons this week for a yield of 4 ozs. 15 dwts. retorted gold. I have put down canvass from the copper plates all the length and breadth of the tables, which are 19 ft. by 5 ft. This is to catch the free gold that escapes from the plates. I can get a good prospect from this stuff off the canvas. We have about 200 lbs. of this, which, I think, will yield another ounce of gold when cleaned. I have not time to retort the silver from the last crushing, from which I expect 1 oz. of gold, and the gold from the canvas, which will be another ounce. So there will be about 11 ozs. of gold from the 42 tons crushed. This is payable.

INDIAN CONSOLIDATED (8th April).—Phœnix section During the month of March 620 tons of quartz were crushed, which yielded 120 ozs. 18 dwts. of gold.—R. B. Johnston.

— (8th April).—Colar section.—No. 5 shaft: During the past fortnight this shaft has been sunk 9 ft., or 51 ft. 5 ins. below the 360-ft. levels, or 25 ft. 3 ins. for the month ; there is nothing to value in the shaft. The 360-ft. level driving north of shaft has not measured anything for the past two weeks, having had to take up some bottom and raise the roof ; there is no change to notice in this drive since my last ; the ground is very hard ; drive for the month, 4 ft. 8 ins. ; lode 2 ft. wide, assaying 1 dwt. 22 grs. The 360-ft. level driving south of shaft has been extended 2 ft., or 54 ft. 2 ins. from shaft, or 7 ft. 6 ins. for the month ; the quartz mentioned in my last has not proved of any value up to this. The stope in the bottom of the 300 south level has been cut by rock-drills 6 fms. 4 ft., and by hand labour 8 fms. 2 ft. The lode in the stope averages from 8 ins. to 2 ft. wide, assaying 9 dwts. 3 grs. per ton stone. The rise and stope in the back of the 300 south has been cut 7 fms. 2 ft. ; the lode here is 9 ins. wide with very hard walls, but shows a little free gold ; per assay, 1 dwt. 22 grs. per ton stone. The 300 uorth stope has been cut by hand labour 6 fms. 5 ft. ; the lode in the stope varies in size from 1 ft. to 2 ft. wide, and assays 15 grs. per ton stone. The 230 north stope has been cut by hand labour 4 fms. 4 ft. 6 ins. ; lode 2 ft. wide ; low grade stone ; have removed the men to the 156 stope. The winze sinking below 156-ft. level north has been cut 11 ft. ; the lode is larger, being fully 3 ft. wide ; assay value, 18 dwts. 6 grs. per ton stone. We have now communicated this winze with the level below. Davey shaft : The 170-ft. level driving north of shaft has been extended 20 ft. 6 ins., or 94 ft. 8 ins. from shaft, or 59 ft. 6 ins. for the month. The vein of quartz still maintains its size ; 1 ft. wide, but per assay shows only a trace of gold. The cross-cut driving east of the 170-ft. level south has been extended 25 ft., or 45 ft. from the level, or 57 ft. 8 ins. for the month. We have gone through in this drive quartz varying in size from 4 ins. to 1 ft. wide ; barren ; intend extending this east, as we have other lodes east of us. New south shaft : This shaft has been sunk 2 ft., or 142 ft. 2 ins. from surface, or 7 ft. 6 ins. for the month. No change to notice in the ground or water. Trial shaft : This shaft has been sunk 2 ft., or 118 ft. from surface, or 64 ft. 6 ins. for the month. There is no quartz in the shaft at present ; it looks very poor. Surface : For March we milled 415 tons of quartz, producing 94 ozs. bar gold. All machinery, except the large compressor, is in good condition, and working well. Health of camp very good.—T. R. Davey.

JOSEPHINE.—Superinteudent's report for week ending April 6th : The 300-ft. level east has been driven 17 ft. during the week ; there is 10 ins. of quartz in the breast. The stopes above this level look very well, showing at times over 3 ft. of quartz. At a point 495 ft. east of shaft in the 300 ft. level, a winze has been started and sunk 12 ft. ; this is the point where we had the big assay. On starting we had about 4 ins. of quartz, and at the bottom of the winze we now have 16 ins. The raise at the west end has now gone up 80 ft., and we have 2 ft. of quartz in view. The 400 stopes look very fair, showing an average of 2 ft. of quartz. After clearing out the mill boiler, 20 stamps were again started on the 3rd, with about same average of rock as last month.

MONTROSE. — The directors have received mine manager's report of work done on Montrose Farm, for month cuding March 31st, as follows :—Scott's reef. Tunnel : The tunnel has been driven to a distauce of 446 ft. forward. The reef is now 3 ft. in width, and appears to be widening. A cross-cut at 350 ft. has been driven 8 ft. to north, and a cross-cut at 303 ft. has been to-day commenced. At each of these poiuts a leader or cross-vein seems to leave the main body, and in the cross-cut at 350 ft. it now shows a width of 2 ft. Some of the richest specimens I have seen have been taken from this vein during the last few days. Work done in tunnel during month, forward 43 ft. ; cross-cut at 350 ft., 8 ft. High level tunnel : This tunnel has been driven to a distance of 84 ft. forward. The reef, which had pinched out was again struck at 62 ft. (3 ft. west of shaft No. 1), 2 ft. 6 ins. in width. In the breast (east of shaft No. 1) the reef shows a width of 6 ft., and is probably considerably wider, as the hanging wall has not been reached. The value of the ore is small, but it will probably improve, it being fairly good in shaft No. 1, and distinctly rich in shaft No. 2 at this level. Work done in high level tunnel during month, 33 ft. West End Rose Reef Tunnel (formerly Tunnel No. 1) : No work has been done on forebreast of tunnel during last month (March). As it is doubtful whether the body of ore in forebreast is or is not the main reef, the men have been employed during the month in cross-cutting at various places along the north wall, but hitherto without striking any continuous vein. The body or ore (4 ft. wide) struck in cross-cut at 102 ft. pinched out at 114 ft. Another body (18 ins. in width) was struck in cross-cut to north at 141 ft., but pinched out at 144 ft. A cross-cut to north at 70 ft. has been driven 12 ft., but no reef has been struck. Work done in tunnel during month : Cross-cut at 70 ft., 12 ft. ; cross-cut at 102 ft., 18 ft. ; cross-cut at 114 ft., 13 ft. ; cross-cut at 141 ft., 9 ft. ; total, 52 ft. Antbear reef tunnel (formerly No. 3) : Only a small quantity of pay ore has been extended from this tunnel during the month, the men having been employed in stoping out a rich leader. Shaft No. 3 : Work was re-commenced on this shaft on March 18th, since when the ore has considerably improved in value. The shaft is now at a depth of 54 ft. on the reef, which shows a width of 1 ft. Work done in shaft during month, 10 ft. Battery site : The battery site is now finished, and in complete readiness for erection of battery on its arrival. 79 cubic yds. of masonry have been built, all of which is good and substantial.

— Under date of 2nd April the manager writes : Waggons are due here to-day with 785 cwt. of machinery, &c.

MOUNT PERRY COPPER AND REID'S CREEK GOLD (23rd Feb.)—Smelting : I had hoped to have had the refining furnace in order in time to have refined the next despatch of copper, but have not been able to do so. The next lot will, therefore, go as coarse copper. We shall smelt no more auriferous ores until the new plant starts at Reid's Creek, after which we shall send monthly shipments of matte. The machinery throughout the company's mines is in good working order, and general prospects are good.—J. Bennett.

MORUYA (2nd May).—Copy of telegram received from the mine : "Lode still looking good, going down almost straight ; dip about one in six, splendid walls."

—14th March.—Since my last report finished level 10 ft. to winze at 10 ft. ; put new framing in winze, 10 ft. slabbing in main shaft and frame at 40-ft. level. Raised about 30 tons of splendid ore in a short time. Will be able to raise large quantities as the mine gets more opened for additional men. I believe it is one of the best properties in the colony.—T. Batt.

MYSORE REEFS (9th April).—Harvey's shaft : The cross-cut east at the 320-ft. level north has been advanced 14 ft. 9 ins., which makes a distance of 38 ft. The width of the band of quartz, arsenical pyrites and trap-rock all intermixed, is 34 ft. We have driven 4 ft. in the clean trap ; several samples for the whole width have been taken, the same showing an average of 3 to 4 dwts. of gold a ton. We have commenced to drive north and south in the part which shows the most gold ; 5 ft. are advanced south, and 4 ft. 3 ins. north ; samples from here give about 5 dwts. of gold a ton. I am in hopes of finding something much better as we advance. We have a fair lode in the bottom of the winze below the 250-ft. level, and should we cut this run here, it will open up a piece of ground that will pay well to stope. Winze below the 250-ft. north level has been sunk by 12 coolies 2 ft. ; now 10 ft. 3 ins. below the level. The rock is very hard, and we have a great deal of water. In the bottom of winze and for the length of it, 6 ft., is a run of quartz and pyrites 1 ft. 6 ins. wide, worth 15 dwts. of gold a ton. An average sample for the whole width is worth 7 dwts. of gold a ton. Cross-cut west of plat at the 250-ft. level has been advanced 18 ft. 3 ins., now 184 ft. 6 ins. from plat. There is no change to notice ; we have from 120 ft. to 130 ft. more to drivo to reach the western formation. Cross-cut east of 250-ft. level north has been advanced by 9 coolies 12 ft., now 167 ft. 3 ins. from level. A branch of quartz and decomposed schist 8 ins. wide has been met with, which is leaving out a large stream of water. A sample of the quartz did not show any gold. I shall continue this for a few feet more, and if nothing better is seen, suspend it. Taylor's engine shaft : The sinking of the shaft has been continued by rock-drills, and a full staff of men (European and native) ; 7 ft. 9 ins. have been sunk ; total depth 154 ft. 6 ins. The rock is so very crash that we are constantly blasting out the timber up in the shaft which is a constant hindrance ; now we are a good distance below the timber I am in hopes that this will not occur again. Approximately there are 20 ft. more to sink to reach the lode, and I expect to get it done in four weeks from date. We are going dowu through branches of blue, kindly quartz, dipping with regularity to the west, these branches show a little gold, but not in sufficieut quantity to value.—M. Scantlebury.

NEW CALIFORNIA.—Manager's mine report for the first half of April :—The 1,900-ft. level west, in 528 ft., and stope : The lode in the drift and stope is yielding fair grade ore for a width of about 3 ft. ; it has shown a very gradual but steady improvement, and is now looking at its best. It is not yet at its richest point, for the drift is only now on the outskirts of the ore ground, but the outlook is certainly very encouraging, as pointing to the certainty of the continuation of the rich ore ground discovered by the 1,800 drift. The 1,900-ft. level east, in 192 ft. : No change. The 1,800-ft. level west, main lode, in 1,033 ft. : This drift got into good ore again soon after last reporting. The improvement continued, and the end is now yielding 8 tons of milling ore per fm. At the north spur, in 42 ft., the vein having diminished in width the men have been put to prospect the backs, where there is 18 ins. of rich milling material, equal to a yield of 4½ tons per fm.

The stopes are looking splendidly, and are yielding 8 tons per fm. of high grade millstuff. In the stopes east and west of winze No. 2, there being a good proportion of smelting ore in the vein, we have to mine it with greater care in order to save it by assortment as much as possible. Altogether the lode is yielding from 10 to 12 tons per fm. of ground. The 1,700-ft. level winze west of shaft down 7 ft., is going down in good ground, there being some 2 ft. of good ore in the bottom. The 1,600-ft. level east, in 610 ft.: The lode has been less irregular, but in the end presents a more favourable appearance. there being about 1 ft. in width of fair grade ore. Work at the mill has proceeded with the usual regularity, the 15 stamps having been employed (45 on company's ore and 30 on custom ore) as when last reported.—A. RICKARD.

NEW EBERHARDT.—The mine manager reports under date April 15th, as follows :—Our prospects are certainly encouraging, although our seams of ore that we are following are as yet small. still the ore we obtain for them is of a good milling grade, varying from $47.14 to $70.00 per ton. Number of tons of ore assorted and put on our ore dump for the past week, 11 tons. Assay value of same, $58.00 per ton. The improvement met with in our south workings, of which I wrote you last week, has not changed, with the exception of a little falliug in the value per ton, which may have been caused by defective sampling.

NEW FLAGSTAFF (13th April).—During the past week the work has been continued as follows :—Level No. 7 : No. 2 south is in 192 ft., and the ground is a little better than it was the past week. Level No. 8 : The Bonanza drift incline is up 38 ft., and is very good-looking for getting into a body of ore at any time. There appears more sand, clay aud ochre than before, and spots of silver-lead scattered all over. The rock is getting darker and more rotten, and every sign indicates that we are coming to ore. Bonanza drift west is in 25 ft. The rock there is harder and brighter than it was last week, but the streak continues, and I will follow it. The black winze is down 30½ ft. ; the rock is very short and does not break well, so the headway is small this week. Level No. 9 : North cross-cut is iu 310 ft. : the ground continues very good, and the streak of irou also. It is a little smaller than it was a week ago. Everything is going satisfactorily, compressors, pumps, hoisting works, &c. I expect the Alta tramway will be opened May 1st.—A. HAGEN.

NEW LA PLATA.—Manager's report for month of March.—The manager writes under date of 15th inst. :—The mine is looking better thau I have seen it for some time past. Slag dump : Royalty to the La Plata Company, $128.09 ; this, with the surplus over my estimate of last month's return, $48.50, gives a total royalty to report of $176.59.

— Writing on the 8th inst., the manager says :—There is no doubt in my mind but the dump will become very valuable at some future date. There is certainly $3,000,000 in it, and every reduction in coals, coke and labour will increase the value of the dump by helping to unlock its vast wealth.

NEW RUSSELL.—The following is from the mine report, uuder date April 16th :—Riggon Hill : Stoping ou the north side of the shaft above No. 3 level has been continued without any perceptihle change in the quantity or quality of the ore. The stope below No. 2 level south has produced a slightly better grade of ore than that at the north side. Laurel Hill lode : The driving south-west of the No. 2 level has been continued steadily during the week, but has not been productive of milling ore. In the middle of the week the back of the level passed from a blue state into a brown quartoze ore matter, which looked extremely promising for gold. So far, however, it has proved entirely barren, but I am not yet without hope that as it gets more directly under the best body of the ore we had in the No. 1 level south it may prove to be sufficiently good to warrant our taking it to the mill. Big lode : In the big lode work has been confined to the digging out for, and laying foundation for the engine moved from the coupressor house. This work is, I am glad to say, complete, and the engine itself partly put in position, so that the machinist will. in a day or so, be free to turn his attention to boiler repairs. Discovery of a new vein for prospecting : At the latter end of last week I discovered a new vein, and I have had a miner and helper working here all the week, and am glad to say that, from at the start. having an ore body some 18 to 20 ins. in width, we now have one nearly, if not quite. 4 ft. wide, which shows up capitally in the pan, aud which we estimate to be not less thau $4 to $5 ore. The shaft we are siuking thereon is not yet more than about 18 ft. in depth, but the ore in the bottom gives every indication of going down, and I am very pleased with the prospect. The vein, which, from its outeropping, appears to be quite distinct from any worked by the company up to the present, is in such a position that, should our prospecting prove to be worthy of development, ore therefrom can be supplied to the new mill with a very small expenditure. I have some 15 or 16 tons of ore on the dump already, and shall haul the same to the Riggon tramroad, and run it to the mill this or next week, in order to test its milling grade. The amount of last month's crushing was 47-50 ozs. gold.

NORTH MEXICAN (5th April).—I fully appreciate your desire of having the shaft go down fast, but we labour under some difficulties that cannot be avoided, as, for instance, having to secure the grouud before anything else. This week the shaft is timbered down to the bottom, as the contractor got through sinking last Saturday. I propose to give a contract for 50 or 100 ft., as in that way I expect to work faster, having now the whim to hoist the refuse quicker and do away with the windlasses.—R. S. CARLISLE.

NORTH TOLIMA.—The superintendent writes under date 18th March :—As under, please find report of operations at the company's mines for February herewith enclosed underground agent's report, and the accounts. Cost and returns : Cost, including construction aecount, salaries, transport, and realisation charges on mineral, &c., $2,465.25½ ; returns value, invoice No. 21, $745.42½ ; total, $1,719.83. ; loss for month, 343l. 19s. 4d. The ground extracted for the month has been :—Productive, 81.2 ft. ; unproductive, 40.2 ft. ; total, 121.4 ft.

NO. 2 QUEEN.—The following fortnightly report has been received from the mine, dated Charters Towers, 13th March :—No. 1 shaft—No. 1 level south : The tributers, Shephard and party, have been cutting away dead ground in the top block they have taken. No stone has consequently been raised by them. No. 5 level south : The underhand stope is getting very much broken up, though there are some good mundic leaders in the formation. Owing to the reef breaking up the output has decreased, aud in view of the falling off in yield shown by the last two crushings, and the patchy character of the stone. I have decided to discontinue work on the cross-reef altogether (except the tribute) as it will not pay any longer, even if the stone goes a shade better. Estimated stone raised by the company 60 tons. No. 2 shaft : Hill and party have sunk a further depth of 12 ft., and timbered 69 ft. of the shaft ; total depth from surface, 581 ft. Note, March 13th : Sinking was resumed to-day, 108 ft. having been sunk, and 113 ft. timbered since January 7th. This gives an average of a little over 52 ft. per calendar month progress, a great improvement on the last contract. The new boiler from Maryborough was delivered at the mine to-day. I am most anxiously awaiting the engine, as the work is becoming too heavy for our present winding plant. Mill : We have 10 heads engaged on the Hidden Treasure Company's stone, and 10 on the Old Identity. We have got 5 ozs. 10 dwts. of retorted gold from scrapings. I have had the false bottoms taken out of the pans, which appears to have effected a great improvement in their working. There is great scarcity of stone at present on the field, but I hope we shall command a fair share of what there is to be got. The drought which continues is also telling severely on the general water supply.—A. G. CHARLETON.

NUNDYDROOG (9th April.) — Mining operations : There is nothing new that I can inform you from underground this week. No measurements were taken yesterday. Webb's shaft continues to be in dark coloured barren rock. Taylor's shaft is hard and harren. The cross-cut driving west at the 370 in search of the lode continues to be hard and barren. Italian miners have commenced to drive the 370 south. In the new shaft near the north boundary no sinking has been done for the week ; the men have been employed putting in timber ; it is nearly completed, and as soon as it is, sinking will be resumed. We are extracting ore from the stope below the 370 south of Webb's shaft where the lode is 2 ft. 6 ins. wide, assaying 2 ozs. 9 dwts. 6 grs. The intermediate level is in a lode 1 ft. 8 ins. wide, assaying 18 dwts. 12 grs. The 230 stope is in a lode 1 ft. 8 ins. wide, assaying 12 dwts. The middle level is in a lode 1 ft. 8 ins. wide, assaying 1 oz. 11 dwts. 12 grs. The 166 stope is in a lode 1 ft. 6 ins. wide, assaying 2 ozs. 5 dwts. 18 grs. The rise in the back of the 230 is in a lode 1 ft. 6 ins. wide, assaying 10 dwts. 18 grs. Health : The work has been disturbed by sickness, especially among the rock-drill men. Weekly samples from the mill : Rough quartz, 2 ozs. 14 dwts. 18 grs. ; smalls, 2 ozs. 4 dwts. 15 grs.—B. D. PLUMMER.

ORITA (20th March).—The following are the details of the operations during the month of February :—Mine—Run No. 40 : After a run of 746 hours with the shortest water supply we ever had, I cleaned up to-day 250 ft. of sluice. which gave $4,179.40 ; cost, including building miners' houses, $1,343.65, showing a profit (notwithstanding the poor water supply we have had) of $2,835.75. By this mail I remit you $3,929.40, and will send the remaining $250 with next remittance. Run No. 41 : This will be ready to start to-morrow night. but till the morning of the 22ud Malpaso will have what water the Medina contains in return for the time they gave it to us. I have every expectation that the river will carry enough water in a few days to give both mines a full supply, and we are in readiness to take advantage of the water at any moment. At present it is rainiug, and I shall not be surprised to find a full water supply here in the morning. Before it can be turned on I have to get in two water gates, and fix up a monitor. I am writing to night that I may get the gold off first thing in the moruiug, and have the day in the mine. As soon as we start washing, I will write you more fully, but may mention the mine is looking better than at the start of run No. 40.—H. J. PRENDER.

—OSCAR (27th April).—Oscar lode : The amount of quartz present in the lode in bottom of shaft has considerably improved, but there is no alteration in its value. The ground is easy, and the men are making good progress. The 400-ft. level west still continues in a good quartz lode, but is at present poor, assaying only 2 dwts. In the No. 3 lode fair progress is being made, but there is no alteration to report either in quantity of quartz or value. We have crushed a few tons from each of the above workings, aud judging from the plates we think the value is about the saue as previous crushings. Daw's lode : There is not much alteration to call your attention to in the shaft or 420 ft. level south. The 370 ft. level south has improved, and progressing satisfactorily, but there is a slight falling off in the level north. The stopes in back of 370-ft. level have not improved as fast as we expected, but those in 170-ft. level north are looking a little better. There is uo alteration at any other points.—J. DAW, juu.

POTOSI (4th April).—New lode—No. 2 tunnel : In my last I stated that the driving of this had been suspended, and the men put to drive west towards same from the eastern or opposite side of the hill. I am pleased to say after driving 25 ft. thereat we succeeded in making the desired communication. The total length of this tunnel, which has been extended all the way upon the course of the lode, is therefore 207 ft., and the lode for the entire distance driven at this point shows itself to be regular and well formed, with au average width of fully 2 ft. of solid, good, milling quartz. No. 3 tunnel has been driven east another 14 ft., and the lode in the forebreast at present is 2½ ft. wide, showing visible gold with a good appearauce ; the nature of the grouud is, however, rather hard and difficult to break. No. 2 new lode : Good progress continues to be made iu the development of the deep tunnel. We have driven 42 ft. during the past fortnight, which makes the present total length of same 220 ft. Some 10 ft. behind the present end this level was communicated with No. 2 Prospect shaft, thereby affording the required ventilation. The lode here continues to be 2½ ft. wide, of solid, good-looking quartz, in which we frequently observe a little free gold. We expect shortly to meet with the east and west lode in this drive, when we hope to enter upon the most productive part of this lode, viz., a coutinuation of what we have in the upper workings on this lode ; hence the extension of this level is proceeding with as little delay as possible. Potosi Viejo : Zeiler's shaft : Satisfactory headway is being made with sinking in this shaft, and we have since my last another 15 ft. to add to depth of same. This makes the total depth below the old miue 90 ft., whilst the entire depth of the shaft from the surface is 225 ft., of which the first 100 ft. from surface is vertical, and the remaining 125 ft. being sunk on the course of the lode. It is most gratifyiug to find the lode continuing to open up so favourably here ; in fact, we have never before seen it look so thoroughly healthy as it does in the present bottom of the shaft. It is now fully 3 ft. wide, of solid, good milling quartz, and the nature of the ground is also of that eongenial nature so charaeteristic in connection with the most productive lodes in this region. The bottom level driving west of this shaft

has advanced another 18 ft., making total length of same 128 ft., and I am pleased to say the lode here continues to open up most favourably, being of the same size and value as when last reported on. In driving some 42 ft. further we shall come under the western shaft, referred to in my last. This shaft we find requires timbering from top to bottom, so much so that it is by no means safe to go down it in its present condition. We hope to complete the temporary security of same so as to be enabled to report the sinking of the shaft in my next. The few feet necessary to sink hereon, so as to communicate with the last-mentioned level, will be speedily accomplished, and this will not only thoroughly ventilate the mine, but also admit of our soon resuming the sinking of same in a profitable lode. The bottom level driving east of Zeiler's shaft is now extended beyond same 123 ft., and continues to improve in size and value, now producing 1½ ft. of solid quartz. Socorro lode: Since my last we have communicated the deep tunnel with bottom level upon this, and are now engaged in clearing out the stuff deposited therein and laying down tramway, so that, all being well, I hope to be able to advise you in my next of the resumption of sinking upon same in a good paying lode. We shall now be in a position to stope and explore here by means of this tunnel, which has secured thorough ventilation to the best possible advantage. Although we are experiencing a rather severe drought, the general health of the establishment is all that can be desired.—J. Pryor.

SOUTH-EAST MYSORE (2nd April).—Mining operations—Lavelle's shaft, north end: During last month we worked the drills three weeks in driving, and cut 63 ft., and effected a communication with Rogers' shaft. We have now splendid ventilation, and a long piece of valuable ore ground. Stope for the last week: I have had a drill stoping in the back of the level; ground cut, 31 ft. long by 8 ft. high. We are carrying about 6 ft. of the lode, and in the bottom of the level it is fully 9 ft. wide. The assays gave from three different points 7 dwts. 19 grs., 6 dwts. 12 grs., and 6 dwts. 19 grs. Although the samples do not present a very high figure, yet, with such a large lode, it will pay well for stoping. I know richer quartz has gone down in the bottom of the level. This will be worked shortly. I shall push on with the drills some time longer, so as to get a good supply of quartz on hand from this place for the stamps. Rogers' shaft: Sunk for the three weeks, 10 ft. 9 ins. If we had continued sinking the whole month our progress would have been very satisfactory, but I had to take the men and put them to blast out some ground for tip-plat, where the communication was made. The lode in the shaft is about 4½ ft. wide; very promising lode indeed. To work the long stope between those two shafts I am making preparations to commence a drive south in a lode 4 ft. wide. As soon as possible a drill will be put here, and when the end is sufficiently advanced the sinking of the shaft will be recommenced. A fine section of stoping ground will be opened out quickly and economically. Thomas's shaft, cross-cut west from bottom level north: Ground cut, 6 ft. 9 ins.; nothing of any value has yet been met with; rock very hard for breaking. Stope south of shaft: Lode 3 ft. wide; low quality quartz, 2 dwts. 14 grs. I am disappointed here. I fully thought we should have met with better paying stone; the colour of it certainly looks better than what it assays. Machinery continues to work very well indeed. Health of the establishment good.—J. M. Rogers.

SOUTH EAST MYSORE (9th April).—Mining operations:—Lavelle's shaft, stope in back of the level: The lode at this part is very large indeed, and is 44 ft. long, one solid mass of quartz; I never saw a finer lode. We are working a rock-drill here, and a strong gang of hammermen. A large quantity of quartz is being put through, which accounts for a large number of men at work. Some 20 ft. further south in the back we struck old works, but where we are now stoping no appearance of the old works as yet. I trust we have seen the last of them. The assays from the big lode show better, at one place in the middle over ½ oz. per ton. This, with such a big lode, will pay very well, and enable us to make good returns. Rogers' shaft: Until we get the engine ready for hoisting no sinking can be done. We have as much as we can do to keep the stamps going with the bullock whim. Every possible effort is being made to get the steam hoist at work, then we shall be in a position to sink the shaft on the course of the lode, and drive north and south. I hope to make connection with the big pumping engine this week. After this is completed the Robey can be stopped and drums put on. Thomas's shaft: Not very much has been done in the cross-cut west during the past week, 1 ft. 3 ins. only. I was compelled to take the men away from here, and put them stoping at Lavelle's. Labour is still somewhat scarce. Should we get a complete staff of coolies preparations will be made for re-sinking the shaft, and likewise the winze. Machinery working well.—J. M. Rogers.

TOLIMA.—The directors have received advices by the mail of 29th April, from their mines, of which the following is an abstract:—Frias: February cost, 844*l*. 8s. 7½d. Frias: February returns, 607*l*. 9s. 5d.; loss for month, 236*l*. 19s. 2½d. The underground agent reports 25 fms. 1 ft. 4 ins. of ground expended, of which 17 fms. 2 ft. 9 ins. were productive, leaving 7 fms. 4 ft. 7 ins. of unproductive ground. The superintendent states that the absence of adequate water owing to the continuance of the drought during February, rendered it impossible to dress any mineral during that month, some slight showers in the early part of March, however, enabled them to dress a portion of the February ore, and to make up the consignment valued at 607*l*. specified above. A good suppy of mineral, the superintendent adds, has been broken and lies undergrouud awaiting haulage to surface. This will proportionately increase the returns so soon as an additional supply of water is furnished by the rainfall long overdue. Indications, he reports, are apparent of an early change in the weather giving such additional supply. The underground agent reports improvements in the 40-fm. level west, driving west of the 60-fm. rise, where 1½ tons of export ore per fm. are obtained, whilst the No 2 sink in the 30 fm. west yields 2 tons of export mineral per fm.

VICTORY.—Writing under date 19th March the mining captain reports as follows:—Since I wrote you last I have sunk No. 1 east winze a further depth of 18 ft., making 32 ft. in all. I am starting a drive from this depth east to open up some stoping ground; the quartz will increase in value as I get under the hill. No. 2 west winze sunk a further depth of 14 ft.; total, 35 ft. I have about 4 ft. thick of reef in each of these winzes, and splendid looking ore ready for milling. No. 3 cautara I have sunk a further depth of 18 ft., making a total of 35 ft. I intend sinking this shaft down to 40 ft., and then driving in to strike the workings in No. 1 east winze. For air I have cut through a small reef in sinking this shaft about 12 ins. thick, very rich, with gold dipping south. The quartz I have taken from this reef will give from 30 to 40 ozs. to the ton. Some of the best samples I have had carried into the office to prevent the niggers from taking them away. I intend running this ore through the mill with some lower grade ore. No. 4 prospecting drive I have driven a further depth of 11 ft. I like the look of this drive, and expect to strike something very rich.

WEST TOKATEA.—The company's agent at Coromandel writes on 23rd March:—The prospects here are much brighter this month. Macfarlane and party have struck a new reef in the Alpha portion of the ground, which I have named the West Tokatea reef. It is a body of kindly-looking quartz, 8 ins. thick, showing nice dabs of gold in the stone. We are now engaged in tracing this lode on the surface, previously to starting a low level to intersect it, 150 ft. of driving giving us 80 ft. of backs. We have specimens worth ½ oz. of gold to the lb. Stevens and party are also working on a leader showing a little gold. The West Tokatea ground is a complete network of golden reefs, and I am confident there is a large rich reef as good as (if not better) than the Tokatea, which I am anxious to discover. If we do not pick it up on the surface we are sure to intersect it in our intended deep low tunnels.

WEST INDIAN (14th March).—In my letter of the 6th March I informed you that I was about to sink in the mass of alluvial deposits at San Miguel. After sinking to a small depth I encountered an enormous boulder of diorite, which I blasted with dynamite, and came upon alluvials much richer than on the surface. A quarter of a metre gave in nearly pure gold 0.71 of a gramme, which would make to the cubic metre about 2 dwts. of a value of about 8s. (One cubic metre equals about 35 English cubic feet).—Feux.

— Since the receipt of this letter the manager has further reported that he has discovered a nugget, weighing 13 grammes, in the River Mosquito, at the foot of the lode known as Naranjal in the Mana Concession, which lode he proposes to work on immediately.

TRIAL OF THE NEW EXPLOSIVE "ROBURITE."

(From *S.A. Advertiser*, Wednesday, March 20th, 1889.)

At the invitation of Mr. C. E. Stokes a party of about 25 gentlemen, including several connected with mining, proceeded by coach to Glen Osmond on Tuesday afternoon to witness some trials of the new explosive "roburite," invented by Dr. Roth, of Germany. The Gilles Glen Osmond silver mine was first visited, and led by the agent for the explosive the visitors were taken some 900 ft. into the Victoria drive of that mine. The experiments here were chiefly directed to proving the absence of after fumes—a serious drawback to the use of explosives—and secondly, of course, the power of roburite. Mr. Stokes did not keep his spectators long in suspense, but quickly fired two charges by means of fuses. The reports were loud, and accompanied by smoke; but there was nothing in the fumes that the most fastidious could take exception to, and there can be no doubt that in this respect roburite is in advance of other explosives. The after fumes of explosives greatly trouble miners; and, in fact, some of them cannot bear them; and if roburite leaves no more trace than it did in the Victoria shaft on Tuesday its general adoption in mines is only a question of time. And when the lookers-on came to examine the power of the shot fired, they had to confess that it had done its work admirably, some 5 or 6 tons of stone and earth being removed. Later on a visit was made to Target Gulley, on the same company's property. From the gully the party entered into a cross-cut running in 300 ft., with no vents for air, so that a better place for the trial for after fumes could not have been selected. Here, as before, however, there were no after fumes, and this fact was freely commented on by several gentlemen who have had experience with the use of explosives in connection with mining. Passing on to the Glen Osmond quarry, experiments were made to fully test the power of roburite. Two charges were placed in the face of the rock, and then fired. The explosion was loud, and on an examination being made it was seen that many tons of stone had been brought down, whilst one tremendous block of solid stone, which hung to the wall, had been cracked up the centre just as cleanly as if it had been sawn. Among the stuff brought down was one huge block of stone, and on this a charge of roburite was placed, and lightly covered with rubble. The shot was fired, and on an examination being made it was found that the face of the stone had been cracked from end to end. Two shots were also fired in the lower quarry, the result being the displacement of tons and tons of stone. Then to further test the power of roburite Mr. Stokes placed a charge on a piece of railway metal. This was a wrought iron rail which had not suffered from use, and the charge was laid between the flanges and covered with some clay. The result of the explosion was that the metal was broken into fragments, and all present were thoroughly satisfied of the power of roburite. The experiments were of a highly successful character, whilst everyone was satisfied that the explosive is safe to handle, and can be carried as a non-explosive, as Mr. Stokes placed a lighted match on the top of a package with no result. Roburite can only be exploded by means of a detonator, and consequently is perfectly safe to handle. Mr. Stokes had intended to show some experiments with gas—roburite produces no flame—to demonstrate the safety of using the explosive in atmospheres charged with gas, such as coal mines, but owing to the lateness of the hour these had to be abandoned. The company went away warm in their praise of roburite, and heartily congratulated Mr. Stokes on the success of the experiments. On measuring the rocks displaced and thrown down by the three charges of roburite on the high level quarry, it was found that rather over 90 tons of rock were dislodged and rendered workable by the quarrymen without any further necessity of blasting; in addition to which the rocks in the vicinity of the explosion were considerably cracked and shaken. These three charges comprised somewhat less than 3 lbs. weight of roburite, which, at the price this explosive will be sold here, amounts to 4s. 6d., boring the holes cost 30s., so that the total cost of displacing 90 tons of stone may be safely put down at under 35s., which the proprietor of the quarry declares most satisfactory.

Letters of allotment and regret have been posted in the issue of 5,000 shares by the Texas Land and Mortgage Co.

REPORTS OF MEETINGS.

THE ECTON CO., LIMITED.

A DISAPPOINTING POSITION—SHAREHOLDERS HAVING FAILED TO TAKE UP THE PREFERENCE SHARES, THE COMPANY TO BE WOUND UP, AND THE PROPERTY TRANSFERRED TO A NEW COMPANY.

THE fifth annual general meeting of the members of the above company was held at the Great Eastern Hotel, London, E.C., yesterday, "for the purpose of receiving the directors' report and statement of accounts, electing a director and auditors, and transacting other business."

Mr. NEWMAN GOODMAN (secretary) read the notice calling the meeting.

Mr. Alexander Kerly (director), in the absence of Mr. Wm. Urwick, occupied the chair.

THE POSITION OF THE MINE.

The CHAIRMAN, at the outset, read the following letter just to hand from the agent :—

To the Directors of Ecton Company Limited.

Gentlemen.—I am sending you a short report of what has been done here since we ceased active operations in December last. You will remember that during the last week of our active mining, as we were retreating we had a few shots in our roadway at 110, Clayton, resulting in two places in the exposure of some copper ore, one of these being in the sole of the level at its extreme north end, and which showed a work of copper as good or better than any we had ever seen in the mine. Some six weeks afterwards we got up steam to work the engines and pumps a couple of days to keep them in order, and took the opportunity to send down some miners and get two days more work at it. I cannot say those two days improved it in appearance, but we left a good work of about two tons to the fm. in the bottom. There are no workings north of this, except at 140, and none east of it anywhere, so there is whole ground in that direction, but south and west has been worked both at that level and below. The other place of interest at the 110 has not been touched since December.

At Swanslow, on the south-west side of the sett, some copper was known to appear near the surface. In March I had four men trenching there, and they soon came upon some green carb and red oxide of copper (of which I sent you a small piece). At one time we had it 10 ft. long and 6 ins. wide ; it was in the loose gravel and about 10 ft. deep, but we did not find it entering the solid ground at that place, although there is a true fissure vein immediately under it. This vein is an east and west one, seems very persistent, and to run right through the mountain and cross south of Water Bank Mine, which is a north and south vein. We have done nothing since at Swanslow, and will see have not made proof of it.

I have done nothing of importance under Duke's pasture lately. We have cut a vein there containing spar barytes, mundic, and a little copper. It is not, however, the one this level was driven to cut, which must be 6 or 7 fms. further in, as indicated by some shallow shafts at surface, from which good copper was got. These two lodes should intersect in about 7 fms. I did not continue this until I saw how we should be for capital, as we have filled up the spare room and would have to put down some 120 yds. of tramway to bring the stuff away before it can be worked more. This work being at adit level, and clear of pumping and engine expenses, would be soon and cheaply done.

Water Bank : We have continued to do a little work here with the small force recently at command. When Capt. Josiah Thomas was here last autumn there was no copper in sight in that mine. We had, however, begun a short cross-cut west to see if there was not another part of the lode there, and he advised that another or two of these shoot cross-cuts should be made, and the result shows it was right. At a distance of 2 fms. we came on another portion of the lode, and, so far as copper is concerned, it would seem to be the main one, as we have better copper there than I have seen before in Water Bank. We sunk some 4 ft. or 5 ft. in this lode, the copper improving, and is left best in the bottom. There is considerable blende about it, but scarcely sufficient of either to pay yet. We have commenced another of these short cross-cuts 10 fms. further north, opposite where the great black pipe came down. We are not yet to the lode, about 1 fm. off ; it ought to be stronger and richer here, with the assistance of the Gash vein. Water Bank ought to be continued, as Capt. Joshia Thomas suggested ; it works cheaply, being all above adit, and clear of pumping expenses. It has produced a large quantity of ore at shallow depth, and is still only shallow, the lowest level worked being 33 fms. above adit.

Last week we were again working Clayton pumps to keep them right, and prevent the water rising quite so high, and whilst so doing put a shot or two in the south end of the 140, where it was sparry, with the result that the shots burst through into a vugh or cavern lined with beautiful calcite crystals, covered with iron and copper pyrites. We don't know the extent of the vugh, but can see in some 20 ft. I should have thought this of much greater importance were it not that we have had a large body of ore, principally blende, under it (in the rise above 150), or else it would be considered a certain indication of a good body of ore ; such cavities here have always ore under them. Still, it is just possible we may have missed the main shoot of ore belonging to this one.

I remain, gentlemen,
Your obedient servant,
ALFRED LUDHAM.

Ecton, May 1st, 1889.

Continuing, the chairman said that if the report just read was not encouraging, at any rate it was not discouraging. The first business before the meeting was to pass the accounts. They had all been carefully scrutinised by the auditors, and the shareholders might take it for granted that at any rate they correctly represented the financial position of the company. He begged to move that the accounts be received and adopted.

Col. HARTNELL seconded the motion.

CALLS IN ARREAR.

Mr. H. B. HAGUE wished for an explanation of the item, "calls in arrear," 1,347*l.* 11s. 2d., also as to the conditions under which 370 shares had been forfeited.

The CHAIRMAN said that some portion of the arrears of call had been paid since the accounts were made up, 200*l.* having been received that morning. As regarded the forfeiture of shares—the directors had done this very reluctantly, and only in cases where they had no alternative.

Mr. HARDMAN complained that some of his shares had been forfeited, and accused the board of partiality in the matter.

The CHAIRMAN said that Mr. Hardman had absolutely refused to pay the calls. However, he and any other shareholder who had been similarly treated could get his shares back upon payment of the arrears of call. (Hear, hear.)

The report and accounts were adopted.

On the motion of Mr. HAGUE, seconded by Col. HARTNELL, Mr. Kerly was re-appointed a director.

The auditors were also re-appointed, and this terminated the business of the ordinary meeting.

EXTRAORDINARY MEETING.

The meeting was then made special, for the purpose of considering, and, if so determined, of passing the following resolutions or modifications thereof, or such other resolutions as might be decided upon, which, if passed, would be submitted to a subsequent meeting for confirmation, whereupon they would become special resolutions, as provided by the Companies Act, 1862, sec. 51, viz. :—

(1.) "That the company be wound up voluntarily." (2.) "That the liquidator be authorised to transfer the leasehold interest of the company in the mines held by them, together with the buildings, plant, machinery, stores, utensils, debts, and all other property and effects of every description, to a new company, with limited liability, under the same or such other name as the liquidator may approve, having a capital of 40,000*l.* in 1*l.* shares." 3. "The consideration for such transfer to be the payment of the sum of 35,000*l.*, by the allotment to the liquidator, or his nominees, of 40,000 shares, credited with 17s. 6d. as paid thereon, leaving a liability of 2s. 6d. only on each share ; and the payment of the debts of and claims upon this company, the costs of and incidental to the liquidation of this company, and the formation and registration of the new company." 4. "The whole of the shares forming the purchase-money to be offered in the first instance to the shareholders in this company, and they shall be entitled to one share in the new company for each share held by them in this company. Any shareholder who shall neglect to apply for the shares to which he may be entitled within the time limited by a notice to be sent to him by the liquidator, shall be deemed to have declined to accept the same." 5. "The shares to which any shareholder is entitled, but declines or neglects to accept, to be sold or otherwise disposed of by the liquidator, as he may think fit, but the net amount realised thereby (if any), after deducting the expenses connected therewith, shall be paid or put to the credit of the shareholder, who being entitled thereto shall have declined or neglected to take such shares." 6. "In the event of the above resolutions being passed, a formal contract will be prepared for the confirmatory meeting, and a further resolution to the following effect will be submitted, viz. :—'That the liquidator be authorised to enter into a contract (in the form then submitted to the meeting), with power to concur in any modifications of the same, which he may consider necessary or expedient for giving effect to the resolutions passed."

UNSUCCESSFUL EFFORTS TO RAISE CAPITAL.

The CHAIRMAN explained the reasons which led the board to take the step they now proposed. Efforts had been made, first by debentures, and secondly by preference shares, to obtain capital to carry on operations, but they had met with no success. 5,000*l.* was required, but not half that sum was subscribed, and the board did not feel justified in proceeding. They had, therefore, now to go through the ceremony of winding-up and forming a new company, to whom the property would be sold in accordance with the terms set forth in the special resolutions. It was thought that this 2s. 6d. would be ample to enable them to thoroughly test the property, and he trusted that the shareholders would see the advisability of taking up their *pro rata* proportion, which was about one-eighth of their present holdings. He moved the first resolution.

Mr. HAGUE seconded the motion, which was carried.

The CHAIRMAN then proposed *en bloc* resolutions Nos. 2, 3, 4 and 5.

Col. HARTNELL seconded, and they were passed unanimously.

MR. KERLY'S OPINION OF THE PROPERTY.

The CHAIRMAN said he thought now, as he had thought all along, that they were in the neighbourhood of something good. He was particularly sweet upon Water Bank ; and they ought to see whether there was anything there before deciding to abandon the mine.

A vote of thanks to Mr. Kerly for presiding closed the proceedings.

LEVANT MINE.

A DIVIDEND OF 12s. 6*l.*

A SIXTEEN WEEKS' MEETING was held on the mine on Tuesday, the purser (Mr. R. White) presiding. The statement of accounts showed that the labour costs had been 7,230*l.* 19s. 4d. ; merchants' bills, 1,455*l.* 0s. 9d. ; coals, 555*l.* 5s. 7d. ; income-tax (12 months), 124*l.* 8s. 10d. ; total debits, 9,968*l.* 5s. 1d. On the other side 119 tons 3½ cwt. of tin had been sold for 7,861*l.* 13s. 11d. ; 536 tons of copper for 3,578*l.* 16s. 9d. ; arsenic, 259*l.* 3s. 6d. ; total credits, 11,514*l.* 10s. 3d. This left a profit on the 16 weeks of 1,545*l.* 5s. 2d., and the balance in favour of the adventurers was stated to be 4,690*l.* 12s. 5d. The agent presented a very favourable report, in the course of which they stated that they expect to raise about the same quantity of copper in the coming sixteen weeks as during the last, although they did not anticipate quite as much tin.

Mr. QUICK proposed, Mr. THOMAS seconded, and it was resolved to pass the accounts.

Mr. FRANCIS OATS moved a dividend of 12s. 6*l.* a share, carrying forward a balance of 60*l.* This would increase the reserve fund to 3,207*l.*

Mr. W. S. BENNETT seconded, and the motion was carried.

The CHAIRMAN said they had every reason to be satisfied with the

quantity of stuff raised; it was the greatest quantity raised in any one quarter for 30 years. (Cheers.)

Capt. Newton said they had driven in levels and sunk in winzes 140 fms. of ground since the last meeting.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Violet.—The African Gold Share Investment Company has been appointed agents of the Violet Gold Mining Company, Limited.

South Standard (Witwatersrandt).—The following telegram is to hand:—"66 claims legally transferred; waterwright will be registered."

Gordon Diamond.—Return of work done at mine for week ending 27th ult:—Loads blue hauled, 4,000; loads blue washed, 5,400; value of diamonds produced, 1,800*l*.

South African.—The following particulars of work relate to the week ending March 30th:—Blue ground hauled, 8,460 loads; blue ground washed, 5,137 loads; diamonds obtained, 1,628 carats; estimated valne, 1,850*l*.

Resident Partner.—Messrs. Tarbutt and Quentin, civil engineers, of 23, St. Swithin's Lane, E.C., have established a branch of their firm in South Africa, under the title of Tarbutt, Quentin, and Boncher. Mr. A. S. Boucher, who will be the resident partner in Johannesburg, sailed for South Africa on 26th inst.

Mynpacht (Luipaard's Vlei).—The following information has been received from W. Anderson, the managing director at the mines:—The length along the course of Botha's reef has been chained, and is fully 4,500 ft. Van Wyks reef does not show all along the line, and therefore cannot be accurately determined, bnt should be about the same extent. The water right reserved for this property is a very good one.

Durban Roodepoort.—The first ordinary general meeting of shareholders was held on Wednesday at the Cannon Street Hotel—Mr. Archibald Parker in the chair. The directors reported that from the commencement of the current year up to the present time the crushings have produced snfficient results to enable them to recommend the payment of an interim dividend for the current year of 4s. per share. A sum of 13,058*l*. 4s. 11d. has been received for gold realised up to the end of December last, the greater portion of that sum being acquired in the three latter months of the year. A resolution was passed increasing the capital of the company from 90,000*l*. to 100,000*l*. in 10,000 shares of 1*l*. each. The chairman explained that the money is not required for present working, but with the view to increase the machinery and fully develop the mine. A full report appears in our present impression.

Barret.—The mine manager reporting for March, says:—The mine yielding well, and I think I can safely say that we have 3,000 or 4,000 tons in sight. The slate bottom rose in old shaft in square G 6 to nearly the surface, and I quite thought had entirely cut the mine out, but to my astonishment, the slate dipped suddenly, and I have since, as reported, had a 14 ft. face of stuff. Banket: I have myself taken samples from ground just outside our border, panning freely 6 or 7 dwts., which is quite good enongh; the formation, undoubtedly, runs through Berlin. You will doubtless hear conflicting accounts, but I have seen enough to feel sure that the discovery may prove of the utmost valne to us. Mill: I stopped on the 13th March, just a month's work, but owing to short month of February, and having stopped one day, only 24 days actual milling; result, 193 ozs. gold; alluvial, 57 ozs.; total, 250 ozs. The above 250 ozs. have been received in London, and sold, through Messrs. Pixley and Abel, for 946*l*. 15s. 5d. Cable advices have been received, giving result for April, 175 ozs. gold.

Transvaal Gold Exploration and Land.—The following particulars are from manager's advices of April 1st:—Bullion: A shipment of 10 bars melted gold, weighing 592 ozs. 3 dwts., valne 2,200*l*., has been forwarded through the Standard Bank of South Africa, Limited. Mines—Theta vein: During week 150 tons were extracted, assaying 4 ozs. 14 dwts. gold per ton. At No. 1,062 the vein continues strong, and of good grade; average thickness is about 6 ft. Beta vein: The weight extracted here during week was 20 tons, assaying 17 dwts. per ton. Columbian Hill: Various shafts have been sunk and trenches cut during week, but no payable vein has yet been found, although there are many favourable indications of the existence of ore in the vicinity. Brown's Hill mill—Battery: The battery was at work for 130 hours, and crushed 144 tons of Theta vein ore, assaying 4 ozs. 14 dwts. per ton. Clean-up of plates yielded 651 ozs. of amalgam. Figures for the month's working will follow next week. Pans: The pans ran for 130 hours on slimes from Theta ore tailings, and treated 46 tons, assaying 3 ozs. 8 dwts. gold per ton. Clean-up yielded 92½ ozs. of amalgam.

Vogelstruis (4th April).—Main reef: Good progress is being made with the drainage level on the main reef. A few more feet of driving will communicate it with No. 7 winze. This latter is heavily watered. Main reef stopes: The stopes about Nos. 1 and 2 winzes are suspended for the time being, the man being employed to bring up a water level at the battery. The stopes are looking fairly well—that about No. 2 winze assaying over 1½ ozs. No. 5 winze stopes are not looking as well. The main reef has pinched up. We shall take out all ore available, and are also making arrangements to extract at No. 4. The assay value of stopes No. 5 winzes is over 12 dwts. In Nos. 6 and 7 winzes no assays were taken, the drifts being driven in the footwall sandstone for more rapid opening out of the ground. In the intermediate winzes forward of Nos. 6 and 7 winzes sunk and being sunk on the reef, the assay valnes are over 7 and 13 dwts. respectively. Maddock's winze—south reef: About 250 ft. have been drifted on the reef. We have suspended drifting and commenced opening out stopes. As soon as stulls are put in we shall again resume drifting. As yet we have only a windlass for drawing water, &c., but I hope early to make other provision for working the trial. The reef is, as you have already been advised, only narrow, but good. The average of the drift face reefs gives an assay valne of over 3 ozs. Rosewarne's winze, south reef: The reef in this winze is not so good. A length of 185 ft. has been drifted. In the next drift the heavy dyke, which gave so much trouble between Nos. 5 and 6 winzes, has been intercepted. To drift through the dyke would be costly, so we purpose cross-cutting No. 7 winze for the south reef again, with the further object of proving the intervening ground, &c. The reef in the drift faces assays (western) over 1 oz.; eastern, nil. We have commenced stoping, and shall be guided by results before resuming the eastern drift. No. 2 shaft: Our mechanics are all employed with alterations at the battery, consequently we have not yet resumed work at this shaft. Battery: The alterations referred to in previous reports have been completed for 10 heads (only), and I am glad to report are working satisfactorily. A second 10 heads have also the alterations well advanced with the last 5 heads to yet take in hand. The supply of water is giving us considerable anxiety. Last July, in the middle of winter and dry season, we measured our water, which gave an available snpply at the dam of clear running water of 155 gals. per minute. Just now, and at the end of what is called the rainy season, the same supply only affords 85 gals., and old residents predict a very dry winter. To obtain adequate water for milling purposes we have taken four miners, and their gangs of boys, from the stopes, and these are opening out 400 ft. of open cutting and tunnelling so as to return our water to the battery again. If the season becomes no dryer, we can, by completing the work referred to, drain in of clear water about 150 gals. per minute (our present supply included); and as provision is being made to dam and filter of mill tailings water, and return again, we ought not to fall short of water, unless springs fail entirely. Our water pipe main is working splendidly, delivering the supply at the dam; and if rains come, its capacity is sufficient to do away with pumping. We had, however, somewhat provided for this contingency; and our pump pipes, &c., which came out with our machinery, will be at once put to use. As 10 heads have been going during the past few days of March, and we may have to stop a day or two to connect up pumps, back discharge fittings, of the other heads, we shall not clean up till end of April. Please gather the exact assay results of the various workings from Mr. Feldtman's assay report. Mr. Edgar Taylor has visited the mine. Assays: No. 29, main reef stope No. 2 winze, 1 oz. 13 dwts. 7 grs. gold per ton; No. 30, main reef stope No. 5 winze east and west, 12 dwts. 10 grs. gold per ton; No. 31, main reef stope No. 6A (incline) winze, 7 dwts. 18 grs. gold per ton; No. 32, main reef stope No. 7A (incline) winze, 13 dwts. 17 grs. gold per ton; No. 33, south reef east of Maddock's winze, 6 ozs. 4 dwts. 18 grs. gold per ton; No. 34, south reef west of Maddock's winze, 4 dwts. 13 grs. gold per ton; No. 35, south reef west of Rosewarne's winze, 1 oz. 2 dwts. 20 grs. gold per ton.

MESQUITAL DEL ORO MINING CO., LIMITED.

MINE CAPTAIN'S REPORT.

5th April.—Work done in the mine during the week was as follows: Acerada, east of Sans: Four men, driven 6 ft. 6 ins.; total, 164 ft. Reef 3 ft. 6 ins. thick, of rather low-grade ore, but looking better during the past week. Acerada, winze A: Four men, sunk 5 ft.; total 9 ft. Reef 3 ft. thick, of fair quality milling ore. The 85 level east: Four men, driven 5 ft.; total, 604 ft. Reef 4 ft. thick, of good milling ore. The 137 level east: Four men, driven 3 ft. 6 ins.; total, 584 ft. 6 ins. Reef 3 ft. 6 ins. thick, of good milling ore. The 190 level east: Four men, driven 3 ft.; total, 399 ft. 6 ins. Reef 3 ft. thick, of an average ore, and shows a little free gold. The 190 east, winze B: Four men, sunk 3 ft. 6 ins.; total, 42 ft. Reef 4 ft. thick, of rather low-grade ore at present. The 190 level west, south part: Four men, driven 5 ft.; total, 321 ft. No alterations. The 256 level east: Four men, driven 3 ft. 6 ins.; total, 269 ft. Reef 5 ft. thick, of a very fair quality ore. San Mignel tunnel: Fourteen men, driven 11 ft.; total, 1,792 ft. 6 ins. Stope B 137 east: Reef averages 6 ft. thick of good milling ore. Back stope 190 west: Reef 6 ft. thick, of a very fair average milling ore. Stope B 85 east: Reef 2 ft. 6 ins. thick, of a rather low grade-ore, bnt hope for an early improvement. Trinidad stope west of Sans shaft: Reef 4 ft. thick, of good milling ore.

[LATEST TELEGRAM.]

The following cablegram has been received from the mine: "Stamps start 28th." That is to say the remaining 20 stamps, to complete the new 30 stamp mill, are now running.

THE MORGAN GOLD MINING CO., LIMITED.

April 27th.—Mr. Charles Pakeman (secretary) forwards a copy of the general manager's report for the four weeks ending April 20th last. In view of the great development which has taken place at the company's property since the commencement of operations the directors have decided to erect without delay further crushing machinery capable of treating up to 100 tons of ore per day. Warrants for the interim dividend at the rate of 5 per cent. per annum for the quarter ending 31st March, 1889, will be posted on the 4th May next.

MANAGER'S REPORT.

April 23rd.—During the past four weeks' run we have crushed 423 tons of ore; yielding, 205 ozs. 17 dwts. 4 grs. of gold: being an average of 9 dwts. 12 grs. per ton.

Death of Lord Walter Campbell.—The Duke of Argyle received a telegram from South Africa early yesterday morning, announcing the death of his Grace's third son, Lord Walter Campbell, from fever, after a short illness. Intelligence had been previously wired to the effect that he was dangerously ill. Lord Walter Campbell was a member of the London Stock Exchange, and went to Natal about three months ago with a view to starting business there. Deceased leaves two children, a son and a daughter.

THE MONEY MARKET.

City, Friday Evening.

SINCE the settlement last week the Money market has been weaker, loans then borrowed for seven days of the Bank having been offering, and the rate has been easy at 1 to 1½ per cent., although there was a fair demand. Discount was in little request, but the quotation has been hardening, and has improved to 1¾ per cent. The new Indian Loan was applied for nearly three times over, and went at 2 prem. on the issue price of 99. This absorbed a considerable amount, which, however, has been released. The offer of the Chancellor of the Exchequer of repayments of Three per Cent. Consols on the 14th May, with an amount for interest due which is equivalent to a bonus of nearly 5s. per cent, is being freely accepted in preference to repayment in July with simply the half-years' interest then due. To-day tenders for the 5,000,000*l*. of new Treasury Bills are to be made, and much interest centres in the result, as the discounters do not care themselves to lock up money for such long dates as nine and 12 months. Owing to the low value of money the exchanges have moved against us, and some arrivals of gold have been taken for the continent. There was, however, an influx for the Bank of 300,000*l*., but the Bank return, nevertheless, shows a reduction in the Bullion of 150,000*l*., while the Note circulation has increased, so that the reserve is over half a million worse at 13,676,000*l*., or 39 per cent. of the liabilities.

The Money Market has been fairly easy to-day, notwithstanding the Cousol settlement and the repayments to the Bank. But of the latter, it is clear that a large proportion must have been renewed, and with 700,000*l*. discharged on matured Treasury Bills, the supply has been moderately large, and after being 1¾, 2 per cent, short loans receded to 1, while as to discount, that was steady for three months' bills, at 1¾.

The new series of 5,000,000*l*. Treasury Bills tendered for to-day, and in which a wide-spread interest was taken, have gone at a discount, charge equivalent to 2¾ for the nine months, and 2⅞ for the 12 months' drafts, which certainly looks as if the outside world tendered largely and, at rates, as near as possible to those previously prognosticated. In connection with this issue, the discount houses were lenders of money until the 13th inst., when they will have to pay for them at about 1 to 1¼.

From the Bank to-day 20,000*l*., was withdrawn for Malta. The Silver market was weak. Rupee Paper firm, exchanges weak, and the India Council has specially sold in bills, 60,000*l*., at the low figure of 1s. 4 7/32d.

This has been another broken week at the Stock Exchange, owing to the holiday on Wednesday, when, in accordance with the usual custom on the 1st of May, the Stock Exchange was closed. Business, however, has been fairly brisk, and prices have been supported on Home, as well as on Continental account. In Parliament more progress has been made in voting several items of supply, and several resolutions in connection with the Budget have been passed, and it is getting evident that the Opposition are beginning to find out that their obstructive tactics meet with but scant approval from the country. The "Parnell Commission has resumed its weary sittings, but a little more interest has been displayed in its proceedings, as Mr. Parnell has been under cross-examination. Although Austria shows signs of uneasiness as to the movements of Russian troops near her frontier, it is generally anticipated that peace will be preserved during the run of the Paris Exhibition, which will be opened on the 6th inst. The Funds have been steady. Indian Government and Colonial Inscribed Stocks have been supported. Foreign Goverument Bonds, however, have been rampant, and more particularly so on Thursday, and prices on that day went up with a rush. Greek Bonds have risen 3½, the Turkish Tribute and Defence Loans ½ to 1, and Uruguay issues 2 to 3 per cent. Spanish Bonds were also in request, although the Budget proposals cannot be said to be very favourable to the bondholders. The earlier rise in South American Loans has been lost, although the gold premium has declined. Home Railways were neglected, and the changes for the week are slight, and about equally divided. The New York Market being closed, dealers here in United States Railroad Securities had matters all their own way, and sent prices up, but on Thursday began to exhibit signs of trepidation as to whether the Americans would support the advance, and although the market on the other side was reported firm, prices gave way, but on the week the variations are merely fractional, beyond a small advance in Canadian Pacific. Grand Trunk Stocks were heavy on the revenue statement, which was regarded as unsatisfactory, but Mexican were firmer. In the minor departments the feature has been the gamble in British Water-Gas shares, which have fluctuated rapidly between 15 and 21 premium. Nitrate issues were also in request, but in Brewery descriptions investors appear to be selling the old high-priced concerns, and re-investing the proceeds in the soundest of the newer undertakings.

The Markets to-day have been active, but the tone has not been so decided. There has been a disposition to send Foreign stocks to higher levels, while at the same time selling preponderated in the English Railway Market. The Funds were good and ⅛ higher, but Colonial Inscribed and Indian Government Securities were hardly changed. Foreign Government Bonds have fluctuated in accordance with the movements on the Continental Bourses, and in the earlier hours Egyptian Unified rose to 92 1/16, and the Preference issue to 103⅝; but the best portion of this advance has since been lost. Greek Monopoly Loan has risen 1½, while Buenos Ayres Cedulas have fallen ½. In other cases the variations do not exceed ¼, and are about evenly divided. Home Railway Securities, as before mentioned, were dull, and North Western and Midland fell ½, and the rest about ¼ per cent., excludiug the Underground Lines, which were firmer. Taff Vale also rose 3, to 266. 269. American Railroad Securities were dull and listless during the earlier hours, but in the afternoon became quite lively, owing to the support given to the market by the arbitrage dealers. Canada Pacific, Milwaukee, Illinois, and Union Pacific were in strong request, and rallied ½ to ¾, while Denver Preferred and Norfolk and Western fell ½. In other instances the changes were only fractional. Grand Trunk of Canada Railway Stocks recovered ½ to ¾, while Mexican (Vera Cruz) Stocks were heavy, and 1 to 1½ down, after being dealt in at 53½ and 91¼ for the Ordinary and Second Preference respectively. Hotchkiss Ordnance Shares were in request, and rose to 10, and the Preference to 9⅞. Nitrate issues were offered in the morning, but closed unaltered. Again we have to record extensive speculations in British Water-Gas Shares, which opened at about 20, fell to 16¼, and re-acted to about 17½.

Annexed are the final quotations to-day :—Consols Account, 98⅝, 98¾; Egyptian Preference, 103, 103¼; Egyptian Unified, 91 7/8, 92 1/8; French Four-and-a-Half per Cents., 105¼, 105¾; Hungarian, 87⅜, 87⅝; Italian, 95¾, 97; Mexican (Internal, 33, 33½; Peru Five per Cents, 15¼, 15½; Peru Six per Cents., 17⅛, 17⅜; Russian, 1873, 103⅜, 103⅝; Portuguese, 68, 68¼; Spanish Four per Cent., 77 1/16, 76 15/16; Turkish, 1871, 93¼, 91¼; Turkish Defence, 101, 101½; Caledonian, 117⅜, 117⅝; Great Eastern, 77, 77¼; Great Western, 155⅞, 156⅛; Brighton "A," 155¼, 155½; North-Western. 181⅞, 182⅛; Metropolitan, 90¼, 90⅜; Metropolitan Distriet, 36¾, 37¼; Midland, 143⅜, 143⅝; North British, 55½, 55¾; North-Eastern, 171½, 171¾; South-Eastern "A," 115⅛, 115⅜; Hull and Barnsley, 33¾, 33¾; Grand Trunk, 10¼, 10½; Ditto First Preference 67⅜, 67⅝; Ditto Second, 47⅜, 47⅝; Ditto Third, 25⅝, 26⅛; Canadian Pacific, 55¾, 56; Mexican Ordinary, 52½, 52¾; Denver, 18⅜, 18⅝; Erie, 29⅛, 29⅜; Milwaukee, 67¾, 68; Lake Shore, 105¾, 106; Louisville, 70½, 70¾; Atlantic First, 32⅝, 32⅞; Ontario, 17½, 17¾; Ohio, 23, 23½; Norfolk and Western, 54⅜, 54⅝; Reading, 23, 23¼; Reading Bonds, 84⅜, 85¼; Union Pacific, 61⅜, 61⅝; Wabash Preference, 28⅞, 29⅛; Ottoman Bank, 12¼, 12⅜; Anglo-Telegraph, 52¼, 52¾; United Telephone, 15⅞, 16⅛; Hudson's Bay, 21½, 22; Suez Canal, 96¾, 97¼; Guinness, 30¾, 31¼; Allsopp's, 8⅛, 8⅞; Bryant and May, 13⅜, 13⅝; Nitrate Railways, 22⅝, 22⅞; Water-Gas, 17, 18 prem.

EL CALLAO GOLD MINING CO., LIMITED.

THE report of Hennen Jennings, Esq., superintendent, has been issued for 1888. He states that there were shipped from the agency to the Bolivar office during the year 52,598 ozs. of bar gold, valued at about 5,040,000 f. This represents the yield of the bullion months dating from December 19th, 1887, to December 19th, 1888. The yield from the ore crushed during the year is thus seen to be 87.100 ozs. per ton ; but, including the bullion obtained from old mill and calciner, the resulting yield for the year would appear as 97.100 ozs. per ton. The ore receipts from January 1st, 1888, to January 1st, 1889, were 54,438 tons. The total operating costs were 4,231,908.98 f. The bullion shipment for 1888 is the smallest annual remittance from the mine since 1879 ; the output of 54.438 tons has only been exceeded in the years 1886 and 1887 ; the yield per ton for 1888 is the smallest return given by the ore for any other recorded period in the whole history of the mine. It will also be observed that the vein worked in 1888 was of a less average thickness than that of any other area ever worked on El Callao lode, and that the gold return of 3·89 ozs. per square metre of vein worked is only about one-sixth of the yield in 1884. By examination of superintendent's statement of expenses for 1888, and by comparing them with those of 1887, it will be found that the total decrease has been 219,293.40. The large decrease in the milling expenses is chiefly due to the entire suspension of crushing by the old mill. A perusal of the operations at El Callao for 1888, will make plain the low grade of the ore now in sight in the mine, and its limited quantity and unpromising position ; also the vital necessity of making new discoveries to preserve the life of the mine. With the exception of a few tons of sample ore crushed by the old mill in February, the crushing of the 54,438 tons of ore hoisted from the mine was accomplished by the new mill. Although during the year the mill and engine required extensive repairs, the cause of a no larger crushing is due to a lack of supply of ore from the mine. The tailings were sampled as usual, and the assays made from them show a loss of 3 dwts. per ton for all tailings flowing into the Yuruari river. The report closes with the manager's hope that the future may have better things in store for the mine.

The Rosario Nitrate Co. give notice that on and after May 3rd next the scrip certificates will be ready for delivery in exchange for the allotment letters of debentures of the company, and provisional certificates in exchange for the allotment letters of shares of the company.

Mr. Samuel de Lissa has been elected chairman of the Gympie Golden Crown Mining Co., in place of the late Mr. Francis J. Bladon.

The share certificates in the Yorkshire Water-Gas Co. will be ready for issue on Wednesday next, at the offices of the company. The company have sold the rights for the borough of Sheffield for the sum of 30,000*l*. sterling, and a similar offer is on hand for Leeds.

AGAR AND EAST POOL.—The committees of both mines have met Mr. T. Bedford Bolitho, M.P., and placed their differences in train for friendly settlement, an immediate reference being agreed to. A telegram was received at the Mining Exchange, Redruth, from Mr. A. Lanyon, Truro :—"Matter arranged, and White instructed to work engine all speed."

Leeds, *May 3rd*, 1889.

It having just come to the knowledge of the Directors of the British Water-Gas Syndicate, Limited, that during the last few days two companies have been registered with the Registrar of Joint Stock Companies, the one in the name of the Scottish Water-Gas Company, Limited, the other in the name of the Lancashire Water-Gas Company, Limited :—

The Directors of the British Water-Gas Syndicate, Limited, hereby give notice that they have nothing to do with these two companies, and leave the Investing public to draw their own conclusions from the above acts.

By order of the Board.

The Directors hereby give notice that the Scrip, £3 paid up, will be ready to be exchanged for Banker's receipts on Wednesday next, the 8th inst.

Fully-paid Scrip will also be delivered to those shareholders desirous to pay their calls in full.

By order of the Board.

THE BRITISH WATER GAS SYNDICATE, LIMITED, LEEDS.

NOTICE IS HEREBY GIVEN, that the Statutory Meeting of the British Water Gas Syndicate, Limited, will be held at the Cannon Street Hotel, Cannon Street, London, on Tuesday, the 14th May, 1889, at 2 p.m., by order of the Board, Thomas H. Owens, Secretary. After the above meeting, an Extraordinary Meeting will be held to alter the Articles of Association in accordance with the requirements of the London Stock Exchange.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

W. F. P. Notts.)—Keep your Ophirs for higher prices. Keep both gold descriptions.

Sub Yarmouth).—Sell Balkis and Viola. Keep others for further advance.

M. P. Sheffield).—We advise you to keep all your Brewery shares, with the exception of No. 3. Sell at once, even though you should lose by it.

P. S. Isle of Skye).—They have been established some time and are safe to deal with.

James W.—Full particulars in Share List.

B. B. B.—Sell without further delay.

Scheme P.C.)—We do not undertake such business.

J. M. H.—Certainly not.

Fred n.—The copy you wish for is out of print. Sell 1, 3 and 5, and keep 2, 4, 6 and 7 for higher prices.

Anxio Glo'ster).—Take no notice of the so-called paper sentyou. It is simply a medium for an advertising clique.

J. W. B.—You can consult our back volume here. It is out of print.

C. C. C.—A solicitor should be consulted.

D. D. B.—No. 1 of the Mining World is out of print. We have offered pounds for a copy, and cannot get one.

Suspi s.—Reporters were excluded. Always a bad sign.

Nitro —Your views are only too well founded.

G. W.—It is a "phantom" premium.

Vespa—You will see something about this concern in another columu.

Hope T. R.)—We do not advise purchase.

A. Tyro Bury).—Buy a few more Yumaris.

Monk A. B.)—No price for the shares.

Puzzle X. Y.)—We think well of your selections, especially No. 4.

M. A. T. Edinburgh).—Certainly hold Gympie Great Easterns.

A. B. C.—See answer to *M. A. T.*

Prom E. C.)—Take your profit.

1, 2, 3, Willesden).—Sell. The present price cannot be maintained.

We are, this week, obliged to omit our Mining Share Lists, but all changes are notified in the "Mining Market."

The Mining World.

LONDON : SATURDAY, 4th May, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

THE COPPER MARKET.

The statistics of the copper trade for the past month have just been published, and we are glad to see that they are of a less unsatisfactory character than has been the case for many months previously. The total supplies in England and France for the month amounted to 8,080 tons, while the deliveries were 8,509 tons. In consequence stocks were reduced 429 tons, to 124,447 tons. The supplies contrast very favourably with the two preceding months, when the amounts were 11,135 tons and 10,009 tons respectively. Indeed, the imports for the month were lower than in any like period since the syndicate began to operate, the nearest approach to them being the receipts in October last, when the figures were 8,619 tons. The main causes of the lessened supplies are a falling off of 2,709 tons in the Chili charters, a decrease of 770 tons in the imports from Spain and Portugal, and of 950 tons in those from North America. On the other hand the deliveries were nearly double those of the preceding month, and six times as large as the February deliveries. The total of 8,509 tons was in excess of any month since the end of 1887. It is clear from this double movement of lessened supplies and increased consumption that the great fall in prices which has taken place in the past couple of months is at length beginning to tell, and we may hope that the effect of the unprecedentedly low prices now ruling will be still more apparent in future returns. There is a vast accumulation of stocks to be got rid of ; but we believe that the holders of large blocks of copper warrants have agreed among themselves to keep the greater proportion of the metal off the market until prices rise somewhat, and that even then the copper will only be gradually disposed of. In consequence of rumours to this effect, as well as to the improvement in the statistical position, the price of G.M.B. copper has risen nearly 2*l.* a ton from the lowest price touched. Those who use copper would be well-advised to lay in stocks now, for though we do not look for any very considerable advance, we think it likely that a further portion of the recent heavy fall will be regained.

MINING ROYALTIES.

It is a matter for congratulation among those who have at heart an industry which, more than any other, has helped to make the United Kingdom what it is, that the question of mining royalties, both as to their incidence and their effects, is at length to be investigated by a Royal Commission. The Commission was approved of some time since, but the names of the commissioners are not yet known, beyond the fact that Lord Northbrook has undertaken to preside. Lord Northbrook is a statesman of long and varied experience, and we may reasonably hope that, under his guidance, the deliberations and investigations of the Commission will be practical and effective. Replying to Mr. Burt on Thursday the First Lord of the Treasury stated that substantially the reference to the Commission would be to enquire into the amount paid in royalties on minerals in the United Kingdom, the terms and conditions on which the payments were made, and the economic effect on the mining industry of this country, as well as to investigate the system in operation in foreign countries, and the conditions under which mining enterprise is conducted in the Colonies. The scope of the enquiry, therefore, appears to be sufficiently wide to deal with all the evils of which the workers of mineral properties in the United Kingdom have so long, and hitherto so fruitlessly, complained. It is clear, too, that those who have the regulation of the proceedings of the Commission in hand are going to the best sources for the information upon which their recommendations will be based, for we are glad to know that, among other experts of high authority, Mr. Peter Watson will be examined at an early date. The ability and wide experience of Mr. Peter Watson are too well known to need any refereuce on our part ; but we will say that it would be difficult, if not impossible, to find a man so capable of pointing out the injustice of the prevailing royalty system and the best means of remedying it. If the other witnesses have anything like the experience and discernment of Mr. Peter Watson we need have no fear for the outcome of the investigation.

Our readers, we imagine, know our views on the subject of royalties pretty well; if they do not it is not our fault, for we have specified them over and over again. We are not among those who believe that the return to a Protectionist policy would be of advantage to the country as a whole, or even for any length of time, to the mining industries of the country. But while we say this, we would add emphatically that it is monstrous that those industries should be doubly handicapped by unrestricted imports of foreign produce on the one hand, and by arbitrary and excessive royalties on the other. It is to be recollected that our richest mines are those in which great depth has been

attained. Their working is, therefore, costly and often dangerous; so that under the most favourable conditions of demand and price the industry is surrounded by difficulties. That fact is indisputable. And yet we have to compete on disadvantageous terms with foreign competitors who have to contend with none of these difficulties. Lead, for instance, is a mere bye-product in the great silver-producing countries of the world, and is sold in vast quantities at any price it will fetch. The effect of this on our own lead-mining industry is that, as Mr. Peter Watson mentioned at the Leadhills meeting this week, 95 per cent. of the pure lead mines of the United Kingdom have ceased to be worked. Then, with regard to tin: while the Cornish tin mines are usually very deep, and costly to work, the metal sent from the Straits Settlements is almost entirely obtained from surface deposits; and, as many of our readers are painfully aware, copper-mining at a profit in the United Kingdom has become entirely a thing of the past. In these circumstances, it is manifestly the duty of the Government to see that the difficulties, which have become inherent in the mining industry, should not be enhanced by causes which they can and ought to control. The question of the Crown royalties as affecting gold-mining in Wales, or wherever else the precious metal may be found, is hardly of the same character; but we think the Government would be well-advised in either abolishing those royalties altogether, or reducing them to a nominal sum. It is asserted that the impost tends to restrict the development of gold-mining; but whether that be so or not, the amount which the impost produces is so insignificant, that it is certainly not worth while to hamper the gold-mining interest on that account.

A COMPANY THAT CAN BE SPARED—THE VOSGES MINES, LIMITED.

SHOULD the public be tempted by the florid statements and ornate language of the prospectus of the Vosges Mines, Limited, to subscribe for shares, they would do well to give further consideration to the matter ere they part with cash which they are never likely to see again. The Vosges Mines, Limited, smacks strongly of similar adventures in the Pyrenees, emanating, there is some reason to believe, from the same source — adventures which we do not doubt the shareholders wish they had never heard of. With two things the writer of the prospectus of the Vosges Mines, Limited, may certainly be credited, first with having given scope to his imagination in drawing up its various paragraphs and next to have exhausted a pretty stiff vocabulary of adjectives. Everything about this property is so remarkable that we are astonished that even in its present form it has ever been allowed by the astute Frenchmen to come to this country. Ascending a sort of Eiffel tower the writer beholds a land flowing, if not with the traditional milk and honey, yet with silver, copper and lead. His view is bounded by a property of 7,207 acres and 43 lodes. In regard to the latter the prospectus is eloquent to a degree, but it is ominously silent as to precise details of past workings. The lodes, we are told, have a high reputation, and in fact this enthusiastic scribe declares that "they have been unequalled in the annals of mining." But even in his lofty flights the practical question must surely have come to him that the prospectus would have been immensely strengthened had he given a few facts to back up his opinions. The presence of the latter makes but poor atonement for the absence of the former, and the reader may be left to draw his own inference from the omission.

Some of the statements of the prospectus set at defiance common knowledge and common sense. It appears to have been written years ago, and not to have been exactly brought down to date. For example, the writer must have been living in the moon, and suddenly descending to earth, penned this prospectus before ascertaining the actual facts when he talks about the advance in the price of metals. Does he need that we should tell him that silver has fallen considerably, that lead is down to almost unremunerative prices, and that copper has dropped to half its value? Does he expect persons blest with reason to believe his statement that "*whatever* may be the cost of crushing, smelting, and refining, it can never amount to a tithe of the value of such ore"—that is, the ore which this concern yields? We are astonished that even a scratch board like that which has been got together to manage this concern should have allowed their names to appear on a prospectus which embodies such an audacious statement. Our view that the prospectus was, in the main, prepared at a time antecedent to the present issue, is strengthened by the absence of dates from the reports of the various engineers who have inspected the property. One of these gentlemen we know to have been dead for several years and his confreres may be dead also for aught we know.

By far the most extraordinary feature of this concern is the anxiety of the directors to get a lot of the capital taken up before, as they say, the prospectus is issued in the ordinary way, and they do not seem to be very particular as to the terms upon which this is done, They do not go to brokers in the usual way, but issue the prospectus helter skelter, and enclose with it a most remarkable document. This production divides itself into three parts—first, the applicant has to send a deposit of 5s. per share to the bankers. Next we have "conditions" which are set forth and they are as follows:—

"1. If the whole of the above issue be subscribed by the public, then I am not to be called upon to accept the allotment of any shares; but in any other event I am only to be allotted my proportion of shares *pro rata* with other persons similarly interested in this arrangement, to the extent of £ , and this letter is my authority for the allotment to me of such proportion."

"2. The issue shall be offered to the public within one month from this date, failing which this guarantee shall be considered cancelled."

"The deposit of 5s. per share above referred to shall be returned to me in full should the whole of the issue be subscribed by the public; otherwise such deposit shall be applied towards payment of such shares as may be alloted to me."

Finally, there is the "consideration."

"You are to cause to be paid to me, one month after the directors proceed to allotment, a commission of 5 per cent. in cash and 5 per cent. in fully paid vendor's shares, on the total number of shares above guaranteed, and such payment is to be made to me whether or not any of such shares are subsequently allotted to me."

This is, indeed, a novel way of getting the capital of a company subscribed, and it is one which looks perilously like issuing shares at a discount without consideration in property or cash. We have nothing to say as to the enormous capital of 200,000*l*., or to what seems to be the total absence of modern machinery on these mines, said to have "a high reputation for their extraordinary wealth," but we have said enough to induce our readers to prefer retaining their money in their hands to listening to the warblers in the Vosges bush. A lot of agreements are mentioned in the prospectus, and if intending shareholders are insufficiently warned by what we have already said, they would do well to consult them, because, possibly, even at the eleventh hour, they may be spared from an investment which has little promise in it of other than failure.

THE UPWARD MOVE IN YURUARIS.

THE prominent notice we last week gave to the shares of the Yuruari Company has been justified by the attention they have received during the present week. They have changed hands by thousands, and there has been a firm market the whole week, closing at an advance upon last quoted prices. Since the time we first took up our parable about Yuruaris, now some three weeks ago, there has been a rise, which at certain times during the week, and notably on Thursday, was marked by at least 75 per cent. upon the quotations which obtained when the upward movement commenced. Ordinarily, shares of this kind should fall on a sluggish market and the intervention of a Stock Exchange holiday, and that they have not done so proves the firmness of the market, and gives force to the general impression that prevails—that it is likely to advance much further. The true state of the week's Mining Market has been this—that whilst almost every other description of shares has been utterly neglected, Yuruaris have absorbed the attention of buyers and sellers. Had the holders of the last issue of shares at 1s. 6d. each shown a little more backbone, market opinion has it that the stock would by this time be at nearly double its quoted price. These persons, who are appropriately called the "turnover community," it is believed have now been practically cleared out, so that the Yuruari market may, for some time at least, be expected to go on its way rejoicing.

Considerable comment has been made upon the grouping of facts and figures which Messrs. Lockwood and Co. have put forward in language which certainly has not erred upon the side of moderation, but it is a noteworthy fact that their conclusions have not been challenged, nor has there been any attempt to disprove their statements. These gentlemen distinctly challenge contradiction, and like joint-stock knights of Calatrava in breaking a lance for Yuruari, they still prance round the ring, but no disputants appear. Their facts not being called in question, it is difficult to disprove their inferences. So far, they may fairly claim to have benefited by their advice the persons with whom they do business, and indirectly to have done good to the company by putting in a concise form the salient features which mark its present position. Their earnest advice is still to purchase Yuruaris without delay, and market opinion endorses their selection. As they point out, news may come at any moment of a rich yield from the Potosi lode, which has recently been cut. From all the ascertained facts Yuruari appears capable of dealing with 4,000 tons per month, and it is only a question of what will be the value of the ore to be passed through the mill to estimate the profits. We might mention that the gold is of high standard—averaging nearly 4*l*. per oz. Of late years, and particularly of late months, the working expenses of the mine have considerably fallen, so that the quantity obtained can be treated at a cost of 6,000*l*. per month, but, perhaps, it would be as well to make an allowance of an additional 1,000*l*. per month for contingencies. Upon the present capital very large dividends ought to be paid, provided the said 4,000 tons be treated monthly, and provided further that the quartz is of anything like the value the company is entitled to expect. The amount of capital upon which these dividends will have to be paid is almost insignificant for such a concern. We lay emphasis on this, because it is a point too often omitted from the calculations of investors and speculators. The capital was mercilessly cut down, and with its present moderate proportions the dividends should be correspondingly large.

SOME FACTS ABOUT THE JAY HAWK MINING CO., LIMITED.

A MEETING of the Jay Hawk Mining Company, Limited, will be held next week, when resolutions will be proposed, which, when carried out, will put the company upon a proper working basis. The nominal capital is 150,000*l.* in 1*l.* shares; and the new company will start with the same number of shares credited with 18s. 6d., and leaving a liability of 1s. 6d. These shares will be distributed to the old members, and if not accepted by them, their neglect will be somebody else's opportunity. With this amount of capital called up by small instalments, it is anticipated, with a considerable show of reason, that the mines can be profitably worked and become dividend-paying. They are certainly extensive enough (108 acres) for all reasonable purposes. Centres of populatiou are within reasonable distance, and so also is railway communication. There is much encouragement to proceed on account of what has been done by the Jay Gould Company. On this property the main vein has been proved by a series of trial shafts to extend over 1,500 ft. on the Jay Hawk Claim, and is said in the former property to show an average width of 7 ft. In depth it has continued in the Jay Gould to iucrease in value; as, for example, at 50 ft. deep the lode was from 1½ to 2 ft. wide, averaging 7 dwts. per ton; whilst 50 ft. lower down the average assay was reported to be 7 ozs.—certainly a very striking increase in value in so short a sinking. From the exhaustive report of Mr. Francis I. Kane, we learn that the Jay Gould Mine in 15 months yielded 108,000*l.* The bearing of this upon the prospects of the Jay Hawk Company is that the manager is sinking a shaft and driving a tunnel upon this very main lode. Natural advantages enable this to be done at a low cost, and the free milling ore produced is distinctly in the company's favour. Only so late as March 19th last Prof. Clayton visited this property, and wrote a report upon it. Prof. Clayton is a kind of mining doctor to English companies in the United States. He is called in to diagnose the condition of the patient, and to ascertain the exact state of his constitution, and his advice is always acted upon with confidence. Just as a miner cannot see beyond his pick, so Prof. Clayton could not discern mining signs through the bank of snow that lay upon the ground at the time he was there. Nevertheless, he was able to enter the tuunel, and had no hesitation in reporting that "the Jay Gould lode (a true fissure) extends westerly into the Jay Hawk property at or near the south side of the Mountain-top claim, or north side line of the Jay Hawk lode claim." It is re-assuring to find a man like Prof. Clayton saying that "There can be no possibility of missing the lode. It is only a question of distance to drive to its intersection which cannot be further than 250 ft. or 300 ft. unless the lode varies greatly from its course as proved in the Jay Gould workings."

A large amount of work has been done, and the recommendations of Prof. Churchill are clear and distinct, and may involve an expenditure of $50,000, though success may be achieved long before such a sum is expended. Upon its re-constituted footing the company will have this money, aud we see no reason why it should not make its mark in the mining history even of the present year.

NORTH BRITISH WATER-GAS, SYNDICATE, LIMITED.

THE extraordinary excitement which is being manifested upon the Stock Exchange over the shares of the British Water-Gas Syndicate—which have been dealt in at over 20 premium—is likely to be repeated iu the case of its offspring, the North British Water-Gas Syndicate, the prospectus of which lies before us. In our article upon the parent company, we pointed out at considerable length merits of water-gas, and its superiority as an illuminating medium to coal-gas, and its capability of application to manufacturing industries, &c., together with its cheapness of production; it is, therefore, unnecessary, on the present occasion, to repeat our views upon the subject. The object of the North British Water-Gas Syndicate is to secure licences to work the water-gas patents in Scotland, and also the patent-rights of Mr. Bernard Dawson, C.E., in connection therewith which will place this company in a commanding position in respect to water-gas plant. The company will thus be enabled to procure for Scotland the most improved type of gas geuerator and furnace plant. The capital of the company is 301,000*l.*, in 60,000 shares of 5*l.* each, and 200 founders' shares of like amount—the latter are entitled to receive one-half of all profits in any one year after 10 per cent. has been paid on the ordinary shares. The purchase price of the rights acquired by the company is 251,000*l.*—payable 200,000*l.* in cash and 50,000*l.* iu fully paid-up ordinary shares, and 1,000*l.* in 200 fully-paid up founders' shares of 5*l.* each. The board is an exceptionally strong one, comprising several gentlemen of great business ability and commercial standing in Glasgow. The lists will open on Monday and close in town and country at or before 4 p.m. on Tuesday. Owing to next Monday being a Bank Holiday in Scotland, the lists there will open on Tuesday, and close on the following day. While Truth was bathing, it is said that Error stole her clothes. The British Water-Gas Syndicate (the parent company) notifies that it has nothing whatever to do with the companies registered under the titles of the Scottish Water-Gas Company, Limited, and the Lancashire Water-Gas Company Limited; and they leave investors to draw their own conclusions from what has given birth to two advertisements which appear on our leader page.

IMPROVEMENT IN THE WEST ARGENTINE CO.'S MINE.

WE congratulate the shareholders in the West Argentine Gold Mining Company on the receipt of the following telegram from the mine manager, dated May 1st:—"Shaft: The reef is 3 ft. in thickness; value 12 dwts. gold per ton; in the winze, 14 dwts. gold per ton. In reserve, 3,000 tons. This refers to the siuking on the Caroline reef, which has been struck at a depth of 66 ft. below adit level, with the result as cabled." This cablegram puts an entirely new face upon the company's affairs, which, it must be owned, were gloomy enough a week or two ago. The manager seems again to have picked up the rich ore at 66 ft. below adit level, thus dispelling anxieties as to the gold making down or not. It is now known that it does make down and there is nothing to hinder the mauager following it. If this be so at the main shaft, why not also the same at other places, where it is known there was rich ore to the water level? The opening up of these fresh reserves will enable the directors of the re-constructed company to make matters far easier for the old shareholders than they had thought possible. We believe it has been decided to abaudon the preference share scheme, because there is always an objection to have two classes of stock in a mining company. We are not in the secrets of the directors, but at the meeting to be held on the 16th May we believe some such scheme as this will be formulated—that the liability will be 5s., with only 6d. a share called up on application and 6d. on allotment—a further call of 1s. not being made for three months. It is just possible so large a call as 1s. three months hence may not be required, for the new company will start with the happy assurance that there is plenty of quartz for its mill, and the proceeds will help to meet costs. The latest news from the West Argentine property has, we repeat, put a greatly improved aspect upon the company's affairs.

THE TRANSVAAL GOLDFIELDS.—8.

By a Cape Colonist.

WHILST endeavouring to fulfil the promise I made in my last letter to give some account of the history of the Witwatersrandt goldfields, of which Johannesburg is the centre, I am conscious of the difficulties of the undertaking. As I pointed out in my last, the discovery of gold in the De Kaap district may be said to be a matter of 25 or 30 years; whilst that of the Witwatersrandt is scarcely more than so many months. I am quite aware that iu some quarters it is asserted that gold was found there so long ago as 1854. This may be so, but it was not a matter of public notoriety, as was the case at the De Kaap. Indeed, I venture to say that it was not a matter of public notoriety so recently as 1878. It was not until that year that it came to my personal knowledge that gold had been found on a certain farm not very far from where the town of Johannesburg now stands. In the year previous, and up to the year 1880, I saw the owner of that farm several times, and handled small gold nuggets which had been found on his property. In 1877, or thereabouts, two Australian gold diggers arrived on his farm from the De Kaap district—a distance of 300 miles—and which they left disgusted after a vain endeavour to find gold there, and after enduring two or three years of hardships and privations. They arrived at my friend's farm in a state of destitution, but they told him that they believed from the formation of the country that gold was to be found in the neighbourhood, and they asked leave to search. Ultimately an arrangement was come to between them and the owner which continued from 1877 to 1881, when the War of Independence broke out, aud they left the country. Now, why these men imagined that they would find gold there will, perhaps, never be kuown. Certainly the formation is now proved to be quite different to anything they had ever seen in this country, and besides that, during the three or four years they were at work their object was undoubtedly alluvial gold; they searched creek after creek, aud were moderately successful, but the idea of working, or even prospecting, for auriferous reefs does not seem to have entered into their heads. This is proved by the fact that during the time they were there they diligently searched for gold, were steady and industrious, managed to make a tolerably good living, and were evidently quite unconscious that they were surrounded by what has since proved to be the widest, deepest, and richest auriferous gold reefs in the world.

Whilst this was going on, a Mr. F. Struben, an intelligent Transvaal farmer, bestowed a very great deal of attention to the geological formation of the Transvaal, and, in order to bring the history of the discovery of gold on the Witwatersrandt to a certain focus I make the following extract from Mr. Struben's account of his experiences, which he has recently published. After premising that it was in January, 1884, that he started prospecting at Witwatersrandt, he goes on to say:—"About November, 1885, Mr. J. Bantjes commenced prospecting on the Rand at Roodepoort. Being very unsuccessful in his researches I showed him the conglomerates, and advised him to work on them, as I felt sure some of them would turn out good. In January, 1886, we crushed some conglomerates for him and others, and they gave very poor results. Although disappointed,

he still kept up heart, and commenced looking about for another bed. With the exception of ourselves, Mr. Bantjes and his party were the only people prospecting here, to any extent. In March, 1886, we crushed some conglomerates, which gave a return of 8 dwts. to the ton. Shortly after this Walker, a former servant of ours, found on Langlaagte what is now known as the main reef. A few weeks after I struck it on the one half of Vogelstruisfontein, and a few days afterwards Bantjes struck it on the other half. From this place we crushed some 28 tons, which gave a return of 1 oz. 8 dwts. to the ton. About this time some parties, Messrs. Plessis, De Villicis, and others, commenced work close to where now stands Johannesburg. Since then the fields have become so well known that any further remarks from me are unnecessary."

It was then that the Government was compelled to recognise the work these prospectors had accomplished, and accordingly, on the 18th July, 1886, they proclaimed and threw open nine farms on the Witwatersrandt, which have now, more or less, a wide world reputation. They are known respectively as Langlaagte, Driefontein, Rantjeslaagte, Doornfontein, Paardeplaats, Vogelstruisfontein, Turffontein, Elaudsfontein, and Roodepoort. Claims had already been allotted by the owners of some of these farms, and their action was recognised by the Government. Pannings of "banket" taken from various portions of these farms showed that the auriferous area was very extensive, and in some parts of surprising richness. There were at this time but a few diggers, and they mostly congregated in what are still known as the Ferreira and Natal camps. News of the discovery very soon got noised abroad, and a rush took place, people leaving from all parts of South Africa in order to share in the good fortune; and, although that rush has continued without any cessation, I am bound to add that at this moment it is greater than ever—it being now an ascertained fact that what are called the "new comers" already far exceed the original Dutch population.

It is now time that I devoted some little attention to the wonderful town of Johannesburg. Ferreira's camp being found to be situated on the line of the main reef, the Government marked off a township, advertised the plan, christened the new town "Johannesburg," and sent Capt. Von Brandis as Mining Commissioner. This was on the 20th September, 1886, and on the 8th of December in that year the first sale of building sites, or stands, as they are called, took place. The sum realised 13,002*l.*, the prices ranging from 1s. to 280*l.* per stand (100 ft. by 50 ft., corner stands 50 ft. by 50 ft.). In January, 1887, another sale of building plots took place, when no less than 19,921*l.* was realised; but these sales altogether fall into the shade by the side of the sale of some 360 more stands which were sold last month, and brought into the public treasury 154,000*l.* Many of these stands have since changed hands at 1,500*l.* and 2,000*l.* each, whilst many individuals, who purchased in the early days, ran up mere shanties on them, which shanties they now let on lease at from 12*l.* to 15*l.* per month rental. All these stands pay a sort of quit-rent to Government of 10s. each per month in perpetuity, but it is expected that before very long something will be done in the way of converting them into freeholds.

Perhaps the most remarkable feature in connection with Johannesburg is its sudden conversion from a mining camp of iron shanties and tents to a city of handsome stone buildings, for public and business purposes, and villa residences. This of itself exhibits the confidence investors have that the gold mining industry will last out the present generation, at all events, and they have speedily availed themselves of the splendid granite to be found in abundance in close proximity to the town. It can now boast of public offices, a gaol, police barracks, innumerable hotels, a Stock Exchange, where high change is held every morning, and is a most animated scene; two theatres in full swing, with excellent companies, attracting crowded houses every night; two Masonic lodges, a Good Templar's lodge, six churches with schools attached, and a hospital and convent are about to be built, which bid fair to become ornaments to a city now numbering 30,000 inhabitants.

(*To be Continued.*)

RUBY AFFAIRS.

The meeting of this company brought into prominence the fact that the directors have managed the mine with ability and economy, both at home and abroad. But there is, unfortunately, one thing which they have found beyond their power—they cannot put ore into a mine in paying quantities if it is not there. Ruby furnishes an illustration of a mine legitimately worked for the benefit of the shareholders, every penny of whose capital is employed under the best available advice to discover those ore bodies of which the mine has not been deficient in past times. So far they have failed, but their resources are not exhausted. There still remains a call which has not yet been made, and though the shareholders may feel chagrined at the long delay of renewed prosperity, they will do their directors the justice of remembering that the weight of disappointment comes upon them with far more crushing effect. The unexpected is always happening in mining, and perhaps, after its many trials, Ruby may yet come to the front.

THE AFFAIRS OF GREAT SHE.

We have no wish at the present juncture to enter fully into the affairs of this concern, which may for all practical purposes be considered *sub judice*. It is true that the speech of Mr. Edward Coleman calls for much criticism as regards its subject matter, and also from the point of view of verbosity. The eloquence of this gentleman flowed for nearly one hour by the clock, until the shareholders began to wonder whether he would finish his discourse in this world or the next. It is a deplorable habit that anyone acquires who employs a dozen words when one is sufficient. Mr. Lewis Levy did not suffer Mr. Coleman's statements to go unchallenged, but he promised at the next meeting to appear with evidence to controvert some of the points in the chairman's speech, and, metaphorically speaking, to tear the accounts to pieces. Very properly, he refused prematurely to disclose his facts. To enter into the whole question in the absence of Mr. Furlong would have been like playing Hamlet without the Royal Dane, but the temper of the meeting was shown in the unanimous approval which was given to the motion for its adjournment for one month. When the shareholders again come together Mr. Lewis Levy will present his case, and they will be able to judge of the character of the services the directors have rendered, and the proper value to be attached to the chairman's speech at Tuesday's meeting. We invite them to approach the question with a judicial mind, and, according to the evidence, give a true verdict.

WEST BEAVER, LIMITED.

The new silver region of Thunder Bay, Canada, is creating no little stir at the present time on the other side of the Atlantic; and, indeed, this is not to be wondered at when we hear of the vast mineral resources of the country. It is said that ore has been discovered worth $22,000 to the ton, and we are informed that one mine alone is making a daily output of $30,000, equal to 160,000*l.* a month. It is not therefore surprising to learn that 'cute Yankee capitalists and miners are flocking into the district. Two of the foremost mines in the neighbourhood are the Beaver and Badger, both of which have been proved to be rich silver-bearing properties. The West Beaver Company's property contains 149 acres, free from Crown dues and royalties; it adjoins the Beaver, and is distant about half a mile from the Badger. It possesses a true fissure vein from 4 ft. to 6 ft. in width, and ores taken from it show native silver, argentite, and rich silver-bearing sulphides, such as galena, zinc blende, and pyrites. The property has been reported favourably upon by several eminent scientists, civil and mining engineers, and experts, and the directors are of opinion, based upon these reports and other information at their disposal, that with development it will yield satisfactory results to the investor. The capital of the company is 150,000*l.*, in 1*l.* shares. The vendors, who are the promoters, have fixed the purchase-money for the whole freehold property at 95,000*l.*, payable 50,000*l.* in fully paid-up shares (this being the largest amount allowed by the rules of the London Stock Exchange, in order to obtain a quotation for the company's shares, which the directors will apply for in due course), and the remaining 45,000*l.* in cash. The balance of authorised capital, viz., 55,000*l.*, remains for working purposes, but this sum is considerably over the amount deemed necessary. The brokers to West Beaver, Limited, notify that the shares are quoted ¼ premium.

NEW YORK, ONTARIO AND WESTERN RAILWAY CO.

Subscription is invited for $2,500,000 Consolidated First Mortgage Five per Cent. Gold Bonds, being part of an authorised issue of $10,000,000. They are to be issued at 93 per cent., or 186*l.* per $1,000 bond, and 93*l.* per $500 bond. The bonds are secured by a consolidated first mortgage upon the entire main line, branches, and property, and are further secured by the deposit with the trustee of the mortgage of all the $3,000,000 of securities (except $5,000 of stock retained for purposes of organisation) created on the Ontario, Carbondale and Scranton Railway Company. The railway has a total mileage of 424 miles, of which 320 miles are owned and the remainder leased or worked under running powers. There is an extension in course of construction, which will increase the mileage to 478 miles. Subscriptions will be received by Messrs. Foster and Braithwaite and Messrs. Satterthwaite and Co., and the list will close on Wednesday, 8th May, 1889.

NICHOLSON'S PATENT, LIMITED.

This company has been formed with a capital of 151,000*l.* in 151,000 1*l.* shares, and with a strong board of directors, to purchase and carry on the business of Dr. J. H. Nicholson, for the sale of his patented artificial ear drums in the following countries (the prospectus erroneously calls them cities): England, British India, United States, Canada, Australia, Spain, France, Italy, Austria, Sweden, and the Argentine Republic. Dr. Nicholson's patented ear drums are well known, and are recommended by physicians and surgeons of all schools. It is said that they "are to the deaf, or those partially so, what spectacles are to those not possessed of good sight." A large number of persons who have used these ear drums testify in the prospectus to their utility. The business has been gradually developed during the last five years, and has been conducted with profit. The highly respectable firm of C. F. Kemp, Ford and Co. certify that the net profits of the business "amount to a total of 11,892*l.* 11s. 10d. for the past year." The directors anticipate that the company will pay large and regular dividends.

REPORTS OF MEETINGS.

THE SCOTTISH AUSTRALIAN MINING CO., LIMITED.

STRIKE ENDED—SATISFACTORY PROGRESS OF THE COLLIERY—CADIA PROPERTY—EXCEPTIONAL SOURCES OF INCOME—20 PER CENT. DIVIDEND.

THE half-yearly general meeting was held at Winchester House, Old Broad Street, yesterday, to receive the directors' report and accounts, declare a dividend, and transact the other usual business of the company—George Smith, Esq. (chairman of the company), presided.

Mr. F. W. TURNER (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

STRIKE OVER.

The CHAIRMAN: Gentlemen, when we last met it was my unpleasant duty to have to enter, at considerable length, upon an explanation of the circumstances connected with the general strike of miners then current. To-day, I am glad to be able to dismiss that matter very briefly, and simply mention that the strike came to an end towards the close of last November, and that the men have been working steadily ever since. The settlement arrived at does not materially alter the conditions of working or the wages paid. We, here, always thought the strike had no adequate foundation, and we are more than ever confirmed in that opinion now that it is over. It has not been without a prejudicial effect upon the trade, but I hope this is in course of passing off, and if the men will go on working steadily, I believe confidence will by degrees be restored in the minds of shipowners, and coal consumers, to whom so much inconvenience and loss were occasioned by the strike whilst it lasted. The current year has begun with a brisk trade. During January and February 49,000 tons of coal were sold from Lambton, and March seems likely to do proportionately as well. The opening out of the

NEW COAL PROPERTY, DURHAM,

is going on steadily. There is a seam of a little over 5 ft. of good coal, and Mr. Croudace, the colliery manager, expresses himself as well satisfied with the prospects of this property.

CADIA.

At the Cadia properties the work of examining the great iron lode is being carried on steadily, and with as much force as admits of economical application. The western drive is now in about 430 ft. from the mouth of the adit, and although the eastern drive has not yet got in very far owing to there having been more difficulties to overcome before it could be started, still this work, too, is now well under way. Almost all the trials of vein-stuff that have been taken in the course of the driving west have shown small particles of gold, but it cannot yet be said that a payable deposit has been found. The lode, however, is very wide, and it is quite likely that some parts of it will be found richer than others. To ascertain this the lode will be cross-cut at intervals. The directors are causing the company's mining outlay to be concentrated on the testing of this iron lode, all past experience tending to point to it as the source whence the alluvial gold found on the property has probably come, and they are causing the work to be pushed on as rapidly as it can be, having instructed the manager that it is the desire of the shareholders that as thorough and exhaustive a trial of this iron lode shall be made as circumstances will permit of. The severe drought which prevailed last year in New South Wales prevented tributers from doing much work in the way of finding and getting gold from the surface by washing. The directors are always glad to encourage this class of operation, which costs the company nothing, and may lead up to information of a valuable character at any moment. I hope the rains which have quite recently set in in the colony may lead to a resumption of the work of the tributers in the Alluvium. On the whole, I think we have reason to feel satisfied with the company's position and prospects. At Lambton a good trade is being done; at the new coal property a good seam of coal for future use is being developed, and at Cadia a useful and promising piece of work is being carried out, which, although it has as yet exhibited no distinct features of the desired character, may yet, I think, be regarded hopefully. With this, we have the satisfaction of having to deal with the distribution of a very substantial amount of profit. You will, of course, thoroughly understand that the sources of about one-half of that profit are quite exceptional. We cannot always expect to have the shortcomings of trade profit caused by a strike to be more than made up by profit on the sale of a coal property. It has happened very opportunely, but I think it behoves us, as prudent men, to lay by a fair proportion of such profit in the way of preparation for a possible "rainy day" in the future. Labour disturbances we must expect to experience again and again, and fluctuations, too, in the demand for and price of coal. I am sure, therefore, that you will support the board in the policy of strengthening the reserve fund, of writing off the Cadia expenditure, and of carrying forward such a balance as will be a material guarantee for a satisfactory dividend the next time we have the pleasure to meet. I beg to move "That the report of the directors be received and adopted, and that the dividend proposed therein, at the rate of 20 per cent. per annum, upon the paid-up capital of the company, 160,000*l*., be confirmed, the same to be payable, free of Income Tax, on and after Saturday, the 11th instant."

Mr. FREDERICK PETERSON WARD (director): I beg to second the motion.

DIRECTORS CONGRATULATED.

Mr. FERGUSSON: I rise to congratulate you as a Board, and also the chairman upon his speech. The latter appears to me to be in the highest degree satisfactory—satisfactory with reference to the firmness with which the formidable, most unreasonable and unjustifiable strike of the colliers was met and overcome; satisfactory as regards the latest news from the manager; satisfactory as having returned once more to what I may call the "sweet simplicity" of a 20 per cent. dividend, and most satisfactory in having added the sum of 5,000*l*. to the reserve fund. The policy of building up a reserve fund commends itself to me as infinitely wiser and more prudent than that of dividing all profits up to the hilt, and I hope that that policy will prevail in the future. As regards future profits and dividends, we have with commendable caution been clearly warned that the increased dividend amounting to 20 per cent. is exceptional, and, doubtless, that is so, but still my hope is not greatly damped or blighted for the future when I consider that the Lambton Colliery was at work only three months out of the six, and that the profits of the Durham have not even commenced, and that in spite of adverse circumstances the colliery profits amounted to 10,350*l*. 14s. 8d. Such a result, under the circumstances, clearly proves that those entrusted with the management of our affairs are entitled to our warmest thanks. Regarding the Cadia properties I have not much to say. I am glad that the work of systematically examining the great iron lode is being steadily carried on, and that both adits are being driven. I imagine that there cannot be amongst us any doubt whatever as to that course being the wisest to pursue under the circumstances, and I hope the work may be pushed on with as much energy as possible until that lode has been thoroughly tested and examined. Even if more energy should involve an increase of expenditure, I am sure we can well afford it. As regards the expenditure, I entirely agree with our chairman, who, in his speech of the 21st October, 1887, used these words:—"Cadia is about as good a subject for mining enterprise as can well be found, and there is no reason why capital should not be raised, if necessary, to deal with this very substantial property." I think those words commend themselves to us all as wise and good. I will conclude by simply asking that as soon as anything good is discovered (and I think it soon will be) the board will issue to us a circular informing us of our good fortune. (Cheers.)

QUESTIONS.

Mr. FREWER: A great deal of what I intended to say has been possibly better said by the gentleman who has just sat down. I am very glad to find that persistence on my part in past years now meets with the support of one or two or more of the shareholders, and I am also glad to find that the directors appear to have taken thoroughly in hand the question of exploring Cadia. Before I ask a few questions, I should like to add to the remarks made with regard to the termination of this strike, that I consider this company is greatly indebted to its officers on the other side, supported by the directors on this side, for bringing that strike to what, I hope, will be a satisfactory termination. I think that the firmness shown by our officers there, and supported by the directors here, will be an indication to the men that, while we are ready to listen to all reasonable demands on their part, anything in the shape of compulsion we shall most steadily and sternly resist. I see that you have changed the name of the colliery to Durham. Durham is associated in our minds with the production of coal of a superior quality. I shall be glad to hear whether the coal found on the Colonial Durham is first-class. I observe that the seam already discovered at a depth of 400 ft. is only 5 ft. thick, and I am very anxious to know whether the directors can tell me if that is the main seam of the district? I cannot think that a 5 ft. seam ought to be regarded as the main seam of such a district. I hope the directors will have borings made in order to discover whether lower down there may not be a thicker seam. Can the directors inform me the depth of the present adits at Cadia on the surface of the ground. I suppose not very great?

Mr. TURNER: The adits will give about 500 ft. of backs when well in under the hill.

Mr. FREWER: With regard to the addition to the reserve fund, I think there cannot be two opinions as to the prudence of that step. We who have been shareholders for a great many years (and I have been connected with the company 31 years) know the ups and downs we have met with. We can hardly expect when the new mines come into working operation but that what we shall meet with then in the way of competition may perhaps affect the 11s. per ton. The directors deserve the greatest commendation for building up the reserve fund and carrying forward the balance.

CHAIRMAN'S REPLY.

The CHAIRMAN: We have a case of the Durham coal coming over, and we shall be able to say more about it when it arrives. Our colliery manager is well satisfied with that seam, and he looks upon it as the main seam of the district. A thickness of 5 ft. represents a very good coal seam indeed.

The report was unanimously adopted.

DIRECTORS AND AUDITORS RE-ELECTED.

The CHAIRMAN proposed the re-election of Mr. Charles Garston Grainger as a director, and said: I am sorry he is not very well and is not able to be with us, but he is an old and valuable servant, and I recommend you to re-elect him.

Mr. FERGUSSON: I second the motion, for I know Mr. Grainger also as an old servant of the company.

The motion was carried unanimously.

A SHAREHOLDER proposed the re-election as a director of Mr. George Thomas Rait, who also went out of office by rotation, and offered himself for re-election.

A SHAREHOLDER seconded the motion, which was carried.

Mr. BLUNDELL proposed the re-election of the auditor, Mr. James Russell Frewer.

Mr. WILLIAMS seconded the motion, which was carried.

The fees to the auditors, 21*l*. each, were voted.

Mr. FERGUSSON: The chairman and directors eminently deserve our thanks, as also do the local officers. They have all done their duty or else we should not see the results that are put down in the report.

Mr. FREWER seconded the motion, which was carried unanimously.

The CHAIRMAN returned thanks, and said: We are doing our best for you here, and our officers are doing their best for you on the spot. (Cheers.)

The meeting then closed.

THE TRANSVAAL LANDS CO., LIMITED.

'TIS BRIEF—'TIS BETTER SO THAN TEDIOUS.

AN extraordinary general meeting of the Transvaal Lands Company, Limited, was held at the City Terminus Hotel, Cannon Street, on Wednesday, the 1st of May, in order that the subjoined resolution, which was passed at the extraordinary general meeting of the company, held on the 6th day of April, 1889, might be submitted for confirmation as a special resolution, viz. :—

RESOLUTION.

"That each of the 85 founders' shares in the capital of the company be divided into eight shares of the nominal value of 2s. 6d. each, and that the following words be added to clause 81 of the articles of association of the company, namely :—'For the purposes of this clause eight founders' shares of 2s. 6d. each shall be deemed to be equivalent to one ordinary share of 1*l.* each, and the holders of founders' shares shall be entitled to vote accordingly, and a member who holds less than eight founders' shares of 2s. 6d. each shall not in respect thereof be entitled to any vote.'"

Mr. W. J. Thompson presided.

Mr. A. W. HERON-MAXWELL (the secretary) read the notice calling the meeting and the above resolution.

The CHAIRMAN : Gentlemen, you have heard the special resolution which is to confirm the resolution at which you arrived at the last meeting. If you like I will read it again, or perhaps you will consider it as read. (Agreed.) I beg to propose that that resolution be approved.

Sir FREDERICK YOUNG seconded the resolution, and stated that he would be leaving England the day after to-morrow for the Cape, accompanied by one of his colleagues on the board, Mr. Pasteur. They would visit the Transvaal and inspect the properties of the company there, and when they returned to England they would give the shareholders a "full, true, and particular account" of what they had seen. They would be careful in making their report that it should be a true one—(hear, hear)—and they would be anxious that they did not tell the shareholders anything but what was actually the case. (Cheers).

No questions being asked, the motion was put and carried, and a cordial vote of thanks to the chairman closed the meeting.

WEST BATTERY REEF GOLD MINING CO., LIMITED.

STATUTORY MEETING—A HOPEFUL OUTLOOK—ENERGETIC DEVELOPMENT.

THE first (statutory) general meeting of the shareholders in this company was held at the Cannon Street Hotel, E.C., on Tuesday, under the presidency of Major-Genl. A. C. Bruce, C.B.

Mr. CHAS. S. C. WATKINS (secretary) read the notice convening the meeting.

A CONCISE STATEMENT.

The CHAIRMAN: Gentlemen, the West Battery Reef Gold Mining Company was registered on the 18th of January last, and this meeting, which is held within four months of the date of registration, in compliance with the Act of Parliament, is purely formal, and we have, therefore, no accounts to present. Some of you gentlemen will, however, no doubt be desirous of hearing something about the mine that you have taken shares in, and I shall be very pleased to give, as briefly as possible, some information concerning it. The property transferred to us is the south-west portion of the Luipaards Vlei Mynpacht, and it extends some 4,500 ft. along the course of the Battery Reef, which is now generally considered as the richest reef in that part of the Randt. Every foot on the reef, both east and west of our ground, has been taken up, and is being vigorously worked by various companies. We are, therefore, fortunately situated, and may congratulate ourselves upon having exploratory works energetically carried on at each end of our length of reef without any cost to ourselves. The Battery Reef Company, for instance, adjoining our ground on the east have their mine in a very advanced state of development, their shafts having been sunk some 250 ft. on the reef, and from the reports, which are periodically published, it appears that the reef at that depth has become a good deal richer. Another company working on our western boundary has, we learn, recently opened up the reef at that point, and I am informed it shows very rich. With regard to our own operations, the works carried on since the acquisition of the mine by the present company have been exclusively devoted to the development of ore ground, so that when our mill is again started we may confidently expect more than a sufficient supply for our 20-head Sandycroft battery. That our expectations are justified will be shown by the fact that our inclined shafts, Nos. 1 and 2, have been sunk to a depth of about 200 ft. At a depth of 80 ft. a level was driven connecting these shafts and opening up a considerable extent of ground for stoping. A vertical shaft, which will be the future main working shaft of the mine, is now down over 100 ft. Good pit-head gear and a hauling engine have been placed in position and are working satisfactorily, so the shaft will be rapidly deepened. At a depth of about 140 ft. a cross-cut will be made to connect this shaft with No. 2 incline shaft, and when that work is accomplished the mine may be said to be in a condition for vigorous and proper working and expeditious development in depth. The important question of a permanent water supply for the battery has the earnest attention of Mr. Anderson, your managing director in South Africa, and the matter has been specially pressing, in consequence of the unusually small quantity of rain that fell during the season just passed through. Considerable works have been undertaken to open up the springs upon the property, and arrangements for collecting water from the tailings are being made, so that we have every reason to hope that no serious delay in the crushing will be caused in the future by want of water. As to the milling department, I am glad to tell you that we lately secured the services of a Mr. Bennett, whom we believe to be fully competent for our work, and he left for South Africa at the end of last month. Referring to our management charges, it will be satisfactory to you to learn that they will not be at all costly, for by an arrangement made with companies working in our immediate vicinity, they sharing the services of competent officials, have to make adequate payment to us in return. By adopting this plan we are enabled to secure the services of really good men, without having to pay excessively in proportion to the work we have at present for them to perform. By and by, when our operations are more extended, this arrangement may have to be re-considered. I do not know that I have anything further to add beyond saying that an ample supply of all requisite stores and material has been sent out, and that I see no reason to apprehend any interruption in the arrangements we have made for the profitable working of your property. (Cheers.)

There being no questions, the meeting at once resolved itself into an

EXTRAORDINARY GENERAL MEETING

for the purpose of considering, and, if approved, passing the following resolution :—

"That the articles of association of the company be altered as follows :—(*a.*) In article 7 the word 'one' in the sixth line shall be omitted, and the word 'two' shall be inserted in lieu thereof. (*b.*) In article 24 the words in the second line 'usually recognised as effectual for that purpose' shall be omitted, and the words 'usual common form' shall be inserted in lieu thereof. (*c.*) In article 72 the words in the third and fourth lines 'any director may act before acquiring his qualification shares or stock,' shall be omitted."

The notice calling the meeting having been read,

The CHAIRMAN, without comment, moved the resolution as above.

Mr. C. CHALONER SMITH (director) seconded the motion, which was carried unanimously.

A vote of thanks to the chairman for presiding terminated the proceedings.

The confirmatory meeting will be held on 14th May, 1889.

PAHANG CORPORATION, LIMITED,

EXTRACTS OF LETTER OF 3RD MARCH FROM WM. FRASER.

JERAM BATANG : I expect to have the water there from Jeram Lumpong by the end of June. The tunnel conveying the water behind the mill at Jeram Lumpong is now holed, and will be completed in a day or two, but until the water is required at Jeram Batang I intend to allow it to run direct from the present water-wheel to the river. Regarding the mill at Jeram Batang it should also be a 30-stamp one, with all the necessary appliances. . . . . Nearly all the Jeram Batang men have recently been employed in the neighbourhood of Jeram Lumpong, partly in excavating at the back of the mill, partly at one end of the tunnel, and partly on the benching of the new water-race. . . . . Water-race: This is going on rapidly. The Eu Lidam which was washed away will be completed in another week, and the race is being rapidly extended. The Semiliang dam has been commenced, the construction being contracted for by one of the Kongsis. . . . . The Semiliang dam I have decided to make at a point some 150 ft. into the valley from the main-race, constructing it as high as the tram-road to the mines would admit of, and conducting the water by a small race into the main race on the lower side of the stream. The water from above Semiliang river in a launder. This dam will be about 5 ft. higher than the top of the main race ; it will take about a month to complete. The Prongdam I shall construct on exactly the same principle. . . . . Tin: None has yet been shipped to Singapore, for the reason that no steamer has yet entered the Kuantan. The Blat tin has not to my knowledge yet entered at Batu Sawah. The On Thai stamps are crushing daily, and some tin will soon be smelted by that Kongsi. After the On Thai Kongsi has finished crushing Hiu Li will crush their ore. Mines : Regarding the mines generally, I have little or nothing to add to what I had to remark in connection with my criticism of Teague's work. As the Kuala is now open, however, I shall be able to keep you posted at brief intervals regarding the work done and the changes in the lodes. I am going in a few days to excavate all the ore deposited in the Red river, and have it transported to Jeram Lumpong to be stamped there. The quantity is very considerable. . . . Extract of letter of 19th March, from Wm. Fraser. Tin : Up to the time I had left no steamer had entered the Kuanton except the Sultan of Jahore's yacht. The Blat Nadak and Kim Sin consignments were at Batu Sawer, and the two former had been resmelted and put into our moulds. The next steamer goes in this week, and if the Sultan's agent is there to receive the royalty, all the tin then at Batu Sawer will be shipped. The On Thai mill is crushing daily, and that ore will be smelted as soon as the crushing is finished. There is also ore lying in the Jeram Batang Kongsees, which could be smelted but the quantities in the individual Kongsees are not large enough to constitute a night's smelting, and it is very difficult to get them to combine to melt their ores. Still, when I return, I shall do it. . . . For some time they have seriously considered the propriety of making a seaport town Kuala Pahang or Kuala Kuanton, and the Governor's recent advice is likely to influence the resident to decide on Kuanton. That would be a splendid thing for us, for not only would we get a breakwater at Government expense, and consequently regular communication all the year round, but the Corporation would derive a very handsome revenue from leases of building sites, &c. On 1st July they are to commence cutting roads through Zambang and Blat from the Kuanton to the Pahang rivers, and another from the Kuala Pahang to Kuala Kuanton, I understand they are also likely to make another road from Kuala Kuantan to meet the Gambang Blat road at a point slightly above Batu Sawyer. This would be a very good thing indeed for us. They also propose to erect a police-station in the Blat district. Under such circumstances I have to ask for your permission to make a minute survey of the land at Kuala Kuantan with a view to having cut up into building sites. At Rumpen the Government also are placing a magistrate with a police-station. That river is, however, navigable for a much greater distance than the Kuantan, and is, with the exception of the Kuala, altogether deeper. Regarding this and Endau I ought to remark that the future is very bright. The Sultan of Tahore is about to undertake, on a very large scale, the development of his side of the Endau River, and this means the rapid population of the district. But his scheme is entirely an agricultural one as well, of course, as a commercial one, and he has already proved its success on the Minar River (near Malacca), a district which a few

years ago was comparatively desolate, and which the Sultan in the last two and half years has turned into a gigantic garden, on and about which a large number of Chinese and others obtain a respectable livelihood.

ROCKY BAR WIDE WEST GOLD, LIMITED.

BAD NEWS—MILL CLOSED DOWN—DEBENTURES.

2nd May.—The directors have to report that during the past week advices have been received from the superintendent at Rocky Bar, stating that in consequence of the ore above the adit level being disturbed in two places by a break in the lode, it is impossible to run the mill at a profit until the pay shoot in the east level No. 1 is opened up. In these circumstances Mr. Smith advised that the mill should be closed down, and work in the mine confined to driving the east level, so as to open sufficient ground to run twenty stamps. The mill has accordingly been closed. The closing down of the mill and paying off the men to date involves an immediate outlay of some $8,000, in addition to which the overdraft allowed to the company by the Boise City Bank (amounting to $5,000) must be made good. The monthly cost of dead work, with the mill lying idle, is estimated by Mr. Smith at $2,500, or say $3,000. The directors had therefore to face the fact that $13,000 must be found at once, and a further $3,000 in a month's time; they accordingly determined to consult some of the largest shareholders at once, and endeavour to make arrangements for meeting the emergency. As a result of a conference held on the 30th ult., it has been decided to create 10,000*l.* of debentures, secured on the whole undertaking of the company, bearing interest at the rate of 10 per cent. per annum, of which a present issue is to be made of 5,000*l.* Of this amount 1,655*l.* has already been subscribed, and the balance of 3,345*l.* is now offered for subscription. The debentures will run for a term of two years from 1st June, 1889, but the directors reserve to themselves the right of redemption of the whole or any part at an earlier date by giving one month's notice of their intention to exercise the option. The amount of each debenture is fixed at 10*l.*, and will be payable as follows:—1*l.* on application, 1*l.* on allotment, and the balance on 1st June, 1889. A form of debenture may be seen at the company's offices.—W. Bramall, Secretary.

Copper in Russia.—Although the French Copper Syndicate has broken down, yet we here in Moscow do not find that the price of copper is much cheaper as yet. Since last autumn the price of good copper in bars has been about 20 roubles a poud (36 lbs. Eng.) = circa 124*l.* per ton, and a day or two ago it was offered at "the very low price" of 16 roubles per poud (99*l.* circa) per ton. About two years we had good copper for Ro.8. 50 per poud (= circa 52*l.* 15s. per ton.) So we hope that as soon as the navigation opens, and it will be possible to get copper from abroad, that the local dealers will be obliged to reduce their price. Here the whole copper business is in the hands of a very few merchants who keep prices up as long as possible.—Extract from *Martineau and Smith's Hardware Trade Journal.*

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

NEW ZEALAND ANTIMONY CO., LIMITED.

To the Editor of the Mining World and Engineering Record.

Sir,—Your report of meeting of the shareholders of the above company, as per issue of January 19th, contains an attack upon me by the chairman, Sir W. L. Buller, who attempts to cover his *laches* by a charge of incapacity on my part as local manager, which caused my replacement by Mr. Wearne.

The value of this statement may be gauged from the following facts:—

1st. Mr. Wearne had been manager of this mine for the four years previous to the New Zealand Antimony Company taking possession; he was not displaced whilst under my charge, and still continues in that position. (Here I may state that he is well known in New Zealand as a thoroughly competent manager.)

2nd. The position that I held is really occupied by Mr. N. Reid, under the title of managing director. The comment on this is that this gentleman was chairman of directors of the previous antimony company, of which I was managing director.

3rd. My term of office with New Zealand Antimony Company as *nominal manager* was for one month only, viz., February, 1888. And all the work that has been done to develop the mine during the past 12 months was scheduled by me as necessary in a report handed to the resident director, Sir Wm. Fitzherbert, in the month of January, 1888.

The cause of the company having lost the amount it has paid in fines to Messrs. Cookson is that, by its officers, it entered into a contract with Messrs. Cookson without taking the trouble to inquire from late New Zealand owners whether at once, or how soon, the mine would be in a position to turn out the quantity required under the contract.

Knowledge of the nature of this contract was only got here (N.Z.) by published report of chairman's speech at first meeting of the company.

Other statements about misrepresentations, &c., will be settled by an independent tribunal, and therefore need no commentary.—I am, &c.,

H. F. Logan.

Wellington, N.Z.,
March 8th, 1889.

Mr. Edward Carter, late of the firm of Messrs. Carter and Carter, chartered accountants, Waterloo Street, Birmingham, has been elected by the board of the Patent Nut and Bolt Co. to fill the vacancy caused by the death of Mr. Edwin James Grice.

Subscriptions will be opened on Monday, May 6th, at Ten o'clock a.m., and close on Tuesday, the 7th, at Four o'clock p.m. for London, and Wednesday, May 8th, at Four o'clock p.m. for the Country.

NICHOLSON'S PATENT, LIMITED.

Incorporated under the Companies Acts, 1862 to 1886.

CAPITAL, £151,000, in 151,000 £1 Shares

(1,000 of which are Founder's shares). The shares are payable as follows:—2s. 6d. on application, 7s. 6d. on allotment, and balance in calls of 2s. 6d., with one month's notice. It is not anticipated that more than £125,000 of the capital will be required to be called up.

The Vendor, Dr. J. H. Nicholson, has agreed that he will accept as part payment of the purchase money 50,000 fully paid-up shares, being the largest number the Stock Exchange will admit of, and has agreed to remain as Managing Director of the Company's business for five years.

The Founders' Shares have been subscribed for by the Managers and Employés of the different Establishments. These Founders' Shares do not participate in any profits until a dividend of 10 per cent. has been paid on the ordinary shares. Half the remaining profits will be distributed amongst the holders of the Foundres' Shares, and the remainder amongst the holders of the ordinary shares, by way of further dividend.

Directors.

Secretary and Offices *(pro tem.)*

P. T. WYMAN, Esq., 21, BEDFORD SQUARE, W.C.

ABRIDGED PROSPECTUS.

This Company has been formed to purchase and carry on the business of Dr. J. H. Nicholson, for the sale of his Patented Artificial Ear Drums, in the following cities:—England, 21, Bedford Square, London; British India, 5, Old Court House Street, Calcutta; France, 4, Rue Drouot, Paris; United States, 177, MacDougal Street, New York, Canada, 30, St. John Street, Montreal; Italy, 23a, Monte Napoleone, Milan; Austria, IX. Kolingasse 4, Vienna; Sweden, Smalandsgatan 14, Stockholm; Australia, 65, William Street, Melbourne; Spain, 24, Calle Carmen, Madrid; Argentine Republic, 1,260, Santiago del Estero Antiguo, Buenos Ayres, and 14 projected Branches.

These Patented Ear Drums are world-famed, and are to the deaf, or those partially so, what spectacles are to those not possessed of good sight.

The business has been gradually developed during the last five years, until it encircles the entire globe. Eleven establishments, in different parts of the world, are being carried on, with very satisfactory results. The 14 projected ones promise corresponding success.

Messrs. A. M. and Wm. Clark, the well-known patent agents, of 53, Chancery Lane, London, W.C., have given their report that the letters-patent are definite and valid, which report may be seen at the offices of the solicitor of the Company.

The business has almost doubled each year since the commencement of operations, five years ago.

The profits during the past 12 months, in the 11 offices now open, have been certified to by Messrs. C. F. Kemp, Ford and Co., 73, Lombard Street, London, E.C., chartered accountants, at £11,892 11s. 11d., yet seven of these offices have been in operation less than one year. Their complete report is with the solicitor of the Company.

Total Capital		£151,000
Amount to be paid the Vendor, including leases of the branches, goodwill, patents, &c., in shares or cash as the directors elect	£100,000	
Working Capital	25,000	
Uncalled Capital	25,000	
Founders' Shares	1,000	
		£151,000

As to dividends on shares: Last year's net profits of the 11 offices opened, available for dividends, say £12,000
Profits to be expected from the 14 projected and partially established offices, say 15,000
or about 20 per cent. on the called-up capital might thus be expected, £27,000 even if the business did not improve, but it will be noticed that it almost doubles yearly.

Should no allotment be made to you the application money will be returned in full.

Application will be made to the Stock Exchange for a quotation.

Prospectuses may be had from our bankers, or the secretary.

Applicants for shares, not having a form at hand, may write a letter as below to the London and South-Western Bank, or Central Bank of London, or any of their branches, enclosing the necessary amount.

Nicholson's Patent (Limited).

Form of Application for Shares.

To the Directors of the Nicholson's Patent (Limited.)

Gentlemen,—Having paid on your account to (*here name the bank*) the sum of £ , being a deposit of 2s. 6d. per share on shares in the above Company, I hereby request that you will allot me that number, and I agree to accept such shares, or any smaller number you may allot me, upon the terms and conditions of the prospectus and the memorandum and articles of association of the Company; and I request you to place my name on the register of shareholders in respect of the shares which you may allot to me.

Signature.....
Name in full .....
Description.....
Address .....
Date of Application. May, 1889.

The Lists will open on MONDAY, May 6th, 1889, at 10 a.m., and Close for Town and Country at or before 4 p.m. on TUESDAY, 7th inst., and Open for Scotland on TUESDAY, May the 7th at 10 a.m., and Close on or before 3 p.m. on WEDNESDAY, 8th inst. (Monday next being a Bank Holiday in Scotland).

REPORT OF SIR DOUGLAS FOX, C.E.

To the British Water-gas Syndicate, Limited. 28, Victoria Street, Westminster, March 28th, 1889.

Gentlemen—I have carefully examined the process of Water-gas as carried on at the works of the Leeds Forge Company, Limited, and herewith enclose my report thereon. I have, from the experiments made on my behalf, come to the conclusion that Water-gas has a great future for manufacturing, heating, and lighting purposes, and that it can be produced at a cost, at present prices, of about 4d. per 1,000 cubic feet. It must, under many conditions, prove a formidable rival to ordinary coal-gas.

Yours faithfully, DOUGLAS FOX.

An order to inspect the Plant in work at the Leeds Forge Company may be had on application to the Secretary.

Water-Gas proved a commercial success. (See report enclosed with Prospectus.) A saving of £10,000 per annum in one works alone.

THE NORTH BRITISH WATER-GAS SYNDICATE, LIMITED.

(INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1887.)

CAPITAL, £301,000, IN 60,000 SHARES OF £5 EACH.

Payable—10s. on Application; £1 10s. on Allotment; £1 in one month after Allotment; and the balance two months after allotment. And 200 Founders' Shares of £5 each, which Founders' Shares are entitled to receive one-half of all profits in any one year after 10 per cent. has been paid on the Ordinary Shares.

DIRECTORS.

JAMES REID STEWART, Esq., J.P. (of Messrs. John Stewart and Co., Ironmasters, Glasgow), Director of the Clydesdale Bank, Limited, Glasgow.

DONALD GRAHAM, Esq., C.I.E., Skelmorlie Castle, Ayrshire, of Messrs. William Graham and Co., Merchants, Glasgow, Calcutta and Bombay, Director of the Loudon and Lancashire Life Assurance Company, Limited.

JOHN SCOTT, Esq., C.B., J.P. (of Messrs. Scott and Co., Shipbuilders, Greenock), Chairman of the Leeds Forge Company, Limited.

C. W. CAYZER, Esq., of Messrs. Cayzer, Irvine and Co., Shipowners, London, Liverpool and Glasgow, Director of the East and West India Dock Company.

THOMAS REID, Esq., J.P., of Kilmardinny, Dumbartonshire, Chairman of Nobel's Explosive Company, Limited, Glasgow.

SAMSON FOX, Esq., J.P., Managing Director of the Leeds Forge Company, Limited, and Chairman of the British Water-Gas Syndicate, Limited.

R. SINCLAIR SCOTT, Esq., J.P. (of Messrs. Scott and Co., Shipbuilders, Greenock), Director of the Leeds Forge Company, Limited, and the British Water-Gas Syndicate, Limited.

CONSULTING ENGINEER.

ABRIDGED PROSPECTUS.

THE object of this Syndicate is to secure licenses to work in Scotland the well-known water-gas patents for improvements in the manufacture of gas for illuminating, heating, welding, and all metallurgical purposes, subject to the reservations, licenses, agreements, rights, and conditions contained or referred to in the purchase agreements of the 29th and 30th April, 1889, mentioned below, lately owned by the Europaischen Wasser Gas Actien Gesellschaft in Essen for the United Kingdom of Great Britain and Ireland, and numbered 2,249, dated 9th June, 1877; 173, dated 14th January, 1878; 5,310, dated 29th December, 1879; 4,907, dated 9th November, 1881; 5,955, dated 14th December, 1882; 8,757, dated 9th June, 1884; 15,706, dated 21st December, 1885; 15,707, dated also 21st December, 1885; and the Fahnejelm Magnesia Comb Patents, numbered 5,646, and dated 5th day of December, 1883; and No. 7,573, dated 22nd June, 1885; and Wilson and Dawsou's Patents, numbered 3,949, dated 12th October, 1876; 1,699, dated 8th April, 1882; 4,697, dated 3rd October, 1882; 5,980, 15th May, 1885; 3,583, 5th March, 1888; 6,516, 2nd May, 1888; together with such rights as the British Water-Gas Syndicate have purchased to use the inventions of the well-known gas engineer, Mr. A. Wilson, of Stafford, and also the patent rights of Mr. Bernard Dawson, C.E., of 110, Cannon Street, London, in connection with such inventions, as limited by the purchase agreement, which will place this Company in a commanding position in respect to water-gas plant, and also enable them to procure for Scotland the most improved type of gas generator and furnace plant.

Hitherto all attempts in this country to manufacture and apply water-gas on a commercial scale for heating, smelting, and illuminating purposes by simple and economical means, and without the use of skilled labour, have failed; but, after application and use upon a large scale, these inventions have proved beyond all doubt that pure water-gas when used as an illuminating medium in combination with the Fahnejelm Magnesia Comb, the Scottish rights of which are secured to this Company, gives a light superior to coal gas, and yet having all its convenience of application, and rivalling in brilliancy the electric light, can be manufactured at under 4d. per 1,000 cubic ft., after allowing for cost of production, wages, wear and tear of plant, and all contingencies.

The greater heating power of this gas, as compared with any produced by present known means upon a commercial scale, gives a mode of application to the industries of steel manufacture, &c., and is of the greatest possible value in its power to produce economical results over the present systems, and it is also for the purpose of developing and extending these various uses in Scotland that this Company is formed. The European patents have been secured in influential hands, and their application has been attended with the greatest success. The first plant in this country has been erected by Mr. Samson Fox, Mem. Inst. C.E., J.P., at the Leeds Forge, and has revolutionised the previous means of working mild steel, the production of steam, and the illumination of the works. Hitherto those works were supplied with ordinary coal gas by the Leeds Corporation, at a cost of 1s. 10d. per thousand cubic ft., which was almost the lowest price charged by any gas company in the United Kingdom, yet by the adoption of water-gas the power of rapid production of finished material is greatly increased, and taking all advantages into consideration, a saving has been effected of over £10,000 in the first year of its use.

Water-Gas has already been extensively adopted in many of the large manufacturing towns in Germany with eminently satisfactory results. Among others may be cited:—

Essen—At the works of Herrn Schulz Knaudt and Company, for welding, and lighting private houses and street lamps, and gas engine driving, calcining magnesia, &c. Hoerde—The Hoerde Mines and Ironworks Company for open-hearth and crucible steel melting, re-heating furnaces, lighting, and heating. Witkowitz, Austria—Baron Rothschild's Iron and Steel Works, for open-hearth steel melting, lighting and heating, and for gas engine driving, the town is lighted with water-gas, including the church, streets, and hotels. Gandersdorf, near Vienna—For lighting, heating, and brazing. Furtstenwalde—At the works of Herr Julius Pintsch, for welding buoys, &c., brazing, lighting, and heating. Gelnhausen—For glass-blowing, for electric incandescent lamps, where it has been adopted principally on account of the great purity and clearness of the flame, a necessity where great clearness of material is required. Konigszelt—For lighting and heating a large railway station and switch lamps—700 flames. Frankfurt—The Frankfurt Metal Company, for smelting and refining precious metals. Warstein, for illuminating a large stalactite and stalagmite cavern belonging to the town of Warstein, where water-gas has been preferred to coal-gas and electric lighting; Hameln and Weser, at Dr. Lohmann's Chemical Works; Winterthur, in Switzerland, at the works of Gebruder Sulzer, for welding, lighting and heating purposes; and in other important manufacturing towns in France, Italy, Russia and America.

In England it has been in use not only at the works of the Leeds Forge Company, but for many months at the works of Mr. Alfred Wilson, at Stafford, and it is also exclusively employed in Mr. Wilson's and Mr. Fox's private residences for lighting, heating and cooking, and for any purpose to which solid fuel and coal-gas has hitherto been applied.

Applications have already been received from a large number of the most important manufacturers who are anxious to adopt water-gas in their manufactories, not only for illuminating purposes, but also for motive power, smelting and metallurgical purposes, and arrangements are in progress to grant licenses.

Mr. A. Wilson has for many years been recognised as one of the first experts of furnace gas in this country, having been engaged in the business for upwards of 16 years, and the value of his inventions and knowledge may be judged from the fact that his generators have already been adopted by most of the leading railways, iron and steel manufacturers, copper and brass smelters, glass manufacturers and boiler makers, foundry men, chemical manufacturers, sugar refiners, oil refiners, brewers, paper manufacturers, colliery owners, &c., &c., who have had erected upwards of 1,000 generators.

The vendors have reserved the right of using and granting licenses for the use of the patents for purposes connected with the manufacture of glass.

The services of Mr. A. Wilson, Memb. Inst. Mech. Eng., have been secured as general manager and chief engineer to the British Water-Gas Syndicate, Limited, and this Company will have the benefit of his advice and assistance in all matters appertaining to their business for a term of five years.

The purchase price of the rights in connection with the water-gas patents and all improvements thereof for Scotland, agreed to be sold by the agreement mentioned below, has been fixed at the sum of £251,000, payable as to £200,000 in cash, £50,000 in fully paid-up ordinary shares, and £1,000 in 200 fully paid-up founders' shares of £5 each. All the expenses of the formation of the company up to allotment, including the underwriting of a portion of the Company's capital, will be paid by the vendor out of this sum.

The following agreements have been entered into: An agreement, dated the 25th day of April, 1889, between the British Water-Gas Syndicate, Limited, of the first part, John Charles Cottam, of the second part, and an agreement dated the 30th day of April, 1889, between JOHN CHARLES COTTAM of the one part, and Alfred Charles Dockerill, as trustee on behalf of the Syndicate, of the other part.

Application will in due course be made to the London Stock Exchange for a quotation of the Company's shares

If no allotment is made, the deposit paid on application will be returned in full.

Prospectuses and forms of application can be had at the bankers', brokers', solicitors', and at the offices of the Company.

Application for shares may be made upon the form accompanying the prospectus, or by letter addressed to the secretary, briefly stating the number of shares required, and accompanied by a remittance of 10s. per share.

Copies of the memorandum, articles of association, and agreements may be inspected at the offices of the solicitors of the Company.

May 1st, 1889.

WATER-GAS PROVED A COMMERCIAL SUCCESS. A SAVING OF £10,000 PER ANNUM IN ONE WORKS ALONE.

THE BRITISH WATER-GAS SYNDICATE, LIMITED.

WATER-GAS.

The following extract from the *Times*, of January 2nd, 1889, relative to the manufacture and application of Water-gas, is reprinted for general information.

WATER-GAS.

"For many years past attempts have been made at intervals to produce what is known as water-gas—that is, gas resulting from the decomposition of water. Experimentally there have been several successes, but practically and commercially up to the present time, as far as we are aware, these have been only failures. These failures have mainly arisen from the difficulty experienced in separating the water-gas from the other products. This difficulty has now been overcome, not by one invention, but by the combination of the best features of several inventions having for their object the manufacture of water-gas. What is more, the patented inventions which have been combined in the new process are not those of one inventor or of one country, but represent several inventors and several nationalities—namely, England, Germany, America, and Sweden. The amalgamation of these various patents and the beneficial results which have accrued therefrom came about by reason of the exigencies of manufacture of corrugated boiler flues and press-flanged steel frame plates for railway rolling stock at the Leeds Forge Company's Works, Leeds. The metallurgical operations carried out there demanded fuel of a higher calorific intensity than could be obtained from either the generator gas of the Siemens' producer, or ordinary coal gas. Mr. Samson Fox, the managing director, therefore turned his attention to water-gas, and, having carefully considered the whole question, decided upon putting down a water-gas plant at the Leeds Forge. The works were begun on September 29th, 1887, and on March 29th, 1888, plant capable of producing 40,000 cubic ft. of water-gas per hour was started, and has since been in constant operation with perfect success, and without interruption. The gas produced gives every satisfaction, not only for metallurgical, but also for lighting purposes, the whole of the works being supplied with it.

"Water-gas is the result of a chemical re-action which takes place in passing steam through incandescent carbonaceous matter, and may be considered as the practical result on a wholesale scale of the ordinary laboratory experiment of decomposing water by passing steam through a highly-heated iron tube. In the water-gas apparatus the fuel, which at Leeds Forge is coke, is raised to a high temperature in a generator by the aid of an air blast. The blowing is continued for about 10 minutes, by which time the fuel has reached a dull red heat. During this period what is known as producer-gas is given off, and this is led away to a range of Lancashire boilers, where it is utilised in raising steam for the engines in the works. At the end of 10 minutes the valves are reversed, the air-blast being stopped, and the further exit of producer-gas to the boilers prevented. Steam is then admitted at the top of the generator for four minutes, and, passing down through the incandescent fuel, becomes decomposed, and a fixed gas results. This gas as formed passes away to a scrubber, where it is treated much in the same way as ordinary coal-gas. From the scrubber it passes to the gas-holder, where it is stored for use for metallurgical purposes in the works, such as heating and welding. For indoor illuminating purposes a portion of the gas is conducted from the gas-holder to the purifiers, where its purification is effected by means of oxide of iron. It will thus be seen that the process consists of alternately blowing the generator hot and making gas, and that a run of gas is made every 15 minutes, during which time the yield from each generator is about 17,500 cubic feet of producer-gas and 5,000 cubic feet of pure water-gas for heating and lighting purposes. The gas is also used most successfully for driving gas engines.

"The metallurgical purposes to which the water-gas is applied at the Leeds Forge are various. In the first place, it is used in the heating furnaces in the plate mill, where the steel ingots are rolled into plates for the manufacture of Fox's corrugated boiler flues. It is also used in welding these tubes and heating the plates for Mr. Fox's flanged frame-plates for railway rolling stock, and for his flanged boiler-fronts, besides which it is utilised in various other similar operations throughout the works. In the application of water-gas to the manufacture of Siemens' steel there is a marked improvement in the quality as well as the quantity of the product. With this gas 30 charges of steel per furnace per week can be turned out, as against 11 charges per furnace per week from furnaces of equal capacity using gas from Siemens' producers. Besides being used for metallurgical purposes, the offices and various parts of the works are lighted with water-gas, the burners employed being arranged on the Fahnejelm system. Burnt in the ordinary way, the water-gas gives a blue flame, but by suspending a comb composed of thin magnesia rods in the flame the filaments are quickly heated to a white heat, producing a bright glow light of high illuminating power, but which is neither unpleasant to the eye nor prejudicial to the sight. The heating power of water-gas was very great, as was demonstrated upon our recent visit to the Leeds Forge Works, where we inspected the method of its manufacture as well as that of its use in the various departments. To give one instance only, a piece of copper wire placed in an ordinary coal-gas flame was only made red hot. A similar piece of wire placed in a water-gas flame issuing from a similar burner was quickly and perfectly fused.

"An important consideration in the adoption of any new system is, of course, its cost; and in this respect water-gas comes out well. Its production per ton of fuel is about 30,000 cubic ft., and with fuel at 8s. per ton, labour at 3s. 6d. per man per day, and the production going on continuously, it is found that the gas costs slightly less than 4d. per 1,000 cubic ft. The experience of nine months' working at the Leeds Forge has led to the conclusion, based on carefully-ascertained data, that the saving effected on the whole works is about £10,000 per annum. Looking at the advantages of water-gas for illuminating purposes, it is to be observed that, besides giving an agreeable light, it does not develop any noxious fumes, nor does it produce smoke; health and cleanliness being thereby preserved, and paintings, furniture, and decorations remaining uninjured. For lighting mansions this would prove a boon, while the producer-gas can be utilised for heating purposes. Similarly, a mill-owner laying down a water-gas plant for lighting his factory will obtain gaseous fuel for steam-raising purposes practically for nothing. For small towns also the lighting could be carried out with water-gas, the producer-gas being used for steam-raising and manufacturing purposes generally. Although the installation of this water-gas plant at the Leeds Forge is the first in England, the system is being largely adopted in America and on the Continent, both at steel works and for illuminating purposes."

In addition to the above extract, the following papers have recently commented favourably on water-gas.

REPORTS OF MEETINGS.

GREAT SHE GOLD MINING CO., LIMITED.

MR. LEWIS LEVY LATER ON WILL CONTROVERT THE CHAIRMAN'S SPEECH—HE PROMISES TO TEAR THE ACCOUNTS TO PIECES AND TO SHOW THE MISMANAGEMENT OF THE PROPERTY—WAS THE CHAIRMAN A VENDOR?—HOME *v.* FOREIGN DIRECTORS—STRANGE PROCEEDINGS.

THE first annual general meeting of the shareholders of this company was held at Winchester House, Old Broad Street, on Tuesday. for the purpose of receiving the accounts and report of the directors, and to elect directors aud auditors. Mr. Edward Coleman (chairman of the company) presided.

Mr. ALICK. R. RAMSAY (secretary) read the notice calling the meeting.

DIRECTORIAL CHANGES.

The CHAIRMAN: Before commencing the business of the meeting I regret to have to mention the death of Mr. John Henry Green, one of our colleagues—a man of very high standing and commercial knowledge in the City of London, Liverpool, Buenos Ayres, and elsewhere, whose offices were in this very building. Whilst on this subject I may mention that Mr. Arthur Kenrick, who was the other director nominated by the vendors, has retired. We regret his loss, because we found him, as an engineer, a very valuable colleague, who was always able to advise the board, and one who seemingly was straightforward, and in every way desirous of promoting the interests of the company. At the preseut time, therefore, the vendor has no directors on the board nominated by him. I will endeavour to follow the clauses of the report, but it will be desirable that I should give an outline of the early part of the compauy's history.

EARLY HISTORY.

As you are aware, the South African Mineral Association were chiefly instrumental in floating and bringing out this company. It was in existence previously to the latter event. It sent out gentlemen to South Africa for the purpose of acquiring the property, aud two of its members were the Brothers Pauling. One went to South Africa, and the other (George) remained in England. Mr. George Pauling happened to meet Mr. Kenrick, who was afterwards the vendor. These gentlemen had been friends in South Africa, and Mr. Kenrick said he could assist him in bringing out a company, and so he introduced him to the South African Mineral Association—several of the influential members of which happened to kuow Mr. George Pauliug,and entertained the greatest possible opinion of his judgment and integrity. It was their business to bring out companies like this, and they undertook the floatation of this one, believing it to be a sound and highly remunerative concern. The association, with its connections and friends, and with the valuable assistance of Mr. Lewis Levey and his friends, undertook to form a syndicate for the purpose of obtaining a guarantee for the formation of our company. Mr. Kenrick laid down as absolute that a minimum of 25,000*l*. should be actually subscribed before this company could be offered to the public. Therefore, it was the business of the association to obtaiu a guaranteed subscriptiou of that amount before issuing advertisements. That was done. Those who undertook that gnarantee became liable for the preliminary expenses, amounting to between 4,000*l*. or 5,000*l*., before the company was advertised, and if it had not succeeded they were liable to lose it all.

HOW THE PUBLIC RESPONDED.

The applications from the public resulted in 5,141 shares being subscribed, so that the total capital subscribed by the public and underwriters was 30,141*l*., which represented, and does still represent, the subscribed capital. Mr. Kenriek undertook to convey to the company 143 claims, which represented the block belouging to the Standard Company—a company registered in the Transvaal, and limited like our own. As a matter of fact, the claims conveyed numbered 150, so that we were seven to the good. Theu the money having been subscribed, and the terms being 10,000*l*. in eash, aud the rest in shares—the 3,500*l*. having been located in this company for preliminary expenses—there remained 6,500*l*., whieh was paid over by the company at Barberton, being the cash portion they were entitled to receive for disbursements incurred, or said to have been incurred, by them for working tho miues previously to their being conveyed to this company. We then thought we were in smooth water. We had bought the property, but we soon learnt there was a difficulty between Mr. Kenrick and some parties who had conveyed the property to him. Meanwhile our position was strong, for we had not paid, though we sent the money to Barberton with instructions that it should not be parted with until the title deeds were placed in our hands. That could not be effected, because

A DISPUTE HAD ARISEN

between the vendors in Africa and the Standard Company, which had made an agreement with the syndicate over there that 80,000*l*. should be actually subscribed as working capital over and above the amount the vendors would receive iu purchase payment. I have told you Mr. Kenrick's arrangement with us, and his arrangement with them was no affairs of ours. Mr. Kenrick went out in April, and arranged the dispute with the Standard Company, by a deposit of 1,000*l*., in the joint names of the chairman of the Standard Company, and one of the members of the syndicate—that in the event of this 80,000*l*. not being forthcoming in the nine months the 1,000*l*. would be forfeited to the Standard Company. Mr. Kenrick settled it as between his vendors and the syndicate, and the property was obtained, upon which we have been working ever since. Though the 1,000*l*. is claimed back it does not affect us, and I only mention it because we do not want to conceal anything. Now, as to the report. The accounts were made up to December 31st, but I can tell you the position to-day. We owe the London and Westminster Bank nothing, but have there 1,864*l*. 10s. 6d., and at the Bank of Africa 115*l*. 17s. 10d. The calls uupaid have been reduced from 3,798*l*. to 921*l*., which gives us an asset of 2,991*l*. Then we have the uncalled capital 5,274*l*., less calls paid in advance, leaving 5,203*l*.—or upwards of 8,100*l*. as available capital. We do not think it right to acknowledge the vendors' claim, in spite of what has been put down here, because we may be able to avoid paying it. We were under an agreement to pay the costs to the vendors for working the mine from December 1st, 1887, up to the time of our getting possession, which was not till six months afterwards, and so we have had to pay 1,215*l*. for what they had disbursed in that period. The amount expended by the manager at Barberton is 7,120*l*. Therefore, we stand at present before you with available capital upwards of 8,000*l*. With regard to the work done at the mines—in December last we sent you a report embodying the main items from the news sent us by the manager. I shall, therefore, not go back later than that circular, but take up what the manager has reported to us since, aud will read extracts from the letters of Mr. Kenrick of February 12th and 18th, and from Mr. Firbank's letter of March 4th. (These were read.) Mr. Firbank was sent out after the local committee had resigned to act as the company's representative direct. Mr. Kenriek said he was in bad health, and must go to the hills. When Mr. Kenrick left, Mr. Firbank took up the tale, as you see. A great point was made about the advisability of having a local committee. We soou found that these gentlemen had great interests of their own. They were engaged in large business transactions, which frequently took them away, aud the company's business suffered. As a matter of fact, they only professed to hold 12 meetings a year, but did not meet so frequently, as they could uot form the necessary quorum. Mr. Kenrick thought they spent too much at Barberton, and although we declined to take the responsibility of askiug these gentlemen to retire, we did suggest that they should accept 200*l*. a year pay instead of 400*l*. On making that suggestion

THEY ONE AND ALL RETIRED

from office, and so we thought it desirable to send out Mr. Firbank at once. We have every reason to be satisfied with the change, for the expenses have been materially reduced since Mr. Firbank took office. His remuneration is 25*l*. a month, and we are exceedingly pleased with the straightforwardness and truthfulness of his reports and their reliability. There was an informal meeting called of the shareholders by a committee, which represented

MR. DEERING AND MR. LOUIS LEVY AND MR. BREWER,

which was of a friendly character to the directors. They only wanted to know the position of the company, and whether they could with confidence go on with the undertaking. That committee met us and had every question answered, and at their suggestion an independeut engineer of their own choosing was employed to make a report. The gentleman selected was Mr. Furlong—he being at that time in Africa. We wrote to Mr. Kenrick to allow this gentleman to go over the entire property and make his own report. Mr. Firbank writes to say that this gentlemau's visit would take place in two or three days, and that the firm, in the absence of Mr. Kenrick, had again applied for leave for Mr. Furlong to inspect the property. I doubt not by the next mail we shall be in possession of information that Mr. Furlong has arrived, and when his report reaches us it will be put into the hands of a committee and of the shareholders generally. I have here a plan which shows that the tramway as proposed passes through nearly the whole of our blocks, but the railway from Delagoa Bay is to be constructed into the Transvaal, and soon we shall have railway communication. We have found out that there is no such thing as "exclusive

timber rights" as mentioned in the prospectus. We thought we had a claim against the vendors arising out of that, and arbitration in our favour

GAVE US 7,500*l.* OF THEIR SHARES.

There is enough wood on our own ground, however, to last for years. With regard to the water race, we have obtained an extension of time to the 1st July, but it is expected that we shall do something after that time. It is for us to act so that we shall not lose this valuable water right. I now come to the question of the transfer of the vendors' shares. There is a condition in the articles that vendors' shares are not to be transferable until the first dividend is paid. We have not yet arrived at that happy position, but the precautions taken to guard us have operated against us, because these shares have found a ready market in the Transvaal. Shares have been sent from this country to be sold there, and all descriptions are marketable alike. It is for you to say whether you would wish this restriction to be removed. The opinion of eminent counsel is that it was competent for the shareholders to do it by special resolutions.

PERSONAL.

I want to clear up a point which affects me personally. I was "starred" in the prospectus to indicate, by common interpretation, that I was interested in the sale of the property, and I have been attacked in and out of the Press on this very question, and asked how much I got out of it. Now, I was not a vendor or promoter in any sense whatever. I am a member of the South African Mineral Association, and subscribed to its funds, and to the funds of the syndicate who guaranteed the capital. I am in precisely the same position as five-sixths of the shareholders—I did not derive any advantage. I put 550*l.* into this company, and that is the amount I stand to lose if the concern is wound up. It has been supposed that I was interested as a vendor, and got a share of the vendors' profits, but there is not one of my colleagues who was interested as a vendor. We have paid upon our qualification, and not one of them has derived any other benefit than the shareholders who are present to day. I move the adoption of the report.

Mr. HENRY SMITH: Do I understand you to say that there is a market in Barberton?

A DEPRESSED SHAREHOLDER.

The CHAIRMAN: There is a market in all the towns in South Africa.

Mr. HENRY SMITH: I understand there are 50,000 shares which are reserved to issue in Barberton, and I understood at the last meeting not one of them was taken up. We must all agree that we are on our last legs, and that when the shareholders have been squeezed once more, and a last call is paid, there will be only one of two alternatives—wind-up, or raise fresh capital. I am not making these remarks in a hostile spirit, but I wish to give the company a chance if it has any value. One of the great evils was the enormous capital with which it was loaded. I believe it is the capital of 450,000*l.*, which prevented the whole of the first issue being taken up, and which has acted prejudicially ever since. I think it absolutely necessary that it should be reduced, and that negotiations should be entered into with the vendors for relinquishing a vast number of shares to which, under our contract, they are entitled. They are entitled to 340,000*l.*, and unless we raise further capital those shares are valueless.

REDUCE THE CAPITAL.

I would suggest that the capital be reduced from 450,000*l.* to 200,000*l.*, and that the vendors should be invited to surrender 250,000 of those shares in our mutual interests on the principle that a living dog is better than a dead lion. I move, "That in view of the disastrous state of this company's affairs, the directors be requested to enter into negotiations with the vendors of the several properties for a material reduction in the purchase-money to be paid." I think that if the directors suggested to their colleagues in Africa that they should reduce their fees, they ought to have set them the example.

The CHAIRMAN: The directors on this side did reduce the remuneration to one-third of the amount they are entitled to. There were nine directors and 500*l.* was the total.

Mr. SMITH: Why should there be nine? 500*l.* is too much, and the directors are too many.

MR. DEERING'S FORMER MEETING.

Mr. DEERING: This is the first annual meeting of this company and presumably every gentleman present was present at a meeting which I brought about by advertisement two months ago. Being dissatisfied with this state of affairs, I invited my brother shareholders to meet me on 6th February to discuss our position, what we could do to better it, and generally for a little friendly conversation. The practical result of that meeting was that I, as the unwilling chairman on that occasion, in conjunction with Mr. Lewis Levy and Mr. Brewer, were selected by the shareholders present as their delegates to confer with the directors as to what course we should pursue for our mutual and individual benefit. I hope in the course of my future life such an infliction will not be cast upon me again. (Laughter.) We were neither slow nor cold in our response to the invitation, nor in the action we have taken since, and I may say that I have listened with patience and respect to the remarks of our chairman, though I have a most thankless task pressed upon me, which is to some extent evolved out of the position—that of stating to you that we (the delegates) are dissatisfied with the management of our affairs, both upon this side and the other side. (Cheers.) The principal statement which I should make is embodied in the report you have in your hand.

"At the suggestion of a committee appointed at an informal meeting of shareholders, held on 6th February last, Mr. Furlong, an independent and experienced mining engineer of position selected by the committee, and who was at the time in South Africa, has been requested to visit the company's property and make a careful survey of the respective mining blocks, and report fully to this board the result of his investigation. This report, when received, will be communicated to the shareholders."

That report we are waiting for in order to embody the result in a circular, which will be issued to each and all of you. Mr. Furlong was selected at the suggestion of an old personal friend of mine—a member of the firm to which the chairman alluded.

WHO IS MR. FURLONG?

He is a man of experience, a man of fortune and of leisure, and having made his own money he is perhaps all the better qualified to suggest a means to do the same for us. At my solicitation that gentleman suggested the name of Mr. Furlong, who was, in his opinion, and that of his firm, the most competent and able man to survey our property independently, give us a report, and let us give it you. He was good enough, by means of his private code, to telegraph what would be his terms, which, being responded to, were instantly accepted, and I trust that before many days are over we may be in a position to draw up a circular or report of what we have done. But that is the pivot upon which our report turns. Until we get this report from Mr. Furlong we cannot tell you what we have done or what we suggest could be done; therefore it is in your interests.

AN ADJOURNMENT MOVED.

You asked me to act with you in conjunction with Mr. Levy and Mr. Brewer, and we have tried to work with you and for ourselves; and I trust I need not ask you any more to absolve us from invidious reflection, but simply to listen to my proposal, which is this—"That this meeting be adjourned for a month." All matters will then be thoroughly thrashed out, I am sure, to the mutual interests of us all. (Cheers.)

Mr. HENRY SMITH: I withdraw my motion, and will second yours. (Cheers.)

MR. LEVY IS PREPARED TO TRAVERSE THE CHAIRMAN'S SPEECH.

Mr. LEWIS LEVY: As one of the delegates with Mr. Deering, I beg to second that motion that we adjourn for a month, when we shall be in a better position no doubt to deal with matters than we are to day. What we ascertained as delegates at a conference with the directors the report has already told you. Nothing has been hidden. The directors opened freely to us all books, all accounts, and all reports, and as to going through the correspondence, it was so voluminous that that was a matter of impossibility. Therefore, we trusted to their frankness to point out to us the most salient points that could interest us. We thought we had them, but, gentlemen, I am sorry to say that by indirect means, through friends in South Africa, I ascertained

MOST IMPORTANT POINTS WHICH WERE NEVER REVEALED TO US.

There is no object in my telling you here and now what they are, but I could go through the chairman's speech and controvert from point to point the statements he has made to day as to the various matters in question. (Cheers.) However, there is no object, I say, in that; what we want to know is whether we have a valuable property, and, if so, to make the best of it. We only know the management has been bad from beginning to end. (Cheers.) We only know that the directorate here and the directorate there have not been in accord. We only know that we have had a local counsel out there whose hands have been tied by the directorate here. We do not want to know too much. It is sufficient for us to know that the management has been bad, and how can we remedy it. That will depend upon the report we are expecting from Mr. Furlong. If we have a bad property let us abandon it, but

I BELIEVE WE HAVE A GOOD PROPERTY,

and in time we shall see how best we can manage it. I may tell you this, that we have left, according to the chairman's speech, money in hand and money to be called (that means 3s. 6d. a share more to pay), about 8,000*l.* I reduce that to 7,000*l.* with which we have now to deal. In order to work that property thoroughly you can spend that amount on development in a year, because at present the outlay is reduced to 300*l.* a month. That means 500*l.* altogether, so that you can calculate how soon we shall be called upon to pay the 3s. 6d., and how soon it will have to be paid. All we have done from the beginning, and all we are doing now is what is called "development."

PARAGRAPHS CAN BE TORN TO PIECES.

I could go through the statement of accounts and pull every paragraph to pieces. (Cheers.) No object would be answered by that, and what we have to do is to see whether we have a property sufficiently valuable to take other means to develop it than those which are being taken now. If we want to work that mine we should have 20,000*l.* of capital. We want to re-construct. (Cheers.)

WHAT IS REALLY WANTED.

We want 20,000*l.*, and it is no use spending that 20,000*l.* unless we have trustworthy information as to what the property is, and that it is worth 20,000*l.* being spent upon it. Therefore, gentlemen, in seconding the motion for a month's adjournment, I think that we shall by that means have an opportunity of ascertaining in what position we have to actually stand. (Cheers.)

Mr. THOMPSON: I object to the last speaker's remarks. He says he can controvert everything, and refuses to do so.

Mr. LEVY: I refuse nothing of the kind. (Hear, hear.)

Mr. THOMPSON: He is about the last gentleman I should put confidence in. (Oh.) It does seem to me when the mover of the motion said he had no reflection to pass upon the directors, practically he is agreed that they are doing their best.

Mr. DEERING: I never said so. I said I did not wish to pass reflections upon them.

Mr. THOMPSON: I do not want to quibble. (Order.)

Mr. DEERING: Neither do I.

A THIMBLE-RIGGING ILLUSTRATED.

Mr. THOMPSON: It appears to me the directors are doing their best. We have got the thimble, and we want to find the pea. The present capital is small to work the mine, but I do not see that there is any cause for complaint. The point is to see whether we can raise money, and I do not think we shall gain much by adjourning, particularly if the directors promise that they will send out the report when they receive it. (Cries of "Adjourn.") I oppose the adjournment, and am prepared to put confidence in the directors, whom I do not know. (Uproar.)

Mr. WEST: I support the motion for adjournment, although on different terms from Mr. Levy. I regret that to some extent he has

thrown a reflection upon the clear and lucid speech of the chairman. It appears the directors met him in a friendly way, and then he makes a sort of charge that they have concealed something without giving evidence.

Mr. Levy: I have given the evideuce.

Mr. West: You said it was not necessary to give it.

Mr. Levy: You shadowed forth a charge.

EVIDENCE AT HAND.

Mr. Levy: I have done nothing of the sort. I have the evidence of the substantiality of what I said in my pocket.

Mr. West: I do not know what there may be in Mr. Levy's pocket—I only judge by his speech. I thiuk any attempt to raise capital until Mr. Furlong's report is known to us is out of the question.

Mr. Owen: I think the best plan is to have an adjournment. The reports state that the allotment of shares took place ou the 16th January, 1888—were those the vendors' shares? (Cheers.)

The Chairman: The vendors' shares were only allotted in Jnly, but the allotment to the public was made in January.

Mr. Gaskell (director): I made personal enquiry as to the validity of the vendors' shares, and was assured they were perfectly in order without any liability.

A Shareholder asked the question as to the results of the Nil Desperandum Battery crushing.

The Chairman: The value of the gold was 330*l*. It is only to-day we have the accounts from Barberton.

A Shareholder: Cau we have a statement of what is being douc with the money in Barberton?

The Chairman: All accounts are in the office, and open for your inspection. Until Mr. Firbank's arrival they were badly kept. We have asked auditors to be appointed to do the work, but until this hour (unless a recently arrived bundle contains them) we have not had these audited accounts.

ABSENCE OF CONFIDENCE.

The Shareholder: Reserving my observations until the adjourned meeting, I may say that this one fact, apart from anythiug else, absolutely deprives the directors of the confidence of the shareholders.

Mr. Cooper (director): I deny that the position of the company is disastrous, because at any moment a shoot of ore may be discovered which would give us no difficulty in placing further capital. I am extremely surprised at the remarks made by Mr. Deering and Mr. Levy. I gave them all the information I conld at one meeting of the eomuittee I attended. I have not the slightest intention of remaining on the board where there are reflections made, sneh as those cast by Mr. Levy. At the last meeting I happened only shortly before to have joined the board. I was asked to become a director, and sinee then am not aware that anything has occurred that has not been done in a businesslike manner. I am very glad indeed to resign my position. I would never remain on a board where there was the least idea that the property was being improperly managed. If Mr. Levy will give explanations I may re-consider my decision.

CONFIDENCE IN MR. COOPER.

Mr. Levy: If there is one man I wish to retain on the board it is you. (Cheers). I do not think it would answer any good purpose to go into explanations at present. What I have said I am in a position to verify, but I will do it at the right time. I exonerate you (Mr. Cooper) from everything, but what the chairman has stated is totally at variance with evidence I have in my possessiou.

THE CHAIRMAN'S CHALLENGE.

The Chairman: I ask you to state it speeifically. If there are any reflections made I must take the step that Mr. Cooper has indieated, and at once retire from the board. I cannot remain uuder reflections, for I feel satisfied that I am perfectly innocent, and I challenge investigation from every source.

Mr. Levy: I will not make any accusation. I do not think it would answer any good purpose to go into details now.

The Chairman: It will answer my purpose, and I challenge you to produce your evidence.

Several Voices: Produce it at the adjournment.

Mr. Levy: That is what I iutend to do.

Mr. Smith: The question before the meeting is the adjourument.

The Chairman: There is no dissentient voice with regard to that, and if Mr. Levy will withdraw any reflections upon this board until the adjourued meeting, and then be prepared to substantiate them, we shall be perfectly agreeable.

Mr. Levy: I do not make any reflections.

The Chairman: I hope that will be noted.

MR. LEVY'S REPLY.

Mr. Levy: I will start with the history of the company, as you did. (Cheers.) I will start from the time when you introdnced this thing to me, and I will answer yon. (Cheers.)

The Chairman: Do I nnderstand that you withdraw any reflections?

Mr. Levy: Oh, dear, no. I reflect nothing, but I am going to controvert the statements you have made.

Mr. Deering: It is an unfortunate thing for directors to be the mouthpiece of the company, bnt the delegates are in the same position. Let the matter rest now, and at the proper moment let the shareholders jndge between the two. My proposal for the adjourned meeting was for that purpose. Mr. Levy was betrayed into commencing to answer the voluminous statements of the chairman, and he has been (shall I say) attacked in a friendly fashion hy a neighbour of his, thongh I am not quite sure that Mr. Levy heard all that was said, but he is perfectly capable of defeuding himself. Mr. Levy does not impugn the members of the board individually, bnt you have asked us to speak for you, and when we have said what we have to say, then you can reply "We are much obliged to yon," or "We are sorry we appointed you." Until that time arrives let us dismiss all bickering.

The Chairman: We may accept that explanation, and the board have great pleasure in aeceding to the motion for the adjonrnment, which is therefore carried unanimously.

Mr. Deering proposed the vote of thanks to the chairman with which the meeting closed.

DURBAN-ROODEPOORT GOLD MINING CO., LIMITED.

20 PER CENT. DIVIDEND—A 2-OZ. REEF, WIDE AND STRONG—BETTER PROSPECTS DEEPER—PROSPECTS OF CUTTING THE ROBINSON LEADER—ENCOURAGING FACTS AND STATEMENTS.

The first ordinary geueral meeting of the company was held at the Cannon Street Hotel ou Wednesday, for the purpose of receiving the report and aceouuts of the directors, of electing directors aud auditors, and of transactiug the other business of au ordinary general meeting—Archibald Parker, Esq., chairmau of the company, presided.

Mr. Lee Wright (secretary) read the notice calling the meeting.

THE POSITION CONCISELY STATED.

The Chairman: Gentlemen, we have now to submit to you the balance-sheet, miniug revenue and profit and loss acconnts for the year ending 31st December, 1888. As these have been in the hands of the shareholders for some time I presume it is unnecessary that we should read them. We shall therefore hold them as read. It is perhaps uecessary we should point out that there are two printer's errors in the figures, which those who have reports should kindly alter. The first is in the profit and loss account, stated as showing a debtor balance of 705*l*. 0s. 2d. This should be 795*l*. 0s. 2d. The second is the item for machinery. It should be 1,199*l*. 12s. 2d., instead of 1,999*l*. 12s. 2d. If this is altered you will fiud the addition correct As we had a meeting only a month ago, and then gave you the information usually given at the general meeting, we have little fresh to communicate. The company, as you are aware, was formed at the beginning of last year with a capital of 90,000*l*., 20,000*l*. of that being working capital. A little crushing under temporary management was done in the first four months, but of an unprofitable character. From the time of the first manager's arrival at the end of April until October the work was chiefly of a preparatory character, and it was only at the end of October that we were able to annouuce a crushing.

GOOD CRUSHINGS.

That was of a highly satisfactory character, and from that date to this the crushings have continued to be very regular in the yield per ton, the total quantity of gold from October, 1888, to March, 1889, being 8,243 ozs., of the value of 31,143*l*., or say 1,400 ozs., or fully 5,000*l*. per month. The last crnshing was rather less per ton than the others, but that is explained by a temporary difficulty in regard to labour, necessitating the crushing of more ore from the main reef—that being more easily obtained. We are informed that there had been some fighting among the Kaffirs, resulting in the death of one of them, and this led to some of the others leaving without notice—they being afraid of being arrested. During the winter season, which has begun, there is always more difficulty in obtaiuing Kaffir labonr. The difficulty with white men has also been considerable; one or two of our best men having beeu offered higher appointments, and the usual curse of intemperance making the work of some of them very unsatisfactory. These are difficulties which we must, however, always be prepared for. Our total expenditure to this date has been about 28,000*l*., abont 20,000*l*. of which may be reckoned as for development. We have in hand, including gold in transit, 25,000*l*., and out of this we feel warranted in proposing an interim dividend for this year of 4s. per share, being at the rate of 20 per cent. on onr capital.

20 PER CENT. DIVIDEND.

This will absorb 18,000*l*., leaving 7,000*l*. to go on with. In the prospectns the estimated profit, working with 40 stamps, was 40 per cent. per anunm. We have not yet more than 20 at work, and as these, from various causes, could not be worked continnously, we may reckon that only 15 have been worked on an average—that is for fnlly six months, so that the prospect is we shall be able to pay the estimated dividend with less than half the number of stamps; and when sufficient dams are made, and the full complemeut of stamps erected and all at work, we expect the results will be exceedingly favonrable. The number of shareholders on the register is 621; of these 581 are European and 40 South African. Our South African friends having expressed a desire for a registry office being opened at Johannesburg, we have again and again made inquiries and consulted our solicitors, but so far we cannot see any system which can be adopted that would be of any utility. To meet the wishes, as far as possible, of the South African shareholders we had the articles of association altered, so as to permit of share warrants being issued to bearer. These are being applied for to a considerable extent, and we trust they will become so general amongst the South African sharcholders as to get rid of the difficulty of having no transfer office there. (Cheers.) I beg now to move that the report and statement of accounts presented to this meeting he, and the same are hereby, approved and adopted.

Mr. C. C. Hopkinson seconded the motion, which was carried uuanimously.

The Chairman: Two of the directors retire from the board in the terms of the 66th Article—Mr. John Brinton and myself; but we are eligible for re-election.

DIRECTORS RE-ELECTED.

Mr. Soper: I beg to propose that Mr. Archibald Parker be re-eleeted a director. There can be only one opinion of his status as a man, and his capacity as a business man.

Mr. Akers: I have very much pleasure and the utmost confideuce in seconding the motion. When we have gentlemen presiding over our interests of the stamp of Mr. Parker I am quite sure those interests will be in safe keeping. (Cheers.) One of his knowledge, integrity and ability, I am sure will be a sufficient guarantee that our interests are being promoted to the utmost.

The motion was carried by acclamation.

The Chairman: I thank you for the honour you have done me and I will do my best for the interests of the company.

Mr. MIRRILEES: I have much pleasure in proposing that Mr. Brinton be also re-elected. I have had the pleasure of knowing him for a number of years, and am fully aware that he is a man of business, and that having him as a director the company has made an excellent choice.

Mr. MORITZ seconded the motion, which was carried, and

Mr. BRINTON briefly returned thanks.

Mr. AKERS proposed the re-election of the auditors, Messrs. Welton, Jones and Co., for the ensuing year, at a remuneration of 25 guineas per audit. Next to the directors it was, he said, important that the gentlemen to whom the figures of this company were confided for examination and report should be of the highest standing. They all knew this firm well, and were quite safe in moving their re-appointment at the remuneration specified.

Mr. HOPKINSON seconded the motion, which was carried.

THE SPECIAL MEETING.

The meeting was then made special, for the purpose of confirming certain special resolutions previously passed, as follows:—

(1.) "That the capital of the company be increased from 90,000*l.* to 100,000*l.* by the creation and issue of 10,000 shares of 1*l.* each." (2.) "That the said 10,000 shares shall be allotted *pro rata* amongst the shareholders of the company who shall be upon the register on the 1st day of May next, provided they apply for the same in writing to the secretary not later than the 30th of June next, after which date the directors shall be at liberty to dispose of such shares as may not be applied for as they may see fit to the best advantage of the company." (3.) "That the 10,000 shares shall be issued at a premium of 4*l.* per share, and that the total amount received for such shares (including premium) shall be used as further working capital of the company." (4.) "That the articles of association of the company shall be amended by repealing article 39, and substituting in lieu thereof the following article:—'An annual meeting shall be held at least once a year in London, and until otherwise prescribed such general meeting shall be held not later than the month of May in each year.'" (5.) "That article 77 of the articles of association be altered by striking out all the words occurring therein after the words 'such delegation.'" (6.) "That a new article shall be added to the articles of association as follows:—'98a. When in the opinion of the board the position of the company permits, interim dividends may be paid to the shareholders on account of the dividends for the then current year.'"

The CHAIRMAN: In making this proposal we are quite aware of the difficulty now existing through the great fall since our last meeting in the price of the shares. This has not arisen through any depreciation in the value of the mine, but simply, we suppose, in sympathy with the fall in the value of gold shares generally—even those of the very best companies. We are hopeful that before the 30th June, the date before which applications must be sent in, there may be such an improvement as to lead to the new shares being fully applied for, but, if not, your directors will do what is considered best for the interests of the shareholders—either offering them for tender or waiting till an improvement takes place before doing anything.

MISAPPREHENSIONS POINTED OUT.

Mr. SOPER, in seconding the motion, said: I, perhaps, may be permitted to say that we regard the Durban-Roodepoort as one of the best companies, and I cannot but fancy that the whole of the share market misapprehends the outlook of affairs very much, as it did originally. It misapprehended it particularly in regard to the on coming winter, because this winter there will be no doubt two factors which will enter into consideration, which have never done so before. The first is that increased accommodation is being provided on the fields for the Kaffir labour, the absence of which was one reason why the Kaffirs returned to their own locations in the North, and hence they may be induced to remain in greater numbers on the goldfields, and the other is because of the great number of stamps on the way, and which are being erected. I, therefore, should not at all be surprised to find that the output of gold during the coming winter will be much greater than the market fancies, though it seems to think it knows everything about it, and on the strength of which erroneous knowledge it is sending the price of shares down. (Cheers.)

Mr. HOPKINSON: Might I suggest that it would be better, under existing circumstances, to issue the shares earlier than you propose, and not to wait for an improved market, in order to get the money which you require for developing the mine. You might have to wait for many months, whereas you make a certainty of it by issuing them at a less premium. Of course they must be issued at a premium which will make the shareholders take them without going to the market. If you issue them, say at 3*l.*, it would be well. It is a question open to discussion, but if the money is required it would be well to secure it on less favourable terms as regards premium.

The CHAIRMAN: We must pass the resolutions as they stand. We cannot do anything until the 30th of June. As a large shareholder, I would be inclined to wait until then before taking any other course. We are not hard pressed for money; we can get along nicely without the increase of capital for the present, although it is advisable in order that we may go on as quickly as possible with the development of the whole mine. I may mention that we have advices from our manager stating that he has engaged a man to prospect the Mynpaeht. If we find a reef there it will be equal to another mine. (Cheers.)

A SHAREHOLDER: If you had the money now would it be possible to use it, because you mentioned some difficulties about it.

WHY THE MONEY IS NEEDED.

The CHAIRMAN: One of the things we require money for is to send out machinery, but we do not need even that for a month or two. I think you may leave that matter to the directors.

The motion was then carried unanimously.

The CHAIRMAN: I might mention that we have with us Mr. Schuitema, one of the local directors, who has been connected with the mine from the beginning. We shall be very glad to hear a few words from him, and though he is a Dutchman and afraid to speak our language, yet I am sure you will understand him.

A DUTCH DIRECTOR'S VIEWS.

Mr. SCHUITEMA: Gentlemen, as Mr. Parker has said—it is very difficult for me to explain myself in English, which I have only picked up in South Africa. I was at the very commencement on the Witwatersrandt, and on the Durban-Roodepoort—in fact it was one of my children. I always told the people there that I considered it my baby—(laughter)—and that it should be nursed as a baby—and in fact a gold property has to be nursed like that. I am sure it is one of the best properties on the Randt. Our 13-claims block has a rich leader in it. This I have seen myself, and it is better than most other properties possess. We have also, or expect we have, the Robinson leader, which is quite a different thing from our south leader or main reef, where we are getting 2 ozs. to the ton of quartz. Outside those two reefs

WE MAY EXPECT TO FIND THE ROBINSON LEADER.

(Cheers.) We have found the Robinson leader already in the 10-claims block—between the south leader and main reef. We found it at the 110-ft. level in a drive, but it is not so rich as in the Robinson ground. All mines in the world are not equally rich, but the Robinson leader is not so rich in our 10-claim block as in the Robinson, but at a depth of 200 ft. we expect to find it just as rich, because other properties on the Randt like ours have done so—the Salisbury at 200 ft., found the same Robinson leader, and every gentleman who has followed the fortunes of that company will know that in certain months they have reported large quantities of gold. There was a rush for the shares, because they struck the Robinson reef, and we may expect it just the same. We found the Robinson leader in the 10-claims block, but it is not so rich as in the Robinson, though we may find it just as valuable deeper down.

A GOOD MANAGER.

The development of this mine under the present manager is most satisfactory. He is one of the best men in the field, a very steady fellow, and one who understands his work. With regard to the Mynpaeht, they had commenced to prospect it. We had from the commencement found a reef on the Mynpaeht. On the surface it was very small, and, if I understand rightly, there has been floated in London a company called the Upper Roodepoort on claims adjoining our Mynpaeht, on which there has been found a leader. I had found it before I floated this company, but never went down on it, because it was on the surface very narrow (12 ins.), and having other work to do on the 13 claims, and having no money to spend there, I had to go on with the other blocks. I think we shall find something good there if we can spend the money so as to sink and work it. With regard to the money required—it is not necessary at present, because we have sufficient, and every month we are making a good profit. We are spending about 1,800*l.* in working expenses to get the quartz, but that includes the erection of permanent structures and the provision of machinery and dams. When the permanent work is finished I think the working expenses will not be more than 1,000*l.* a month, but even with our present expenditure

WE HAVE A PROFIT OF 2,000*l.* A MONTH,

but more money is required to put up new machinery. We have any amount of quartz, and the more machinery we have upon that ground the better. We have a 6-ft. body of reef and a 2-ft. 3-in. body of leader, which makes down to a depth of 180 ft., and it may extend down to 800 or 1,000 ft. In other companies it has done so. With only one leader in our 13 claims we shall have four years' work with 50 stamps, and we have at present only 20. Why should we not crect 50? (Cheers.) It is only a matter of labour. The standing expenses are all the same. The management, the amalgamators, and all other expenses are about the same, whether you work with 20 or 50 stamps. At present the cost is 30s. per ton, but spread over a larger output such as we should have with 50 stamps, it might be reduced to 1*l.* per ton.

AN UNPALATABLE SUGGESTION.

I am pressing that view upon the directors, and I have even suggested that the money we propose to divide as dividend should be applied to that purpose. I have said, would it not be better to refrain from declaring a dividend and put the money into more machinery? I have been always a large shareholder, but I am not so large a shareholder now. Still I have a pretty good number of shares, and should like the dividends to be passed, and the capital of the company left to stand at 90,000*l.* But there are other shareholders who would like to have dividends. They say I might sell my shares to-morrow.

NO REGARD FOR POSTERITY.

I am not working for my children or my grandchildren, but for my own pocket—give me something for my own money. They are right too. If we like, in the Durban-Roodepoort property, we can always manage to produce 3,000 ozs. of gold, but you must not ask what the gold cost you. We can produce 3,000 or 4,000 ozs. by putting on a double staff of men, for we have a leader 2 ft. 3 ins. thick.

THE MINE WILL BE WORKED FAIRLY.

But we work the mine fairly, and we take the quartz as it comes. (Cheers.) It is known all over the country that the Durban-Roodepoort does that. If we want, instead of that, to sort the quartz and attack the rich leader only, crushing in the time to come the poorer part, we could, I say, produce 3,000 to 4,000 ozs. of gold just the same as the Robinson. We do not do that, but we work the quartz just as it comes. A gentleman visiting our mine from one of the rich Randt properties, said, "Why do you crush that stuff"—indicating some poorer quartz. My reply was, what it is to you—"It is because we want to work the mine fairly." His view was to work it for the share market, and so crush only the rich ore, and although I should like to raise the price of the shares to a higher premium, I want to do it by legitimate means.

A REGISTRATION OFFICE IN SOUTH AFRICA WANTED.

As to the question of a registration office, that is important. There are only 25,000 shares held in South Africa, as against 60,000 shares about three months ago. I held 17,000 shares in Johannesberg, and a friend of mine held 7,000. I bought one day from a London firm 1,500 and 3,000—4,500 in all, and that gentleman delivered them in parcels of 1,000 each, leaving out the odd number. Now it is impossible for us to deal with them. We are not holders of scrip—we are speculators just as you are here. If I had not held 6,000 vendors' shares my position might have been awkward. As the shares, as they came from London, could not be delivered, we had to send them back

to get them split up, and that takes two months. A registration office is therefore a necessity, though

THE DIFFICULTY IS PARTLY MET BY SHARE WARRANTS.

Still even in that case there may be delays. The people out there are afraid to buy your shares not knowing how they may be delivered. I bought on the 4th February from the same firm 2,000 shares, and said, let it be mentioned on the contract note that they must be delivered in parcels from 50 to 100 shares. What was the small scrip I got? 240 shares, 150 and a third lot of 300, so that it was difficult for me to sell them again. That is why we want a registry office out there. If I go back to Johannesberg I shall be afraid to buy shares from London if there is no means of splitting them up.

Mr. SOPER: Can you tell me why there is the same difficulty in Johannesberg that you complain of in London.

Mr. SCHUITEMA: Johannesberg shares are split up in London, for there is a registry office.

Mr. SOPER: Why cannot you have one there?

Mr. SCHUITEMA: They say English law is against it.

CANNOT BE DONE.

The CHAIRMAN: This matter of the registration office is very important, and the directors are very anxious to meet the views of their South African shareholders. We have again and again gone to our solicitor, Mr. Crisp, to see how it can be done, and he has said it cannot. I know the South African Diamond Company is in the same position. At Somerset House they say that if any company does it they will have something to say to them later on. The Sheba Company tried it, and found it of no avail. Our share warrants are divided up into as low as five shares, and can be carried about like a bank note with coupons attached for dividends.

Mr. SOPER: I believed that if Mr. Crisp represented matters at Somerset House he would find that it was simply a question of the stamp duty. If that were arranged Somerset House would be agreed.

The CHAIRMAN: The dividend will be paid on the 13th May.

Mr. MIRRILIES proposed a hearty vote of thanks to the chairman which was carried by acclamation, and the meeting terminated.

THE LEADHILLS SILVER-LEAD MINING AND SMELTING CO., LIMITED.

MINE LOOKING POOR—REDUCTION OF DUES—MR. PETER WATSON ON THE DEPRESSED STATE OF HOME MINING—95 PER CENT. OF THE MINES CLOSED—THE ROYAL COMMISSION ON ROYALTIES.

THE twenty-fourth ordinary meeting of the above-named was held at the Registered Offices, No. 30, Finsbury Circus, on Thursday—Peter Watson, Esq., chairman and managing director, presided.

Mr. FELIX F. WILSON (Secretary) read the notice calling the meeting.

MINE LOOKS POOR.

The CHAIRMAN: Gentlemen, the directors have not a great deal to say to you on the present occasion, inasmuch as it is the half-yearly meeting, that is to say, we have not any statement of accounts to submit, as this is a mining and smelting company, and our accounts close always at the end of June, and generally about August or September we call you together and submit the state of affairs to you. Since we had the pleasure of seeing you here at the annual meeting, I deeply regret to say (as you will have seen by the reports published in the MINING WORLD from time to time) that the mine, comparatively speaking, has been exceedingly poor. Our ends have not been so poor for a very long time, and it is my duty to point that out to you. If it had been otherwise, I should have felt as much pleasure in pointing it out to you as I feel disappointment at having to tell you of a falling off: but mines vary, as a matter of course, and it is not therefore to be wondered at that our mine, compared with what it was a few years ago, is exceedingly poor at the bottom ends at the present time. Shareholders may say that the market price of our shares is very low, but investors have doubtless observed that the mine has been getting poorer, and this is all the more unsatisfactory with the present price of lead. In view of these facts, we have from time to time called the serious attention of the lord to this state of things, and have asked for a remission of the royalties. For some 10 years we were endeavouring to achieve this object, and ultimately, after a deputation of the directors had waited upon his lordship in London, and after seeing him and his agent, as my colleagues and I had the pleasure of doing in Scotland, when we urged the importance of his granting us a liberal reduction in the royalties, he promised to take the matter into consideration, and, as you are aware, for the last two years he charged us 600*l.* per annum instead of one-ninth royalty. It was his desire that the mines should be again inspected, and accordingly they have been inspected; but in the meantime his lordship has made us a concession, charging us for this year (1889) 1,200*l.* instead of a ninth—that is to say, we have to pay double the amount this year that we had to pay last year and the year before. Since that arrangement was come to between the directors and his lordship, we have received a report from Mr. James Hope, his agent in Edinburgh, which report was carefully considered by your board, who desired me to send it to Mr. Newbigging for his remarks thereon. That has been done, and we have received Mr. Newbigging's reply. To-day we shall send Mr. Newbigging's report and our own remarks in connection therewith to his lordship and to Mr. James Hope, after which we are most anxious that a speedy settlement should be come to with regard to the promised lease, and liberal reduction of royalties.

THE PRICE OF LEAD.

When we started this mine the price of lead was 23*l.* and 24*l.* a ton, and the royalty was a ninth. Since then the price of lead has come down to its lowest—something like 10*l.* a ton. During the last six years the average price was about 12*l.* 7*s.* per ton, and I regret to say that to-day the price is about 12*l.* 10*s.* to 13*l.* per ton. Those gentlemen in the room who have been associated with mining for a number of years will understand the full meaning of what I say when I tell you that the foreign competition in regard to minerals, whether tin, copper, or lead, is a very serious matter; and the reduction in price has had the effect of causing something like 95 per cent. of the mines of this country to cease working. It is all very well for those interested in agriculture to cry out on account of the low price of corn, &c.; but the mineral industries of this country are suffering to quite as great an extent. (Hear, hear). Therefore I hope that when the report of the Royal Commission on the royalty question comes before the House of Commons it will take this matter into consideration. I have been asked to go before the Royal Commission, and I shall state my views plainly and most distinctly in reference thereto. If there is any industry in this country that has reason to complain of the high rates of royalties, and the effects of foreign competition, I think it is the mining industry of Great Britain and Ireland. They suffer in Ireland and in Wales, as we all know; and in the North of England many have come to grief in consequence of the present state of things. The Leadhills Mine is one of the very few pure lead mines that have not succumbed.

A LAST APPEAL TO LORD HOPETOUN.

Your directors and managers have had a vast amount of trouble and anxiety to keep this mine going; and we now ask his lordship again, and for the last time, we may say, to come forward and grant us a new lease on liberal terms for the future. We have received a very long report from a gentleman who has been associated with the lead mining industry for a considerable period in Wales and elsewhere; but Mr. Newbigging and your directors demur entirely to it. It is a report which has been made on Lord Hopetoun's behalf, but we have been favoured with a copy, and have given a reply to it. This gentleman has been on the property for only a few days. Mr. Newbigging, our manager, has been there for 40 years, and I will quote the opinion formed of him by the late Captain Waters, who was one of the greatest experts in lead mining in this country. This is from the MINING WORLD of 3rd March, 1883:—

"I will just say two or three words by way of thanks for your compliment. I am sorry Mr. Newbigging is not here to speak for himself, because he is in the habit of speaking his mind well, and is a very intelligent and thoroughly practical mining engineer. He was born and bred in the Leadhills district, and has made this mine his study, observing the various changes we come across in our search for mineral with the minutest care. He has set himself during the whole time he has been there to study Leadhills, and I can tell you he is the right man in the right place. I can also testify to Mr. Aitchison's ability as a man and a miner. He is one of the most intelligent miners that I have met, and it is a real pleasure to talk with him on geological matters. I pay my monthly visit with much pleasure, knowing that I am to meet men with whom I can discuss, intelligently and practically, questions relating to mining. We agree very well together, and do not prophecy unless we can come subsequently to you and substantiate by facts what we have said."

If anyone knows anything about this mine it must be the men who have been born and bred on the place. Mr. Newbigging has given a long answer in detail in connection with this report, which his lordship has had made for him. I mention this because I hope that such a remark coming from Capt. Waters will, when his lordship reads his report which I trust he and his agents will do, and will consider and well digest the various points in connection therewith, I trust that he will not forget that Mr. Newbigging is a man of character and position, and well knows the position of this mine, and is capable of advising him and us as to what should be done with regard to the development work in the future. That is why I mention the subject.

A SUGGESTION FROM A SCOTCH SHAREHOLDER.

We have received several letters from shareholders, amongst them one from a shareholder in Scotland who observes in this report that our dressing and smelting operations are getting on very well. He calls attention to the last paragraph in Mr. Newbigging's report:—"Our dressing and smelting operations are getting on very well just now. I expect to commence the smelting of the year's fume by the beginning of May, and I am hopeful of a very satisfactory return. It will be necessary to make substantial repairs, &c., on the flues this summer, which will incur a large outlay." The shareholder naturally suggests, in reply to that, that until we get a new lease and a liberal arrangement with regard to royalties we should not go to any very large outlay—in other words, that we ought before incurring any expense to know really what we are about. (Hear, hear.) It is suggested on one side that we should sell our ore instead of smelting it. This, however, would be the most suicidal thing that could possibly happen, inasmuch as we would have to send our ore 120 or 150 miles away from the mines, and be entirely at the mercy of two or three smelters. If we sent it to another part, some 200 or 250 miles away, it would be perfectly ludicrous, for seeing that we have no railway, the cost of conveyance would be great.

A REASONABLE REQUEST.

Your directors have gone into this matter very carefully, and we have to express a hope that his lordship will at an early moment come to an arrangement with us, by which we shall be enabled to prosecute this mine in a proper way, not only for our own advantage, but for the benefit of everybody connected with us. (Cheers.) Notwithstanding the reduction in the price of lead, we have been able to increase the wages of our men during the past six months; and I hope that has given satisfaction to them. I may say we are giving more wages at the present time than the price of lead and the state of the mine really justify. We could not, however, shut our eyes to the fact that there is a demand for miners both at home and abroad, and we desire to do our utmost for the welfare of our *employés*, even if we suffer ourselves to an extent, because we hope that if his lordship will be liberal to us and come to an arrangement that we, as shareholders, may yet have something good in future years. (Hear, hear.) I was at the mine the week before last, and the various improvements which have been going on since I was there before of course have necessitated an expenditure of money. Our desire has been to keep things in efficient working order.

A RAILWAY UP TO THE MINE.

Another important matter I ought to have mentioned, and it is with regard to a railway up to the mines. That subject has been approached in very serious terms by the gentleman who examined the property

recently, and representations have been made to his lordship. What his lordship will do on the subject of a railway I do not know. There may be opposition by one route; but with regard to another route, I do not think there would be any very serious opposition, and in all probability it could be made cheaper. That, however, is a subject the pros and cons of which are gone into in this report. Of course carriage is a matter of serious importance to us. I do not know that I have anything further to add. We have to regret the continued low price of lead. Some people think it will go to 10*l*. a ton; others say it will not.

NO SYNDICATE.

At any rate, I repeat the hope which I expressed some time ago—that we should have nothing to do with syndicates. There was a lead syndicate in America which put the price up to 14*l*. or 15*l*. a ton about 18 months ago, but that, like the copper syndicate, broke down, and I trust we shall never see any more syndicates, either for lead, copper or tin. Supply and demand must on all occasions regulate the market price. I shall now be happy to hear any suggestions you may have to make with regard to the property.

No shareholder rising, the CHAIRMAN said that the only business before the meeting was the re-election of Mr. Thomas Gleu, the retiring director.

RE-ELECTION OF MR. THOMAS GLEN.

Mr. THOMAS WILSON moved that Mr. Glen be re-elected a director. Mr. Glen, he said, had been with them now for many years and took a great interest in the property, and the shareholders could not have a better man to watch their interests. (Cheers.)

Mr. GEACH seconded the motion.

The CHAIRMAN put the resolution to the meeting, and declared it carried unanimously.

Mr. THOMAS GLEN, in reply, said: I am much obliged to you, gentlemen, for the honour you have done me in re-electing me a director. I must say it has not been quite an enviable position, from the fact that it has not been a money-making business, and I always like to go on a board where some money is to be made. (Laughter.) However, we must trust to Lord Hopetoun's liberality, which I hope will lead to better results. (Hear, hear.)

A NEW DIRECTOR PROPOSED, BUT NOT ACCEPTED.

Mr. CHANCE said he understood that the shareholders had the right, according to the articles of association, to have seven directors. At present they had the minimum of three, and considering the extent of the property, he thought it desirable that the directorate should be added to. He therefore proposed that Mr. Edward Geach be a director. Mr. Geach had a large holding in the company, and represented altogether, with his friends, something like 3,000 shares.

Mr. GEACH said that it had been the intention of a large shareholder to be present to-day to second his re-election, but, unfortunately, ill health prevented him from attending. He (Mr. Geach) had sent in a letter to the board signed by shareholders representing about 1,500 shares. His own interest was about 600 shares, and he would be very glad to assist the directors in the management of the company. He represented between 3,000 and 4,000 shares, and his friends had constantly urged him to go on the board.

Mr. JOHNSON seconded Mr. Geach's appointment.

A SHAREHOLDER asked if they had power to elect another director to-day.

The CHAIRMAN: Mr. Geach has given notice in the usual form to become a candidate here to-day. He has sent a document signed, recommending him to become a member of this board. Sometime ago he was anxious that one of his friends should become a director, and recommended Mr. Glen, and we had much pleasure in receiving him. Mr. Geach at that time did not express a desire to come on the board himself, and it is only recently that he has qualified himself to do so. We have seen very little of Mr. Geach; at the same time he has taken an interest in the company, and does hold a good many shares himself and also his friends, to the tune of about 3,000 shares. My colleagues think that it is perfectly unnecessary, especially now, when we are crossing the stream, to have anyone else. We have given a good deal of time and attention, and carried you through these difficulties so far, and we hope to land you in a proper place ultimately. At the same time it is a matter for the shareholders to consider. So far as I am personally concerned I have no objection to your electing half a dozen more, but we do not think it is the time to impart any fresh blood into the undertaking. We are economising in every way we possibly can. We have reduced in management, salaries by 200*l*. a year. The other director that went out at the time received 125*l*. a year, which we have saved, and in other matters we have effected a saving of about 400*l*. a year. This is not a time to augment the expenditure, but at some future date I hope we shall be able to elect a new director. Under the circumstances, having given the time and attention that we have done in the past, we do not think it necessary to elect another director. (Hear, hear.)

Mr. GEACH said that he understood by the articles of association that a certain sum of money was set aside for the directors, and whether they had three or five it would be the same.

Mr. SOUTHGATE (director): Clause 62 of the Articles of Association reads thus:—"The remuneration of the directors shall be at the rate of 125*l*. per annum to each director, to be divided amongst them as they think proper." Therefore it is pretty clear that every director added to the board increases the remuneration by 125*l*. per annum.

Mr. GEACH said he would take the sense of the meeting on the subject.

A SENSIBLE VIEW.

Mr. THOS. WILSON: As one of the old shareholders, allow me to say that I think we are doing very well in managements, and we ought to go on as we are at present. (Hear, hear.) It is very essential now that we should study economy, and to add another 125*l*. per annum to our expenses does not seem to me at all desirable. I do not know whether Mr. Geach is a practical man, but if not, I think his appointment would be most undesirable. If he could bring some special knowledge to bear on the matter that would benefit us, I should say by all means let us have him. (Hear, hear.)

Mr. PAUL agreed with the last speaker, and did not think any benefit would arise from appointing another director at the present moment.

The CHAIRMAN put the motion, which was lost.

THE SHAREHOLDERS' PATIENCE BECOMING EXHAUSTED.

Mr. ROBERTS: With reference to the general observations of the chairman, I wish to propose a resolution to this effect:—"That the shareholders present at this meeting regret to find that no satisfactory arrangement has yet been made in regard to the liberal concession of royalties and a new lease to the company for the future; and they desire to impress upon the directors and Lord Hopetoun the importance of no further outlay taking place in these long pending matters." I am free to confess that Leadhills matters are a weariness to the flesh—(laughter)—and, therefore, I shall not say much on the subject. I daresay every shareholder will feel, as I feel, that he has only been getting a scanty pittance in return for the money invested in the mine, and that Lord Hopetoun is the gentleman for whom we have been working. (Hear, hear.) This mine pays the highest royalty of any mine in the kingdom, and I think that, considering the difficulties with which we have had to contend during many years, and the small amount that we have received for our outlay, that we should convey to Lord Hopetoun that we are quite weary of this matter, and that we wish it brought to an issue. (Hear, hear.) If the money that I had invested in this mine had been invested in Consols at the same time I should have received about 30*l*. more in interest, and my principal, instead of being reduced to a third of what it was, would have been intact. I do not think it necessary to enlarge upon this subject. We have had it out before, and my feeling has been very much the same as the gentleman who last spoke. I am in a position to know that the directors have been

CONSTANT IN SEASON AND OUT OF SEASON

in endeavouring to bring this matter to a successful issue. (Cheers.) But they have to contend with Lord Hopetoun's agents in Scotland, and with various other hindrances, and I think we cannot do better than, at all events, record our sentiments as they are embodied in this resolution. (Cheers.)

NOTHING FROM NOTHING.

Mr. HARDING: We shall be happy to pass the resolution if it will be of assistance to the board. We all feel strongly the dilly-dallying that has been going on on the part of Lord Hopetoun, or his agents, or with both. We have heard before that he intends to do something, but it has all come to nothing. I was hoping to-day that we should have heard from the chairman the position we are in, but it seems to be about the same as it was last time. We were told then that very shortly something would be done, and now we hear the same thing to-day. That was 12 months ago, and nothing seems to have come out of nothing. In the absence of any more reassuring statement, I will second the motion. (Cheers.)

TEN YEARS' NEGOTIATIONS.

The CHAIRMAN: So far as this resolution is concerned I shall put it to the meeting, for I quite endorse the views expressed both by Mr. Roberts and Mr. Harding. It has been a tedious business, for these negotiations have been going on for the best part of 10 years, and particularly during the last three or four years. We have urged that a new lease should be granted, and also that he should reduce his royalties. When we have met Lord Hopetoun in London and in Scotland he has received us with open arms, and expressed himself favourable to our request—in fact, he has written, "I am determined to grant to the company liberal concessions with regard to the future development of this mine." It has been stated that he would like to work it himself and make a railway to it. Such is the rumour, and if that be true, why does he not approach us and let us come to terms forthwith? You cannot sink shafts and drive levels for a period of three or four years, and leave the reward to be reaped by somebody else of your toil and expenditure. I say, that when a lease in other parts of the country is given up, or when it has only a few years to run, the lords come forward, and are always anxious to grant liberal terms to the workers of their properties, in good times and in bad. The instructions to make this report for him were given just 12 months ago.

Mr. WILSON: Do you know what is the gist of the report?

WHAT LORD HOPETOUN HAS DONE.

The CHAIRMAN: I may say that his lordship is recommended to make a reduction in the royalties, but the directors consider it is not on a basis they should accept, or which they can recommend the shareholders to adopt. As to the report, it was dated the 31st December, and sent to us in February, and immediately we sent it to Mr. Newbigging for his observations. The mine, according to the report of the inspector, extends over 20,000 acres. Two years ago Lord Hopetoun made a remission down to 600*l*., but this year he has raised it again to 1,200*l*. That is a concession upon the ninth royalty under the lease.

LUCKLESS SHAREHOLDERS.

Mr. HARDING: Can you do any good for the shareholders with that royalty for the present year's high rate of 1,200*l*.

The CHAIRMAN: Certainly for 95 per cent. of the pure lead mines of this country are shut up. We have gone fully and fairly into this matter, and I do hope this resolution will strengthen our position. We shall send it to Lord Hopetoun and Mr. Hope, with a report of this meeting.

Mr. HARDING: If we do not get satisfactory terms I hope the mines will be shut up, or that we shall adopt some such course.

The motion was carried unanimously.

Mr. ROBERTS: I beg to propose a vote of thanks to the chairman and directors. I know they have a very much harder task to manage than when things are going on swimmingly and paying dividends. (Hear, hear.) I am perfectly certain that it is the thought night and day of the chairman, and I believe he has done all that is possible to get this vexed question settled. As Mr. Harding said he was sure they had every confidence in the directors. (Hear, hear.)

The motion was carried unanimously.

Mr. WILSON: Can you tell us roughly what percentage of the profit of these mines Lord Hopetoun has had?

The CHAIRMAN: 43 per cent. since the formation of the company.

The meeting then closed.

LATEST REPORT.

30th April.—Monthly report.—Brown's vein: Eight men are set to drive the 145-fm. level 3 fms. 2 ft. north of Jeffrey's shaft, at 110s.

per fm.; vein 4 ft. wide, charged with nice quartz and ore, worth 30 cwt. per fm. Four to drive the 145 north in string from Wilson's shaft, at 100s. per fm.: worth 25 cwt. of ore per fm. Six to drive the 145, 13 fms. 5 ft. 6 ins. in south of Wilson's shaft, at 95s. per fm.; vein 5½ ft. wide, mixed with quartz but no ore; it is too dry yet, but expect a favonrable change soon. Four to sink a winze below the 130 south of Wilson's shaft, at 97s. 6d. per fm.; vein 8 ft. wide, worth 50 cwt. per fm. Seven to drive the 130, 47 fms. 2 ft. north of Jeffrey's shaft, at 115s. per fm.; vein 4 ft. wide, charged with very promising quartz and ore, worth 30 cwt. per fm.; it is wet too. Four to stope above the 130 north of Jeffrey's shaft, at 47s. 6d. per fm.; worth 20 cwt. of ore per fm. Four to No. 1 stope above the 130 south of Jeffrey's shaft, at 40s. per fm.; worth 20 cwt. of ore per fm. Four to No. 2 stope, at 55s. per fm.; worth 25 cwt. of ore per fm. Four to stope above the 130 north of Wilson's shaft, at 35s. per fm.; worth 25 cwt. of ore per fm. Six to stope above the 130 south of Wilson's shaft, at 40s. per fm.; worth 55 cwt. of ore per fm. Four to stope above the 115 south of Wilson's shaft, at 42s. 6d. per fm.; worth 25 cwt. of ore per fm. Two to the drift above the 115 south of Wilson's shaft, at 80s. per fm.; worth 25th cwt. of ore per fm. Fourteen to stope below the 85 north of Jeffrey's shaft, at 55s. per fm.; worth 45 cwt. of ore per fm. Four to the drift above the 35 south of flat-rod shaft, at 50s. per fm.; worth 35 cwt. of ore per fm. Four to the stope above the 20 south of flat-rod shaft, at 30s. per fm.; worth 30 cwt. of ore per fm. George's Roust vein: Three to drive Gripp's adit 332 fms. 2 ft. 3 ins. north of Muir's cross-cut, at 112s. 6d. per fm., aud 20s. per ton of ore; vein 2 ft. wide, wholly charged with kindly quartz, but, of course, without ore.—T. Newbigging.

ANGLO-MEXICAN MINING CO., LIMITED.

THE COMPANY ENTER THE DIVIDEND LIST—DIRECTORS OVERCOME MANY DIFFICULTIES, AND PLACE THE COMPANY ON A SOLID BASIS—THE TRUE METHOD FOUND OF TREATING THE ORE.

The adjourned ordinary general meeting was held at the City Terminus Hotel on Wednesday, to receive the report of the directors, and the statement of accounts to 30th September, 1888, and to transact the general business of the company.—Mr. George Hopkins in the chair.

Mr. James Ford (secretary) read the notice calliug the meeting, and the report of the directors was taken as read.

The Chairman: Gentlemen, in presenting our anuual report and accounts to you, I wish to observe, in the first instance, that although the adjournment has been to some extent inconvenient, it has not been without its advantages, because it has enabled ns to briug the accounts up to September 30th of last year, and to place before you those accounts in a much more complete manner than we could have done had the meeting been held in December. You will remember that at our last meeting I spoke very confidently as to the time when we might expect to be able to pay dividends, and I did so advisedly, owing to the statements made by our manager in his letters to ns, which were very strong upon that point, and who gave us, without any hesitation or doubt, hopes that we might expect that we should be in a positiou to declare a dividend at the time I mentioned. I refer to that because, as mentioned in the first paragraph of our report, it has been a matter of great regret and annoyance to the directors that they have not been in a position hitherto to do so.

MINE WORKING REGULARLY.

The mine has been working regularly and steadily, and making a fair ontput every month, and a fair amount of profits, and these profits have from time to time been nsed by us for the purposes of the mine itself. They have been expended on necessary works, and in making additions and alterations to the leaching plaut, furnaces and mill, and generally in surface improvements. A considerable amount of money has also been spent in sinking a new shaft, which is now down about 1,100 or 1,200 ft., and is called the Victoria shaft. It enables us to get at the workings in the lower levels with greater facility, and to extract the ore at a cheaper rate. Then, again, the important matter of supplies and stores always takes a large amount of money. You will see at the date these accounts were made up, that the stores and supplies amounted to no less a sum than 25,016*l*. These are some of the items, showing where our profits made during that period have gone.

DEBTS PAID OFF.

Bnt we have, also, dnring that period been paying off our debts and liabilities. (Cheers.) If yon take the trouble to compare the state of the accounts at the present time with the last balance-sheet you will see in how greatly an improved position we are now to what we were at that time. For instance, there was then owing 27,614*l*. to sundry creditors in London; that is now redneed to 10,000*l*. There was also 8,000*l*. owing to creditors in Mexico: that is now reduced to 2,222*l*. And whilst I am referring to the balance-sheet, I wish to point out that the item of 85,484*l*., which then stood to the debit of the company as a debt due to the vendors, has now disappeared from the balance-sheet; whilst on the credit side we have items which did not appear there before, such as cash in hand at the mine, in New York and in London, and several consignments of silver outstanding. In fact, as stated in the report, instead of being in debt both here, in Mexico, and also in New York, we now have no debts except the 10,000*l*. of debenture capital, which still remains unpaid, against which we have assets, and, in addition, cash in hand. On reference to the profit and loss account, whicl we are enabled to put before you for the first time, you will see that on September 30th, 1888, we had

STANDING TO THE CREDIT OF REVENUE 29,334*l*.

That is not money available, but it is the profit made up to that date. There have been very heavy expenses incurred at the mine during the period we have been in existence. I mentioned just now that we have expended since the last balance-sheet 18,326*l*. on the construction of leaching and other works on the surface. You will see that that makes a total of no less than 77,405*l*. from the commencement of the company on works of that description.

LOW PRICE OF SILVER.

Now, reverting to the profit and loss account, one thing which has tended very much to minimise our profits has been the very serious depreciation in the price of silver. It has not been so low for very many years as it has been lately, and even now I believe that it is as low as 3s. 6d. per oz. That is a very low price compared with what it used to be. Now, we have had many other serious things to contend against at the mine. First of all, there was the question of how to treat the ore. This was most troublesome, and taxed the abilities of a great many experts to know how best to deal with it. We sent out two of the best experts we could get—Mr. Russell, the lessee of what is known as the Russell process of treating ores by leaching, and Mr. Ottaker Hoffmann, who spent a long time at the mine. These gentlemen furnished us with a very valuable report, going fully into all the details of the whole question, and the result was that

THE DIRECTORS DECIDED TO ADOPT THE RUSSELL PROCESS.

That involved the erection of fresh plant and machinery suitable for that particular purpose; and I am pleased to say that, notwithstanding the large royalty that we have to pay to Mr. Russell for the use of his patents, we have received a very considerable benefit from the use of his process. We have written out to our manager for his report on its employment. It has been used now at the mine for just over 12 months, which we think sufficient time to have tested it well; and he has written to us stating that it has been of very great advantage to us; in fact he has effected a saving of something like 8 or 9 per cent. He has promised to send over a full report of its use and advantages. (Hear, hear.)

LABOUR.

Another difficulty we have had, and which we still have to some extent, is the question of labour. Mexican labour is of a very uncertain character. Our snperinteudent writes that he never can depend with certainty upon his men. One day he may have a large number at work, and the next day, without any notice whatever, many of them—as many as half the number—will leave and go away. They are not reliable, and do not appear to care to work more than they can help. The result of this has been that for some time past we have been trying to introduce other labour. At first we introduced a number of Italians but they did not settle long. Since then we have got a number of Chinese, who are most excellent men, and do good work on a low rate of wages, and our managing director, Mr. Olmsted, for some time past has been negotiating for an additional number of Chinese, and I am happy to say that at last he has succeeded, and has arranged for additional Chinese to be sent to the mine forthwith. I think that at present we have about 60 or 70, and he has arranged for 100 more. With that addition to our labour, I think the question will be pretty well settled. Then another point which has given a great deal of trouble has been the realisation of the silver. It leaves our works as silver precipitate, which contains about 30 or 35 per cent. only of pure silver. We have tried every possible way to facilitate the realisation of silver on the best terms. We have sent it to Messrs. Balbeck and Company, at New Jersey, some of it to the Omaha Smelting Works, some to San Francisco, and we have even had some of it sent to Hamburg for realisation. I think the conclusion is, that we cannot do better than send the precipitate to Messrs. Balbeck and Co., at New Jersey, and accordingly most of it goes there. The consignments are coming in now much faster than they used to do formerly. You will probably remember that at our last meeting I spoke of the great inconveuieuce of not gettiug our accounts made up to a more recent date, and that was a question we were constantly impressing npon our manager, but I see now with great pleasure that we shall in the future be able to get our accounts made up to a more recent time, aud that we shall therefore be able to hold our meetings more quickly after the aceonnts are made up. For instance, I do not see why we should not get our balauce-sheet made up to the end of the year, and hold our meetings uot later than July or August. We are looking forward to that, and I think we shall soon be able to do it.

A GOOD MANAGER.

Now, luckily, we have at the mines a very able manager and superintendent, Mr. Sydney Jones. Previous to his coming to our property, he was manager of the Prietas Mine, and was brought up under our late manager, Mr. Covington Johnson; but Mr. Jones took the property under more favourable circumstances than Mr. Johnson did, because the latter gentleman had overcome the greater part of the inherent difficulties belonging to the undertaking, and left the property in a more satisfactory condition for his successor than he found it. We have in him an excellent manager, a capital correspondent, and a thoroughly reliable man in every respect. I dare say most of you have gone to the trouble to look through the report he has sent us on the working of the mine for the past year, and which, if you have not done so, will give you an enormous amount of information on the different workings and the cost of the several operations. Mr. Olmsted, as you know, succeeded Mr. Clarence King as managiug director, and at the time of our last meeting he was at the mine in Mexico.

THE NEW MANAGING DIRECTOR.

We find in him a valuable colleague. His appointment, you will remember, was part of the settlement we made with the vendors when they agreed to take fully-paid up shares as the balance of purchase money. Mr. Olmsted, writing to us a short time since on the question of dividends, said his own opiniou, and the opinion of the large shareholders in New York, was that after getting the property in the satisfactory condition in which it now is, it would be better to delay the payment of dividends a little longer, and to create a reserve fund out of revenue.

REASON FOR AND AGAINST A DIVIDEND.

We pointed out to him the fact that our having at all times a large amount of silver unrealised—some at the mines, some at Mazatlan, and some on the road from Mexico to New York—was really a reserve fund, with which Mr. Olmsted agreed; he went on to state that he thought it would be better for us to accumulate sufficient money for the payment of three or four divideuds before

we began to pay any. In America they are accustomed to pay dividends more frequently than here, but we have beeu in existence many years, and the shareholders have never had a sixpence from their property, aud in my opinion, there is really no reason why we should delay dividing the money we have in hand. (Cheers.) Therefore, as mentioned in our report, it is the intention of the directors to

DECLARE A DIVIDEND OF 3 PER CENT.,

aud warrants for that will be posted either to-night or to-morrow. (Hear, hear.) We have the money in the bank, and there seems to be no reason why the shareholders should not have the benefit of it after waiting so patiently and so long. A good deal of what I have said is set forth in the report, and with that and Mr. Sydney Jones's report. I do not think I need enlarge iauy more upon the subject. Therefore, as we have further business to do presently, I will formally move the adoption of the report and accounts, and after that has been seconded. if there are any questions that any gentleman likes to ask, or any further information I can give, I shall be happy to supply it. (Applause.)

Mr. AYRES seconded the motion, and said that a good deal of ore had been taken out of the mine, but what were the iudications that they would take out a corresponding quantity iu future ?

Mr. LEWIS : Thesc accounts are made up to the 30th of September, but what is the position of affairs now ?

MR. HARRISON MISAPPREHENDS THE ACCOUNTS.

Mr. HARRISON : I am afraid we cannot take much comfort from the speech of the chairman, which is in painful contrast to the promises held out at the original formation of the company and in the prospectus. It is no use praying about the past—we must only hope that we may have better luck in the future, but if we have repeated to us such a profit and loss aecount as we have had to-day I am afraid there is not much chance of large dividends being paid by this compauy. It seems to me that you are consuming an enormous sum every year for expenses—managing directors in New York, 3,306*l.*, stationery aud telegrams, 513*l.* (Laughter.)

The CHAIRMAN : Please bear in mind that this is a profit and loss account from the commencement of the company, covering a period of between five and six years, and that the items of expenditure which the hon. proprietor is debiting to one year is really the accumulation since the company was started. (Cheers and laughter.)

Mr. HARRISON : I was under a mistake. Still, at the end of this time you declare a dividend of 3 per cent. which is rather against the better judgment of the managing director in New York. I take it that that is for the purpose of throwing a little sop to the shareholders or we should not have heard of this dividend. (Laughter.) I am afraid that this 3 per cent. is not likely to give us a valuable quotation nor yet to redeem us from ruin. Still, to its extent I can congratulate you and your co-directors on the manner in which you have managed the affairs of the compauy. I do hope that at the next meeting you will be able to give us a more cheerful account of what has been going on than you have been able to do on this present occasion.

CALLS GOOD.

Mr. INGRAM : With reference to the calls in arrear (7,488*l.*) what has been done, or is likely to be done to collect them ? I should also like to ask whether the shares which the directors have takeu are in addition to the directors' fees shown in the profit and loss account ? The expenses are for six years, but the accounts make them look as though they were for one year.

20,000 TONS IN SIGHT.

The CHAIRMAN : With reference to the inquiry of Mr. Ayres, the manager reported on the 31st December last that we at that time had 20,000 tons of ore in sight. The developments in the lower part of the mine were exceedingly good. We published a week ago the last report, and on the 16th March the manager says : "I consider that the appearance of the bottom of the mine is decidedly encouraging." Week after week we get reports which plainly show that iu all these developments we have a very large mine, and a very large quantity of ore has been laid open. In Mr. Johnson's letter, of the 31st March, he says that the various points are looking well, and showing good ore in the bottom of the miue, varying in width from 2½ ft. to 4½ ft.

MR. CLARENCE KING'S VIEW.

I may say that when this matter was first introduced to me by Mr. Clarence King he assured me over and over again that there was an enormous quantity of ore in this mine. I remember his words distinctly. He said that as we took out the ore for reduction we should open up a large quantity year by year. He said : "People talk glibly about bonanzas. I have seen most of the mines in the world, and I never saw above two or three bonanzas, and I verily believe that this mine is one of them." We know how reliable a man Mr. King is, and if I have not enlarged enough upon the prospects of the miue—because I never like to indulge in speculations of that sort—it does seem as if Mr. King's opiniou as to the extent aud continuauce of the miue would be realised ; but we have this fact—and Mr. Jones gives the measurement—that on the 31st of January he measured 20,000 tons of ore in sight, and from that time to this at the different shafts and drifts driveu they have always opened up ore. What we have and what we can distribute is about 12,000*l.* in the bank. We shall also be pleased to distribute other moneys as they come over.

A SHAREHOLDER : What is the present cash position ?

The CHAIRMAN : We cannot get our accounts up to a close date, and it takes a long time to get the shipments realised. We have had an output each month of about $60,000, and my own opinion is that if the accounts could be made up close up to to-day we should show a considerably increased profit.

A SHAREHOLDER : You debit the account with stores, and there is a balance of 25,000*l.* to its credit.

Mr. FORD : There is 29,000*l.* balance to the good. Part of that is represented by the 6,000*l.* of cash at the mine, and part of it by stores there also. If you take all your assets and liabilities and put them one against the other the result will show a profit of 29,000*l.* Occasionally you may have a certain amount of your profit invested in stores, and until you realise your silver you will not be able to pay dividends.

MODERATE EXPENSES.

The CHAIRMAN : Our office expenses are 500*l.* a year, which includes the secretary, clerks, accountants, and rent. The amount of directors' fees include what they have taken in shares. That was part of the arrangement with the vendors. They said they would take their debt in fully paid shares, and we must do the same with our fees. The arrears of call are those of two shareholders only, under an arrangement which is beneficial to the company, and I hope in the course of a few months those arrears will be wiped off. We have reduced the debentures, and I am anxious to get rid of them entirely, but I thought the shareholders were entitled to some consideration. The interest is 10 per cent., and we were very glad to get the money at the time. We can pay it at any time that it may be convenient for us to do so.

The report was then unanimously adopted.

The CHAIRMAN stated that the dividend would be declared by the directors after the meeting.

Mr. LEWIS expressed a hope that the meeting would not be postponed another time. Whatever the state of accounts might be the shareholders ought to be called together once at least in every year.

The CHAIRMAN : I hope that in future we shall be able to hold our meetings within four or five months from the date of the accounts. I propose the re-election of Lieut-Genl. Hopkinson.

Mr. SAMUEL POPE, Q.C., seconded the motion, which was carried.

The auditors were also re-elected.

The SECRETARY read the notice convening the extraordinary meeting to alter certain articles of association. These alterations were required to meet the views of the Stock Exchange, and were of a comparatively trivial character—for example, the transfer fee was reduced and was made 2s. 6d. instead of 1s. ; the borrowing powers of the directors were limited to 50,000*l.* ; the fees of the directors were also reduced ; and the rule as to the directors' qualifications was made more stringent ; whilst sundry articles were cancelled.

The CHAIRMAN moved the necessary resolution for which a confirmatory meeting will be required.

Mr. AYRES seconded the motion, which was carried.

Capt. PAVY : I should like to propose a vote of thanks to the chairman. Perhaps I know as well as anyone the labour and trouble undergone by Mr. Hopkins over this matter. I know he has provided his own money to save the company from going to ruin, aud I think he eminently deserves the thanks of the shareholders.

Mr. POPE, Q.C., seconded the motion, which was carried by acclamation.

ON A SOLID BASIS.

The CHAIRMAN, in returning thanks, said : This has been a long aud tedious business, and there have been times when we have been on the verge of bankruptcy, but by forbearance on your part and a little help on our part, we have now put the company upon a solid basis, and I hope that our future meetings will be even more agreeable than the one we have held to-day.

The meeting was then closed.

LATEST REPORT.

The mine superintendent in his report for week ended March 21st says :—Operations below 572-ft. level are progressing satisfactorily. San Gerardo shaft, San Antonio, and Ultimo winzes are looking well, showing good ore in the bottom of the mine, varying in width from 2½ to 4½ ft. I hope to have the new level opened up within three months from this date. I hope to keep up our shipments to about $60,000 per month for, say, three months, unless, of course, some unforeseen accident occurs.

THE RUBY AND DUNDERBERG CONSOLIDATED MINING CO., 1885, LIMITED.

MINE VIGOROUSLY EXPLORED WITHOUT IMMEDIATE RESULT—FINANCIAL POSITION — ARRANGEMENT WITH RICHMOND COMPANY—SLAG DUMP—CONFIDENCE IN DIRECTORS.

THE ordiuary general meetiug of the shareholders of the Ruby and Dunderberg Consolidated Mining Compauy, 1885, Limited, was held at the City Terminus Hotel, Cannon Street, London, on Tuesday, for the following business : — To receive and adopt the report and accounts of the directors as audited ; to elect directors in place of Mr. Thomas Dickson and Lieut.-Genl. J. Walpole D'Oyly, who retire by rotation, but, being eligible, offer themselves for re-election ; to appoint auditors in place of Mr. R. Mackay and Mr. W. Russell Crowe, who offer themselves for re-election—Thomas Dickson, Esq. (chairman of the company), presided.

Mr. J. FORSTER HAMILTON (secretary) read the uotice calling the meeting, the minutes of last meeting, and the report was taken as read.

The CHAIRMAN : In moving the adoptiou of the report it is necessary I should make some few remarks in order to explain our position, aud I shall then be prepared to answer any questions that may be asked. I am very sorry that the general result is so uusatisfactory. We have done all we possibly could to make the mine a success by watchiug over the progress of affairs here, and giving them all the needed attention, but we cannot put ore into a mine if no ore is there.

AN ASSET TO BE UTILISED.

One of our directors who sat upon the board on one or two occasions went out to California on certain business of his own, and took the opportunity of going to our mine and inspecting it, and consulting with the manager.. It was suggested at the time that we should have erected furnaces and gone into smelting operations, but we did not adopt that course, and it is a very wise thing that we did not do so, as events have turned out. The smelting of our ore, and the pursuing of the course which we have concluded to adopt with regard to utilising our slag heap that has been so long remaining as a dead asset, and which we intended to utilise, was completely put a stop to by circumstances that happened at Eureka, by which the Richmoud and the Eureka Consolidated Mining

Companies, two of the largest institutions which have establishments at Eureka, for smelting—and the Richmond is well known in the City—have been compelled to stop their smelting arrangements altogether on account of the outrageous claim (I can call it by no other name) made by the United States Government. The Government came down upon them, and made a tremendous claim extending over some years, for wood used, as they alleged, out of Government forests. This claim amounted to such an enormous sum that all the mines were shut down, and they have since waited to see what the result would be. Most likely it was an electioneering "dodge," as it is called there, but for what reason it was done I do not know, though it had the effect of closing the mines. They did not smelt their ores, neither did they smelt ours, and what we had from the tributers had to remain on the dump till we saw what was going to be done. Some arrangement has we understand been arrived at now—the Government claim has not been paid—by which the furnaces are able to resume operations again, and we have a telegram this morning saying that the Richmond Company has commenced buying ore; I do not know whether they are mining themselves. They have done what is preparatory to opening the furnaces, viz., buying ore, which amounts to the same thing. I assume that if they were not able to utilise their furnaces they would not buy our ore, and as they are buying the ore I presume some plan has been arrived at. That is borne out by another circumstance, which I will explain. You are aware of the slag dump which has been for so many years accumulating, and which we could never utilise. It consists of a most intractable ore for fusion; a good portion of it is arsenate of iron, which, when liberated by fusion and heat, evaporates, and becomes a deadly poison to those who attempt to deal with it; hence no one, except during the last few years, has attempted to treat these slag dumps, which arise from silver ore taken out of limestone, on account of the poisonous arsenate in it; but Mr. Probert, of the Richmond Company, has secured a patent by which these intractable ores can be used, and the deadly effects are done away with. Therefore we approached them to see how we could utilise the slag dump, and we tried to make the best bargain we could both here and there, and finally we came to a conclusion.

ARRANGEMENT WITH THE RICHMOND.

A letter received 10 days ago gave us the first intimation of a process for arriving at an agreement, and a telegram this morning confirms that. I may state that the Richmond people have agreed to give us the use of one of their furnaces for the smelting of this ore, from which we expect to get a considerable sum. (Cheers.) The agreement is a fair one. They give us the use of a furnace, and charge us for all the materials used in smelting; and their own people, who are used to handling the ore, will undertake the smelting. They will debit us with the materials used, and charge a certain sum—we have not yet heard what it will be—for the use of the furnace. I have no hesitation in saying that the Richmond Company will not rack rent us, but that

THEY WILL TREAT US FAIRLY AND HONOURABLY,

as we have always been on friendly terms with them.

DIRECTORS ACT ON MR. RICKARD'S VIEWS.

I now come to another point, which has been the *bête noir* of our working for a considerable time, and that is the tunnel from which we expected so much. Mr. Rickard advised us upon this, and I cannot see why he should have gone out of his way and told us to do these things, as he reaped no advantage from leading us on a false scent. He said "You have the three Eagles, and in driving a tunnel you will be finding what is in the three Eagles, and when you arrive at the shaft where they found the ore before you will be in communication with the Dunderberg, so that you can work from the shaft instead of having to convey your hoisting gear, and everything to the new shaft." Mr. Galway confirmed this, and said we could not do better, therefore, we proceeded with it. We have driven 1,200 ft., some of it through very hard rock, but we have met nothing on the way. We then commenced the uprise and drove 127 ft., and an additional 100 ft. will bring us to the clearer air where we hope, if anywhere, to get ore. If we do find it, it will be the easiest thing to work it, and, therefore, it is the plan which I conceive was thought out there to be the best from a business point of view. Driving the tunnel has cost us a certain sum of money, which we are sorry to find is at present quite unremunerative. The new shareholders of the three Eagles have contributed a very respectable sum towards that, so that the Ruby and Dunderberg people have not contributed all the amount. The driving of the tunnel has not been pure and simple out of the pockets of the Ruby shareholders; these men have advanced considerable sums for calls, and we paid nothing for the three Eagles, so I see no course better than the one we have pursued. (Hear, hear.) The calls have been met very fairly considering the number of shareholders, though there are some who have not paid, and these have raised a technical point upon which they trust to get off, though whether they will do so remains to be seen. Having explained the report, I now beg to move its adoption. (Cheers.)

Lieut.-Genl. D'OYLY (director): I beg to second the motion.

RADICAL CHANGES SUGGESTED.

Mr. SUTTON: I think of all the reports I have ever seen of a mining company this is about the worst, and I should think the days of the Ruby Company are numbered. I think it is time some alteration was made, not only in the board of directors, but in the mining captain. There must be something wrong when you have a mine like the Dunderberg, which has produced 2,315*l.* of stuff at a cost of 4,900*l.* Is it not time to shut the mine down, or to alter your captain? I shall object to the accounts being passed. I make a proposition that they be not passed, and that we appoint a committee to look into the affairs of the company to see whether something cannot be done, either by the captain being altered, or an alteration made by which we shall smelt our own stuff or turn the slag into money. You have only one more call to make, and the last stage of the Ruby Company will be worse than the first, worse than five years ago, when we reconstructed. You have the tunnel of the Eagles Mine, but what have you got out of it? In 12 months' time there will be another call made, and we shall then get to the end of our tether; you will pay your debentures for the half-year, and it will be re-construction again, or handing the company over to the debenture-holders.

A MISTAKE CORRECTED.

The CHAIRMAN: It is not the case that the money has been spent on obtaining the ore; it has been spent on the Eagles Mine. If there had been no tunnel there would have been no expenditure. If you look at the Dunderberg Mine, which is the one we have always held on by, you see we have got 2,315*l.* at an expense of 1,443*l.*

Mr. SUTTON: The Dunderberg Mine has never made a profit yet.

The CHAIRMAN: Look at the figures yourself.

Mr. SUTTON: But look at the other expenses.

The CHAIRMAN: If we were to go out of existence to-morrow, the Dunderberg Mine, owing to the traditions and stories and other things which are woven in the miners' minds, would be started immediately by them. The Dunderberg Mine can always find a number of tributers to go down. We have been searching to find out where the pipes of ore come from. The tunnel has cost us about 3,000*l.*, but one-third of that has been contributed by people who were brought in the other day. As regards changing the manager, I am very sorry to say that we shall have to change whether we like it or not, as he has sent in his resignation. He is a most valuable man, and in him we have had an honest and efficient mining captain. We can create managers but we cannot create mines.

Mr. SUTTON: The question is, are we going to leave it in the hands of Mr. Galway, or shall we appoint a proper person who understands the business, who can take the slag heap in hand, and smelt it for us, and let us have the proceeds? It is idle to go on half-year after half-year, having the slag heap brought up and getting nothing from it. I have a lot of money down the Ruby Mine.

Subsequently Mr. Sutton voluntarily withdrew his amendment.

The CHAIRMAN: If any shareholder will come and go over matters with us and advise us, we shall be delighted.

WHAT THE MINE HAS AND HAS NOT DONE.

Mr. EVANS: Deducting the cost of the tunnel, has the mine paid?

The CHAIRMAN: We have our liabilities at home.

Mr. EVANS: Is it worth while to continue the mine?

The CHAIRMAN: If any of you will meet us and tell us what you would recommend, we shall be glad. We are coming near the end of our debentures, and I should like, if possible, to see any of you who would like to consult us and give us any additional advice.

Mr. EVANS: The Dunderberg Mine has earned 2,315*l.*, but the expenses are 1,443*l.*, and the money is absorbed in other things.

THE COMMON SENSE OF THE POSITION.

Mr. SNELL: If you wind up, the debenture-holders will get the property. It will be better to work the mine, and see if the shareholders cannot get something out of it. There is a prospect of getting something if the mine is successful, but if it is wound up the shareholders cannot possibly get any benefit, as the debenture-holders will get everything. The object should be to keep the expenses down to the lowest possible amount, and we hope the turning over of the slag heap containing an enormous number of tons will prove successful. Of course the debenture-holders are entitled to their half-yearly interest, but I suggested to the chairman a day or two ago that it would be wise to call a meeting of the debenture-holders, and to place the matter before them, and to ask them to forego their interest. If they will not, we can only spend the money to the end of the time, and they will then get nothing at all. I should think they would consent to forego their interest to enable the money of the company to be spent on further exploration of the mine. (Cheers.)

The motion for the adoption of the report was then passed unanimously.

DIRECTORS COMPLIMENTED AND RE-ELECTED.

Lieut.-Gen. D'OYLY: I beg to propose the re-election of Mr. Thomas Dickson. I think, from the remarks he has made, any one can see that to be a director of this company is not to recline upon a bed of roses, but still he must take the rough with the smooth. We are endeavouring to do our duty in a straightforward, honest way, and for the best interests of the shareholders. (Hear, hear.) I am sure Mr. Dickson has paid always the best possible attention to his duty, and particularly so since he has been our chairman. He has always had the interests of the shareholders at heart.

Mr. SUTTON: I second the motion. I am certain that the last speaker, Mr. Dickson, and Mr. Bellingham do all they can do to bring silver out of the Ruby Mine—(hear, hear)—but at the same time I do not think Mr. Galway is a fit man for the post. I think the company is conducted in as economical a manner as any mining concern in London, but I want to see a little of my money back.

The motion was carried, and the CHAIRMAN briefly returned thanks.

Mr. BELLINGHAM (director) proposed the re-election of Genl. D'Oyly, who had been an old shareholder, and who took as much interest in the company as any person living.

Mr. DICKSON, in seconding the motion, said: We have always worked most harmoniously, and only wish we could bring about better times.

The motion was carried unanimously.

Mr. SUTTON proposed the re-election of the auditors, but at the same time said he did not like to see two.

Mr. WARD seconded the motion.

The CHAIRMAN remarked that two auditors were appointed at the special request of the shareholders. Their remuneration was 15 guineas each.

The motion was carried.

Mr. CROWE, in returning thanks, said: I do not think the position of affairs is owing to bad management at the mine, but is simply a question of not finding ore. I was a shareholder in the original company. The expenditure in this one is reduced to a minimum, and there is nothing that has been adversely criticised.

Mr. EVANS proposed, and Mr. WARD seconded, a vote of thanks to the chairman, and with this the proceedings were brought to a close.

LATEST REPORT.

7th April.—Dunderberg: We commenced shipping ore to the Richmond furnaces last Saturday, and have shipped 34 tons from the mine up to date. There is no change to report. Eagles drift: We have had the work retarded here during the past week, in consequence of having had to put in some air pipes, and have only raised 6 ft., making a total of 176 ft. raised. We have six contractors and 20 tributers at work. Eldorado: We have shipped 8 tons from this mine during the past week.

Telegram received (30th April) from Eureka:—"101 tons tribute ore shipped; 107 tons tribute ore sold for smelting, producing to company $331; no change."

PORT PHILLIP AND COLONIAL GOLD MINING CO., LIMITED.

(IN LIQUIDATION.)

ALL SHARES WILL BE TAKEN UP—RESOLUTIONS CONFIRMED—POSITION OF OLD SHAREHOLDERS AND NEW—SUBSTANTIAL TOKENS OF SUPPORT.

AN extraordinary general meeting of the members of the above-named company, whose Registered Office is now at 6A, Austin Friars, London, was held at Winchester House, Old Broad Street, on Monday, for the purpose of confirming the resolutions, passed at the meeting held on Friday, the 12th day of April, and fully reported in the MINING WORLD of April 13th.

J. H. A. Smith, Esq. (liquidator), presided.

Mr. VERDEN (solicitor to the company, of the firm of Messrs. Kerly, Son and Verden) read the notice calling the meeting, which has already appeared. The solicitor also read the draft contract.

ALL THE SHARES WILL BE TAKEN.

The CHAIRMAN: At our meeting of the 12th April last the whole question of what course should be taken with reference to the property was so fully discussed, and the gentlemen present expressed their opinion so freely upon it, that it is unnecessary to make any long speech to-day. The question before us is simply whether we will confirm the resolutions arrived at at the last meeting or reject them. There is no medium course according to the law—you must either accept them, or reject them. Since the last meeting (of course I was not, and am not yet legally authorised or empowered to take any steps for placing your capital) gentlemen have been to me from various quarters who are anxious to enter into arrangements for taking any shares the shareholders may not feel disposed to apply for. From one group alone came

PROPOSALS AS TO TAKING 150,000 OF YOUR PROPOSED 200,000 SHARES,

and others came for lesser amounts of 20,000 and 10,000 shares. Of course, the shareholders will have priority in every respect, not only as to the shares to which they are entitled, but as to any surplus shares which may not be taken up by the present holders. Until each shareholder has received the full amount of shares he may be desirous of having, no outside person will, under any circumstances, obtain a single share from the company. If any information should be required I shall be happy to furnish it, but meantime I formally propose "That the resolutions read to you, which were passed at the extraordinary general meeting held on April 12th, 1889, be, and they are hereby confirmed."

Mr. DIXON: I second the resolution. The subject was so well thrashed out last time that further discussion seems unnecessary—more particularly as you say no alteration can be made.

QUESTIONS BY THE LATE AUDITOR.

Mr. CROWE: I should like to ask the liquidator or solicitor one or two questions. In the contract was mentioned a payment to dissentient shareholders. May I ask you to let me know what that means? I had not the pleasure of attending the last meeting, and without wishing to raise any objection, which I suppose will be of no avail, I desire to speak with reference to the proposed contract. I read here that the old company is to receive in respect to its vested interest in this property 50,000 shares credited, or is it 200,000?—(The CHAIRMAN: 200,000)—credited with 2s. each share—is that the payment to the old company for its interest in its various properties?

The CHAIRMAN: That, and taking up the liabilities from the 31st March.

Mr. CROWE: It seems to me that the old company is practically getting nothing. It is offered shares in the new company upon which there is a liability of 3s. The shareholders have seen fit to accept the proposal, and it is only now a matter of confirmation. I must draw your attention to the concluding paragraph, number 5:—"That the liquidator be authorised to enter into a contract with any person or persons for the purpose of obtaining subscriptions, or guarantees of subscriptions, for any such shares, on such terms and conditions as he may think expedient, and also to pay, advance, or guarantee the costs and expenses of, and incidental to, the formation and registration of the new company." On the face of it it looks as if the old company is to get nothing, and yet has to pay the expenses of forming the new company. Am I to understand that that is merely to be an advance for the purpose of promoting the new company, which is to be repaid to the old company as soon as the new company is in existence?

The CHAIRMAN: That is so, and it is specifically stated so in the contract.

Mr. CROWE: I do not wish you to think that I am raising any absurd objection, but my 200 shares cost me 1*l.* each. I was at one time the auditor of the company. I do not wish to throw any impediment in the way, but merely ask these questions for information, because, on the face of it, it looks as if the old company had to pay all the formation expenses of the new company, and unless there is something to control such expenditure, unless there is an assurance from the liquidator that the money will be repaid, it will be unfair.

The CHAIRMAN: I quite agree with you, but the matter is specially provided for in the contract. (Hear, hear.)

Mr. CROWE: We have your assurance that if you do advance a sufficient sum to register the new company and float it, that the new company will pay back to you, as liquidator of the old company, such expenditure.

The CHAIRMAN: That is stated in the contract, and the clause shall be read again when you have finished.

Mr. CROWE: Supposing old shareholders do not take any new shares upon which there is a liability, and probably some will not feel so inclined, is there any payment at all to be made to them in respect to their rights? What I have said has been in no spirit of animosity. I have wished to elicit from you an assurance that this money, to be paid to form the new company, will be repaid to the old company when the new one comes into existence.

Mr. CRANE: The last sentence in the third resolution I do not quite understand: "If the liquidator shall obtain any premium for the shares to which members of this company, other than such dissentients, would have been entitled had they applied for the same as aforesaid, such premiums, less the costs and expenses of realisation, shall belong and be paid to such members by the liquidator." I suppose that if an old shareholder does not apply for his full number, and the surplus shares are disposed of at a premium by the liquidator, the premium will be paid to the shareholder.

The CHAIRMAN: That is what it means—it does not mean the dissentient.

A SHAREHOLDER: Do I understand from you that the whole of the new shares have been applied for outside the old shareholders? I think you said 150,000 have been applied for in one block, and that 10,000 or 20,000 have been applied for besides.

SHARES WILL NOT BE ISSUED UNDER PAR.

The CHAIRMAN: I said that until these resolutions are passed there is no power for me to negotiate, but rather in anticipation of them, several gentlemen have already been in communication with me to know on what terms I am prepared to deal with them for any shares present holders may not take. One group wanted to negotiate on the basis of 150,000 shares, and others for smaller numbers—of course, all at par. The shares cannot be issued at less than 3s. Part of the consideration in the contract for the sale of the property is the handing over to the liquidator 200,000 shares credited with 2s. each. Those shares are the property of the shareholders if they like to take them. If not, then the liquidator disposes of them on the best terms he can, at and above par, but with not less than the minimum amount of 3s. to be received by the new company.

Mr. CROWE: Then the whole of the capital will be only these 200,000 shares, first of all submitted to the shareholders, and if they do not take them, outsiders may come in and derive the advantage of the 2s. credited as paid, but 6d. per share has to be paid directly.

The CHAIRMAN: That is exactly the position.

MR. BAKEWELL SURPRISED.

Mr. BAKEWELL: This is such a very ordinary procedure in the reconstruction of a company upon the ruins of an old one, that I am almost surprised any question should be asked upon it. (Hear, hear.) As far as my experience goes the old shareholders are relieved of a very pressing liability, which would have occurred, of about 1s. a share. (No.) At all events, the directors told you so, and I think we are entitled to believe what they say. (Hear, hear.) In this case a speculation has been conducted for a certain time by the old company; the old company does not feel inclined to go on with it, but offers it practically to a new company. Those members of the old company who wish to go on can do so; those who wish to remain out can do so, but they will have no liability, and receive no advantage. If they enter into this new company they, as it were, take up a fresh speculation, which may be a grand success or a total failure.

HORSE V. SADDLE.

We may find a "horse" directly, and most likely we shall; but the question is—when shall we find the "saddle?"

Mr. CROWE: Perhaps you will find the "saddle" first. (Laughter.)

Mr. BAKEWELL: Therefore, it is well known to every shareholder that this is a pure speculation, as in point of fact, if the plain English be used, every mining company is. Therefore, when questions are asked that I should have supposed every gentleman could have answered for himself, who had ever taken a share in a mining company, I think some of our time may possibly have been wasted. (No.) This is a work of the same nature as if it were a gold digging enterprise carried on by two or three men. Those two or three men leave it, and their places are taken by two or three others, who possibly may find what their predecessors failed to find. In this case it is perfectly legitimate, because everything has been done that is possible to protect the rights, privileges and interests of the old shareholders.

VIEWS OF THE SOLICITOR.

Mr. VERDEN: It seems to follow necessarily that there will be practically three classes of persons in the old company having relations to the new. In the first place there will be those who take up the shares, as to whom their position is clear. Then there may be those who may dissent. The Act of Parliament provides that when shareholders dissent from a scheme of this kind their interests are liable to be bought up. Then there is the other class of persons who may not dissent, and who may not take the shares in the new company. As to these persons, the scheme provides that any premiums obtained by the liquidator shall belong to them, so that their interests are protected to the very best possible extent. The only other question that remains is as to the payment of the preliminary expenses. Some one must pay them, and the provision is that the liquidator pays them in the first instance, and the new company repays the amount to the liquidator. That is provided by the third clause of the agreement which I have read, and which I will read again. (Reads clause.) That clearly provides for this, and if the new company has a prosperous existence it must pay for the cost of creating itself.

SUBSTANTIAL SUPPORT.

The CHAIRMAN: I think the solicitor has clearly answered all the points that were brought up, but I might refer to the small attendance by stating that after the last meeting I sent to each shareholder a full report of the proceedings, accompanied by a circular, asking those shareholders who were in favour of the scheme to send me their proxies for voting in favour of it. I have a very large number of proxies representing a considerable proportion of the shareholders. I have also communications from two shareholders, one holding nearly 2,000 shares, and another just a little under. They have not sent their proxies, but wire: "I will take shares in the new company to the extent of present holding." I think I may take it that the general feeling is that you want to close up this matter, for the advertisements we inserted for several consecutive weeks resulted in only the trifling offer which was ignominiously rejected at the last meeting. Meantime we must keep the mine unwatered, and Mr. Bland hints that it is necessary for us to take some further steps, as otherwise we may get into trouble for breach of our covenant, or be at the mercy of persons who might denounce us to the Minister of Mines.

The resolution was then unanimously confirmed.

Mr. BAKEWELL proposed a vote of thanks to the chairman.

Mr. CRANE seconded the motion, and with Mr. SMITH'S reply the proceedings ended.

THE OPHIR TERRITORY CONCESSION, LIMITED.

OBJECT OF SPECIAL RESOLUTION—PROGRESS OF THE COMPANY—AN UNFOUNDED STATEMENT RECEIVES A PROMPT DENIAL.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Monday, when the following resolution, which was passed at the extraordinary meeting of the company, held on the 8th day of April, 1889, was submitted for confirmation as a special resolution (that is to say):—

"That the company be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867, and that Percy Mason, of Nos. 29 and 30, King Street, Cheapside, in the City of London, chartered accountant, be, and he is hereby appointed, liquidator for the purposes of such winding-up." Should the foregoing resolution be duly confirmed, notice was given that there would at the same meeting, be proposed the following extraordinary resolution (that is to say):—"That Mr. Percy Mason, the liquidator of the company, be and is hereby authorised to divide among the contributories of the company, in specie, any part of the assets of the company; and in particular all or any of the shares in the Ophir Concessions, Limited, allotable by that company to this company or its nominees, under or by virtue of the agreement, dated the 6th day of March, 1889, whereby the Ophir Concessions, Limited, adopted a previous agreement, dated the 18th day of February, 1889, and made between this company of the one part and John Richard Taylor of the other part, which agreements the said liquidator is hereby authorised and directed to carry into effect, with such modifications (if any) as he may deem expedient, subject to the approval of the directors."

Col. INNES (chairman of the company) presided, and in the absence, in Lisbou, on the company's business, of Mr. Henry B. Greenwood (secretary) read the notice calling the meeting."

The CHAIRMAN: I have nothing to add to what I said at the last meeting. The first resolution I have read was then carried unanimously, and I will now propose that it be confirmed.

Mr. WARD: I beg to second the motion.

EXPLANATIONS.

The CHAIRMAN put the resolution, which was carried unanimously.

The CHAIRMAN next read the special resolution as above, and in proposiug it said: I should like to make two or three remarks. We did not know that this resolution was necessary, but our solicitor and counsel seem to think that it should be passed. There are three points about it on which I should wish to make some remark. One is the word wherein the liquidator is authorised to divide amongst the contributories to the company in "speiie." There is no "specie" that I know of to be divided, because it all goes to the new company, but counsel has put it in, and so we have left it there. The next point why it is necessary that this special resolution should be passed is to enable the company at once to distribute the new shares, and in particular, all or any shares of the Ophir Concessions. It is to enable them to distribute the 1*l*. shares in exchange for the 5s. shares at once. The last remark I would wish to make is that the directors took upon themselves to add the words at the end of this resolution, "Subject to the approval of the directors." The feeling seem to be strong at our last meeting, that the liquidation should not be left absolutely in the uncontrolled power of any one man. The directors had proposed Mr. Percy Mason as liquidator, and it was almost unanimously carried by the meeting, and, therefore, we asked Mr. Percy Mason to attend a board meeting, and explained to him that it appeared to be the feeling of the meeting that the directors should be consulted, and have an opportunity of seeing the liquidation carried on advantageously to the shareholders, and Mr. Percy Mason at once met us, and said it was his wish it should be so.

Col. NOEL MONEY: I move the resolution.

Mr. WAUD seconded the motion, which was carried unanimously.

The CHAIRMAN: I may mention, in conclusion, that Mr. Greenwood, the secretary, is in Lisbon. He has been in daily communication with the Mozambique Company, and I believe we shall be able to announce before long that the arrangements he has made are very favourable to the company. I would rather not discuss the matter as to what they are as the negotiations are pending, but I think everything will be found to be highly satisfactory. Our agent wrote from Durban, saying that he and his party had arrived there, and that they were going to Chiloane at once by a coasting steamer. There he would present his Government passport to the authorities, and would meet the principal engineer of the Mozambique Company, who left at or about the same time our agent did, to assist him in locating his claim. Other engineers have been sent out to assist us, and I learn with great satisfaction that the mines working in Manica under the Mozambique Company are going on very successfully, and that they have just raised 40,000*l*. to enable them to be worked to the full extent. This is the special meeting, and the special resolutions have been carried, and, therefore, I declare the meeting closed.

AN ERRONEOUS IMPRESSION.

Mr. WAUD: There are a good many others very anxious to know about the unfortunate decree issued, and signed by the Ministry and countersigned by the King. I do not want you to state anything that you do not think advisable. It is a very severe blow to those who have relied on the good faith and management of this board. If you could give us the slightest possible information it will not only be satisfactory to those who are here, but to those who are absent, when they look at the sheets each morning and see the shares quoted down to 4s. 6d. to 5s. 6d. I must say there must have been something behind the curtain which has been hid from the directors, or they would not have felt justified in adopting the course they did if they had had the slightest idea that this unfortunate decree would be issued by the King. I have seen it stated in print, that the Ophir Company referred to had nothing to do with our concessions, and I trust you will be able to confirm that by your own month.

A DISTINCT AND SATISFACTORY REPLY.

The CHAIRMAN: All I can say, is that the directors have hidden nothing whatever from the shareholders. Our title has been approved by the solicitor, it has been approved by counsel. It has been approved also by the solicitor of the two sub-companies which have been formed. The parties forming this expedition have been received in Lisbon with friendship, and have received Government passports, with God speed. I do not know that I can say anything further (Cheers).

Mr. WAUD: All these things occurred before the decree was issued, but has anything occurred since the last meeting that has come to lead you to suppose that our concessions have been interfered with in an official way.

The CHAIRMAN: I have not, nor have any of the directors, received any information that would lead us to suppose for a single moment that the concessions have been or will be interfered with.

Mr. WAUD: That is just the class of remark which will have the desired effect outside as well as inside this room.

The CHAIRMAN: Nothing whatever has occurred upon which to base any such apprehension. That closes the meeting.

Mr. WAUD: I beg to propose a vote of thanks to the chairman for the able manner in which he has conducted the proceedings of this short meeting. It is so far satisfactory what he has said, and I trust that at the next meeting his report will be even more satisfactory.

The motion was carried unanimously, and with the brief reply of the CHAIRMAN, the proceedings closed.

THE YURUARI CO., LIMITED.

THE assistant secretary advises receipt of letters from the mines, dated Chile, 3rd inst. The superintendent confirms cablegram already published, and says as regards the mine, that he forwards exhaustive report from Capt. Rogers, and can only add that he is pleased to report that the mine throughout is showing a marked improvement in the levels both east and west. He states:—"With regard to the Water shaft, Capt. Rogers has just cut the lode in the shaft. The lode in No. 4 drift is looking exceedingly well. I went down a few days ago, and can personally report that the lode is showing visible gold throughout. There is no doubt that the future of this property lies between the Water and Cenicero shafts, between which there is sufficient quartz to keep us going for years to come. I feel more confident than ever that before long the mine will be yielding larger returns than heretofore."

MINE REPORT.

1st April.—Water shaft: Shaft now 90 ft. below platform No. 4; progress during the month, 15 ft. When I commenced sinking the shaft on the 21st March, no lode was in sight, but I am pleased to report that the lode has now become filled with quartz, and I have every reason to expect, as I have already reported, to strike the pay-shoot with very little further sinking. I have commenced cutting a platform, and started a drift eastward close to the bottom of the shaft. This drift will be 85 ft. below No. 4 drift, and will be on the same level as No. 8 from Cenicero; the lode here is the best in the shaft, being 4 ft. thick, walls well defined, slightly mixed with bluestone, but improving as the drift advances. It will take me a few days to finish the platform, after which I shall continue to sink the shaft. Stope back, No. 4 drift east: 110 ft. from centre of shaft; progress made during the month, 22 ft. 6 ins.; lode well defined, 3 ft. 1 in. in thickness, showing visible gold in the stope. Drift No. 4 east: Length, 183 ft. from centre of shaft; progress during the month 18 ft., showing a good lode, carrying visible gold, 2 ft. 6 ins. in thickness. Cenicero shaft: Stope No. 10 east, 200 ft. from centre of shaft; progress made during the month 11 ft. 6 ins.; the lode in this stope is very good, and averages 6 ft. in thickness, with well-defined hanging and footwalls, showing visible gold throughout the stope. Stope No. 12 east: 308 ft. from centre of shaft; progress made during the month 70 ft.: the lode in this stope also looks well, with an average thickness of 5 ft. 2 ins. Stope bottom of No. 9 west: 600 ft. from centre of shaft; progress made during the month, 12 ft. 6 ins.; the lode in this stope is well-defined, with an average thickness of 6 ft. 2 ins. I am now driving drifts Nos. 8, 9 and 10 west, and the cross-cut south of No. 11 drift east. No. 8 drift west: Length, 684 ft. 6 ins. from centre of shaft; progress made during the month, 16 ft.; the lode at end of this drift is 2 ft. 6 ins. thick, with well defined footwalls; quartz of good quality, showing visible gold. Drift No. 9 west: Length, 730 ft. 6 ins. from centre of shaft; progress during the month, 20 ft. Since commencing to drive this drift the lode has become better defined, and has increased in width, being now 3 ft., with quartz of good quality. Drift No. 10 west: 601 ft. 6 ins. from centre of shaft; progress during the mouth, 18 ft.; this lode has improved in width, with well defined footwall; quartz of good quality. I would recommend that the driving of drifts Nos. 8, 9 and 10 west be continued, as the lode in each of them is much improved. I have to report generally that in both the shafts above referred to, and in the levels both east and west, a marked improvement has taken place in the mine. The chief feature is that I have cut the lode in the Water shaft higher up than I expected, and consider the future of the property is now a certainty.—W. ROGERS, Mine Captain.

The share certificates in the Manica Ophir Mining Co. are now ready for delivery, in exchange for banker's receipts for payment of allotment and first call, at the offices of the company, 3, Broad Street Buildings, London, E.C.

HOLLOWAY'S PILLS. — Enfeebled Existence. — This medicine embraces every attribute required in a general and domestic remedy. It overturns the foundations of disease laid by defective food and impure air. In obstructions or congestions of the liver, lungs, bowels, or any other organs, these Pills are especially serviceable and eminently successful. They should be kept in readiness in every family, being a medicine of incomparable utility for young persons, especially those of feeble constitutions. They never cause pain or irritate the most sensitive nerves or most tender bowels. Holloway's Pills are the best known purifiers of the blood, the most active promoters of absorption and secretion, whereby all poisonous and obnoxious particles are removed from both solids and fluids.

"Life," 21st February.

"Colon Gold Mine shares are likely to rise."

"Fair Trade," 15th February.

"The Tetuan Gold shares, which we recommended as a mining investment some week or two ago, have thoroughly fulfilled our prognostication. Colons can be had for 2s. 6d. to 3s. There ought to be a big rush to be in this swim."

"Society Herald," 26th February.

"The interest which has been displayed of late in Colombian Hydraulic Mines continues. The favourite of the hour appears to be the Colon Mines, which are in the immediate vicinity of the Tetuan, Orita, Maravilla, and other famous Colombian mines worked by the hydraulic process. I am assured, on the same good authority which aided me in predicting so accurately the course of Tetuans months ago, that the advance in the price of Colon shares has only just made a beginning, and that they may be expected to cross 20s. within a very short time. Be it observed, I by no means mean to imply that they will not go very much higher than the figure mentioned, but my policy is to advise my readers step by step, so that those who have bought at low prices may turn out their shares whenever they have a good, respectable profit."

"Society," 2nd March.

"Colon Gold shares are likely to have a considerable rise. It is even wise to buy these shares and carry them over from account day to account day. They should, however, be acquired and put by until they show dividends—a time not far distant. The Colon Mines are situated in Colombia, a district now where the mines are significantly productive. All those who are investors should read the report of Mr. Welton, the engineer of the Colombian Hydraulic and Orita Mines. He is a great authority, and in his conscientious statement exhibits what this really legitimate property should produce to the Colon shareholders."

"Stock Exchange Times," 2nd March.

"COLON.—None should stop buying these shares."

"The Hawk," 19th February.

"Colon Gold shares have come with a rush in the last few days. The mine is undoubtedly one of the richest in the gold-paved district of Colombia, consisting of auriferous gravel deposits which are worked on the hydraulic system. It is a near neighbour of the celebrated Orita Mine, already cleaning up to the tune of £1,200 a month. Major Ross, a director of the Orita Mine, has just joined the board of the Colon, and his presence signifies that the works will go forward with redoubled energy."

"Country Gentleman," 2nd March.

"It will be remembered that last week and the week before last I had a good deal to say about Colon Gold mines, and stated that it would not be long before a report, which would astonish even those who believed most firmly in the mine, would be forthcoming. This report is now to hand, and, reading it, it really appears as if the engineer, Mr. W. S. Welton, who is responsible for it, had been drawing upon his imagination; but I am assured that this is far from being the case, and that Mr. Welton has underrated the brilliant prospects of the mine. One thing should be remembered, and that is that Mr. Welton is a well-known and highly-respected gentleman, and anything that emanates from him should be received with the respect that it deserves. Mr. Welton can lay claim to having seen his reports regarding other mines fully borne out by actual results."

"Country Gentleman," 23rd February.

"I can but repeat the advice I gave last week regarding Colon Gold mining shares, and that is to buy them at once. Since I first mentioned them they have risen from 3s. to 11s. 6d., and it is highly probable that they will go as high as 15s. and over. The property, which has only recently come into such great prominence, is situated quite near the famous Colombian Hydraulic and the Orita. It is stated by thoroughly competent authorities that the deposits cover over 1,000 acres, the property really consisting not of one mine only, but of five mines equally rich and promising."

"Country Gentleman," 16th February.

"COLONS.—The jump has been as smart as I prophesied, and I hear that the top has by no means been reached. The mine has suddenly been found to be far richer than was ever believed, and consequently the shares, of which there are not very many about, are in the most active demand. An enormous amount of business has been done in them during the week, and they close to-day very hard and firm. In fact, the movement in Colons has been *the* feature of the week."

"Country Gentleman," 9th February.

"Rumour says strong financial combination has wrought a change in the management of a mine for some time before the public, and that the shares, now at 3s., will have a large and smart rise. My readers will do well to watch for this. I may not mention the name at present, but next week shall be able to give full particulars."

"Financial Chronicle," 20th February.

"Colon Gold shares promise a further advance."

"Financial Chronicle," 23rd February.

"COLONS.—The rise has only begun."

"Rialto," 16th February.

"Colons seem to be good for a big rise in price."

"Bullionist," 2nd March.

"COLONS.—Investors and operators should buy at present prices An excellent report has been received upon the Colon Mines from Mr. W. S. Welton, one of the most experienced hydraulic miners of the day."

"Bullionist," 2nd March.

"Colons are steady, and should be bought. From all we can learn regarding this property, there is no doubt as to its great value, and when the results of the operations now being carried out under the new management become known, we quite anticipate the present price to quickly double itself."

"Stock Exchange."

"Colons will soon be better. Those who should know are buying the shares again quietly. Our readers might do worse than follow this example."

"Stock Exchange," 16th February.

"The feature of this market during the past week has been a great rise in Colon Gold shares. Early on Wednesday morning these shares—then only at 3s. 6d.—began to spring away by leaps and bounds, and in but a few minutes a rise of 5s. was to be recorded. Judging by the prospects of this undertaking, now that some important changes have been effected in the management, the shares ought to have a much further rise, and doubtless but a few days will see them several shillings higher than now."

"Stock Exchange," 23rd February.

"Colon Gold shares have met with great demand during the current week. The reports from the mine are of a very satisfactory character and, we consider, justify a further advance. Reports say that these shares will go a good deal higher."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Investors' Guardian," 23rd February.

"Colon Gold shares are very firm, and there are many indications of a further advance in price. It would not surprise us to see them go to double the preseut quotation."

"London and Brighton," 17th February.

"The Colar Mines are of the same nature as the Tetuan, being hydraulic, and comprise something over 1,000 acres close to the well-known Colombian Hydraulic and Orita Gold Mines. The advantage these cheap-priced shares present to the mining speculator is that there is plenty of room for a rise, while the possible fall is very limited, and at the worst the loss is infinitesimal compared with high-priced shares which, if they have a chance of a rise of one or two points, have also the probable contingency of a drop of four, five, or perhaps more, at any time."

"London and Brighton," 20th February.

"Colon Gold shares are certainly good to buy for a rise."

"Mining News," 2nd March.

"In the case of Colons, one of the popular speculations, we feel sure prices will advance, and these shares offer an excellent investment medium at their current price. Colons will go much higher than now selling."

"Stock Exchange Times," 2nd March.

"We are confident that the shares will yet see from £3 to £4 each."

"Court Circular," 2nd March.

"Things speculative have been more or less depressed during the last few days, and even the shares of the Colon Gold Mines have had a slightly backward tendency, in common with the rest of mining investments. This is, however, not a bad thing for those who want to speculate, since the report from the mines would show Colons to be very good business, and, if they are a shilling or two cheaper, all the better for the buyer, seeing that they can be so thoroughly recommended."

"Financial World," 16th February.

"COLON.—A pleasant surprise awaited those connected with this hitherto unknown enterprise last week. Very little has been heard of this modest placer mine, until a demand sprang up in the middle of the week for the shares, which forced them upon the attention of the market, and, as a consequence, the shares rose in one day from the insignificant price of 2s. 6d. to 8s., an advance equally as important as some which have had to be recorded with respect to the Witwatersrand properties, when we consider how little has been done to bring them into prominence. As a thread of the gossamer will show the direction of the wind, the results which have lately been made by several well-known placer properties may be taken as giving in some degree an indication of what is yet in store for those whose faith is pinned to properties of this description, in preference to those of the quartz mines. A company whose shares can advance in one day 6s. ought to possess a property destined to make some flutter in mining circles."

"Financial World," 2nd March.

"COLONS.—These shares, we believe, have now reached their lowest ebb, and those who want to secure an interest in this ought to do so when the price stands at something reasonable. The decline in the price was due to indiscriminate selling by speculators who desired to realise."

"Mining World," 16th February.

"We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulations. We look for a steady advance in the returns in the near future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are managed with honesty and ability."

"Mining World," 16th February."

"Hydraulic mines have been to the fore, and particularly the share of the 'Colon,' of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, began to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success."

"The Capitalist."

"The most remarkable has been Colon Gold shares, which are now quoted 10s. to 11s., with every prospect of a still further rise."

"Financial News," 14th February.

"The feature of the mining market yesterday was the rise in Colon Gold shares. The Colon Gold property is a close neighbour of the Colombian Hydraulic, the Orita, and the Tetuan, and, if we may judge from the reports, a worthy competitor with them. Among the directors of the undertaking we notice Mr. Sankey, of the Colombian Hydraulic, and Major Ross, of the Orita—an ample guarantee that the management will not be lacking in enterprise or intelligence."

"Financial News," 15th February.

"In another column will be found the report of Mr. B. Anderson, a well-known American hydraulic mine engineer, upon the Colon mines, which we had occasion to mention in our yesterday's issue. According to Mr. Anderson, a sampling of the gravel gave, under hand washing, a profit of $1,351 the amount of water used being only 4 to 6 miner's inches. The mine, we understand, has been worked more or less systematically under the hand process, or sluicing, and always with results similar to the above. The new directors of the company have determined to work the mines in a more energetic manner, and have already entered into a contract for the construction of the works necessary to bring 500 miner's inches of water on to the mines at a cost of £14,000, this sum being only half the amount of working capital still remaining intact with the company."

"Financial Chronicle," 2nd March.

"COLONS.—We may shortly expect to commence moving again."

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

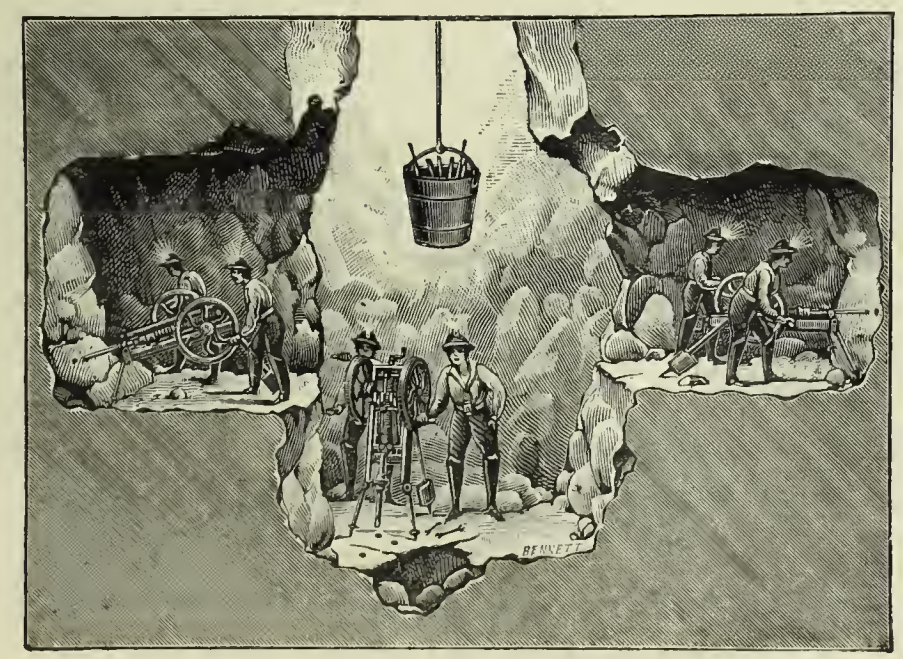
A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, testimonials, &c., to

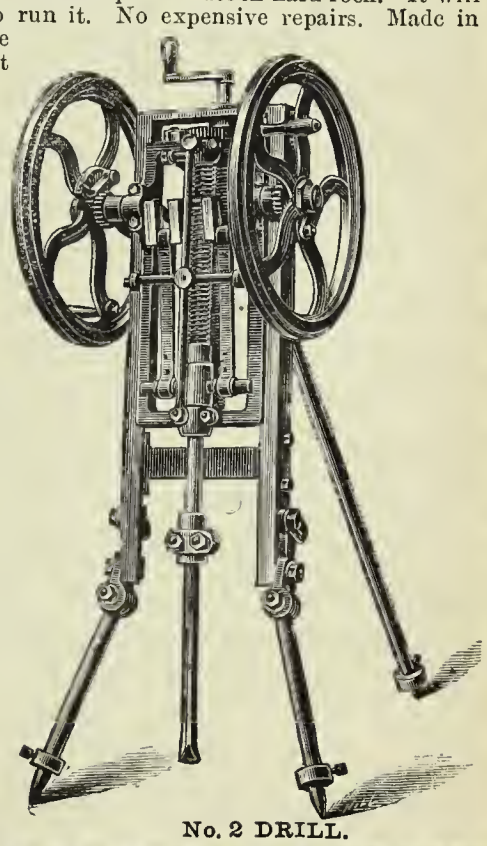
WELLINGTON & CO. (Successors to CLARK & WELLINGTON),

MANUFACTURERS.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.



SHOWING DRILLS AT WORK SINKING AND DRIVING.



No. 2 DRILL.

OPHIR CONCESSIONS.

NOW that all the legal formalities in connection with the re-organisation of this Company have been completed, we again strongly advise holders to take advantage of the nominal price at which these shares now stand to average. To-day's quotation is an absurdity. There was absolutely no cause for the decline further than the fact that as these £1 shares could not be delivered until after the confirmatory meeting, the jobbers, as usual, took advantage of the position to shake out timid holders, and pick up some cheap shares. No company could be progressing more favourably than the Ophir, and the clear and businesslike statement of the Chairman at Monday's meeting will dispel once and for all the vague and unaccountable rumours respecting the validity of the Concessions which somehow or other got afloat. This Company is working in perfect harmony with the authorities at Lisbon, and the reception the leaders of the Sabi Ophir expedition received is evidence enough, if evidence is wanting, of the cordial relations which exist between the two Companies. Captain Lemon was handed an official Government passport, and he and his party are now well on their way to this extraordinary and enormously rich Manica country. He takes a well-found small steamer with him, and his intention is to ascend the Limpopo and strike inland for the wonderful deposits he referred to at the statutory meeting of the Ophir Company. The Directors are not working in the dark: they are not sending costly expeditions here and there on the off chance of finding gold. The gentlemen in charge of the various parties of engineers know exactly where to go; moreover, they are no strangers to either the country or the chiefs. The head of the Manica Ophir expedition, who will proceed through Matabeleland with the Matabele chiefs, lately cabled as follows:—"Arrived at Kimberley, engaging mining experts and arranging expedition. Will proceed forward at once to Matabeleland *en route* for Manica." The Directors, we understand, expect very shortly to receive satisfactory accounts from the gentleman in charge of the first expedition that was started; this would be from the neighbourhood of the Busi and Sabi Rivers. Nothing is being left undone or to chance, and if only one of the expeditions proves a success these shares must go up enormously. As some doubt appears to exist on the subject, we may state from letters just to hand from Lisbon, that the Mozambique Company's engineers are now at work in Manica, and so confident do the Directors feel as to the future, that they have doubled the capital of that Company for the purpose of thoroughly working these mines. Mr. Greenwood, the secretary of the Ophir, who is now in Lisbon, writes very favourably as to the result of his trip, and it is not unlikely that he will have an agreeable surprise for the shareholders on his return.

The new opening to the Zambesi which has just been discovered is a matter of the greatest importance; the channel is some 500 yards wide, and deep enough to allow vessels of from 400 to 500 tons to go direct from the sea up to Zambesi to Tete and surrounding districts. In fact, everything is working in the direction of the development of the trade and the opening up of this Manica country, which is only separated from the Transvaal by the Limpopo. Already the excitement is spreading northward, and rich as the Randt and De Kaap Goldfields are, they will soon be neglected for Zoutpansburg, exceedingly glowing accounts regarding which are being received. Prospectors are now rushing to that quarter, which is another proof of what has been so often stated, *i.e.*, that the Transvaal is simply the fringe of the gold-bearing basin, the centre of which is in this wonderful Manica country. What will the price of Ophirs be when the Mining Engineers of the world realise this? These shares cannot go any lower, but who can say to what price they may not have risen in a few months hence? The boom is setting in strongly in this direction.

LEWIS HOPCRAFT, Esq.

SECRETARY (*pro tem.*)

Mr. E. J. D. NEWITT.

OFFICES.

15, QUEEN STREET, QUEEN VICTORIA STREET, LONDON, E.C.

PROSPECTUS.

THIS Company has been formed to acquire the patents and other rights of the Hopcraft Furnace for Great Britain, together with the patent and patent rights for France, Italy, Belgium, Spain, Turkey, the Colonies of New South Wales, Victoria, and New Zealand, and the United States of America, in all of which countries the patent for the furnace has been applied for, and fees paid; also the right to obtain patents for all other countries in which it may be deemed advisable by the Company to secure them.

The directors propose to sell the rights for counties or districts in this country and abroad, for the manufacture and sale of the furnaces, reserving to the Company the manufacture and sale in such districts as they may retain.

The extraordinary results attained by actual working of the Hopcraft Furnaces have been recently made known to the public by means of a series of exhibitions in London of the furnaces in operation.

The special advantages of the Hopcraft Furnaces are :—

1. They are specially constructed to burn small coal, slack, or coal dust, but can be arranged to burn with equal facility large or mixed coal as ordinarily used.

2. They are self-feeding, self-stoking, and, where necessary (as for continuous steaming), self-cleaning.

3. They effect practically complete combustion, and are consequently smokeless in operation.

4. They are designed for marine and land boilers of all descriptions.

5. The Hopcraft Furnaces can be fitted to existing boilers in a couple of days. The apparatus is not complicated, requiring but little skilled labour either in working, in taking out, or in replacing the whole or any portion of the furnace, and the fire bars are found to wear exceptionally well.

6. With this smokeless furnace the same evaporative efficiency is obtained from the use of small coal as from best large steam coal when burnt with the ordinary draught, and the duty obtainable from the boiler is much increased. The great economy secured to manufacturers, steamship owners, and others, is evidenced by the following figures taken from the *Colliery Guardian* of 3rd May, 1889 :—

The present price of best large steam coal in the Lancashire district is	Per ton. 10s.,	while small or slack is	Per ton. 4s.
„ Newcastle	10s.	„ „	3s. 6d.
„ South Wales... ...	14s.	„ „	7s.
„ South Staffordshire	9s. 6d.	„ „	2s.
„ Loudon (Welsh) ...	22s.	„ „	9s.

The representatives of most of the leading scientific and other papers in London and the provinces have attended exhibitions of the Hopcraft Furnaces, and have reported in detail as to their mechanism, and as to the remarkable results they are achieving. A large number of these reports and illustrations of the furnace are enclosed with the prospectus.

When Mr. Hopcraft had perfected his invention as a smokeless furnace, he submitted the same to the National Smoke Abatement Institution for their inspection and approval. Exhaustive tests, extending over three days, were made by Mr. D. K. Clark, the testing engineer to the institution, and the following is an extract from its annual official record :—

"The system is very effective as a smoke preventer. In point of evaporative duty and economy, as compared with using hard steam coal in the ordinary furnace, as much water was evaporated per hour by Welsh dust in the automatic furnace, with an economy of 50 per cent. in cost, as by hard steam coal in the ordinary furnace, and 13 per cent. more water, with 48 per cent. of economy by Durham slack."

Mr. D K. Clark's full report to the National Smoke Abatement Institution accompanies the prospectus.

The results which have ensued on the introduction of the Hopcraft Furnaces prove that, from the actual working of these furnaces recently fitted to a marine boiler, a saving is effected at the present price of coal of more than £1 per day per furnace, and this without emitting smoke.

On land boilers the results are equally remarkable. The actual saving effected by the Hopcraft Furnace amounts to over 50 per cent. in London, being, in fact, the difference in cost of small coal or slack and the more expensive large coal commonly used. In English colliery districts the saving is considerably greater, as there the small coal is so much below the price of large.

This satisfactory saving has been recently effected at the works of important London firms, and the economy has been proved by continuous firing, extending over periods varying from two to 12 months, smoke being prevented in each case.

In connection with land furnaces, taking the case of works having 10 furnaces requiring, say, 15 tons of coal per day, costing 10s. 6d. per ton, by the adoption of the Hopcraft Furnace the same weight of coal (small or slack) costing 3s. 6d. per ton, doing precisely the same duty, effects a saving on 300 working days of £1,575 per annum. In such a manufacturing district, the centre of, say, 1,200 factories or works of the average capacity named, the saving on the same basis, by the adoption of the Hopcraft Furnace in one-half of these factories, will be seen to amount to nearly one million sterling per annum, with the great additional advantage of the absence of smoke.

Taking the case of marine boilers with the low average of, say, 10 furnaces per steamer, the saving by the use of the Hopcraft Furnace will amount on 200 days' working to the considerable sum of £2,000 per steamer per annum. Many of the large steamships of the Atlantic Liner class are fitted with upwards of 60 furnaces each, and consume over 300 tons of coal each per day. The saving in these cases will be larger in proportion, and will amount to over £100 per day, or if under steam 200 days in the year, their total saving will amount to £20,000 per annum for each steamer. A steamship of the P. and O. type, trading between England and New South Wales, consumes about 5,000 tons of coal on the voyage out and back; the saving in this case, with the Hopcraft Furnace, may be taken at about £2,000 on the voyage.

It is hardly necessary to multiply statistics to show the commercial value of an invention of such importance as this, and the far reaching benefits it is calculated to afford to the industries and to the steam shipping of the world.

The cost of applying the Hopcraft system to existing furnaces is so moderate as to be covered by the saving actually effected in a short period of working.

The directors are satisfied that a large and profitable trade awaits the Company. They are in possession of inquiries for fitting a large number of land boilers, and for equipping the steamships of some important lines. The execution of orders has already commenced at the London factory, taken over by the Company, and the directors have the offer of further premises suitable for the requirements of the Company's business in Birmingham.

The directors consider that the profits which will accrue to the Company on the sale of the furnaces will be ample, first, to provide the interest on the 8 per cent. cumulative preference shares, and leave a substantial balance available for distribution as follows, viz., three-fourths to the ordinary shareholders, and one-fourth to the preference shareholders. Having regard to the large returns anticipated from the manufacture of the furnaces, and from the sale of the concessions, the ordinary shares offered for subscription are expected to rank for a high rate of dividend.

The vendor company has expended a considerable amount of money in perfecting the invention, in erecting trial furnaces, in taking out the British and foreign patents, in exhibiting the various types of furnaces, in opening a London factory, and in obtaining the orders with which this Company commences its business. It transfers all rights, British, foreign, and colonial, to the present Company for £150,000, payable as to £25,000 in cash, and the balance in shares, or partly in cash and partly in shares, at the option of the directors.

It is intended to make early application for a Stock Exchange quotation of the Company's shares.

The following contracts have been entered into, and copies of the same may be inspected by intending applicants for shares, at the office of the Company's solicitors :—

(1.) An agreement dated the 3rd day of June, 1887, and made between Lewis Hopcraft of the one part, and the Automatic Furnace Grate Company, Limited, of the other part.

(2.) An agreement dated the 7th day of May, 1889, and made between the Automatic Furnace Grate Company, Limited, of the one part, and George Watson, for and on behalf of the Company, of the other part.

The vendor company will provide all the preliminary expenses, and the charges for the formation of the Company up to and including the first allotment of shares, and in connection therewith it has entered into agreements and arrangements with third parties, for guaranteeing subscriptions to the present issue of shares, to none of which agreements or arrangements the Company is party. Applicants for shares will be deemed to have waived as against all persons their right to any particulars of these agreements and arraugements, or of any contracts subsisting in connection with the business, whether under section 38 of the Companies' Act, 1867, or otherwise, and to accept this as sufficient notice thereof.

Applications for shares should be made on the form accompanying the prospectus, or by letter, and forwarded, together with the amount of the deposit, to any of the banks named at the head of the prospectus. If the whole amount applied for by any applicant is not allotted, the surplus of the amount paid on deposit will be appropriated towards the further amounts due on the shares allotted; and where no allotment is made the amount will be returned in full.

Prospectuses and forms of application may be obtained at the offices of the Company, or of their bankers or brokers.

Dated May [illegible]th, 1889.

THE RISE IN YURUARI SHARES.

THESE SHARES HAVE BEEN
THE FEATURE OF THE MARKET
EVER SINCE OUR FIRST NOTICES APPEARED.
NO LESS THAN 300,000 SHARES
HAVE BEEN DEALT IN
DURING THE LAST ELEVEN DAYS.
AS A NATURAL CONSEQUENCE OF THIS
THE SHARES HAVE BEEN LARGELY OVER-SOLD.
AND A GRAND OPPORTUNITY NOW OCCURS
TO SQUEEZE THE BEARS,
WHO HAVE LARGELY
SOLD SHARES WHICH THEY DID NOT POSSESS.
IT IS NOW PERFECTLY CLEAR THAT
IF THOSE 300,000 SHARES
ARE TAKEN OFF THE MARKET
BY THOSE WHO HAVE BOUGHT THEM,
THE BEARS WILL BE SQUEEZED WITH A VENGEANCE.
THEY WILL HAVE TO SCRAMBLE IN
BEFORE MONDAY NEXT, AT 12 O'CLOCK,
AT ANY PRICE THE SELLERS CHOOSE TO EXACT!
THIS WILL CAUSE THE PRICE TO DOUBLE ITSELF
IN ALMOST NO TIME,
AND THE BEARS WILL BE SORRY
THAT THEY EVER SOLD YURUARIS
AGAINST PUPLIC OPINION!
BUYERS OF YURUARI SHARES!
YOU NOW HAVE A CHANCE
SUCH AS DOES NOT OFTEN OCCUR,
WIRE AND ORDER YOUR BROKERS
TO DELIVER YOU EVERY SHARE YOU HAVE BOUGHT.
BE AS MERCILESS TO THE BEARS
AS THE BEARS WOULD BE TO YOU!
CORNER THEM AT ONCE.
BY ACTING UPON OUR SUGGESTION,
AND BY BUYING AS MANY MORE
AS YOUR PRUDENCE AND POCKET WILL ALLOW.
BUY YURUARIS FOR THE GRAND RISE,
AND SEE THAT YOU GET THEM.
LET YOUR INSTRUCTIONS TO YOUR BROKERS
BE FIRM AND UNMISTAKABLE!
TAKE NO EXCUSE!
BE WHEEDLED BY NO ARTS! AND REMEMBER THAT
THESE ARE GOOD, SOUND BUSINESS FACTS!
BUY YURUARIS,
FOR THEIR INTRINSIC VALUE.
BUY YURUARIS,
BECAUSE THEY ARE DIRT CHEAP!
BUY YURUARIS,
BECAUSE THE PROFITS WILL BE GREAT.

BUY YURUARIS,
BECAUSE THEY ARE SOUND AND RELIABLE,
BUY YURUARIS,
BECAUSE THE MINE IS BEING WORKED
ENERGETICALLY AND WELL.
BUY YURUARIS,
BECAUSE THE MINE IS IMPROVING AT ALL POINTS.
BUY YURUARIS,
BECAUSE EVEN IN ITS BRIGHTEST DAYS
THE MINE NEVER LOOKED BETTER THAN IT DOES NOW.
BUY FOR THE RISE.
TAKE UP THE SHARES.
INSIST UPON DELIVERY, AND SEE THAT YOU GET THEM.
WE HAVE BASED ALL OUR CALCULATIONS
UPON SOLID FACTS AS THEY ACTUALLY EXIST.
THE WHOLE FINANCIAL PRESS, WITH FEW EXCEPTIONS,
CORROBORATE OUR OPINION THAT
THE YURUARI COMPANY
IS NOW ON THE HIGH ROAD TO SUCCESS.
AND THERE IS NO MISTAKE ABOUT IT.
YURUARI HAS THE SMALLEST CAPITAL, AND
THE LARGEST OUTPUT OF GOLD.
EXAMINE THESE FACTS,
CALCULATE THE CHANCES,
THEN ACT UPON YOUR OWN JUDGMENT.
CORNER THE BEARS!
IF YOU BOUGHT YOUR SHARES THROUGH ANY
RESPECTABLE OUTSIDE BROKER,
REMEMBER THAT HE IS, IN ALL PROBABILITY,
A MEMBER OF THE NEW MINING EXCHANGE.
AND IS SUBJECT TO STRINGENT RULES.
THE SHARES WILL BE BOUGHT IN AGAINST HIM,
AND HE WILL HAVE TO PAY THE DIFFERENCE,
OR BE EXPELLED FROM THE EXCHANGE.
THIS WILL ALSO BE THE CASE WITH
MEMBERS OF THE STOCK EXCHANGE;
SO EVERY SELLER
CAN EASILY BE FORCED TO DELIVER.
YURUARI!
WE WILL SEND, ON APPLICATION,
FULL PRINTED DETAILS, POST FREE.
SEND FOR THEM!
READ THEM!
AND DECIDE FOR YOURSELVES.

THE MINING MARKET.

City, Friday Evening.

INDIAN RETURNS—FOREIGN SHARES UNSTEADY—SOUTH AFRICANS LOWER—COPPER—FAIRLY HOPEFUL OUTLOOK.

The feature of the week has been the returns from the Indian Mines. These are dealt with in a special manner in our leader columns. The return of the Mysore Company is very striking. It is about 2,000*l.* in money value more than any monthly return previously announced. A dividend of 2s. 6d. has given satisfaction to the shareholders who are not indisposed to regard their property as something in the nature of an El Dorado. It is a very singular thing, however, that despite the returns, the dividend and the most brilliant report the company has ever issued, the shares were flabby and tottered to a small fall. Why this should be the case is one of those mysteries that will only be known when the secrets of all things are revealed. The Ooregum return is also satisfactory, but here again the shares receded, and generally the Indian market has shown weakness.

Foreign mines have toppled in the absence of the support of buyers. Prices are quoted lower, and mark the absence rather than the presence of business. The immediate outlook is not very bright, but at any moment the turn may come. There has, however, been a good deal of business in Victorys, which have improved, and Yuruaris, which are a shade lower, consequent upon sales, to secure profits on the part of those persons who took up the last issue of shares at 1s. 6d. each. There has also been a good business in Colons and Tetuans. Another dividend of 1s. a share has been declared by the sister company—Colombian Hydraulic.

South African shares have found few friends in the shape of buyers, and have continued to fall despite the fairly encouraging returns and telegrams from the scene of operations. Diamond shares are unchanged, with the exception of St. Augustine, which at first fell 100 per cent. on the announcement of the death of Col. McMurdo, who, it may be remembered, was under a contract to develop the property on terms which were set forth at the meeting in March. To-day, a very satisfactory meeting was held of the South African (Pullinger) Company which is referred to elsewhere.

Copper shares are looked at askance by investors, and it is feared that the worst has not come, though it is rumoured that an arrangement has been come to by which copper will not be sold below a certain price by the persons who hold it. Some light upon the situation will be thrown at the Rio Tinto meeting on Monday, but we scarcely think that Mason and Barry directors are likely to do much good by proceeding against their quondam guarantors. Even a verdict would be very much like a Phyrric victory.

Home mines have been at a low ebb, and with the exception of a few dealings in the leading Cornish descriptions there is little to note.

The outlook, whilst not being particularly brilliant, may at least be described as fairly hopeful.

Africans.

Very little business has been doing in the African market, and in consequence of the absence of buyers, prices in nearly every instance have given way, and this notwithstanding the fact that the returns of Crown Reefs and others have been fairly good. If holders will purchase further, or only keep their shares until about the end of July, they will probably see prices advance considerably. A fall of ¼ is shown in Edwin Bray; Republics, 1s.; Thomas, ⅛; Johannesburg Waterworks, $\frac{3}{16}$; Aurora, ½; Bantjes, ⅛; Bothas, $\frac{5}{16}$; Central Langlaate, ⅛; Ditto Roodepoort. ¼; City and Suburban, 1⅛; Crown Reef, ⅝; Crœsus, ⅛; Dornkop, $\frac{1}{16}$; De Villiers, 3*l.*; Durban Roodepoort, ¾; Evelyns, ¼; Ferreiras, 20s.; Goldfields of South Africa, ⅜; Heriot, ¼; Henry Nourse, ½; Johannesburg, 20s.; Jubilee, 1¼; Jumpers. ¾; King Solomons. ⅛; Knights, $\frac{3}{16}$; Langlaagtes. $\frac{3}{16}$; Mainreef, $\frac{5}{8}$; Mays, 20s.; Modderfontein, ⅛; Nabob. ¼; Randfontein. ⅛; Royals. ½; Salisbury. 1½; Simmer and Jack, ½; Spez Bona. ⅛; Stanhope, 20s.; United Langlaagte, ¼; Van Ryn, ⅛; Vogelstruis, ⅞; Wemmers, 1¼; Wolhuters, ½; the only rises being in Imperials. ⅛; Bankets. ⅜; Kleinfontein, ¼.

Copper.

With a limited amount of business doing, in several instances prices have slightly improved. The following have risen :— Cape ⅛ ; Rio Tinto, ¼ ; and Tharsis, ¼, whilst a fall of ⅛ in Libiola completes the alterations in this class.

Australians.

There have been but very few transactions in the shares of Australian properties during the week, and hence prices are generally lower. There appears to be a determined attempt on the part of "bears" to stop prices advancing. Even Gympie Great Eastern are lower than last week, although the returns show splendid profits. In our opinion its shares should be quoted about par ; they still, however, remain in the neighbourhood of 10s. A fall is shown in Bonnie Dundee of 3d. ; Cumberland, 1s. 6d. ; Day Dawn, 6d. ; Gympie Golden Crown, 6d. ; Gympie Great Eastern, 1s. ; Mount Shamrock, 6d. ; the only rise being in Mosman of 6d.

Diamonds.

There has been a little more business doing this week than during the last month, and in a few instances prices have improved a trifle, but notwithstanding the slight upward move the market is very uncertain, and the least selling on behalf of the public would send quotations down considerably. A rise has taken place in Anglo-African, ⅜ ; Griqualand West, ¼ ; New Consolidated, 6d. ; whilst the following have fallen. De Beers, ⅜ ; New Jagersfontein, ½ ; South African (Pullinger), 1s. ; Burma Ruby and St. Augustines, $\frac{3}{16}$. The following are the closing prices :—

Anglo African	4⅞	—	5⅛
Bultfontein, New Shares	4	—	4¼
Central Dorsfontein	8	—	10
De Beers Consolidated	15½	—	15¾
Gordon Diamond	19/	—	21/
Griqualand West	6	—	6¼
New Consolidated	23/	—	24/
New Jagersfontein	12¾	—	13¼
South African (Pullinger)	15/	—	16/
Spes Bona (Bultfonteiu)	6/6	—	7/6
United	2¼	—	2½
United Jagersfontein	15/	—	17/
London and Orange Free State Explor.	4	—	4½
London and South African Exploration	16¾	—	17¼xd & rights
Read's Drift Land Co.	1½	—	2
Burma Ruby Miues	1¼	—	1⅜pm

Indians.

Business in Indian descriptions during the week has been but slight. The Mysore Company have, as we predicted they would last week, declared a dividend of 2s. 6d. per share. There is no reason why the Ooregum Company should not follow in the footsteps of the Mysore Company and pay dividends, seeing that they are making regular monthly returns.

A fall is registered in Balaghat of 6d. ; Devala-Moyar, 6d. ; Glenrock, 6d. ; Goldfields of Mysore, ⅛ ; Indian Consolidated, $\frac{1}{16}$; Mysore ⅛ ; Mysore Reefs, 6d. No other change to note.

Foreign Mines.

The market in the above shares has presented a dull appearance, and prices have, in but few instances, advanced. The following have risen :—Barretts, 9d. ; Colombian, 2s. ; Dickens Custer, 1s. ; Orita, ⅛ ; and Victory, 1s. ; whilst a fall is registered in Balkis, 9d. ; Calloa Bis, 1s. 6d. ; Carlisle, 1s. ; Colon, 1s. ; Elmore, 3d. ; La Trinidad, 1s. ; Montana, $\frac{1}{16}$; Monte Del Oro, 1s. ; New Lisbon-Berlyn, 9d. ; Kapanga, 6d. ; Palmarejo, 6d. ; Transvaal, 2s. ; Uuited Mexican, ⅛ ; Venezuelan Austin, 6d. ; Viola, 1s. ; and Viso, 1s.

Outward indications all point to a coming boom in Victory shares. It was whispered the other day in certain well-informed circles that news of important developments was expected by next mail. This had the effect of causing a good inquiry to spring up. As it is not improbable these shares may within the next few weeks register 25s., speculators should not be influenced to avoid them.

The following list shows the principal changes which have taken place :—

	Last Week.		This Week.

LATEST FROM THE MINES.

Indian Mines.

Balaghat-Mysore.—The following cablegram is from Mr. A. S. B. Oakley, the company's resident agent :—"Crushing for April, 70 tons 143 ozs." The above represents only 10 days' work, as, in consequence of the mill being stopped for much-needed repairs to the boiler, crushing did not commence until 20th April.

Mysore.—The following telegram, dated 6th May, gives last month's return of gold as follows :—"2,600 tons of quartz produced 3,576 ozs. of gold ; also 296 ozs. obtained from tailings ; together, 3,872 ozs." The company have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of March, which realised 12,640*l.* 11s. 5d.

Nundydroog.—A telegram, dated 6th May, gives last month's return of gold as follows :—"300 tons of quartz produced 485 ozs. of gold." The company have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of March, which realised 1,897*l.* 13s. 5d.

Ooregum.—The company has sold the gold obtained in the month of March, which realised 4,254*l.* 1s. 2d.

Colonial Mines.

Anglo-Saxon Syndicate.—The directors have received advices

by wire to the effect that during the past month 293 tons of stone were crushed, the yield therefrom being 1,050 ozs. of gold, and that a great quantity of rain was falling. A dividend of 2s. per share has been declared, payable on the 15th inst., making a total of 8s. per share, or 40 per cent., since the commencement of the year. The manager reports the near completion of a contract for sinking the deepest shaft another 70 ft., in which the reef has been visible the whole way, showing rich gold. This company has recently sent out a powerful pumping and winding engine, and is about to erect a wire tramway, when it is expected the returns will be considerably increased.

CUMBERLAND.—A telegram from the mine conveys the result of April month:—"In 21 days' work, with 15 head of stamps, crushed 600 tons, yielding 254 ozs." The message further adds that the ore they are now crushing is richer.

DURHAM AND LORD BYRON AMALGAMATED.—A cablegram, dated 6th May, states:—"Cleaned-up 2nd May, 284 tons; yielding 273 ozs.; value of crushing for the public, 340*l*."

MIDAS.—Cable from the mine:—"Yield for week 105 ozs. (430*l*.)

MOUNT ALBION.—The following telegram is from the manager at the mines.—"To the 18th April 770 tons ore raised, containing 38,000 ozs. silver (or about 49 ozs. per ton); 466 tons ore smelted, containing 21,000 ozs. silver, producing 48 tons silver-lead bullion, containing 18,000 ozs. silver. Shipped, per Dacca s.s., 80 tons silver-lead bullion, containing 21,000 ozs. silver."

MOUNT LEYSHON.—A cablegram, dated 7th May, gives the result of fortnightly crushing:—"345 tons, 201 ozs., 20 stamps, 157 hours; the machinery is broken; the repairs are nearly finished."

MOUNT PERRY COPPER AND REID'S CREEK.—A cablegram from Capt. Bennett states:—25 tons matte; 1,200*l*.; Quetta."

NEW LIVINGSTONE.—A cablegram, dated Charters Towers, 7th May, states:—"Have sunk 17 ft. since last cable. The width of the vein 18 ins.; poor quality." Note.—Present depth of shaft, 392 ft.

PHŒBE.—The following cablegram is from the manager at Charters Towers, viz.:—"208 tons, 357 ozs.; value 1,200*l*."

FOREIGN MINES.

ALMADA AND TIRITO.—The certificates for the shares of this company are now ready.

COLOMBIAN HYDRAULIC.—The following cablegram has been received:—"We have cleaned up after a run of 1,000 hours. The gross returns are 3,700*l*.; the net profit is 2,000*l*." This is apparently six weeks' returns against two months' cost. Notice is given that the directors have declared a dividend of 1s. per share, free of income-tax, payable on 28th inst., on the shares as they stand on the register of members on the 18th inst.

CONSOLIDATED ESMERALDA.—Superintendent states by cablegram, May 8th, 1889:—"Crushed 412 tons; yield, 1,050 ozs. gold; value, 2,900*l*."

JOSEPHINE.—Cablegram received 7th May:—"Yield of free gold for month, $6,600; estimated value of sulphurets for month, $1,650 net; total expenses for past month, $5,500. Tons milled during month, 1,000."

MESQUITAL DEL ORO.—The following cablegram has been received from the mines:—"20 stamps ran 422 hours (April); quantity of ore crushed was 599 tons; bullion produced at clean-up, 472 ozs. We have now steadily at work 40 stamps. Drills (for driving the San Miguel tunnel by steam power) will be at work about 13th inst."

NEW GUSTON.—The following cable information has been received from the mine, viz.:—"Seven lots (equal 70 tons) third class ore have averaged $50 per ton. Three cars (equal 30 tons) of high grade ore have given 200, 500, and 400 ozs. of silver per ton respectively." Mr. Schwarz states that he expects to be able to ship 150 tons third-class ore monthly, in addition to first-class ore. A cable received 8th May is as follows:—"Mine looking well; good ore is still being found in fifth level."

PESTARENA UNITED.—The gold returns for the month of April were as follows:—From Pestarena district, 471 ozs. 16 dwts. 18 grs. from 455 tons of ore, equal to 1 oz. 0 dwts. 17 grs. per ton. Val Toppa, 160 ozs. 6 dwts. 6 grs. from 349 tons of ore, equal to 9 dwts. 4 grs. per ton. Total, 632 ozs. 3 dwts. obtained from 805 tons of ore amalgamated, showing an average yield of 15 dwts. 16¾ grs. to the ton.

STAFFORD.—The following telegram has been received from Mr. H. B. Tilden, the manager at the mine, dated 6th May, 1889, announcing particulars of the clean up for the last two weeks in April:—"Crushed 95 tons, which yielded 48 ozs. gold."

UNITED MEXICAN.—Telegram:—"San Cayetano property. Gross returns for week ending May 4th, $6,000; expenses for weeks ending April 20th and 27th, $5,600; net returns on weeks ending April 20th and 27th, $4,000. El Cubo property: Expenses for weeks ending April 20th and 27th, $4,590."

HOME MINES.

NORTH LEVANT.—Adventurers in North Levant held a nine weeks' meeting on the mine on Tuesday, the purser (Major White) presiding. The accounts showed:—Receipts, 945*l*.; debits, 1,140*l*.; less on the two months' working, 195*l*.; present balance against the mine, 401*l*. It was resolved: "That the mine be offered as a going concern, and a special meeting to confirm this or otherwise is to be held on the 30th inst." The meeting will take place in London.

TREGURTHA DOWNS.—Sold for the fortnight on the 4th inst., 8 tons 3 cwt. of tin ore, at 54*l*. per ton; realising nett, 438*l*. 6s. 6d.

WEST FRANCES.—A profit of 759*l*. on 16 weeks' working in West Frances was reported, and a dividend of 2s. 6d. per share was declared. Captain Josiah Thomas made some interesting remarks respecting the great flat lode, and replied to some strictures passed on him at the last South Frances meeting.

WHEAL CREBOR.—The shareholders have practically decided to leave the mine to the purser, Mr. Bawden, for 12 months—they to receive one-eighth of the proceeds of the gross sales.

METALS.

COPPER has been steady. G. M. C. copper fluctuated between 38*l*. and 39*l*., but yesterday afternoon suddenly improved to 39*l*. 15s., and to-day has eased to 39*l*. 10s. cash, and same price for three months prompts; three months has been about the same price as cash. A moderate business has been done in Chili bars at about the same price as G. M. C.; 10 tons Hope Australian ingots in warehouse fetched 43*l*. We quote English tough at 44*l*. to 45*l*.; best selected, 45*l*. to 46*l*.; strong sheets, 50*l*.; Indian sheets, 47*l*.; yellow metal sheets, 5d. to 5¼d.; ore, regulus, &c., 7s. to 8s.

TIN.—Straits declined from 90*l*. to 89*l*. 10s., but has since improved to 91*l*., which was paid yesterday, and closes to day at 91*l*. 12s. 6d. to 91*l*. 15s. cash, and 50 tons for 17th June, 92*l*. paid; three months about 15s. to 20s. over cash, and Australian about 10s. premium over Straits. The Dutch market declined to 54½fl. for Banca; 54*l*. for Billiton, but has improved again to 55fl. for Banca and 54¾*l*. for Billiton, with an upward tendency. The Trading Company announces their usual sale for 28th inst. Rotterdam, and 24,200 slabs Banca and 1,000 slabs Billiton will be offered. English ingots, after selling at 93*l*., are now quoted 97*l*.

TIN PLATES have been dull 13s. 3d. ordinary coke Liverpool. Stocks on 1st May, 376,209 boxes.

SPELTER has been weak, and is quoted 17*l*. 7s. 6d. for ordinary. Brands ex ship here.

LEAD is firmer. Soft Spanish, 12*l*. 10s. to 12*l*. 12s. 6d.; soft English, 12*l*. 15s. to 13*l*.; L. B., 13*l*.

QUICKSILVER active. Rothschild advanced the price on Wednesday to 8*l*. 5s., and yesterday afternoon to 8*l*. 10s.; second sold at 8*l*. 2s. 6d. to 8*l*. 7s. 6d.

ANTIMONY firm; 49*l*. 10s. to 50*l*.

GLASGOW PIG IRON MARKET.

3.15.—Business at 44s. 0½d., 44s. 1d., 44s. 0½d., cash; 44s. 3½d., 44s. 3d., one month; closing buyers, 44s. 0½d., cash; 44s. 3d., one month; sellers ¼d. more. Market steady, fair business.

LONDON METAL EXCHANGE.

4.30.—Closing official report.—Copper: G.M. Brands, cash, 39⅜; three months, 39⅝; best selected, 44, 5; strong sheets, 50; English tough, 43, 4. Tin: Fine foreign, cash, 91, ½; three months, 91⅝, 2⅛; Australian, 91⅜, ⅞; English ingots, 94.

At yesterday's Flintshire ore ticketings the average price was 9*l*. 1s. 6d. per ton; 300 tons of Duke of Westminster Mine realised 2,718*l*.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING MAY 11TH.

Carried forward.

Bank of Constantinople	—	9 per cent.
Colombian Hydraulic Mining ...	—	1s. per share.
Central Argentine Railway ...	848*l*.	7 per cent.
Georgetown (British Guiana) Gas Co. (525)	—	7 per cent.
Guardian Fire and General Assurance	—	2s. 5d. per share.
Investment Trust Corporation ...	1,051*l*.	5 per cent.
Land Mortgage Bank of Texas ...	—	10 per cent.
Mysore Gold Co.	—	2s. 6d. per share.
National Bank of Anstralasia ...	25,000*l*.	12½ per cent.
National Bank of Anstralasia ...	—	2½ per cent.
National Provincial Bank of England	33,350*l*.	bonns 6 per cent.
Positive Government Security Life Assurance...	3,205*l*.	7 per cent.
Queen's Insurance	—	15 per cent.
Royal Bank of Australia	—	6 per cent.
Scottish Imperial Insurance ...	—	1s. 9d. per share.
Universal Life Assurance	—	2*l*. per share.
Western and Brazilian Telegraph	—	9s. per share.

(Commercial Notes, see page 795.)

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (8th May).—The lode in the 40-fm. level east of junction produces 7 tons of mixed ores per fm. In the 40 west of junction the lode produces 6 tons of mundic and copper per fm. Glasson's new rise in back of the 40 at the new engine shaft is going up in a productive lode, and the stopes therefrom are producing fair class arsenical mundic to the value of 8 to 10 tons per fm. Cook's late stopes below the 30 east will produce 10 to 12 tons of muudic and copper per fm. There is no change to notice in the wide stopes below the 30 west of junction, which are producing a large quantity of mixed ores.—T. Gregory.

D'ERESBY.—The Gors shaft is now down about a yard below the No. 9 level, and the sinking which will be carried on with all possible speed will, it is expected, open up a piece of rich lead ground to the north of the shaft, and perfeetly distinct from the runs of lead ground at the south. The agent's belief is that they are only now on the top of a great run of lead ground, as the best part is in the bottom of the No. 9 level.

EAST BLUE HILLS (7th May).—We are lookiug better here. We have cut a lode in the north cross-cut at the 30-fm. level near the shaft where the heave came in. The lode is 4 ft. wide, produeing a little tin and very promising. The 30 end west on the Baldhu lode and stope are of usual value. We shall have a little over 3 tons of tin against Saturday next, after which I am hoping we shall be able to increase our returns.—C. F. Bishop.

GLYNDWR.—In reply to several correspondents, it may be necessary here to repeat the description given in the supplementary notes of last month. This company, which is 12,000 shares of 1*l*. each, has been formed to purchase and work a group of lodes on the eastern slope of the Maes-y-Safn mountaiu, not far from the celebrated Halkyn. The history of this mining district is remarkable. The lead was first discovered near the surfaee, and iu the width of a road alone 167 tons were raised, the course of ore was followed down as far as the water would permit, yielding 20 tons of lead ore per lineal yard. A small horizontal engine was subsequently ereeted for the purpose of winding and pumping, but for the latter purpose perfectly inadequate, yet under great difficulties the shaft was carried down a depth of 72 fms., and a level driveu which reaehed the limestone flat measures, and a rich course of ore At this point the little engine broke down, the works were suspended, and nothing further has been done to this day, It is now proposed to erect suitable machinery to follow this rich course of lead in depth. The section of the workings shows that the engine shaft, in some 15 fms. further sinking, will enter the limestone flats, and, in all probability, a bed of ore of enormous value. Whilst this sinking is being carried on, the 72-fm. level westward will be extended into the limestone beds, from which large returns will be made, fully sufficient, it is believed, from three points alone, to repay the whole eapital of the company. Irrespective, however, of the results to be obtained from these workings, the rieh lodes of the old Maes-y-Safn Mine to the westward, which have given over 300,000*l*. profit, traverse the entire length of this grant, and will be reached by a short cross-cut from the Glyndwr engine shaft, towards which they are underlying. This property was originally held by one gentleman only, whose intention was to form a company to erect a more powerful pumping maehinery to develop in depth these great courses of lead. Fiuancial difficulties, however, overwhelmed him, and the property has remained in abeyance until secured by the present proprietors, who have a firm conviction that it will give large dividends immediately the workings are drained

GREAT FORTUNE (8th May).—Shaftmen have completed cutting the ground, aud the cistern is nearly ready to go underground, and very fair progress is being made to commence forking quick. The four stopes on the Conqueror branches are worth in the aggregate 11*l*. per fm. Seven tribute pitches are worth in the aggregate about 16*l*. per fm.—W. Argall, S. P. Curtis.

MARK VALLEY (9th May).—The south part of the lode has been intersected at the 25, where it is 5 ft. wide, composed of a hard capel with tin throughout, and worth 10*l*. per fm. This we shall proceed to drive on at once with the hope of opening out a good piece of ground, as the end is being driven under the 15 west, which is now 15 fms. in advanee, and worth 8*l*. per fm. There is no particular attraction in the 15 east; the lode on whieh we are driving is about 2 ft. wide, and produeing a little tin. The water is increasing, and issuing very strong from the lode, as well as from the south side. From this we think there is every probability of our nearing the junction. The other points referred to in our last report continue without any change calling for particular remark this week.—W. George.

MID-DEVON.—Report for week ending 4th May.—Surface: Machinery throughout the mine has worked well, and done good duty. A shaft: The influx of water is abating, as seen by the satisfactory progress made in draining; at 1 p.m. to-day the water was 30 ft. below the 80, with machinery kept as near as possible to four revolutions per minute. C shaft: All work at the 60 has been suspended. The 50 east No. 3 stope has been worked on by six men, where good deposits of ore are being discovered. The yield still equals to four tons per cubic fm., surrounded by matrix, conducive to its continuance being intermixed with chlorite axinite quartz, and a little barytes. The fissures and veins are all stained with copper. The dip of deposits is eastwards.—J. Neill.

PRINCE ROYAL (7th May).—We shall start the engine to pump on Friday next. The engineer will have finished putting in the new gear which will make the engine much more powerful; this is what is wanted in order to sink the mine. I hope we may soon get the water out and resume sinkiug, and in which I trust we shall have success.—C. F. Bishop.

ROMAN GRAVELS (9th May.)—We are greatly disappointed to find that we shall not be able to start pumping this week with our large Cornish engiue. This is due to the very great delay iu the delivery of the new cylinder, piston and rod, &c., which we had every reason to believe would have reached us more than three weeks ago. We finished the pitwork, &c., on Monday week last, and had we been able to start pumping at once, we should now be more than one-third of the way towards forking the mine. We now hope to start the engine early next week. We have to-day sent out samples of 20 tons of blende for sale next week. The piston and rod, &c., only reached the mine to-day.—A. Waters and Son.

SOUTH CONDURROW (8th May.)—The 40 end east of King's shaft is worth 9*l*. per fm. Three stopes in back of this level worth 30*l*. per fm. in the aggregate. The 50 end east is worth 10*l*. per fm. Three stopes in back of the 50 are worth respectively, 8*l*., 10*l*., and 10*l*. per fm. The 60 end east is worth 8*l*. per fm. The stope in bottom of this level is worth 15*l*. per fm. The stope in the back of the 70 east is worth 18*l*. per fm. The back of the 80 east is worth 7*l*. per fm. The back of the 93 east is worth 8*l*. per fm. There is no new feature in the bottom of Marshall's shaft, nor in the 108-fm. level west of Marshall's.—W. Rich, W. Williams, H. King.

SOUTH DARREN (9th May).—The stope in the 142 west is worth 2 tons of silver lead ore per fm.. The stripping in this level is worth 17 cwt. silver lead ore per fm. In the 142 end east the lode is stronger, showing spots of lead. The stope in this level is worth 15 ewt. of silver lead ore per fm. The drivage in the 130 west is cut 7 ft. iuto the lode, and is not yet through it. It is now producing good work for lead. The 110 end east is without change. The stope in this level is worth 10 cwt. of silver lead ore per fm. The 100 end west is still interspersed with strings of lead coming out from the side. The end is not at present of much value, but these strings seem to betoken a better lode inside. We intend to prove this with a cross-cut soon. The stope in this level is worth 10 cwt. of silver lead ore with a mixture of copper.—J. Mitchell.

VAN (9th May).—The 135-fm. south level: This month has been devoted principally to preparing for the more expeditious development and economical working of the recent discovery in this level, by sinking (or rather communicating) the winze already sunk at the mouth of the cross-cut with the 150-fm. level. This will expedite and economise the delivery of the overstuff from the south 135-fm. level to surface, as well as furnish better, and indeed the necessary facility for crossing south at the 150 to interseet the same important discovery. We shall resume driving upon the ore ground in the level on Monday. The stoppage during the past month has deprived us of quite 20 tons of lead ore, and will of necessity defer our sampling some eight or nine days, but we shall regain it. The 120-fm. level east: The cross-cut south in this level is driven 24 ft. There is a very strong lode still in the end, produeing chiefly copper, but not so strong as passed through. However, as we have another 36 ft. to cross through, we do not know yet what we may discover. We can only afford to keep two men at present in this level. In the stopes there is no change to report, except from the intermediate stope in back of the 105 west. The eastern end of this stope has turned almost altogether into blende, of whieh it will produce fully 4 tons per fm. The western end has become very hard, and will not now pay for working. In the middle of the stope a level driven upon a branch of ore in the soft, or hanging, is yielding very good ore. Surface: We are going ahead for another sample as fast as possible. I hope to start the 16-in. engine on the Halvan floors in about another week. Machinery in fair working order.—W. H. Williams.

WEARDALE.—Report on mines for week ending 4th May: Ore raised for week, 100 tons; ore dressed for week, 94 tons; ore, &c., smelted for week, 115 tons; producing 57 tons of pig lead.

WEST CARZISE (8th May).—We shall commence sinking the engine shaft to-morrow, in a large lode, producing a little tin. The 30 west on Carzise lode, 10 ins. wide, and worth 2*l*. 5s. per fm.; price for driving, 35s. There is no particular change in any other point in the mine.—J. Curtis.

WEST WHEAL GRENVILLE (7th May).—Since our report of last week the shaftmen have been clearing stuff from under the 90, cutting ground for cistern and fixing the same in position; putting in road for heaving down castings, sending down windbore, doorpiece, pumps, &c., for standing drawing-lift and taking out timber, &c., to make way for rearing up said lift. At Harvey's shaft skip-road is fixed to about the 50-fm. level.—T. Hodge, J. Skeat.

WHEAL GRENVILLE (9th May).—I have nothing to report this week, all works are going on regular, and machinery working well throughout the mine.—T. Hodge.

WHEAL METAL AND FLOW (8th May).—The slide in the bottom of the 35-fm. level has disordered the metal lode, and the water at this point is very quick, so that we have discontinued the sinking. In the back there are some good stones of tin. The lode in the 35 end is 2 ft. wide, looking very promising.—W. Argall, S. P. Curtis.

WHEAL UNY.—The manager writes that he considers the underground operations are looking very promising. The winze between the 182 and 193-fm. levels has been communicated, and the 193-fm. level west is improving with every indication of continuing to improve, so also are the 182 and 193 eastward. The sump shaft continue to present a very promising appearance, and the general prospects of the undertaking are certainly most encouraging. The monthly sale of tin was 14 tons 1 ewt. 0 qrs. 17 lbs., at 53*l*. 15s. per ton, and the returns will now progressively inerease.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (13th April).—Have driven 50-fm. level 9 ft. north. Drove east cross-cut No. 3, 5 ft. Drove west eross-eut No. 2, 3 ft. In cross-euts Nos. 2 and 3, cut hanging and footwalls. North breast continues in the centre of the lode, showing metal, but scattered. Have sunk the Balvanera shaft 5 ft. Have driven cross-cut No. 4 west 24-fm. level, 7 ft. 3 ins. Cut 18 ins. metal, and then a fault. Changed course to the north to follow metal. Have driven cross-cut west from No. 7 winze 24-fms. 5 ft. 8 ins. Ground changed very suddenly without showing metal, and as per your Mr. Sanchez instructions, have abandoned it for the present. Mine, shaft, and ladder-ways are in good order.—H. C. Cloud.

ANGLO MEXICAN.—The superintendent in his report, dated 7th April, writes:—During the past week the San Gerardo shaft has been sunk 4 ft.; the bottom shows a streak of good ore about 2 ft. wide. San Antonio winze was sunk 1 ft. Two drifts have been started from this winze at the bottom (650 level), one going east aud the other going west. The east drift was advanced 5 ft., and the west drift 7 ft. There is 4 or 5 ft. of good ore in the face of each drift. Ultimo winze was suuk 6 ft.; the bottom of this winze shows 2 ft. of low grade ore. The intermediate drift east (above 506 level) was extended 3 ft., and shows 2 ft. of good ore in the face.

ASIA MINOR (13th April).—54 men driving; value of ends, 4 tons 10 cwt.; 180 men stoping, value of stopes, 14 tons 5 cwt.; 4 men sinking, 6 men rising, 151 trammers' labourers, &c. The lode in the end west from No. 4 stope in Petri has within the last week very much improved both in size and character. In the forebreast the lode is fully 6 ft. wide, chiefly composed of vein-stone of a very

favourable character, intermixed with mundic and lead ore, worth of the latter 10 cwt. per fm. We expect as the driving proceeds the lode will further improve. The winze in the bottom of Petri level in Air shaft is down 14 metres, and the men are driving east. The lode in the end of this drive is 5 ft. wide, and is worth 3 tons of rich silver-lead ore per fm; a very fine lode. When this level is communicated with the end west from Petri big stope we shall have excellent stoping ground here. Savalan end west of Air shaft: The lode in the end of level is worth 1½ tons of silver-lead ore; and also the lode in bottom. Union end east: Production to 19th April is 2,561 tons crushed; produced 306½ tons rich silver-lead ore.

BALAGHAT-MYSORE (16th April). — Fortnightly report:—North engine shaft: I am pleased to say the sinking of this shaft has again been resumed; it is now down 4 ft. below the 410-ft. level. The 410-ft. level north has been sunk 14 ft. 4 ins., or 60 ft. 6 ins. from the shaft; the ground is still hard for driving. The 330-ft. level north has been advanced 22 ft., or 436 ft. 6 ins. from the shaft; the quartz is about 1 ft. wide, and assays 1 oz. 12 dwts. 16 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 4 ft. 9 ins., or 27 ft. 3 ins. below the level; the quartz is about 1 ft. wide, and assays 18 dwts. 7 grs. of gold per ton. The stope in the bottom of this level yields quartz of about 10 ins. wide, assaying 4 ozs. 1 dwt. of gold per ton. The stopes in the back of this level produce quartz of about 1 ft. wide, assaying 2 ozs. 1 dwt. 18 grs. of gold per ton. The No. 3 winze in the bottom of the 270-ft. level north has been sunk 2 ft. 3 ins., or 62 ft. 3 ins. below the level; the quartz is about 8 ins. wide, but only assays 1 dwt. 7 grs. per ton. This winze is now down to about the required depth of the 330-ft. level. I have therefore put the men to drive south from present bottom that a communication may be effected as quickly as possible. Comparatively little has been done at the No. 2 cross-cut east at the 270-ft. level north since last report, it being now only 75 ft. 6 ins. from the level. The progress at the No. 2 west cross-cut has also been very slow, the end only being 40 ft. 4 ins. from the level. Better speed is now being obtained, as a new lot of coolies have been engaged for both of these places. The stopes in the back of the 270 north yields quartz of about 1 ft. wide, which assays 16 dwts. of gold per ton. As desired, the driving of the 270-ft. level south has again been resumed, and the end advanced 10 ft. 3 ins., or 183 ft. 9 ins. from the shaft; the lode yields a little quartz, but not of any value. The 165-ft. level north has been driven 2 ft. 6 ins., or 479 ft. from the shaft; the quartz is about 3 ft. wide, but only assays 1 dwt. 22 grs. of gold per ton. A stope in the bottom of this level produces quartz of about 1 ft. wide, but this week it only assays 1 dwt. 7 grs. of gold per ton. Surface: As intimated in my last report, the upright boiler was attached to the mill engine and put to work the next day as anticipated, but I am sorry to say was found to be unequal to the work required, and we were obliged to disconnect it again, up to the present, therefore, we have been unable to crush any quartz. The repairs of the mill boiler are not yet completed, but are being pushed forward as fast as possible, and I hope to have the mill in full working order again before the end of this week.—Capt. PRYOR.

BRATSBERG (29th April)—Hoffnung Mine: No. 2 adit level is yielding about ½ ton per fm., and from appearances we are daily expecting to meet with more ore. The rise in the back of the level is yielding fully 1 ton per fm. No. 3 adit level is worth ¾ ton per fm., and the lode is looking very encouraging. No. 4 level is worth 1 ton per fm. No. 5 level east continues to yield about ½ ton per fm., and the general appearance of the lode is equal to that of the richer parts of the mine. The mid level at Murchison's is worth 1 ton per fm. At the shallow workings the lode in the rise has become poor, and we shall discontinue rising here for a while, and put greater force on the level driving west from this rise which is at present producing about 1 ton per fm. The number of miners employed at this mine during April was about 70. Johannes Mine: We have now driven on the course of the Johannes lode east and west 6.88 metres and for nearly the whole length only a few shots of ore have been met with. We have also opened on the Howard lode 2.61 metres, and for that length it has yielded ¾ ton per fm., therefore, seeing that at this section of ground the Howard lode is by far the most productive, we now propose to confine our attention to this lode alone, and as operations advance we can consider the advisability of cutting into the Johannes lode again at a point advanced from the cross-cut; six miners have been employed here during April. Næsmark Mine: During the past month four miners have been engaged driving north and south on the lode, and 8.75 metres have been driven. A little ore has been met with in both of the levels, but not enough to value. The present end of the south level is in a disordered state, and letting down a good deal of water, but this, we think, is only a temporary change. Some quartz veins are being met with in the north level; hence we are in hopes of meeting with more ore here shortly. Surface work and remarks: The state of the roads at present is very bad, consequent on the change of the season, and the carriage to the lakes is difficult and expensive. The steamers have commenced running, and we hope, in the course of nine or 10 days, to get the roads in a good state for waggons, and then to daily send down 10 or 12 tons to the port. Operations in the mine and at surface have been very irregular during the past month owing to the Easter holidays, and a considerable delay has been felt in each department, and not the least in the mining; hence the quantity of 20 per cent. ore mined (which we estimate at 112 tons) has been affected.—J. D. HOLMAN.

CAPE COPPER (31st March).—Ookiep: The ground in the 105-fm. level east of No. 5 level continues favourable for driving, and at times produces stones of copper ore. The stope in the back of the 105-fm. level east of No. 68 winze is yielding 4 tons of copper ore per fm. The rock in the 92-fm. level (No. 11) north-east of 51 winze having become unproductive, it has been suspended for the time, and the men are put to sink in the bottom of this level to prove the ground containing stones of copper ore recently passed through. The stopes throughout the mine, as will be seen by the tabulated report, are yielding well. Trial Mines—Springbok: The ground in the winze below the 59-fm. level having become entirely unproductive we have deemed it expedient to suspend the sinking, and have begun to cut in at the bottom of the ore ground (in this winze) to ascertain its direction, and to lay it open for stoping. Kotzees Mine: The two cross-cuts at the 25-fm. level each present at times a little copper ore. Nababeep north: The 21-fm. level south-east of shaft is still producing saving stuff, and the ground is of a congenial nature. The rock in the 21-fm. level south-west of shaft having become very compact and unproductive, driving has been suspended. Nababeep south: We have no change to report at this station. The ground in bottom of shaft continues to be impregnated with specks of purple copper ore. Ookiep east: The rock in 58-fm. level south-west of shaft yields spots of copper ore, intermixed with a great portion of magnetic iron pyrites. The ground in the winze sinking below 58-fm. level yields ½ ton of copper ore per fm. Spectakel: The 36-fm. level south towards Kelly's shaft is now yielding about 1 ton of copper ore per fm. The stope behind the end having declined in value, is suspended; and in order to push on the driving of the level more vigorously, the number of labourers has been augmented. Returns for March: Ookiep, 2,100 tons of 22 per cent. Arrivals at Port Nolloth: The Pembroke Castle, San Lorenzo, and Taunton. Arrivals at Swansea: The Hinda and Houdeklip. Bill of lading received: 690 tons of ore per Cicero. —Capts. LANKSBURY and HENWOOD.

CORTEZ (20th April).—The following work was done on the mines during the week ending this day:—Boss tunnel: Advanced 22 ft. Main tunnel: East drift advanced 11½ ft. Centre: Extracted 1 ton of ore, containing 80 ozs. silver. Middle tunnel: West drift, stoped 20 tons of ore, containing 50 ozs. silver per ton. North-east upraise: Stoped 47 tons of ore, containing 52 ozs. silver per ton. North-west upraise: Stoped 35 tons of ore, which averaged 130 ozs. silver per ton. East drift: Advanced 14 ft. This drift is being run along beside the ledge in the east end of big porphyry drift. Development tunnel: Advanced 25 ft. Ore hauled to mill, 236 tons. Ore treated at mill, 173 tons. Assays of same showed it to have contained 85 ozs. silver per ton. Bullion shipped: 12 bars, which contained 11,486$\frac{69}{100}$ ozs. pure silver, and 8¾ ozs. gold.—WELSH.

A cablegram from Mr. Welsh (the superintendent) gives the results for the month of April:—"Production, 49,000 ozs.: expenses $14,700."

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 16th March:—No. 1 shaft—Underlie: This shaft has been sunk a further depth of 6 ft. for the fortnight, making total depth below No. 7 plat 74 ft.; the reef and formation increase in size as we sink; there are 3 ft. of good mundic stone, worth 1 oz. 15 dwts. per ton. No. 7 level east: The contractors have driven a further distance of 9 ft., making total distance 94 ft., reaching P.C. boundary; there are 2 ft. of stone on the footwall of the formation of medium quality, worth 15 dwts. per ton. During the fortnight a winze was commenced from this level at about 50 ft. east of the shaft, and sunk 9 ft.; there are 2 ft. of fair quality stone in the bottom. A leading stope will be commenced above this level. No. 7 level west: The contractors have driven a further distance of 18 ft., making total distance from shaft 46 ft.; the reef here is well-defined, and of good payable quality, being worth about 25 dwts. per ton. No. 6 level west: The contractors have driven a further distance of 15 ft., making a total distance of 265 ft. from the shaft; the country is somewhat disturbed at present, being intermixed with diorite, quartz and formation. Stoping above this level is being carried on; the reef will average 3 ft. in thickness, worth 1 oz. per ton. No. 6 level east: The stopes above are looking much the same as last reported on the reef, being 3½ ft. wide, and worth 22 dwts. per ton. No. 5 level west: The reef on the hanging-wall portion has yielded good stone last fortnight, the reef being about 18 ins. thick; on the footwall portion the reef is 2 ft. thick, worth about 12 dwts. per ton. No. 4 level west: The reef in the stopes continues about the same, being about 4 ft. thick, and worth 1 oz. per ton. No. 3 level west: The present end of the cross-cut is in diorite country, and I consider it should go in a few feet more. No. 2 level: Stoping is still carried on with two men on a reef 2 ft. thick, and worth 1 oz. per ton. No. 2 shaft—Underlie: The contractors have sunk a further depth of 6 ft., making a total depth of 101½ ft. below the 1,003-ft. level. Tenders have been called to cross-cut from the bottom of the shaft to the reef. 630 ft. stopes: These stopes are without change, the reef being about 4 ft. thick, and worth 1 oz. per ton. No. 3 shaft: The contractors have sunk a further depth of 10 ft., making total depth 590 ft. from the surface, and timbered 472 ft.

— (23rd March).—The general manager reports as follows:—General remarks: We are glad to say that there is an improvement in the mine, taking it all through.

DAY DAWN P.C.—Report for the fortnight ending 16th March:—The output of quartz is 2,239 trucks to Excelsior mill, 906 tons; 51 dray loads to Defiance mill. The amount of stone hauled from each level is as follows, viz.:—No. 11 level, 112 trucks; No. 10 level, 601 trucks; No. 9 level, 800 trucks; No. 8 level, 391 trucks; Nos. 6 and 7 level, 335 trucks; total, 2,239 trucks. No. 2 underlie shaft has been sunk a further depth of 10 ft., making a total depth of 230 ft. from the surface; ground still very hard. We have cut the formation again over the back of the underlie. This will cause a little delay, as we are obliged to timber up the shaft, which will take best part of the coming fortnight. Machinery in good order.—T. LESTER.

DENVER (27th April).—Mine: The outlook at the mine is of a more cheering nature, and there seems to be somewhat of a break in the gloom which has hung over it lately. The improvement comes from the recent discovery (200 west) referred to in previous letters. We have shipped from that place some 60 tons of milling ore, from 18 tons of which we have received returns in the shape of 11 ozs. 14 dwts. of gold and 4 tons of concentrates, assaying 7.10 ozs. of gold and 5.30 ozs. of silver per ton (equal to an average of $5 per ton). Whilst this in itself would not be anything very good, yet from the fact that it began from a mere prospect it indicates a rapid improvement, which, if maintained, will soon be of considerable importance. In connection with this is the fact of its being in practically "virgin" ground, and near the surface where the richest pockets have always been found. I would add that, in my estimation, this region of the mine presents excellent prospects for good discoveries. The cross-cut at the 1,050 west is going forward with fairly good speed, and is now in 42 ft. We should now soon see a change of ground, as with another month's work the lode will be cut.—A. RICKARD.

DEVALA-MOYAR (15th April).—The pyrites winze has been sunk 3 ft. 6 ins.; total depth below deep tunnel, 45 ft.; the portion of the lode working on is 6 ft. wide, 7 per cent. of which is pyrites. The deep tunnel east has been driven 3 ft. 6 ins.; distance from mark, 14 ft. 6 ins.; it still continues to have a favourable appearance; lode 3 ft. wide, chiefly quartz, carrying about 5 per cent. of pyrites. Tunnel west of cross-cut, cut by boring machinery, has been driven 9 ft.; total distance, 27 ft.; the lode at present is large, but poor, and will only yield 4 per cent. of pyrites. Stopes in bottom of deep tunnel: The lode is 6 ft. wide, and yields 10 per cent. of pyrites. Winze in bottom of the 48 west has now been sunk 20 ft.; the lode

here is a good one, and worth for pyrites from 35 to 40 per cent. We have 18 men employed here, and the work is being pushed on with all possible despatch. We have a good lot of wood prepared to carry us through the monsoon. Assays for week: Pyrites winze, 1 dwt. 17 grs.; deep tunnel east, 5 dwts. 5 grs.; stopes bottom of deep tunnel, 10 dwts. 10 grs.; winze bottom of 48 west, 2 ozs. 5 dwts. 16 grs.—J. WILLIAMS.

EAST AREVALO (MEXICAN) (15th April).—Since my last report we have driven east on the lode at the No. 3 level 4 ft. 6 ins.; the metal is continuing in this direction, and its yield is being dressed and got ready for the reduction works. We have also cut across the lode 2 ft. 9 ins., and have still 6 ft. to reach the footwall, where I anticipate the cutting of more metal. The No. 2 level north has been extended 1 ft. into the lode, making about 20 ft. I have for the present stopped this level. No. 4 level: Here I am about to again commence driving into the lode under where we have ore at the No. 3 level. No. 5 level: Driven north and south each 3 ft.; lode as yet of no value. I shall confine my operations for the present to the third and fourth levels to open and prove the metal. I have discovered we have ground enough above the fourth level to last for many, many years.—H. PRIDEAUX.

GARFIELD (20th April).—The mill: The battery was hung up on morning of 18th inst. I expect to start it again about middle of next week. To-day we made a shipment of 4 bars bullion, weighing 485 lbs. (Avoir.), of estimated net value of $4,750.—HOOPER.

GOLDFIELDS OF MYSORE (16th April).—Fortnightly report.—The west cross-cut at 165 ft. bridge shaft has been advanced 4¼ ft.; total length, 24¾ ft.; the end is in country. The end of the south level at 105 ft. has been driven 4 ft.; total, 69¾ ft. There is 2½ ft. of quartz in the end, worth 2 dwts. by assay. The north level at 105 ft. has been advanced 3 ft.; total, 79½ ft.; the end is in country. Driving south at 175 ft. in middle shaft an advance of 5½ ft. has been made; total, 83 ft.; the lode in the end is 2½ ft. wide, and worth by assay 2 dwts. The west cross-cut from this level has been driven 5 ft.; total, 14¾ ft.; the end is in country. The north level 175 ft. has been advanced 5¼ ft.; total, 87½ ft.; there are 3 ft. of lode in the end, worth by assay 6 dwts. The north level 108 ft. has been advanced 5 ft.; total distance from shaft 148½ ft.; the lode is 2½ ft. in width, worth 2 dwts. by assay. The new shaft south of bridge shaft: The east cross-cut at 75 ft. has been advanced 4½ ft.; total distance, 6¼ ft. from shaft; end in country. The new shaft, south of middle shaft, has been sunk 4¾ ft.; total depth, 109 ft.; the bottom is in country. Champion lode: Coromandel shaft has been sunk 4½ ft.; total depth, 182¾ ft.; the bottom is in country, with a few stringers of quartz. Driving north from the west cross-cut at 150 ft., an advance of 18 ft. has been made; total length, 51½ ft.; there are two branches of low grade quartz in the end. The winze in the south level at 100 ft. has been sunk 4 ft.; total depth 18 ft. In the bottom are several stringers of low grade quartz and country. New prospect shaft has been sunk 3¾ ft.; total depth, 211¼ ft.; the bottom is in country. The north drive at 200 ft. has been advanced 5¼ ft.; total, 15¾ ft.; the end is in country. The new shaft near Balaghat: The east cross-cut has been advanced 10 ft.; total, 43 ft., and the west cross-cut has been driven 11 ft.; total, 47½ ft. We have intersected a small stringer of low grade quartz in the latter.—J. SAMBORNE.

GYMPIE GREAT EASTERN (21st March).—During the past fortnight the drive north at the 634-ft. level has been extended 8 ft.; total, 53 ft.; there is a large body of crushing stuff showing a little gold. The south drive has been extended 10 ft; total, 91 ft.; the reef keeps about the same with very little gold showing. The stopes above these levels north and south are all showing a large amount of crushing stuff, and some of them show fair gold. The stopes above the 500-ft. level north and south are all showing fair gold, and those above the 364-ft. level on the old Eastern reef are about the same as last reported. The winze at the 580-ft. level in the eastern cross-cut to cut the No. 1 South Great Eastern reef has been sunk 4 ft.; total, 114 ft., and timbered 38 ft.: total timbered, 104 ft. We have opened out to the west about 6 ft. on the underlay and broke down the reef; there is no improvement since we went through it in the winze; the formation between the walls is about 3 ft. I have started to put up a rise east to see if we can get more quartz there than we have at present. Everything about the mine, winding engine and battery, is in fair order. There are 78 men employed—68 at the mine and 10 at the battery.—J. JAMES.

JOSEPHINE.—Report for week ending April 13th:—The 300-ft. level has been driven east 8 ft.; total distance east of shaft, 610 ft. This drift should be in the shoot of quartz for some distance yet, but from appearances the quartz has taken a more sudden dip, and we have no quartz in the breast; I have therefore stopped the drift for a few days, and have started an upraise from the end of the drift to see if the shoot of rock continues above: if so the drift will be continued. The stopes above this level do not look as well as they did last week, but have yielded considerable quartz. The 300-ft. level winze has been sunk 9 ft.; total depth, 21 ft.; the vein has widened out very much, being 7 ft. wide, and carrying from 2 to 3 ft. of quartz. The 400 stopes show little change, and carry about 20 ins. of quartz. The mill will have a partial clean-up on the 15th, and will not average over $3,000 in free gold. The second run of the month I hope to do better.

MONTE CHRISTO.—The manager reports under date 11th March:—Main shaft has been sunk 7 ft.; total depth, 282 ft.; the lode is making a little stronger, it is about 10 ins. in the east end and 6 ins. in the west. The stone is good-looking, but carries little gold, and the reef is well defined with good clean walls. East drive has been driven 11 ft.; total length from shaft, 202 ft. We have cut a stream of water here, which usually indicates the proximity of a body of ore. Endeavour shaft: The erection of the poppet head winding engine and engine shed has now been completed, and the shaft lined. In the bottom there is a lode of about 7 ins. which carries fine gold. Norton shaft has been sunk 7 ft.; total depth, 37 ft. We have struck a small vein in the bottom about 4 or 5 ins., carrying fair gold.

MONTE DEL ORO (30th April).—Fortnightly report.—Taylor's engine shaft: The 186-ft. level south of the cross-cut east has been extended 17 ft. during the last fortnight, and this makes its total length 247½ ft.; the lode averages about 15 ins. in width, and its composition is quartz and slate intermixed. In the 186-ft. level north of the cross-cut west the lode appears to be getting more regular and better defined than it has been throughout the fortnight, as it is now 1½ ft. wide, and is composed principally of quartz; the total length of the level from the cross-cut is 71½ ft., of which 13½ ft. have been driven since my previous report. Shaft No. 6: At a distance of 170 ft. from the shaft we reached the end of the old workings, when I immediately set the men to drive north on the course of the lode, and since then 12½ ft. have been driven, making the total distance from the shaft 182½ ft.; the lode is small, being composed of a soft flookan about 3 ins. wide, but it contains no quartz. Shaft No. 5: North of this shaft the lode varies in width from 3 ins. to 4 ins., but at present it carries no quartz, its composition being a soft slate, while the country rock is still decomposed granite. We are now 100 ft. north of the shaft, and the driving will be continued in order to prove whether there is any more quartz standing in this direction. Shaft No. 2: The ground in the intermediate level north of winze No. 1 is favourable for driving, and thus very good progress is made. In the past fortnight 26½ ft. were driven, and the level is now 36½ ft. long. Towards the hanging wall the lode carries a branch of quartz 3 ins. wide.—J. ROBERTS.

MOUNT MORGAN EXTENDED.—The directors have received a report from their local committee (per Mr. R. Ballard, M.I.C.E.) dated Rockhampton, 18th March, which states:—Mill going up slowly and steadily (*i.e.*, the buildings). Plant from Melbourne not yet shipped, although promised for 12th March. I expect to get word of the shipping daily. Classen's drive: Here I am continuing the drive (see par. 12 last report). I am in a most promising hæmalite reef, still with the drive, but if I don't get rich gold in it before end of March I shall stop it, for I can't afford to carry it on. I have little enough cash to build my mill with. Leaching platform (see par 13 last report): Here I am sinking a shaft between the points where we got the gold and silver on the leaching approach and the pulveriser platform. We are down some 20 ft. I have sent some very nice looking ore out of it to Lymburner for assay. Gold is present in that locality, I feel sure pretty heavy, but to strike it we may have to drive for it, as I more than conjecture that it is running in a flat vein on the top of the diorite or dolomite blow from which we got the assays referred to in last report. If I do not get good encouragement in this shaft this month to proceed with the search, I shall have to stop, as I have no money at my command for prospecting. I ought not by rights to be sinking this shaft at all, but for the life of me I could not help it; still, if I do not find something good here before end of March I shall stop it. Well: This well is now driven 62 ft.; the vein is 3 ft. thick between the walls—it is going in the same direction as our other veins. It is my greatest comfort at this present moment, this vein. I have called it the Immanuel vein, and I have every hope of success in it at 56 ft., where we struck it. Assays gave—gold, 6 dwts. 13 grs.; silver, 4 dwts. 2 grs. At 59, assays gave, gold, 4 dwts. 2 grs.; silver, 1 dwt. 15 grs. At 62 ft. we find the stone becoming a nice quartz. I have not yet obtained the assays. I am pushing this well on with hopeful vigour. We have good hopes now of water and gold too out of it. I esteem it an excellent sign the paucity of silver. It promises well for the vein. You will remember, a long time ago, I noticed an outcrop on the Bye wash. I sent 112 lbs. of the stone to Gympie, to my old friend Joseph, and he assayed it about 5 dwts. per ton, and got nearly 4 dwts. per ton out of it by mercurial amalgamation. This was the outcrop of the Immanuel reef, which we have cut in the well undoubtedly, and the point in consideration was 200 ft. south of the well. In paragragh 9 I omitted to mention that, when at Mount Morgan last, I discovered in our feed platforms at a higher level on the side of the mountain than the leaching or pulverising platform, the outcrop of a lode. This has since been identified by me with the lode referred to in paragraph 9. I took with my own hands samples of this outcrop. Lymburner assayer, Gympie, gives me in this gold, 5 dwts. per ton; silver, 10 dwts. per ton. It is, therefore, quite within the bounds of possibility that I may be fortunate enough to find payable stone within the reach of the man who feeds the mill. I say, possibility, because I have not done with this lode yet by any means. I have only just made its acquaintance, and mean to develop it, if not now, as soon as I can afford it. Gold west of the value is a tremendous step in the right direction, and here we have three assays of 15 dwts., 15 dwts., and 5 dwts. respectively from the same lode immediately at the mouth of the jaws of our stone-cutter.

MYSORE (16th April).—Mining operations: During the last fortnight very satisfactory work has been done by the rock-drills. The 466-ft. level north of Taylor's shaft was driven 34 ft. 6 ins.; total, 616 ft. 9 ins.; the lode is now 3 ft. wide, and assays 7 ozs. 3 dwts. 17 grs. The 296-ft. level north of Taylor's shaft was driven 19 ft. 9 ins.; total, 637 ft. 7 ins.; there is a small string of quartz; it assays 13 dwts. 1 gr. The 236-ft. level north of Taylor's shaft has been holed to old workings in the rise. The 236-ft. level south of Plummer's shaft was driven 4 ft. 10 ins.; total, 229 ft. 10 ins.; there is a small quantity of quartz, but of no value yet. The cross-cut driving west at the bottom of Taylor's shaft, very good speed was made; 22 ft. were driven in a fortnight; there is no appearance of any lode. In the 173-ft. level south of Williams' shaft the appearance is the same as for some time past; 6 ft. 6 ins. were driven, making a total of 209 ft. McTaggart's shaft: The 152-ft. level north of McTaggart's shaft was driven 12 ft. 10 ins.; total, 396 ft. 4 ins.; the air became so bad that the men were obliged to give over work, and we have now started to sink a shaft from surface with the intention of ventilating this level. The 220-ft. level was driven south of Schaw's 3 ft. 4 ins.; total, 66 ft. 10 ins.; there is a compact lode of quartz 5 ft. wide, assaying 9 dwts. 19 grs. There is no change to notice in the cross-cut at the 160 south of Schaw's; it is driven 3 ft. 2 ins.; total, 91 ft. The 180-ft. level south of Tennant's shaft was driven 5 ft.; total, 78 ft. 9 ins.; the lode is 14 ins. wide, assaying 6 dwts. 12 grs. The 180-ft. level north of Tennant's shaft was driven 4 ft. 10 ins.; total, 76 ft. 10 ins.; the lode is 12 ins. wide, assaying 7 dwts. 4 grs. Stopes: The stope in the 466-ft. level north of Taylor's shaft, south of the cross-cut, is in a lode 3 ft. wide, assaying 1 oz. 6 dwts. 3 grs. No. 1 stope in the back of the 400 north of Taylor's shaft contains a lode 1 ft. wide, assaying 3 ozs. 19 dwts. 17 grs. The stope below the 296 north of Taylor's shaft is in a lode 4 ft. wide, assaying 1 oz. 21 grs. The stope in the bottom of the 296 south of Plummer's shaft contains a lode 3 ft. wide, assaying 13 dwts. 1 gr. The stope in the bottom of the 296 north of Plummer's shaft, north of the winze, contains a lode 1 ft. 3 ins. wide, assaying 1 oz. 6 dwts. 3 grs. There are two other stopes working, one in the back of the 466 north of Taylor's shaft where the lode is 2 ft. 6 ins. wide, assaying 1 oz. 12 dwts. 16 grs., and one in the back of the 236 ft. north of Taylor's shaft in a lode 5 ft. wide, assaying 2 ozs. 18 dwts. 17 grs. Sinking: Sinking the incline

below the 400 north of Taylor's shaft, 16 ft. were sunk, making a total of 179 ft. 8 ins.; the lode is 2 ft. 6 ins. wide, assaying 1 oz. 9 dwts. 9 grs. Sinking in the bottom of the 466 ft. north of Taylor's shaft on the west lode, 5 ft. 6 ins.; total 25 ft. 6 ins.; the lode is 6 ft. wide, assaying 1 oz. 0 dwts. 21 grs. Sinking below the 296 south of Plummer's shaft; on the west branch, 6 ft.; total, 19 ft.; this place is holed, and the men have been put to stope. Rowse's shaft was sunk 6 ft. 2 ins., making a total of 114 ft.; the rock is now compact and hard; we commenced regularly with the rock-drills last Thnrsday. Schaw's shaft, sinking below the 220, 7 ft. 6 ins. were cut, making a total of 82 ft. When we get to the 300 it is our intention to drive levels north aud south of the shaft: the lode is 4 ft. wide, assaying 16 dwts. 18 grs. The rich stones of gold I referred to a fortnight ago appears to be only a small nest; nothing of the character has been seen since. Tennant's shaft was sunk 4 ft.; total, 228 ft.; the lode is 1 ft. 8 ins. wide, assaying 9 dwts. 19 grs. Rise in the back of the 400 north of Taylor's shaft was put up 20 ft. 6 ins.; total, 50 ft. 6 ins.; the lode is disordered, and split iuto branches; we think it is 2 ft. wide, but no assay was made. The rise in the back of the 296-ft. level is still in old workings; the sides are very rotten, and give a great deal of trouble to make them secure. Samples from the mill:—Old mill, 9th April, 1 oz. 6 dwts. 3 grs.; new mill, 2 ozs. 5 dwts. 17 grs.; old mill, 16th April, 1 oz. 19 dwts. 4 grs.; new mill, 2 ozs. 3 dwts. 2 grs.—B. D. PLUMMER.

MYSORE WEST.—Report of the mining manager for the two weeks ended 13th April:—Walker's shaft: 159 North of Walker's 17 ft. 6 ius. have been done, making 437 ft.; 12 moplahs employed; cost per ft., Rs 10; size of vein, 3 ft.; assaying a trace; vein improved in last few feet. 225 north: 6 ft. have been done, making 145 ft. 8 ins.; 12 coolics employed; cost per ft., Rs 14; size of vein, 6 ft.; assaying a trace. 225 south-east reef; 5 ft. have been done, making 123 ft. 6 ins.; 12 coolies employed; cost per ft. Rs 20; size of vein, 4 ft.; assaying a trace. 300 cross-cut west: 6 ft. 8 ins. have been done, making 21 ft. 6 ins.; 12 coolies employed; cost per ft., Rs 25. 300 north, 18 ft. 4 ins. have been done, making 63 ft. 6 ins.; cost per ft., Rs 18. 300 south (one week): 4 ft. 8 ins. have been done, making 44 ft.; 15 coolies employed; cost per ft. Rs 24; size of vein, 2 ft.; assaying a trace. 300 cross-cut east (one week): 5 ft. have been done, makiug 22 ft. 2 ins.; cost per ft., Rs 25. These last three ends worked by one rock-drill.

NEW EBERHARDT.—The mine manager reports, under date April 22nd, as follows:—Mine: Our south workings are showing fully as well as last reported. We have during the past week taken out, assorted, and put on the ore dump 13 tons of ore, of an average assay value of $56 per ton. We have some bunches of ore that assay from $70 to $150 per ton, but the general average is as given above. Ore shipments: We are daily shipping from the mine about 9 tons of ore, and we now have on our dump at the mill 230 tons. Mill: The mill is running steadily on tailings, and doing good work. The reason why we are running on tailings is from the shortness of our water, but I hope that next month we shall have sufficient water for all purposes.

NEW ORGANOS.—The underground agent writes, under date March 14th:—The following is a report on the work done in these mines during the past month: Te Encontré top workings: 24 ft. 2 ius. extracted; vein from 6 ins. to 12 ins. thick. No. 3 cross-cut: A level going west has been cleaned out 18 ft., and 12 ft. stoped in the back of same; lode 3 ft. wide, carrying 8 ins. of quartz, containing lead and irou pyrites; assays made gave 2½ ozs. free gold per ton. Marino lode; 65 ft. 6 ins. extracted; average width of mineral, 10 ins. James' Discovery: 35 ft. driveu on the lode, which runs from a few inches to 4 ft. wide. In the open cut above, 101 ft. 4 ins. have been excavated on two small branches of gossan containing visible gold. New Discovery: 102 ft. has been extracted in drivages, sinking, and stoping. This rich bunch has given out both in length and depth. No. 2 level is being cleared out to get at the rich ore said to be there. Constancia: The top levels have been uncovered, and about 150 tons sent to the mill. The lode is wide, composed of quartz, gossan, and felspar. Mill report: 371 tons of mineral treated, yielding 177 ozs. of gold.

— The manager writes under same date:—Machinery: The mill has worked well during the month, and is at this writing all running, save in battery No. 5, where there is one cam with one end broken, so that the corresponding stamp only makes one blow to every two of the others. Mill report: The mill report shows 351¾ tons of mineral crushed, yielding 177 ozs. bar gold, or .5 3 ozs. per ton. The assays give an average for month of .749 ozs. free gold per ton, so that 67.2 per cent. of the free gold was caught. The mill was repeatedly stopped for lack of mineral, and to save wear and tear was not run at a very high speed. The average working time was 17.69 days of 24 hours for each battery, and the average crushing per head per day of 24 hours was .654 tons. Had the mill run continuously for 30 days at this rate we could have crushed 597.6 tons. As previously stated, it is very evident that our returns are now governed entirely by the product of the mine and the capacity of our transportation facilities, for it can be safely asserted that the mill can treat all that can be sent down. That the mine was severely taxed for the 351 tons sent down last month is proved by the fact that many assays for free gold gave under 0.20 ozs. per ton, the assays of all coaches sent down in one day averaging 0.04 ozs. per ton. The highest days' assays average 4.05 free gold. As the American pan and settler are now ready to work, I am putting up some ties to concentrate tailings for them.

NINE REEFS (9th April).—Mining operations: Malleson lode, main shaft—Morrison shaft, sinking under the 185 ft., has advanced 3 ft., the total depth now being 53 ft.; the part of the vein carried is about 3 ft. wide. The 310-ft. level north of Baynard shaft: Driven 4 ft. 4 ins., the total distance being 68 ft.; the vein is 4 ft. wide. Stoping: No. 1 stope in the back of the 185-ft. level north of main shaft: Vein 6 ft. wide; assay, 6 dwts. 19 grs. gold per ton. No. 2 stope in the back of the 185-ft. level north of main shaft: Vein 6 ft. wide. No. 3 stope in the bottom of the 185-level south of Baynard shaft: Vein 4 ft. wide. No. 4 stope in the bottom of the 185-ft. level south of main shaft: Vein 4 ft. 6 ins. wide. No. 5 stope in the bottom of the 185-ft. level north of main shaft: Vein 6 ft. wide. No. 6 stope in the back of the 310-ft. level north of main shaft: Vein 5 ft. wide. Champion lode, Vyvyan shaft: Cross-cut east at the 145-ft. level, 70 ft. south of Vyvyan shaft; driven 3 ft. 6 ins., a total distance of 16 ft. 6 ins., intersecting some small branches of quartz. Stopes: North end of south stope in the back of the 145-ft. level south of Vyvyau shaft: Vein 1 ft. 8 ins. wide. North end of south stope in the back of the 145-ft. level south of Vyvyan shaft: Vein 1 ft. 8 ins. wide. North stope in the back of the 145-ft. level north of Vyvyan shaft: Vein 1 ft. 6 ins. wide. No. 2 lode: New shaft, sinking from surface, has advanced 8 ft. 6 ins., a total depth of 62 ft. This shaft is still in old workings, at this point about 3 ft. wide. Milling: The quantity of rock stamped during the week has been: main shaft, 135 tons; Vyvyan shaft, 3 tons 12 cwt.; and surface rock, 3 tons 12 cwt., making a total of 142 tons 4 cwt. The yield of gold obtained during the past month was as cabled yon—72 ozs. The board's view is perfectly right in the statement that No. 2 vein parallel to the Malleson vein should be tested by cross-cuts from different points already opened in the mine, especially so at Baynard shaft. I also thank him for the information relative to the sinking of Baynard shaft. Since I have been here I have often been struck with the fact that whilst Balaghat Mine yielded some very rich quartz containing fairly large-sized pieces of gold, the veins in this mine, as a general rule, hold the gold (no matter how rich the quartz may be) in comparatively thin flakes. The rock in Balaghat is easier for working; ours is very hard—admittedly the hardest on the field. The question that presented itself to my mind was: Is there a softer belt of rock traversing the Nine Reefs property? On enquiry and examination, I find that, at a distance of about 417 ft. south of Baynard shaft, there is a shaft called, I am told, Seymour shaft. This shaft is some 70 odd ft. deep. Some considerable work has been done on the vein met with in the shaft. The men who worked in the shaft claim—and I think with good grounds—that there is a change in the rock that encloses the vein at this shaft. I have taken some of the vein that was lying at surface, had a number of washings taken, and found better results in yield of gold from these washings than we get from many of our stopes. If it proves that there is an easier rock at this point, I think we have a very good prospect of having some very rich vein matter, for at this depth there is some slates in the gangue as well as quartz. The timber at the upper part of the shaft has decayed, but we are cutting timber to replace it, and shall very shortly resume the working in this shaft. I will give you the earliest information of the result. If the vein yields as the washings would seem to indicate, there is a good piece of vein at this shaft—I should say quite equal to what may be expected at the new shaft on the Champion lode. Whether Seymour shaft (?) is on the Malleson lode or the parallel lode is not to me very certain.—Capt. BENNETTS.

— Mr. Hodgson, the representative of the board at the mines, also informs the directors as follows:—Capt. Bennetts will tell you of the very good washes he got from the dumps at surface by a shaft to the south of Baynard shaft, called, we believe, Seymour shaft. Judging by the appearance of the country rock and quartz at surface, the shaft is in quite different ground to the rest of the Malleson lode. The rock is lighter in colour and not nearly so hard, and the quartz shows no pyrites. The washes I saw were better than any we are getting from other parts of the mine. Arrangements are being made to make the shaft safe, all the timber having been drawn, for us to go down, and we hope that on inspection we may find something worth looking into.

NINE REEFS (16th April).—Mining operations: Malleson lode: Morrison shaft, sinking under the 185 ft. level, has advanced 3 ft., a total depth of 56 ft. The part of the vein carried in the shaft is about 4 ft. wide, the assay being 5 dwts. 5 grs. gold per ton. Baynard shaft: 310 ft. level north driven 2 ft. 6 ins., a total length of 70 ft. 6 ins. The part of the vein carried in the drift is about 4 ft. wide, the assay being 9 dwts. 19 grs. gold per ton. Stopes—No. 1 stope in the back of the 185 ft. level north of main shaft: Vein 6 ft. wide; assay, 1 oz. 4 dwts. 19 grs. gold per ton. No. 2 stope in the back of the 115 ft. level north of main shaft: Vein 6 ft. wide; assay, 6 dwts. 12 grs. gold per ton. No. 3 stope in the bottom of the 185 ft. level south of Baynard shaft: Vein 4 ft. wide: assay, 6 dwts. 12 grs. gold per tou. No. 4 stope in bottom of the 185 ft. level south of main shaft: Veiu 4 ft. 6 ins. wide: assay, 8 dwts. 19 grs. gold per ton. No. 5 stope in the bottom of the 185 ft. level north of main shaft: Vein 6 ft. wide; assay, 7 dwts. 19 grs. gold per ton. No. 6 stope (first part) in the back of the 310 ft. level north of maiu shaft: Vein 6 ft. wide; assay, 5 ozs. 14 dwts. 19 grs. gold per ton. No. 6 stope (second part) in the baek of the 310-ft. level north of main shaft. Vein, 6 ft. wide; assay, 6 dwts. 12 grs. gold per ton. Champion lode: Vyvyan shaft, 145-ft. level cross-cut east: 70 ft. south of Vyvyan shaft driven 4 ft., a total distance of 20 ft. 6 ins., without meeting with any vein except that mentioned in former reports. Stopes: North end of south stope in the back of the 145-ft. level south of Vyvyan shaft Vein, 1 ft. 8 ins. wide; assay, 11 dwts. 17 grs. gold per ton. Sonth. end of south stope in the back of the 145-ft. level south of Vyvyan shaft: Vein, 1 ft. 8 ins. wide; assay, 16 dwts. 12 grs. gold per ton. North stope in the back of the 145-ft. level north of Vyvyan shaft: Vein, 1 ft. 8 ins. wide; assay, 16 dwts. 10 grs. gold per ton. New shaft: sinking from surface has advanced 8 ft.; total depth now being 70 ft. This shaft appears to be near the bottom of the old workings on this part of the vein; it may, however, be an arch of ground left by the former workers to support the side of the excavation made by them. I have taken samples of the surface ores lying near the shaft and had them assayed, the result being as follows:—No. 1, 6 dwts. 12 grs. gold per ton; No. 2, 10 dwts. 10 grs. gold; No. 3, 2 dwts. 14 grs. gold; No. 4, 3 dwts. 6 grs. gold. Being informed there was a good deal of workings at this shaft, and that there was a pipe of rich grade quartz in the vein, I at once commeuced to get the shaft ready for timbering, and trust to be working on the vein the latter end of next week. The ores from this shaft have already very favourably affected our returns at the mill. I have a sample taken from the vein matter of this vein, and may telegraph you the result of the analysis. I am also very nearly ready to cross-cut at Baynard shaft to intersect No. 2 vein. We have two very important works now in hand, viz., new shaft and the parts of Malleson lode south of Baynard shaft, either of which may turn out better than the average of workings up to the present.—Capt. BENNETTS.

NORTH MEXICAN (19th April).—I have been trying to sink the San Nicolas shaft as fast as possible, but there are always some difficulties that cannot be overcome quickly and cause loss of time. We re-commenced sinking at the bottom of the shaft 141 ft. deep, when a good many of the teeth of the pinion wheels broke off the whim, making it entirely useless. We are making a new whim of timber, which I expect will be finished next week, when I anticipate beginning sinking again in the shaft. I wish you would send a winding engine as soon as possible, as the deeper we get the more

trouble we shall have to hoist. I have got through repairing the water pipes.—R. S. Carlisle.

NUNDYDROOG (16th April.)—Mining operations: The new shaft near the north boundary is down 40 ft., and it is timbered to bottom; there is a little water, and the stuff is iron stained, and occasionally there are stones of quartz found. Taylor's shaft is down a total depth of 367 ft. 2 ins.; the rock does not change, it is still very hard, and it is barren. The west cross-cut in the 370 north of Webb's shaft has been driven in all 38 ft.; the rock is light in colour, but is hard and barren. The other drifts, the rise and stopes are looking much the same as I reported them last week. Assay of weekly samples from the mill:—Rough quartz, 3 ozs. 6 dwts. 12 grs.; smalls, 1 oz. 18 dwts.—B. D. Plummer.

OOREGUM (16th April).—Fortnightly report.—Main shaft: The 250-ft. level south has been driven 16 ft., or 247 ft. 11 ins. from cross-cut west; the lode is 2 ft. wide, and gives an assay of 11 ozs. 4 dwts. 6 grs. of gold per ton of quartz. The 250-ft. level north has been driven 12 ft., or 170 ft. 8 ins. from cross-cut west; the branch of quartz here is still small, now 3 ins. wide in the bottom of level; a sample from it gives an assay of 13 dwts. 2 grs. of gold per ton of quartz. The stope in back of the 250-ft. level south from cross-cut west is being continued; the lode is 2 ft. wide, and gives an assay of 3 ozs. 3 dwts. 3 grs. of gold per ton of quartz. Low's shaft: The 200-ft. level driving north of shaft, 5 ft. 5 ins. have been done, or 301 ft. 11 ins. from shaft; there is a small vein of quartz here to-day, but was too small on Friday to take a sample from it; from its present appearances we shall, I think, soon see a change here. The country rock is precisely the same as that we have in the 166-ft. level driving south towards this in Probyn's shaft. The winze sinking in bottom of the 200-ft. level north of shaft, 3 ft. 7 ins. have been done, or 57 ft. 7 ins. below the level; no sample was taken from here the past week. The 200-ft. level driving south, south of shaft, 11 ft. 6 ins. have been done, or 177 ft. 10 ins. from cross-cut west; the lode is 2 ft. 9 ins. wide, letting out a deal of water, which is draining away from battery old workings; an assay from it gives 1 oz. 1 dwt. 19 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 200-ft. level south, south of shaft, is 5 ft. deep: the lode is 1 ft. 6 ins. wide, and gives an assay of 1 oz. 13 dwts. 18 grs. of gold per ton of quartz. We think as we sink this winze that the lode will soon widen out. Probyn's shaft is now 36 ft. 3 ins. below the 300-ft. level; the lode is 3 ft. 6 ins. wide, and gives an assay of 7 ozs. 7 dwts. 1 gr. of gold per ton of quartz. The cutting of plat at the 300-ft. level rather impedes our progress here for the time. The 300-ft. level north of shaft 4 ft. 3 ins. have been driven, or 26 ft. from shaft; the lode is the size of the level, driven 4 ft. 6 ins., and gives an assay of 1 oz. 2 dwts. 21 grs. of gold per ton of quartz. The 300-ft. level driving south, 5 ft. 6 ins. have been done, or 28 ft. 1 in. from shaft; the lode is 4 ft. wide, and gives an assay of 1 oz. 12 dwts. 16 grs. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level north of shaft, 7 ft. have been sunk, or 54 ft. 5 ins. below the level; the lode is 2 ft. wide, and gives an assay of 3 ozs. 22 grs. of gold per ton of quartz. The 230-ft. level driving south of shaft, 3 ft. 9 ins. have been done, or 103 ft. 7 ins. from shaft; the lode is 2 ft. wide, and gives an assay of 1 oz. 12 dwts. 16 grs. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level south of shaft, 4 ft. 3 ins. have been done, or 35 ft. 6 ins. below the level; the lode is 2 ft. 6 ins. wide, and gives an assay of 4 ozs. 11 dwts. 10 grs. of gold per ton of quartz. The 166-ft. level driving south of shaft, 7 ft. 6 ins. have been done, or 222 ft. 3 ins. from shaft, and gives an assay of 6 ozs. 8 dwts. 7 grs. of gold per ton of quartz. The No. 2 rise in back of the 166-ft. level south of shaft is 9 ft. 9 ins. above the back of level; the lode is 2 ft. wide, and gives an assay of 5 dwts. 10 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 166-ft. level south of shaft, 6 ft. 4 ins. have been sunk, or 33 ft. 4 ins. below the level; the lode is 2 ft. 9 ins. wide, and gives an assay of 1 oz. 9 dwts. 9 grs. of gold per ton of quartz. All our pitwork and machinery is working well.—W. Martin.

OSCAR (4th May).—Below we hand you our monthly report for April:—Oscar lode: The shaft has been sunk 8 ft., and is now about 450 ft. from surface. Composition similar to previous months, with a slight increase of quartz; 10 tons were passed through the mill, which showed no alteration to the last returns. The 400-ft. level has been extended 10 ft., and is now 75 ft. west of shaft. This level has for several weeks been very hard, with uneven walls, which prevented satisfactory progress being made. During the last few days an important change has taken place; the ground is softer, and there is a good hanging-wall. Composition nearly all quartz, milling about 2½ dwts. to the ton. We think an important alteration may soon be expected here. No. 3 lode has been driven 17 ft.; composition, 70 per cent. quartz, and 30 per cent. greenstone and gabbro, milling from 2 to 3 dwts. per ton. The lode has a very promising appearance, and we feel confident of soon getting into richer ground. Daw's lode: The shaft has been sunk about 8 ft. The lode is about 5 ft. between the walls. There are about 15 ins. to 18 ins. of quartz and decomposed rock in the south end, assaying from 2 to 3 dwts. to the ton, but we have not seen any visible gold, which accounts for the low assay value. In the north end the lode is somewhat pinched, showing only a few strings of quartz. We have not crushed anything from here this month. 420 ft. level: Owing to our cross-cutting east, very little progress has been made here. The 370 ft. level north produced a good deal of quartz the first fortnight, but has since fallen off considerably. The same remark also applies to the southern level; it is, however, improving, with every prospect of returning some better stuff. The width of the quartz in the stopes has been very small and bunchy. We have seen a little visible gold, but not much. Crushed about 20 tons of decomposed rock, which only gave traces of gold, and 37 tons of quartz, which averaged a little over 4 dwts. to the ton. The 230-ft. level: The lode is producing a good deal of quartz, which will be milled next month. The 170-ft. level: The quartz in the stopes over this level varies from 8 to 18 ins., and assays for free gold 2½ dwts. to the ton. None of this stuff was treated in the mill, but reserved for next crushing. We mail you to-day 25 ozs. bullion.—J. Daw, jun.

PESTARENA (3rd May).—Caunter lode: The 90-fm. level east yields 5 tons of ore per fm., worth 15 dwts. of gold per ton. The 100 east has a lode 1 mitre wide, yielding 7 tons per fm., at 1 oz. per ton. The 110 east gives 6 tons, at 10 dwts., and west 5 tons, at 14 dwts. The 110 west from cross-cut contains pyrites, but not sufficient to value. The intermediate level over the 100 west produces 8 tons per fm., at 1 oz. 5 dwts. No. 1 lode: The 70 south yields 2 tons of 15 dwts. ore per fm. The 130 south has a lode 50 centimetres wide, containing quartz, but carries no ore. In the 150 north the lode is 1.60 metres wide, and seems to be improving, the present yield is 4 tons per fm., at 10 dwts. per ton. Driving of the 150 south has been resumed. In the winze under the 140 north the lode is yielding 5 tons per fm. at 15 dwts. per ton. Cross-cuts: The 130 south has traversed another wall or division, and the nature of the ground seems to indicate the vicinity of a lode. In the 140 the rock is still mixed with pyrites, but nothing of importance has yet been met with. There are six stopes at work, averaging 5 tons of ore per fm., at 1 oz. per ton. Val Toppa: The eastern branch in the end north of cross-cut at zero level gives 8 tons per fm., at 4 dwts. per ton; the intermediate level above, 7 tons, at 18 dwts., and the intermediate drive north on flat lode over No. 2 level, 15 tons, at 5 dwts. The other exploratory points call for no special remark. Four stopes are yielding on an average 9 tons per fm., at 11 dwts. Stopes on arches on the Great Quartz and Marun Rossa lode over and under No. 3 levels are turning out a good quantity of stuff.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending April 14th: Dunderberg: Amount of ore shipped during the week to the Richmond furnaces, 141 tons. There is no change to report, all the pitches in the mine being poor. Eagles drift: The ground in the raise has been softer for the last few days, and we have advanced 9 ft. during the week, making a total of 185 ft. raised. We have 20 tributers and nine contractors at work. Eldorado: We have shipped 22 tons of ore from this mine during the week. Lord Byron: We commenced to ship from this mine this morning; the pitches above the tunnel level are not looking quite so well. We have 12 tributers at work.

— Telegram received 7th May from Eureka:—"20 tons tribute ore sold for smelting, producing to company $46."

SOUTH-EAST MYSORE.—The secretary writes:—The board have no detailed report by this mail, as Capt. Rogers was on the point of leaving for England, having resigned. The directors were prepared for this contingency, and have made most satisfactory arrangements for carrying on the work. Mr. Hodgson has taken charge, and completed the other arrangements necessary. Mr. Hodgson's letter is principally occupied with details with regard to taking over the mine but expresses the utmost confidence in the future.

VICTORIA (LONDON) (21st March).—Total quartz crushed at the South Clunes United Company's Mines for the four weeks ending 21st March, 2,638 tons. Total gold obtained, 865 ozs. 9 dwts. 12 grs.; average per ton, 6 dwts. 13 grs. The above returns shows a smaller quantity of quartz crushed amounting to 250 tons, with an increase of 6 grs. per ton on the yield. The quartz vein reached in the No. 9 level looks promising, showing gold, and we hope the return will shortly improve again. Receipts, 2,927*l.* 6s. 3d.; expenditure (including progressive underground work, and alteration in the machinery at No. 4 shaft during the month amounts to 996*l.* 0s. 8d.), 2,827*l.* 12s. 1d.; balance carried, 99*l.* 14s. 2d.

VISO (30th April).—Report for April: I am glad to inform you that throughout the month now ending all our work has proceeded uninterruptedly. In the deep adit level being driven south, the character of the lode has much improved, and at present looks more kindly for yielding tin than it has done for a long time past. The forebreast of this level is now about 30 yds. from the open working on the back of the lode in Mi Amor, to which I have referred in former reports as having been very encouraging, and yielded considerable quantities of tinstuff. We are therefore pushing on this deep level towards it as fast as possible, in order to give it a proper trial. Having secured the two mining concessions adjoining our mines, viz.:—San Guillermo and California, which were pending for a long time, we have extended our tramway into the former (San Guillermo) and are just now ready to commence working it thoroughly and cheaply. As yet we have been able only to make a few superficial trials, but from what we have seen we are inclined to believe that it will prove a valuable acquisition to the company's property, as it has already yielded large quantities of tin from an extraordinary fine-looking lode which has only been wrought to a very limited extent. We intend, therefore, to take up the development of this mine at once, and as we have a tramway leading from it to our dressing floors, we can work it much more cheaply than has been done heretofore. There is no change worthy of remark at any other part of the company's mines.—R. R. Nancarrow.

OPENING OF MEYER AND CHARLTON BATTERY.

Transvaal Daily News, 22nd March, 1889.

"A large gathering of ladies and gentlemen assembled yesterday afternoon at the Meyer and Charlton Mine to witness the starting of the new 20 stamp battery. The event was a very interesting one, and passed off most successfully. The engine (Fowler, of Leeds) was started by Mr. Charlton amid much cheering, and the stamps were at once in full swing. They have been made and supplied by Messrs. Harvey and Co., Hayle, Cornwall, whose agents for the Transvaal are the Corunwall Trading Company (Messrs. W. and S. Hosken), Johannesburg. Messrs. Harvey's stamps have now gained a wide reputation on these fields for excellence of working and finish of workmanship. The 20 stamps started yesterday at Meyer and Charlton were greatly admired by those competent to judge their many points of technical superiority; in fact, the stamps manufactured by Messrs. Harvey and Co. are without doubt the very best that can be obtained, and they are rapidly coming into extensive use on the Randt."

From the *Standard*.

"The mill is one of Harvey's, of Cornwall, England, which are coming into great favour on the Randt; it is a splendid piece of machinery, and was erected without the slightest hitch."

From the *Eastern Star*.

"There could not have been less than 300 persons present. The battery is by Harvey and Co., of Cornwall, a firm which has gained considerable favour on these fields by the excellence of their mining machinery."

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

WEMMER.—The London agency has received, ex Tartar from Cape, two boxes, containing 591 ozs. native gold.

WITWATERSRANDT.—The London agency has received, ex Tartar from Cape, one box, contaiuing 647 ozs. native gold.

WOLSINGHAM.—Robert Whyte and Co. have received, ex Tartar from Cape, one box, containing 261 ozs. native gold.

VOGELSTRUIS.—The following cablegram gives result of the first crushing, viz.:—"850 tons of ore yielded 162 ozs. of gold."

JUBILEE.—The London secretary has received the following cable from the company's secretary at Pietermaritzburg:—"The result of last month's crushings is 360 ozs."

GORDON DIAMOND.—Return of work done at mine for week ending 4th inst.:—5,500 loads blue hauled; 5,600 loads blue washed; diamonds produced valued at 1,200*l*.

ESSAMAN.—Have sold, through Messrs. Johnson, Matthey, and Co., 132 ozs. of gold, produce of March crushings, realising 510*l*. 17*s*. 5*d*. One pot was upset in smelting, and will be added to next month's supply.

DURBAN-ROODEPOORT.—A telegram from the mines states:—"Since our last cable (2nd April) we have crushed 740 tons of quartz, yielding 892 ozs. of retorted gold; working 25 days, and a day lost for various causes."

SOUTH AFRICAN.—The following particulars of work relate to the week ending April 6th:—Blue ground hauled, 7,039 loads; blue ground washed, 4,963 loads; diamonds obtained, 1,537 carats; estimated value, 1,690*l*.

SOME 22 mines ih the South-African Gold Field are at work, and are reported to have produced during the last four months (to close of March) as follows: December, 17,280 ozs.; January, 18,582 ozs.; February, 21,165 ozs.; March, 22,242 ozs. Total four months, 79,269 ozs. Monthly average, 19,817¼ ozs. However, there would seem to be a material steady increase iu the monthly output.

RED REEF.—The Commissioners of Inland Revenue give notice that they have entered into an agreement with the Red Reef Gold Mining Co., Limited, for the composition of the stamp duties payable on transfers of the shares of the company, in accordance with the provisions of the Customs and Inland Revenue Act, 1887. Transfers executed on or after April 11th, 1889, will be exempt from stamp duty.

WITWATERSRANDT MINES.—The following are approximately the crushings as yet to hand by cable:—Crown Reef, 900 ozs.; Wemmer, 1,000; City and Suburban, 1,000; May, 954; Kleinfontein, 1,150; Jumpers, 1,450; Simmer and Jack, 900; Worcester, 1,000; Charlton and Meyer, 450; Vogelstruis, 162; Jubilee, 360. None of the above-mentioned companies were crushing with their extra stamps. The result of the Robinson Company's crushing for eleven days, working with their extra stamps, is estimated at 4,000 ozs.

GEORGE WALKER (MOODIES).—Report from Mr. Clewes, the manager:—Eastern section, north reef: A rich leader has been discovered in the drift near the western shaft, and sunk on 6 ft. It has widened to a veiu 8 ins. thick, showiug visible gold. The drift west has been extended 17½ ft.: lode 2 ft. wide, of varying grade. Cross-cut south extended 31 ft. South reef: Eastern shaft extended 10½ ft in low grade ore. Drift west extended 5 ft.: lode 2 ft. wide; leader 9 ins. wide, showing visible gold. Western section No. 1 level driven 83½ ft. in sandstone, coutaining leaders running gold. Two of the drifts are in payable ore, one being on a rich leader, carrying about 3 ozs. of gold per ton. There are 60 tons of ore at surface.

NOOITGEDACHT ESTATE.—The following advices have been received from the mine:—Dam: The recent rains brought down a quantity of shingle, completely filling up the old dam, and thus saving a considerable amount of labour in constructing the new one. Button's reef, No. 3 section: The main level shows considerable improvement; the lode is 4 ft. wide, and contains coarse gold. A drive has been commenced to connect No. 1 level east with the 90-ft. level east. In the 180-ft. levels east and west the lode is of good size and fair quality. No. 4 section: The three levels are progressing in the same quality of ore. Davidson's reef: No. 3 main level, lode 15 ins. thick and mixed. The 80-ft. level east, lode 18 ins. thick, high-grade ore. The 80-ft. level west, 2 ft. thick, rich ore. Intermediate level, 3 ft. lode, rich ore. No alteration to notice in other parts of mine. The mechanic has arrived, and has commenced on the erection of the battery.

NATAL LAND AND COLONISATION.—The accounts are submitted as made up to the end of 1888. The company have sold during the year 3,258 acres of land, for 3,250*l*., giving a profit of 1,502*l*. above the balance-sheet cost of the properties. The amount remaining due by purchasers of property is 18,671*l*., of which only 5,143*l*. is unrealised profit. The company have been obliged to cancel three of the five sales mentioned in the last annual report as likely to fall through, retaining, of course, the 1,700*l*. which had been received from the purchasers on account. These three properties have been replaced amongst the company's assets at the same figures at which they formerly stood, viz., 3,350*l*., although they are now valued at 4,523*l*. About one-third of one of them has just been re-sold for 600*l*., the whole costing 85*l*. The rent roll of the company has further increased, the receipts on rental account being 408*l*. more than in the previous year. The interest received on mortgages, &c., is less, but is more than compensated by the reduced amount of interest paid on debentures. The debenture debt has been reduced during the year by 12,600*l*. The balance to the credit of the profit and loss account, together with the amount brought forward from the previous accounts, is now 6,420*l*. 2*s*. 5*d*., which the directors regret they are not able to deal with until Mr. Bolton's action against the company has been disposed of. The directors are pleased to state that the present year has opened with a marked improvement in the land market, and the prospects of the colony and company are much more reassuring.—H. KIMBER, Chairman.

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from manager's advices of April 8th:—Bullion: A shipment of four bars melted gold, weighing 320½ ozs., value 1,200*l*., has been forwarded through the Standard Bank. Mines—Theta vein: No ore was extracted from the main vein during the week. Stripping operations at Nos. 1,061 and 1,062 were being carrried on vigorously, but would not reach the ore until the following week; 40 tons, assaying 1 oz. 5 dwts. per ton, were extracted from the small leader overlying the main vein. Beta vein: Ore extracted during week, 10 tons, assaying 1 oz. 4 dwts. per ton. Columbian Hill: At this place a number of trenches had been cut, and tunnels driven on what appears to be a large body of ore. So far as yet proved, the ore is of a low grade, and assays from 8 to 13 dwts. per ton. It was, however, improving as it was being driven in upon. The vein varies from 5 ft. to 12 ft. in thickness. Brown's Hill mill—battery: Time at work during week, 50 hours. Ore crushed, 18 tons from Theta vein, assaying 4 ozs. 14 dwts. per ton, and 19 tons from Beta vein, assaying 1 oz. 17 dwts. Operations were interrupted for monthly clean up, and to fix regulating gear on turbine. Figures for March, 584½ tons. Theta ore crushed produced 83¾ ozs. of gold—1 oz 9 dwts. per ton. Pans: The pans were at work 78 hours, and treated 28 tons of Theta vein sluices, assaying 3 ozs. 7 dwts. per ton. Return for March, 157 tons tailings treated, produced 43 ozs. gold. Gold contents of auriferous residues collected during month, 81 ozs. Total production from 157 tons treated—124 ozs. gold. Telegram:—"Crushed 390 tons in 16 full days, yielding 360 ozs. Treatment of tailings in the pans, yielded 45 ozs. Total for April, 405 ozs."

WASSAU (30th April).—The remittances of gold for the month of February were 105.45 ozs, of the net value of 374*l*. 13*s*. 8*d*. During this month the mill ran 21 days and 8 hours, and crushed 393 tons of ore, the yield of gold being 0.36 per ton. Scarcity of water continued during the whole of this month, and up to the latest advices, dated 20th March, very little rain had then fallen. The shareholders have been informed monthly of the amount of gold sent from the mine, and its net value; no doubt it has been disappointing to them as it has been to the directors. A year ago, and even nine or 10 months ago, there was strong evidence that better times were near, but our "hope" is again to be deferred. The principal causes of the decreased yield have been the low value of the ore and scarcity of water—the latter, however, would not have been so serious an item if the ore had retained its quality, or increased in value per ton, as it was expected to do. Mr. Gowans, the superintendent of the mines, will soon be on his way home, when we shall have a full and more complete explanation; and, on this account chiefly, it has been thought advisable to postpone the annual general meeting until July next, by which time the mine reports lead us to expect more encouraging news. The accounts for the year ending 31st December, 1888, have been made up and audited, and will be sent out with the notice convening the meeting.—J. CLEMENTS, Secretary.

P.S.—Since the above was written, Mr. Gowans has returned, and he assures the board that he expects very much better returns will be received from the mine during the next two months, and by this the directors are encouraged to carry out the resolution for the postponement of the general meeting as above referred to.

"JUMPERS."—The directors in Johannesburg submit summary of operations and result of same for the month of March:—Quartz won, 1,715 tons; quartz milled, 1,615 tons; yielding gold, 1,379 ozs. 1 dwt.; taken at 3*l*. 10*s*. per oz., 4,823*l*. 15*s*. Cost of winning same, mining and milling, also legal, office, and all other expenses of every nature, together with 100*l*. 12*s*. 6*d*. for quartz won prosecuting permanent works, and 191*l*. 5*s*., being 2*s*. 6*d*. per ton for every ton of quartz stoped, credited permanent works redemption account, 2,338*l*. 13*s*. 1*d*.; profit on month's operations, 2,438*l*. 1*s*. 11*d*.; expended upon permanent works, construction of buildings, &c., during the month, from capital account, 2,819*l*. 15*s*. 10*d*. Driven during month—Main reef, 74 ft.; north reef, 52 ft.; No. 3 reef, 67 ft.; total, 193 ft.; sunk winze on No. 3 reef, 17 ft.; east main shaft sunk and timbered during month (making total depth of 190 ft.), 14 ft.; cross-cuts from main to north reef, 1st level, 50½ ft.; cross-cuts from east to main shaft, 2nd level, 7½ ft.; Mine—East Main shaft: Timbering to the second level has been completed, the station cut, and the cross-cut to main reef started. Including the sump, this shaft is 190 ft. deep vertical—the deepest vertical sinking on the Randt. We are now busy fitting runners (so as to have the cages at work in the shaft during April), which suspends the further sinking for a short time. A great deal of timbering, especially the putting in of the stull, has been done during the month, and the mine work generally well pushed forward. Our reefs being very wide in places, we find great difficulty in obtaining suitable timber for the stulls and stoping. Battery: Owing to the feed pump to the boilers of driving engine breaking down, we had a stoppage during the month. The yield of gold during March was below our average, as most of the quartz milled came from the backs of drives where the stull is being put in, and necessarily had a large amount of sandstone casing mixed with it. Erection of new battery is well in hand, and we expect to have the 70 head completed by the end of April, and the erection of engine and four boilers well advanced. New battery house is also in course of erection. To erect and place in working order within a short space of time such a large installation of machinery as four boilers, a 100 h.-p. nominal compound engine, and 70 heads of stamps, in the face of the heavy labour difficulties existing at the Randt, is a very large and onerous undertaking, but if nothing unforeseen happens, we will have the mill ready for work during the month of June. Additional rooms for miners, storehouse, &c., have also been taken in hand during the month. Dividend 10 per cent. is payable 25th April.—R. R. HOLLINS, Chairman, Managing Director.

NEW AKANKOO.—An extraordinary general meeting of the above-named company will be held next week, for the purpose of considering, and, if deemed advisable, passing certain resolutions, with or without modification. A special general meeting of the shareholders being necessary to make certain alterations in the articles of association, in order to comply with the requirements of the Stock Exchange Committee before granting a quotation for the shares of the company, the directors take the opportunity of laying before the shareholders a brief statement of the present position and prospects of the

company. It was intended to postpone the meeting until the return of Mr. Harvey from the Gold Coast, but as this will not occur probably for another month or more, the directors consider that no further time should be lost. The liquidation of the old company was duly carried out, and the present company starts with a capital of 98,948 ordinary and 21,000 preference shares. The work at the mine has been vigorously proceeded with, and a large extent of ground has been opened up for stoping, a good quantity of quartz being ready at the mill for crushing. Much delay occurred through the old water-course, constructed at great expense, having entirely collapsed, and the water from the bottom of the shaft not being sufficient or clean enough for milling purposes. Pipes had therefore to be sent out to convey a fresh supply, which it was at first proposed to pump direct from the river, but it was found that a sufficient quantity could be obtained from a swamp about 400 ft. from the mill, and this is now being utilised. The mill itself, however, has given considerable trouble, as, on account of its having been erected a long time before it could be used, the foundation timbers, composed principally of green wood, have rotted and given way in places, and their replacement is a matter of some difficulty, without taking down and entirely re-erecting the stamps. It is proposed to do so in the case of the second 10 heads ; meantime the first 10 heads have only been workable at half speed and very irregularly. Mr. Harvey advised his intention to stop for repairs, and at the same time to remove the driving engine 6 ft. further back, which has doubtless been done, as the latest telegram advised "crushing resumed." The directors can announce with much satisfaction that the great value of the reef is established beyond all question the further it is opened out, and every exertion is being made to push on with the main shaft, which is expected to strike the reef at a depth of about 480 ft., and by the time it has been carried down they hope to have enough levels open to supply 40 heads of stamps. The more recent returns show an average of over 1 oz. gold per ton, and with 20 heads going the expenses can hardly exceed 6 to 8 dwts. The directors have to announce with deep regret the loss by death of Mr. Ramsay, who had proved himself a most capable and zealous manager. Fortunately for the company, Mr. Harvey was on the spot, and secured for a time the services of Mr. L. C. Henry, who was staying at the mine, and whom he strongly recommends as an active and efficient substitute for Mr. Ramsay. The Governor of the Gold Coast Colony with his staff recently paid a visit to the Akankoo and neighbouring mines, and expressed his confidence in the future of mining in the district. Concessions are being rapidly secured by speculators, and there is apparently every prospect of the Gold Coast resuming its old position of one of the principal gold-producing countries in the world. Since the shareholders last met the following quantities of gold have been received : —November, 1888, 219 ozs.; February, 1889, 48 ozs.; April, 1889, 157 ozs.; realising 1,500*l*. 6s. 4d. ; and the directors earnestly trust that remittances will now be regular. With 20 heads of stamps kept in full work there should be no difficulty in returning 400 to 500 ozs. gold per month. Mr. Boyle, the late secretary, having obtained a more important post, the directors have arranged to effect considerable economy in the London expenses by removing the company to 32, Great St. Helen's, E.C.—C. J. Tolputt, Secretary.

THE ETHERIDGE UNITED GOLD MINING CO., LIMITED.

9th May.—The Directors have pleasure in communicating to the shareholders the following information, which has been received by mail recently from Mr. Matthew Ferguson, the new manager : —I arrived on the company's property on the 31st of January, and proceeded to thoroughly inspect the mines. The reef at the Etheridge Reefs (Lord Nelson) Mine is from 2 ft. 6 ins. to 7 ft., and is well worth prospecting deeper, the largest of the lode being in the bottom of shaft, just on the mundic stone with brown stone on top. I recommend that say 200 tons of the brown stone should be taken out for a trial crushing. If successful there will be years of work for the battery. After which I would sink the shaft and prove the mundic stone, whilst doing same it would be as well to get the duplicate six wheeler pans, the two concentrators, and six berdans from Goldsmith Creek, and have them in readiness for treating the mundic stone. The Canadian West has a very large reef varying from 4 ft. to 5 ft., and is capable of keeping the battery going at Goldsmith Creek. I hope to have the machinery at Goldsmith Creek completed in a fortnight, as there are still five berdans, one settler, and two wheeler pans to be erected before the grinding gear will be sufficient. The dam is full ; I shall not stop the battery as long as I have stone to crush. We cleaned up from 130 tons stone a yield of 93 ozs. 17 dwts. of gold, which I think is very fair, considering all the machinery is new. I also sold 20 ozs. 18 dwts. of gold which Mr. Viviau left in the bank of New South Wales. I may say grinding is the best possible way for this stone, with the exception of chlorination ; after what I saw on the Charters Towers goldfield I believe it is the best process yet found out. The Chlorination Company bought tailings, which had been through concentrators, berdans, wheeler pans and settlers, for which they paid 7*l*. and even 10*l*. per ton. During the fortnight, ended the 23rd of February last, we have been crushing quartz from the Canadian West which is looking very well. I should not be at all surprised if we come into some very rich ore at a depth of about 300 ft. ; at present the best mundic stone is very patchy and in shoots, but in sinking I think it would become more regular. When the dry season sets in, I should like to put the shaft down another 200 ft., but until then the levels will keep the battery going. I intend to keep the battery at lighthouse (Etheridge Reefs) going on the brown stone, which is quartz free from mundic, and can be treated with very little grinding, and is always found above water level ; there is plenty of it, so I hope it will be payable. From a fortnight's crushing we have got 102 ozs. 11 dwts. 12 grs. smelted gold from Canadian West stone. Since the foregoing came to hand by mail, a telegram has been received from Mr. Ferguson on the 5th instant, saying "Proceeds gold 1,700*l*." From sundry details furnished by Mr. Ferguson the directors are satisfied that every economy is being used in the working of the mines.—L. J. Woodman, Secretary.

Certificates for shares in the United Lankat Plantations Co. are now ready for delivery, in exchange for the letter of allotment with vouchers attached.

MINING IN IRELAND.

By J. H. Collins, F.G.S.

It seems to me that a part of the capital which is being subscribed so readily and abundantly for foreign mining ventures might easily and profitably be diverted to Ireland.

It is well known that there are many promising mining localities in the sister kingdom, which with the advantage of cheap labour, a mild climate, and accessibility to the commercial centre of the world, should certainly be given a chance of development. Ireland is known to contain gold, silver, lead, copper, and iron in considerable abundance ; coal exists in Tipperary, Kilkenny, and other localities ; while tin, platinum, and other valuable metals have from time to time been reported to exist. Up to the present, except, perhaps, in Wicklow and Antrim, the very unfortunate social condition of the island, and the uncertainties of its political relations with England, have had much to do with the neglect of these resources. Absolute want of capital must also be admitted to have been an obstacle in many cases, while something must, I fear, be attributed to the Irishman's indisposition to steady work, his readiness to submit to demagogic influences, and his proneness to the excessive use of strong drink. But all these evils and adverse circumstances may be controlled—all may be made to disappear in face of strong and well-directed effort. I believe, in particular, that the introduction of the Cornish cost-book system of working mines, with its adjuncts of tutwork, and especially of tribute, would in Ireland, as it has in Cornwall, tend to produce a race of self-reliant miners, well aware that there is no fund to fall back upon if the mine itself once gets a bad reputation—expecting to share in the profits of a prosperous time, and in the adversity of times which are adverse.

There are, no doubt, many good things in mining abroad, but it should be remembered that there are also a great many bad ones. There are good and bad things nearer home, but home affairs have at least this advantage, that the bad may be sooner weeded out, while the good are more under control.

I do not write this because I have any definite Irish project in view. At the present moment I have none such, but I believe there is in Ireland a fair and reasonable field for mining, and I should like to see it receiving its due share of attention.

MASON AND BARRY, LIMITED.

The directors' annual report of Mason and Barry, Limited, for 1888 states that the total quantity of ore broken and raised at the mine during the year 1888 was 336,389 tons, as against 329,128 tons in 1887, and the shipments during the same period amounted to 78,994 tons, as against 76,493 tons in the previous year. The quantity of ore sold for its sulphur value during 1888 amounted to 85,988 tons, as against 80,838 tons in 1887. After writing off in the mine books for depreciation of works, plant, &c. (including open cash account), the sum of 42,996*l*., and allowing for the variation in the estimated value of the stocks on hand in this country and in Portugal on December 31st, 1888, and after deducting the current expenses and income-tax, the net profits on working account have amounted to the sum of 208,093*l*., to which has to be added the sum of 8,194*l*. received as dividend (less sinking-fund) on the La Sabina shares, and the sum of 5,617*l*. from sundries, making together a total profit for the year of 221,903*l*. To this has to be added the balance, 7,041*l*. brought forward from the year 1887, making together the sum of 228,945*l*., which has been appropriated by the directors as under :—Interim dividend paid October, 1888, 83,324*l*. ; credited to goodwill and leases sinking fund, 20,000*l*. ; balance unappropriated, 125,621*l*. The directors have, as before, transferred to goodwill and leases sinking fund the sum of 20,000*l*., thus bringing the fund up to a total of 160,000*l*. The reserve fund stands, as on the previous 31st December, at the sum of 113,943*l*. From the above unappropriated balance the directors recommend the payment of 9s. per share, making, with the interim dividend of 9s. per share, a total dividend for the year of 9 per cent., and to carry forward a balance of 42,297*l*. to the next account. The directors regret to inform the shareholders that the contract entered into with La Société Industrielle et Commerciale des Métaux of Paris, under guarantee of due payment for all copper precipitate delivered, given by the Comptoir d'Escompte de Paris, has been broken, and the directors have been compelled to institute legal proceedings against both of those companies, and the same are now pending in the Law Courts.

THE GUARANTEE OF THE COMPTOIR D'ESCOMPTE AND MASON AND BARRY, LIMITED.

The case of Mason and Barry v. the Comptoir d'Escompte de Paris came before the Divisional Court, consisting of Justice Field and Cave, on Thursday, upon an appeal by the defendants to set aside the service of the writ in the action, upon the ground that the defendant company were a foreign corporation, and the cause of action did not arise within the jurisdiction of the English courts. The action was brought upon a guarantee given by the defendant company for the performance of a contract by the Société des Métaux for copper supplied by Mason and Barry. The defendants carry on business in Paris, but they also have an office in London, where business is carried on under a power of attorney, and the writ had been served at this place. The last clause of the guarantee provided that, "for the purpose of the guarantee, and any legal proceedings thereout, we hereby elect the domicile of our office in Threadneedle Street." Counsel argued that for the purpose of giving jurisdiction domicile was a question of fact, and not of election. Their Lordships held that there had been good service of the writ, and dismissed the appeal with costs.

In a second action brought by the Quebrada Railway against the same defendants, and a third action by Messrs. Haggin, also against the same defendants in which the same point was raised, their Lordships made a similar order. Mr. Atkinson, who appeared for the defendants, intimated that the opinion of the Appeal Court would be taken on the point.

WEST ARGENTINE GOLD CO., LIMITED.

The receipt of the following telegram from Mr. Allan has greatly improved the position of the company :—"Shaft—the reef is 3 ft. in thickness—12 dwts. ; winze, 14 dwts. ; in reserve, 3,000 tons." The above conveys the satisfactory news that the Carolina reef has been struck at a depth of 66 ft. below the adit level, and that it maintains its value going down ; that there is payable ore in sight sufficient to keep our new mill at work for some time, whilst the deep shaft will now be continued with every prospect of successful result. The following information, published by the Central Argentine Goldfields, Limited, is interesting to this company, being largely concerned, both as shareholders, and entitled to royalties :—

CENTRAL ARGENTINE.—Extract from Mr. Mellor's Report.

"Alluvials : The Canada Honda contains alluvials to the extent of about 254 acres of what I find, from careful examination, and testing by trial holes and washings I have made, may be termed pay dirt, such as will prove remunerative in washing. I annex a list of these tests and the weight of each sample of gold taken. I could not get down to the bed rock in many places, because of the water being under the level of the bed of the river. Average yield, 14 dwts. 2 grs. per cubic metre. (2*l.* 9*s.* per cubic metre.) Lodes : In the southern portion of the property, about 10 miles from the Canada Honda proper, there are several distinctly defined lodes. One at Paso del Rey, crossing the Canada Honda, traceable for some distance on the hills on both sides. There are also lodes at Cerritos Negros, about half a mile from Paso del Rey, also the Poterillos vein in the same neighbourhood, and from the surface assays were as follows :—Paso del Rey, 3 ozs. 2 dwts. 19 grs. per ton of ore ; Cerritos Negros, 17 dwts. 23 grs. per ton of ore ; Proterillos, 11 dwts. 10 grs. per ton of ore. In my opinion these veins will show better results if they are properly eosteened to some depth below surface, and average samples taken across the lodes. Cerros del Oro : The ore, judging from its soft nature, will be mined and milled at a cost of about 5 or 6 dwts. per ton. The immense height of backs will allow of four levels for stoping of 30 metres each above adits, and should the ore assay well (which I believe it will), there will be enough to keep 50 stamps going for 30 years from these adits alone."

The directors have not received conditional applications for the suggested 5*s.* preference shares to the number fixed as the minimum they are therefore obliged to abandon the scheme of re-construction, which was adopted at the meeting of the company held on 27th March last. The alternative scheme discussed at that meeting was simple re-construction on the basis of the issue of shares with 15*s.* credited and a liability of 5*s.* per share in lieu of those now held. But the board has been requested to postpone for a few days the definite submission of this scheme, as, with the improved prospects as indicated above, a more favourable proposition, it is expected, will shortly be laid before them for consideration, subject, of course, to the assent of the shareholders in general meeting. It is understood, however, that the proposition will involve the inclusion of the shares in the subsidiary companies in the assets to be taken over by the new company to be subsequently distributed. There will be a binding arrangement for the placing of all shares not taken up by the present shareholders in re-construction, which will ensure ample capital for the adequate working of the mines in the 7th department concession. The directors will communicate full particulars at the earliest possible date.—W. P. Owen, Secretary.

STOCK IN THE JAY HAWK CO.'S SUPERIOR MINE ON THE MISSOURI MARKET.

(Extract from the Helena *Independent*.)

The *St. Louis Republic* of the 13th inst. contains the following :—A very large transaction in mining stocks has been consummated within the past few days in the placing of between 40,000 and 50,000 shares with well-known capitalists of the Superior Mine, located in the Jay Gould district of Montana, one of the richest in that territory. The property consists of two claims, the Superior and the Asheulet, and is an extension of the celebrated Jay Gould Mine, being on the same ledge. The property is said to have been worked for some time, but it was only recently that the ore body was encountered, and they are now 130 ft. in on the vein, which is said to be equally as rich and of as great an extent as the Jay Gould. The latter property was offered in this market at one time for $50,000, but the parties who owned this mine failed to find a purchaser, returned to Montana, secured local backing to put up a 10-stamp mill, and since then the mine has turned out to be one of the most valuable in the State. Joe J. Mullally, J. H. Blessing and other St. Louis parties interested, started negotiations for the extension of the Jay Gould, but they hesitated so long after the terms had been agreed upon, that the owners quietly sent a man to England, and it was placed there for 70,000*l.* ($350,000), and another rich mine was lost to St. Louis. The Superior, however, is said to be equally as valuable as the above two properties, and if properly developed will pay largely. It could not be learned yesterday what figure the stock was placed at, or who placed it. But there is a very strong suspicion that John Carter's visit to St. Louis has some connection with it, as he said to be interested in the property. The purchasers are said to be A. J. Weil, James Campbell, Col. Jim Edwards, Leon Goldman, and others. The deal has been on the *tapis* for some time, but it is now an assured fact, and the stock will be transferred to the purchasers in a few days.

SPECIAL CIRCULAR.

10th May.—I have much pleasure in giving a few particulars regarding the Jay Hawk Mining Company, Limited. The property is situated 36 miles from Helena, the capital of Montana, and is about 108 acres in area. There are five lode claims and four mill sites. The Jay Gould Mine is contiguous to this company's property, and is at present time the richest mine in Montana. The main vein of this concern has been proved to traverse 1,500 ft. of the Jay Hawk claim. A large amount of work has been done, and in the course of a few months it is expected that the monthly profits will amount to over 6,000*l.* I strongly urge you to purchase a few hundred shares at once at the present quotation of 5*s.* 6*d.* before an advance takes place. A rise is certain, perhaps to 20*s.*, but very likely to 5*l.* per share. This mine will turn out the prize for 1889.—J. H. Nicholls.

COMMERCIAL NOTES.

(*Continued from page 787.*)

RAILWAYS.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year : — Increases : — Caledonian, 2,570*l.* ; Eastern and Midlands, 102*l.* ; Great Northern, 4,585*l.* ; Great Western, 10,120*l.* ; Hull and Barnsley, 476*l.* ; London and North-Western, 10,328*l.* ; London and South-Western, 5,683*l.* ; London, Chatham, and Dover, 2,531*l.* ; Manchester and Sheffield, 3,026*l.* ; Metropolitan, 330*l.* ; Midland, 7,048*l.* ; and North British, 3,366*l.* Decreases :—North-Eastern, 3,160*l.* ; and North Staffordshire, 389*l.*

The Brighton Railway traffic return for the week ended May 4th exhibits an increase of 1,044*l.* ; and the South-Eastern an increase of 2,863*l.*

The Mexican Railway traffic receipts for the week ended May 4th were 18,700*l.*, against 13,800*l.* last year, showing an increase of 4,900*l.* For April the gross earnings of the Mexican National Railroad amounted to $288,722.

For the nine days ended April 30th the Canadian Pacific Railway receipts were $327,000, against $303,000 last year. From January 1st to date the total earnings amounted to $3,978,000, or $336,000 more than in 1888. The estimated receipts of the Argentine Great Western Railway for the week ended April 26th were $21,000, against $18,960 last year. For the seven days ended April 30th the Dutch Rhenish Railway receipts were 7,575*l.*, being 996*l.* in excess of 1888. The Smyrna and Cassaba Railway receipts for the week ended April 21st were 1,458*l.*, against 1,462*l.* last year. The estimated earnings of the Ohio and Mississippi Railway from April 9th to 16th amounted to $81,907, compared with $67,548 (actual receipts) last year. For April the Bilbao River and Cantabrian Railway receipts were 8,646*l.*, against 10,249*l.* last year.

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results :—Increases :—London, 128*l.* ; Belfast, 175*l.* ; Provincial, 523*l.* ; Southampton, 4*l.* ; Woolwich and South-East London, 11*l.* ; Bristol, 93*l.* ; Edinburgh, 200*l.* ; Imperial, 19*l.* ; Sunderland, 30*l.* ; Swansea, 46*l.* ; Germany, 347*l.* ; Gothenburg, 24*l.* ; Calcutta, 38*l.* ; Southwark and Deptford, 5*l.* ; and North Staffordshire, 109*l.* ; while the North London shows a decrease of 61*l.* ; West Metropolitan, 33*l.* ; Stockton and Darlington, 6*l.* ; Hull, 32*l.* ; London Street, 55*l.* ; London Southern, 8*l.* ; South London, 36*l.* ; Calais, 15*l.* ; France, 36*l.* ; and Bordeaux, 263*l.* The Anglo-Argentine Tramway receipts for the week ended March 25th were 5,483*l.* against 4,489*l.* last year. The Vienna General Omnibus return for the week ended April 27th exhibits an increase of 463*l.*

JACKSON RAE PHOSPHATE CO., LIMITED.

The rapidly increasing demand for phosphates and nitrates is evidence that their great utility as elements of plant food, or fertilizers, is becoming universally recognised by those interested in agricultural pursuits. No matter how productive a farm may be, the continual yielding of crops of hay, straw, &c., must inevitably exhaust the fertility of the soil, unless the phosphorus contained therein is given back to it in some way or other. The application of nitrates and phosphates has been proved to effect this object, and of the two, the latter appear to be preferable inasmuch as nitrates are very soluble, and hence are liable to become washed out in the drainage waters. The original source of supply of phosphates was South Carolina, where, some 20 years ago, the discovery of the deposits was made, and since which time it is said that upwards of 4,000,000 tons have been shipped. Extensive deposits have now been found in Canada, and they are rapidly coming to the front.

The particular property which the Jackson Rae Company has been formed to acquire comprises 100 acres of freehold land situate in the province of Quebec—said to be the best phosphate-bearing district in Canada. The mines have been proved and developed, and it is estimated on the basis of recent workings, that an output of some 3,600 tons of phosphate can be obtained. Were this sold on the spot at only $13 to the ton, a profit of 17½ per cent., would be derived ; but as it is the intention of the company to ship the phosphate to England, where it could be sold at something like 4*l.* 4*s.* per ton, a yield of 25 per cent. upon the capital of the company would be obtained. This would naturally be increased as the pits were further developed. The capital is 25,000*l.* in as many shares of 1*l.* each, and the price fixed for the purchase of the property is 20,000*l.*, of which 8,000*l.* will be in cash. The company appears to offer an opening which will doubtless not be lost sight of by the investing public.

THE

Mining World & Engineering Record.

ESTABLISHED 1871.

Shareholders desiring FULL REPORTS of the MEETINGS of the Companies in which they are interested should Subscribe to and Read the Mining World—6d. weekly. One Guinea per annum, post free.

Half-year, 10/6; Quarter, 5/6. All subscriptions payable in advance. Subscriptions for the Continent, £1 3s. 6d.

Orders to be sent to

W. Dunbar Quinlan,

234, 235 & 236, Gresham House, Old Broad Street London, E.C.

CONTINENTAL AGENCY,

at which the Mining World may be purchased every Saturday

PARIS	- - -	224, Rue de Rivoli.
NICE	- - -	15, Quai Massena.

Subscriptions will also be received at the same addresses.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

Trace (A. P.)—You can obtain the information by writing direct to the secretary.
R. L. (Birmingham).—The company has not yet been formed.
J. M. R. (Jersey).—We advise you to hold.
French (X. Y.)—Sell all.
Hopper (Ipswich).—It is quite right, and you must pay.
Suspicion (T. P.)—We advise you to apply for the new shares.
John C. M.—It appeared last week.
Finance (Bath).—They have fallen in sympathy with all the others.
B. A. C. (Brighton).—Demand the transfer. It is long overdue.
Mansion (Dewsbury).—We will enquire and write by letter.
P. Q. R.—1, 2, sell, and save any further loss.
L. Lewis.—A, B, E, and F are worth holding. C, D, and G show a profit, and under the circumstance we advise you to sell.
Buyer (B. A. B.)—You are right. Yuruaris look like going higher.
Investor (Lancashire).—Do not be misguided. Sell 1, 2, 3, 4, 5, and 7. No. 6 we will enquire about.
Motto (Chiswick).—The dividend declared is beyond expectations: hence the rise in the shares.
Normal (T. U. V.)—Keep your shares. They may improve during next account.
Rails (Backhouse).—Every chance of an improvement.
Reader (Willesden).—The premium is too high for the shares named.
Indian Shareholder.—The information given in this issue is complete. File it for reference.
J. W. M.—No demand for the shares.
G. M.—The advance was to be 6,000*l.* We doubt if it has been made.
W. D.—Your surmise is correct.
Henri.—You ought not to apply for the shares. The persons are shady.
T. G. W.—Hold for better prices.
"*Africa*" (Yorks).—On receipt of your name and full particulars we will be happy to supply you with the information required, either by post or in these columns.
Rockwell (Sheffield).—We do not believe in the company, or have we ever done so. In our opinion you have grounds for criminal action.
C. E. K.—You can buy Victory, Organos and Colons, but sell others mentioned.
Doubtful (Aberdeen).—We know of no company in the North Carolina district, promoted in England, which has paid dividends.

We are, this week, obliged to omit our Mining Share Lists, but all changes are notified in the "Mining Market."

The Mining World.

LONDON: SATURDAY, 11TH MAY, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

THE MYSORE REPORT—BRILLIANT FACTS AND FIGURES.

The shareholders who have read the Mysore report with an intelligence born of a due appreciation of the facts may be envied their feelings of gratified astonishment at the results which it sets forth. Every page speaks with the eloquence of facts, and the general impression left by the whole production is that the magnitude and importance of the enterprise have never been fully grasped even by the shareholders mostly interested in its financial success. With the general position of Indian mines we deal in our present impression in a way that will be understood by even the most casual reader, but the report of the Mysore Company we hold to be so important, and we do not hesitate to add, so brilliant, that it demands special and distinct notice in order that our readers may really see matters as they are. The question of India as a productive goldfield is affirmatively settled by this report. The facts support the figures, and the figures sustain the facts. The inferences we draw from both are warranted by past results and by present prospects. It would be a mere truism to say that the Mysore Company has never before issued such a report, but it would not be exceeding the bounds of what is just to add that it is many a year since any other gold mining company has issued a document so encouraging from every point of view.

Leaving the report as a whole to speak for itself, there are yet one or two main points upon which we desire to lay emphasis. Has the reader carefully perused page 25, which deals with the reserves of ore in the Mysore Mine on the 21st March? The total, which has been conveniently added for him by Mr. Rowse, comes to 33,575 tons. It will be observed that the bulk of these reserves come from north of Taylor's shaft, and between the 236 and the 466-ft. levels. What is the cash equivalent of those reserves? The average value of the lode in all the places specified from which these reserves can be extracted, based on the fortnightly reports, was 3 ozs. to the ton, and judging from the realisation of the gold hitherto obtained it would represent a value of close upon 400,000*l.* We ask the reader carefully to note this fact, and at the same time to remember that the total capital upon which dividends have to be paid is 175,000*l.* The richest point in the mine, according to Capt. Plummer's last report, is the 466, the deepest level in the mine, where the lode has produced by assay 7 ozs. 3 dwts. 17 grs. Actually the deepest point in the mine is the winze now being sunk in the bottom of the 466 north of Taylor's shaft, which is down 25 ft. 6 ins., where the lode is worth considerably more than 1 oz. to the ton. This proves its continuity so far as the greatest depth has gone.

Let us go back for a moment to the meeting held in May, 1888, which Capt. Plummer attended. It was then determined to restrict the output and force on the four principal levels. That has been done most effectually in the interval, principally by means of rock-drills, which have rendered most gratifying service. In one of the levels 90 ft. were driven in one month—a rate of progress that will be gratifying to anyone who is practically acquainted with mining. The drills are chiefly in charge of English and Italian miners, who are assisted by coolies. Our own countrymen, we may say in passing, are working extremely well, and so also are the Italians, who are pleased with the arrangements made for their payment and comfort, and have taken kindly to the climate and to their duties. The coolies are much more efficient than formerly, and the magnitude of the establishment may be gathered from the employment by the company of over 1,000 persons. The four levels north of Taylor's are being driven with vigour, and Rowse shaft, named after the secretary, has been sunk for the purposes of drawing and ventilation. It will have been seen from the plans which accompanied the report that it will not take long before this shaft is through, when it will be available for these and other purposes. It is most important for the shareholders to remember that the lode is continually dipping north, that is, in the direction in which the company has most ground. The record of the past six months may be summed up in a phrase—it is one of improvement all along the line.

A final word to show the relationship of recent returns to future profits The profit for the year was 22,964*l.* During the last six months of the year the output was restricted as before stated, and 10,000*l.* of gold less was sold in consequence. But for this the profits would probably have been about 30,000*l.* The realisation of gold from the April crushing, the best that has yet been announced, will probably be 15,000*l.* 6,000*l.* will cover the entire costs at home and abroad, so that for that month there will be a profit of 9,000*l.*, or at the rate of 108,000*l.* a year, or again, on the capital of the company, nearly 70 per cent. This is beyond anything ever contemplated in the prospectus, and is in pleasing contrast to most documents of this kind. Mining is full of surprises, but who would have said, when Mysore shares were tossed about the market at 2s. 6d. each, that in the course of a few years this concern would have given birth to an industry, now instinct with life and activity, and would have continued in the van with so brilliant a result as this report sets forth? Who would have said a few years ago, when the shareholders were only prevented by the earnest advice and entreaties of Messrs. John Taylor and Sons from dividing their remaining capital of 13,000*l.* between them rather than make one more effort to retrieve the past—who would have said that such a mine would now be earning profits bounded only by 108,000*l.* a year? Upon what slender threads hang the destinies of men—and, we may add, of mines!

THE REDEMPTION OF CONSOLS.

The offer of the Chancellor of the Exchequer to repay holders of Three per Cent. Consols on the 14th inst. at par, with 1*l.* 6s. 8d. in "consideration" of accrued interest, has not been responded to so freely as expected, only five, or at the outside, six millions having

been accepted out of the fifteen millions offered. This at first sight would, if correct, pending official figures, look like a failure, but it must be remembered that the official notice did not disclose the fact of the bonus of 5s. per cent. included in the amount of "consideration" for interest due, which was only pointed out by ourselves and the Press financially. Apart from this, however, many trustees, to avoid any risk of responsibility, have preferred to let matters take their course, even to the extent of being paid off, or having their stock at the expiration of three months from the 6th July, become Two-and-Three-Quarter per Cent. Consols; while many obstinate holders refuse all offers, and in the last extremity will demand and receive their money on the 6th July, thus carrying out their protest against the reduction of interest on the debt. Add again those whom it has been impossible to reach not only abroad but at home, and it will be found on reflection that after the commotion created by the original offer the result, so far from being unfavourable, is really satisfactory.

The Chancellor will be able to make up his fifteen millions by dealing with the stock under his control in the Government departments, so that the result is not really affected. It is, however, evident that those holders who did not avail themselves up to the 9th inst. of the offer made have not done wisely. In any case, even if they sell they lose the ¼ per cent. bonus, and if they do not take the money on the 6th July will be worse off by 1¼ per cent. than at present, as the New Two-and-Three-quarter per Cent. Consols, which they will then hold, are only worth 99 instead of par. Unless an extension of time for the present option is notified it would be best policy to sell the old stock, getting thereby principal and interest, and buy the New at, say, 99, yielding 2*l*. 15s. 6d. per cent. or reinvest in Local Loan, Metropolitan Three per Cent., or India Three-and-a-Half per Cent.

THE BOARD OF TRADE RETURNS.

The Customs' returns issued by the Board of Trade for the month of April completes a third of the year, and are very favourable, thoroughly confirming the reports of the recovery in trade of late so generally acknowledged. Our own exports, although nearly half a million under the 20 millions, show an increase upon the corresponding month of 10 per cent., while the imports were 37,225,000*l*., or nearly 16 per cent. increase. The re-shipments, however, have absorbed 5,573,000*l*. of these imports, which is an increase of 9¼ per cent. The net imports stand at 31,652,000*l*. for the month, or 12,093,000 in excess of our exports; while the total trade, so far as these figures indicate, has been 62,367,000*l*., or at the rate of 748 millions sterling per annum. Our exports for the four months show an increase of 7½ per cent, the imports 11½ per cent., and the re-shipments 15¼ per cent., while the total trade represented is at the rate of 739 millions sterling per annum, so that the month shows an improvement of nine millions upon the average. The salient features in the return are the increase in all classes of exports, including manufactures, but excepting food and drinks, and an increase in all imports apart from metals, chemicals, oils, and tobacco. Corn has increased 48 against 56 per cent. in value, and cotton 38 against 40 per cent. sugar, while only 15 per cent. greater in quantity has risen 46 per cent. in value. As regards metals, the imports were 1,871,000*l*. for the month and 7,953,000*l*. for the four months, or a falling-off of 239,000*l*. and 636,000*l*. respectively. The exports, including manufactures, on the other hand were 3,272,000*l*. for the month, and 12,503,000*l*. for the four months, or an increase of 316,000*l*. and 621,000*l*. respectively. The export also of machinery and millwork was 1,200,000*l*. for the month, being an increase of 228,000*l*., and for the four months 4,517,000*l*., or an increase of 799,000*l*. Of copper the imports of ore have fallen off from the Cape and Venezuela, but have increased from Italy, the United States, and other countries. From Spain the supply of regulus has augmented, while tin from the Straits has increased. The export of copper to France shows a large falling off, as might be expected, with less shipments of lead to China, and greater exports of tin to France and Russia. All iron and steel has increased, except old iron and wires.

The following table gives the results as regards metals, &c.:—

Exports.

Article.	Quantity Tons.	Value £	Increase or decrease per Cent. Quantity.	Value.
Coal and coke ...	2,242,560 ...	1,123,382 ...	+16.5 ...	+13.

YURUARI SHARES.

We have from time to time, in the face of good report and bad report, recommended the shares of this company as a sound and improving investment—basing our views upon its present position and prospects, as well as upon the ridiculously low price of the shares. The faith that is in us has been strengthened by the circular which has been issued by the board, and which is reproduced textually in another column. This circular fully justifies the opinions and prognostications we have from time to time expressed, and emanating from a respectable body of directors, who deserve well of their *clientèle*, we attach to it the importance it merits. Upon careful analysis, we think this circular will be favourably received by the proprietors generally, and by those particularly who have retained their shares, notwithstanding the stones that have so freely been cast at Yuruari by persons who certainly cannot claim to be without sin themselves. The circular confirms the official information previously published, that within a very short time sufficient quartz will be available to keep the mill fully employed. The shareholders and the public generally should keep in mind that this company is prepared to raise and treat quartz upon a scale exceeding that of most of its contemporaries. With a mine capable of producing, and with a mill capable of treating, 5,000 tons of quartz a month, very large profits should be made. Two new lodes have recently been discovered, one at the east of the Cenicero shaft, and the other, believed to be the well-known Potosi lode, in the Water shaft, so that there should be practically an unlimited quantity of quartz available. Business men will understand that the margin of profit per ton will be proportionately increased according to the quantity treated, and also that the expenses will be reduced. We think the directors did well to bring under the notice of the shareholders the fact that according to the articles of association, the annual meeting will fall to be held on the 30th October, as some misapprehension seems to have existed, owing to the fact that it was not quite understood that this company only commenced its operations on the 1st May, 1888. Hence the financial year did not expire till April, 1889. We have made enquiries on this point, and are glad to learn that the directors hope to be able to call a meeting as early as August next, for they are of the opinion that the more publicity that can be given to Yuruari affairs, the better will it be for the company, whether from the investment or the speculative point of view. The directors have undoubtedly had great difficulties to overcome, but have faced them in a manful way, and may be credited with a considerable degree of success. The Yuruari register at the present moment contains the names of about 5,000 shareholders—a number sufficiently large to absorb those of some half a dozen companies of importance, and standing in the City of London. In market opinion, the temporary lull in Yuruaris affords a good opportunity to buy, for with all the facts surrounding this concern it seems impossible to believe that the shares can long remain at a price so absurdly low. No further justification of this opinion is needed than the following, which we quote from the circular of the directors already referred to:—"The directors have pleasure in stating that they consider operations for the year have been upon the whole satisfactory; and they estimate the profits to 30th ult. from all sources at about 10,000*l*., or at the rate of 40 per cent. upon the paid-up capital of the company for the past 12 months."

GOLD MINING IN THE COLAR FIELD OF MYSORE, INDIA.

By One Who Has Studied It.

Steadily month by month so far this year has the yield of gold from the Colar goldfield increased — each month having recorded an increase in yield of about 2,000*l*. over its predecessor; that whereas January of this year yielded 16,266*l*., February yielded 18,642*l*., March, 20,655*l*., and April has yielded 22,716*l*., or at the rate of not less than 272,592*l*. a year, or considerably over *a quarter of a million sterling*. Large as this yield would be, I fully expect to see it greatly exceeded, and that we shall have a yield of nearer *half a million sterling* for the year 1889 from this field. From a study of the reports of the various companies at work in this field, and from what has so far been accomplished this year, I fully believe that the total yield for the first six months of 1889 will, if it does not surpass, at least equal that of the yield for the whole of last year (1888), and I believe it is very probable that, however good the yield of the first six months of 1889 will have been, it will be far surpassed in the latter six months of 1889.

The Mysore Mine requires yields of gold for its next two months (May and June) of not more in the aggregate than 25,000*l*., to enable it in the first six months of this year to equal its total output for last year (1888), and this it will easily obtain at the average of output of its last three months. The Mysore Mine will quite possibly of itself yield over 200,000*l*, or even nearer a quarter of a million sterling for the present year (1889). This I venture to say, as Capt. Plummer in his annual report for 1888, just to hand, expects shortly now to have Rowse's shaft sunk to the 466-ft. level, when, he says, he anticipates that he will easily keep the whole head of 60 stamps going with a monthly crushing of 3,000 tons, and this crushing at the present rate of yield per ton, together with the yield from tailings, should give a monthly return of over 5,000 ozs., or about 20,000*l*. This large monthly yield will, however, probably be surpassed before the end of the year by additional stamping power in the meantime being erected. With such yields as I forecast, the annual dividend of the Mysore Company should spring from 20 per cent., that it has hitherto been for several years past, to 50 or

60 per cent., to be still further increased to 100 per cent. or more, with additional rock-drills and stamping power. An addition even to the foregoing dividend is likely to be made by the Mysore Company at about the end of the year, through the sale of a portion of its magnificent property to another company that will, probably, shortly be formed. Truly, Mysore shareholders have a great deal to be congratulated upon, as they will probably see their shares at over 10*l.* a piece very shortly from this date.

The Nundydroog Company has for some time past, I believe, from the fact of developing its property, been restricting its output; its output will probably very shortly yield a good average per month; and "Plummer's Pet" will possibly, at the end of the year, record a most satisfactory total for 1889.

The Balaghat Mine has, since it commenced to win gold, extracted very rich quartz, but hitherto the veins have been so narrow; however, recent reports state that the veins, as they are getting lower, are widening very considerably, and in consequence of this news I expect to see the yield for 1889 largely exceed that of 1888.

The Ooregum Mine is doing remarkably well; it has started on its yielding career in yielding to none on the field—having the finest record of any for its first year. I expect to see it not only very shortly paying dividends on its preference, but also on its ordinary shares. This mine at no distant date promises to run the Mysore very hard for pre-eminence. Anyone who carefully reads its reports will see what an exceedingly rich mine it is rapidly developing into.

The Indian Consolidated Mine has not, as yet, made much headway, but that it has fine large reefs running through its property is evident, which will, doubtless, as greater depth is gained, repay its shareholders for their patience—in fact, recent reports state that the yield of quartz is now considerably increasing, and even better news than this is just to hand for the Nine Reefs shareholders.

The South-East Mysore is very highly reported of, and under able management should quickly render a good account of itself.

At present the seven foregoing mines are the only ones crushing auriferous quartz on the field, but the other six companies, with the exception of one (Mysore-Wynaad) are yielding auriferous quartz, and I anticipate it will not be long before several of these companies are setting their stamps to work on payable stone. With such reports before them from the Colar field, it is impossible for the public much longer to remain lethargic, as good returns and dividends are now getting quite fashionable with the Colar gold mining companies, and a grand future is assured for them now. Whereas for several months past the yields from the *Transvaal* mines have been retrograding, those for the Indian mines have been advancing, and still they pass the watch-words "inferior" (to none) and "excelsior."

By referring to the accompanying tables, Nos. 1 and 2, it will be seen that, notwithstanding the far better and sounder position of Indian gold mining in 1889, the combined capitals of the various companies in the Colar field, when the total produce of the field has reached the large sum of 361,338*l.*, is over 3,000,000*l.* less than it was in 1886, when the total yield at the end of that year amounted to not more than about 90,000*l.*—only the capital and shares of four companies standing at a premium, and not even are these standing at the premium that they should with such immediate prospects at hand; whereas the shares of several others, that may very shortly develop into fine properties, are standing at a heavy discount in the market. However, the value of the mines as a whole has improved very considerably over their value of July 6th, 1888, at which time they stood lower than at any other since the great rise they had in value in 1886, when the total value of the capital invested in Colar mines reached the handsome figure of over *6,000,000l. sterling*. That this value for the Colar mines will again soon be attained I have very little doubt, and on this next occasion it will not be simply on theory about what the mines are going to do, but on what they have actually done, and are capable of doing in the future. From the fact of having got so many shafts down upon the gold-bearing strata, most of the mines in the Colar field are now practically surface mines, and whereas in the past it has only been possible to get thousands a year out of them, in the near future it will be probably found quite possible to get out very large sums indeed.

TABLE I.

Showing the results, &c., of Gold Mining in the Colar Field of Mysore, India.

Full List of Gold Mining Companies in the Colar Field of Mysore, India.	Selling value of 1*l.* share on May 7th, 1889.	The highest value recorded of 1*l.* share (in 1886).	Approximate rise required on May 7th, 1889, per 1*l.* share, to equal value in 1886.	Value of gold produced to Dec. 31st 1886.	Tons crushed from June, 1884, to December 31st, 1888.	Ounces of gold produced from June, 1884, to December 31st, 1888.	Value of gold produced from June, 1884, to Dec. 31st, 1888.	Tons crushed from December 31st, 1888, to April 30th, 1889.	Ounces of gold produced from December 31st, 1888, to April 30th, 1889.	Value of gold produced from Dec. 31st, 1888 to April 30th, 1889.	Value of original capital (1880&'81) with increase of capital (1885 and 1886) in 1886.	Value of original capital (1880&'81) with increase of capital (1885 and 1886) on July 6th, 1888.	Value of original capital (1880&'81) with increase of capital (1885, 1886 & 1888) on May 7th, 1889.	Authorised capital.

* The returns for April not yet (May 7th) to hand.

THE TRANSVAAL GOLDFIELDS.—9.

By a Cape Colonist.

From the official returns published up to October, 1888, I gather the following statistics which go to prove the extraordinary growth of this town. Stand licenses, from Jannary, 1888, to October, 1888, 226,533*l.*; digging licenses, 38,658*l.*; prospecting licenses, 35,545*l.*; customs, 88,557*l.*; and market returns, 187,486*l.*, for the same period. The correspondence through the post office exclusite of newspapers, shows the following results.

	Received.	Forwarded.
Quarter ending 31st December, 1886...	5,972	11,432
„ „ 31st March, 1887 ...	23,548	24,339
„ „ 30th June, 1887 ...	45,878	44,403
„ „ 30th September, 1887	69,498	62,968
„ „ 31st December, 1887...	142,107	90,668
„ „ 31st March, 1888 ...	189,988	109,757
„ „ 30th June, 1888 ...	238,287	252,231
„ „ 30th September, 1888	370,801	288,974

The telegraphic line did not get into working order nntil the end of 1887, and the following returns are therefore only for the first three quarters of 1888, viz. :—

	Despatched.	Received.	Amount received.
First quarter ...	36,127	33,325	3,498*l.*
Second quarter ...	37,938	34,956	3,504*l.*
Third quarter ...	40,608	35,816	3,829*l.*

Since last January a large number of companies (there are about 120) have been able to commence operations for the winning of gold, and many others that were more advanced have made additions to their machinery, and those in charge have doubtless become more efficient as amalgamators, in consequence of their larger experience in the treatment of the gold ores of this district. On the other hand, it is also to be remembered that a good many companies are standing idle for want of the necessary capital to prosecute their labours. It is computed that there are now 1,500 stamps at work, and by the end of the present year it is estimated that that number will be doubled. On this point I shall be able to give more information in future letters. Meantime, I may call attention to the following published returns of gold output for Witwatersrandt alone during the past year.

January ...	11,269 ozs.	July	19,963 ozs.
February ...	12,161 ozs.	August ...	19,877 ozs.
March ...	14,706 ozs.	September...	20,495 ozs.
April	15,853 ozs.	October ...	27,773 ozs.
May	19,002 ozs.	November...	26,000 ozs.
June	16,328 ozs.	December ...	25,000 ozs.

The returns for January and Febrnary in the present year have been declared to be 21,000*l.* and 25,000*l.* respectively. Now, it is well known that sinee October the crushing power has been very largely increased by the addition of stamps, and the erection of new batteries, and the falling off per month of the crushings raised the question whether these figures can be relied on. Indeed, it would appear from an article just published by the *Standard*, the leading Johannesburg paper, that there is every reason to believe that they are "eooked." These returns are snpposed to be supplied to the Chamber of Mines for pnblic information, and this is what the *Standard* of the 9th inst. says on the subject :—"It would now appear that it is utterly impossible to give any credence to the returns of the Chamber of Mines, as they are in no better position to obtain exact information than we are ourselves. We have hitherto accepted the statements of that body as correet, but it is discovered that their eompilations are very far from the truth. The Chamber is supposed to collect exact data, but it would appear from what we can learn that it is absolutely impossible for them to be correct. The fault does not lie with the Chamber. They do all in their power to collect the necessary figures, but as they are baulked in their operations, how can they do so? If they send notes to the secretaries of companies they get no reply; if they attempt to take outside information, although in the main correct, they are accused of carelessness, and when they do as they have been doing—take their figures from the banks—they lay themselves open unconsciously to a fraud. Last monthly return—that for January—showed a decrease of 4,000 ozs. compared with the preceding month. We, like others, put the defalcation down to want of appliances, and, so far as that was concerned, we were right, as had the machinery been complete in all cases and the mines properly worked, there would have been a very large increase; but it would now seem as if an increase was not wanted, and consequently a decrease was very soon obtained. This was done by private shipments of gold, and by giving sueh instructions to the bank managers as would prevent them from including from certain properties in the list given to the Secretary to the Chamber of Mines. . . . . We ask what does all this mean? As a matter of fact tho last (February) month's return has been a good one, so much so that from private information we are inclined to believe that there was much jobbery in the compilation of the results, not by the Chamber of Mines, but by the owners and directors of properties. The last one we eonsider will be a worse one for jobbery than the one previous. It is openly stated that the returns for February will be much less than those of the preceding month, yet it is pretty well known that the deposits in the banks on the 20th were more than those for January. Of course the banks are not at fault. If the mine manager, with the instructions of his directors, orders the bank not to give his results, either individually, or as a part of the whole, the bank manager must obey, and consequently when the secretary to the Chamber of Mines calls to gain the necessary information he is refused, so far as these portions are concerned. We ask, what does it all mean? It decidedly implies that a big 'bear' is taking place, to be followed by a monster 'bull.' The actual results of one month will be held back to enable those interested to buy, and then the joint returns of the surplus of several months are put in as representing the true crushing for a given period, so that the shares will rise. It is almost certain that whatever the return of February will be, it will not be a true statement, and cannot be accepted as a criteriou of our progress."

As a matter of fact, the return for the month of Februnry has been published by the Chamber of Mines as 25,000 ozs., but what these figures are worth I leave my readers to guess after reading the above extract. I need hardly say that the article has created no little excitement and indignation, but as yet no attempt has been made to refute the very serious charge which, if true, must depreciate the value of shares throughout the whole of the Randt properties. At the same time it is worth while to consider whether there are not other questions of more vital importance than the riggiug of the market by speculators, and which questions materially affect the position of intending investors in the financial operations of the Transvaal. At present the capitalists and speculators on the Randt are principally men whose transactions were of a very limited nature iu the early days of the diamond fields, but who by diut of perseverance and adroitness have succeeded in converting their humble "tenners" (I write of facts) into hundreds of thousands of pounds. These men were at first slow to realise the importance of the goldfields,aud it is only within the last few months that they have migrated thither, and succeeded in converting their hundreds of thousands into millions. This forms one class. A second class eonsists of colouists, who have in many cases succeeded in converting their 500*l.* into five and six figures, reinvestiug their money again as fast as new compauies are floated, and a new one is floated almost every day; and a third class consists of a few English eapitalists, who were fortunate enough to take time by the forelock, and are doing remarkably well. So far, so good; but I question whether any of these men recognise for a moment that their position is a very ticklish one. If my readers have followed me in my previous letters they will have gathered that the government of the country, the political power, and the voting power is in the hands of a few illiterate Boers, who not only steadfastly refuse to extend the franchise to the new comers, but who are wholly unable to eomprehend the mighty changes which are going on around them. I can compare them to nothing else than a block of ice in the middle of a rushing torrent. True, the block of ice must ultimately be swept away, but the question remains whether the millions now invested in the Transvaal will not be imperilled whilst the revolution is going on. I do not say that what I am now going to postulate will take place, but those who know the peculiar idiosyncrasies of the Boers will bear me out when I say that it is quite possible. It is well known that they are in a restless condition, and that they are exceedingly jealous of the introduction of such a large number of English speaking people. Now, it will take a Boer Government a very little while to pick a quarrel with one of the native tribes adjacent to the Transvaal—whether it is "protected" by Great Britain or not—and an appeal to arms is speedily the result. Not having a standing army they are obliged to depend on their burghers, or volunteers, to fight their battles. These burghers affect a good deal of sentimental patriotism, but they decline to fight without the sinews of war, and, as the case now stands, there is nothing to prevent the President ordering out what is called a "commando," and in order to provide such commando with provisions, there is nothing to prevent him sendiug a *posse* of burghers to the Standard Bank at Johannesburg, and "requisitioning" (such is the euphonious term) five thousand sovereigns as their contribution to the war fund, and the bank would be helpless in the matter. True it is that the demand might be resisted by force, but I need hardly add that the result would be a civil war, which would carry ruin and devastation over the whole of South Africa. That a revolution must take place is a moral certainty, but whether it be a peaceful one, or an appeal to physical force, no man can possibly tell.

SOUTH AFRICAN CO.

The name of this company is very misleading, and has often been the cause of perplexity to investors. It is the old Pullinger Company, and it is a pity the name was ever changed. Shakespeare has truly asked, What's in a name? but there is a good deal in it, when it does not clearly indicate the undertaking you wish to specify. Apart from the company's name, all the circumstances connected with it are such as justify us in offering our congratulations to the shareholders. The expenses have been reduced, the produce has been increased, and the price that produce realises in the market is also higher than 12 months ago. A very satisfactory yield of 32½ carats per load is now obtained, and the price, instead of being 19s. per carat, is round about 23s. In

addition to the dividends already declared, a further distribution of 1s. per share will shortly be made. In fact, the prospects of the company are so good that its neighbours are anxious to draw it into the great diamond combination, but the directors will not be cajoled unless they see that the interests of their shareholders are properly considered. Amalgamation may be brought about, but only on terms which are favourable to the shareholders, and such as are commensurate with the company's present position and immediate outlook.

AN OMITTED REPORT.

BOUILLON FLEET.

If you want to sell a patent liquid, a quack medicine, an indifferent business, or anything whatsoever, your best plan is first of all, for a period of a month or two, to cover the walls with posters, and to disfigure the newspapers with striking advertisements. You must make your ware thoroughly known, and indoctrinate the public with the idea that there is really a demand for it. Then you go out into the highways and hedges and secure your board of directors. The next advisable step is to secure your promoter, and leave in his hands the financial arrangements as to capital, purchase-money and promoter's remuneration—the latter not being an item which he is likely to forget. Then you should advertise right and left, secure "testimonials" (and certain medical men are always ready to give them), and finally invite subscriptions. When these arrive you should pocket the purchase-money, and leave your company to pursue those ordinary stages which, by a sure and certain process, lead to the portals of the winding-up court—that place of interment which already contains the charnel remains of so many recently formed trading companies.

Now, Bouillon Fleet may be a very nice article—for those who like it. We confess we do not. To our perverted tastes workhouse skilly is preferable, because, possibly, more nutritious. Still, there may be a "public" for even the decoction known as Bouillon Fleet; and on a moderate capital it might be made to yield a modest return to the investor; but with a capital of 125,000*l.*, such as is put down in its prospectus issued the other day, the dividends which the directors foreshadow are likely to remain for a long time in the prospective.

We are quite ready to credit the statement in the prospectus that "the business has passed little more than the experimental stage," but, in our opinion, the public, for a reason we shall give presently, would do well to let the owners carry it beyond that stage. We learn that the respectable firm of Monkhouse, Goddard and Co. have reported upon the business, but it is with some surprise we read that the directors do not consider it advisable to publish this report "for trade purposes." These things are not done in a corner, and as between the florid statements in the prospectus, a matter-of-fact report reduced to figures emanating from the firm we have named would have come—well, like a tonic after a dose of Bouillon Fleet. It seems that the Bouillon Fleet business did not commence until last October, and why the public should give 75,000*l.* for a six months' old concern, which has big rivals, we cannot understand. It should be remembered that the six months in question have been those of winter. The individual who drinks Bouillon Fleet in the winter is a man of courage, but he who drinks it in summer is a hero.

Reference is made to the mineral water business which the company also acquires, and on this point we should like very much to have seen the result of the last three years' trading as set forth in the report of Monkhouse, Goddard and Co. Before wise men take shares in Bouillon Fleet they should ask to see this report, and ascertain the tale it unfolds. In the meantime, in its absence from the prospectus, we think the public will do well to let Bouillon Fleet alone as an investment, and probably if they passed it by on the other side as a beverage they would be studying their internal economy.

DEATH OF COL. McMURDO.

Those who saw Col. McMurdo at the St. Augustine's Diamond meeting a few weeks ago, and those certainly who saw him more recently at his office in St. Swithin's Lane, will be painfully surprised to hear he is no more. The proximate cause of death was paralysis of the brain, but the cause of the paralysis of the brain was over-work. Col. McMurdo's life had been a busy one throughout. We first hear of him fighting as an officer on the Federal side in the American war, after which he makes his appearance in the more staid, but no less exciting arena of big commercial undertakings. When some nine years ago the colonel arrived in London to make his home amongst us, he made no secret that his ideas were, as his countrymen would say, "big," and with steady determination he set about working them out. He was about the first who, on any considerable scale, introduced British capital to South Africa, but so far it cannot be said that its employment has been remunerative. He constructed the Delagoa Bay Railway, and at the time he died was also contractor for the Mexican Government of the important Tehuantepec Railway. He brought the Gatling gun into Europe, was connected with electrical works, and, in fact, his ramifications extended almost everywhere, and touched nearly every description of enterprise. At a recent Balkis meeting he offered to relieve the company from its financial embarrassments by putting down 6,000*l.*—an offer which, in their impecuniosity, the shareholders delightedly accepted. At the St. Augustine's Diamond meeting, on March 25th, it was stated by Col. Mallesou that Col. McMurdo had, up to that time, expended 7,000*l.* in working the property. "He has spent his money for the benefit of the shareholders, and, of course, for his own. If he is a loser, he will lose several thousand pounds, and if a gainer he will share his gain in the proportion of the shares he holds." Characteristic of the man was the rapidity with which he came to the business point. At this very meeting Mr. Moseley was wailing piteously about his debentures, whereupon the Colonel quietly said to him, "I am ready to buy anybody's debentures at par." How the other concerns with which Col. McMurdo was connected will fare it is perhaps beyond our province to enquire, but we know that when his death was announced St. Augustine's Diamonds fell from about 10s. to 6s., and Balkis from 6s. 6d. to 5s. 9d. Col. McMurdo was a kind-hearted man, as many Americans in distress might testify, and he was also useful (as having the dash and the courage to set on foot important commercial enterprises. His death, at the early age of 47, will be sincerely regretted.

THE HOPCRAFT FURNACE.

The introduction of the Hopcraft Furnace, whilst calculated to confer great benefits upon coal consumers in particular and the inhabitants of large towns in general, is likely to be regarded with considerable dread by colliery owners by reason of the great economy of fuel, which it will effect. The advantages of the Hopcraft Furnace (except to the aforesaid colliery proprietors) are three-fold—economy in waste and use of coal, prevention of smoke and increased heating power. Mr. Lewis Hopcraft, the inventor and patentee, estimates that the saving, even on such steamers as are employed for channel traffic, using 10 furnaces would be 10,000*l.* a year, whilst to a single Atlantic liner it would be the enormous sum of 20,000*l.* per annum. Mr. Hopcraft's chief reliance is placed upon this, that small coal can be burned equally well with large coal, and be made to produce the same effect.

By the present system furnaces are fed from above. A draught is produced by the opening of the furnace doors, during which time combustion is checked, and, as a natural consequence, so also is the production of steam. Waste also ensues by the production of clinker, which clogs the fire-bars, checks the flow of air, and materially impedes combustion. Clinker, in fact, has periodically to be removed from furnaces, thus entailing a further loss of power while the operation is going on. These remarks apply to large coal; how much more, then, do they apply to small, which contains a larger quantity of pyrites and other impurities? Mr. Lewis Hopcraft was led to his invention by a careful consideration of the disadvantages of the present system. He calculates that the furnace doors are open 18½ minutes out of each hour, during which time the fire is practically inoperative. A great authority travelling from Glasgow to London by sea—unenchanted, we suppose, by the beauties of the upper part of the Clyde, and sighing deeply for an unlimited quantity of Eau de Cologne—tried to forget his misery by a little calculation which occupied his mind during the whole voyage, and the conclusion to which he ultimately came was that, under the present system of firing, "only 10 per cent. of the evaporative power of coal is utilised—the rest being wasted." As we have said, the coal, both large and small, is cast into the furnace from *above*, under the system of Mr. Lewis Hopcraft it is introduced automatically from *below*, and is accompanied by a draught which can be regulated as required. Skilled stoking is not necessary in the Hopcraft process, for an ordinary labourer, or the traditional boy, is quite equal to the occasion—or, we should say, to the furnace. The coal is lifted by an Archimedean screw into the fire, the grate is circular, and consists of concentric rings of iron with air spaces between. It is set at an angle, and slowly revolves in an oblique plane upon a hollow axis, through which the fuel is elevated. As the coal comes up the revolution of the grate causes it to be evenly distributed, and the used-up fuel, along with the clinker, is deposited by automatic arrangement into the ash-pit below. There is also an automatic air supply—the air being regulated to the fuel, and, in fact, the whole system turns upon the regulation of the fuel and the air supply. The general result produced is unintermittent and absolutely complete combustion—in fact, there is no smoke at all. The sponsors of any so-called "perfect combustion system," though they talk with the tongues of men or of angels, if their furnaces emit smoke should not be believed. Mr. Lewis Hopcraft's system emphatically emits no smoke, and it gives to such centres as Birmingham, Sheffield, Leeds and Glasgow something like the assurance of fresh air, and even a chance to vegetation of seeing what it can do to bring life and beauty to our smoke-begrimed towns. The furnace has been tested in many practical ways, and the engineer of the National Smoke Abatement Society has reported upon it favourably. It is said that the Hopcraft furnace can be fitted to existing boilers in the course of two days, and it is added that the cost of one furnace saves itself in a month. We were told something like this about the type-writer, and did not believe it, but have lived to know that the result has justified the statement. There is no reason why the Hopcraft furnace which comes to us excellently credentialed should not do the same.

The public have the opportunity of joining a company started to work this patent on a scale commensurate with its importance. The capital is 220,000*l.*, in 1*l.* shares, and the vendor takes 150,000*l.* for his rights, British, foreign, and colonial, of which only 25,000 need be paid in cash, and the balance in shares or cash, at the directors' option. The latter gentlemen include persons of much experience in the use of steam coal—amongst others Sir Edward Reed, M.P. (late chief constructor to the Royal Navy), Mr. Dillwyn, M.P., Mr. Reid, M.P., and Col. Engledue (late engineer-in-chief to the Indian State Railways). There is every reason to believe that the large profits these gentlemen anticipate for the shareholders will be realised.

Removal.—Notice is given that the offices of the Witwatersrandt Venture Syndicate, the Anglo-Mexican Mining Company, Limited, the Emerald Mines of Columbia, and the Edwin Bray Gold Mining Company, Limited, have been removed from 15, Queen Street, Queen Victoria Street, London, E.C., to College Hill Chambers, 23, College Hill, London, E.C.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

During the week the Money Market has been extremely easy, discount being in little request, and many here and on the Continent competing for the few bills offering, while loans have been freely lent at low rates to employ money borrowed of the Bank and renewed last week, and the amount required to meet the payment for the five millions Treasury Bills due on Monday. On Tuesday, the redemption money will be payable, but since it appears only to amount to six millions at the outside, the relief to the market will not be so great as expected. The settlement at the Stock Exchange takes place on Wednesday, and may lead to some extra demand. Ease may follow, but as the *Economist* says, the demand on trade account, and the improvement in business generally, are not compatible with a continuance of cheap money. Discount fell to 1½ per cent., but is a fraction firmer, while short money offers at ¾ to 1 per cent. The exchanges which have been against us for some time, last post were a little more in our favour. As regards Italy and Austria, the latter had fallen as low as 12.0, a point not touched for many years. The Bank return, despite an influx of 142,000*l.*, shows a reduction in the stock of bullion of 246,000*l.* A reflux of notes, however, leaves the reserve only 175,000*l.* less, at 13,500,000*l.*, or nearly 41 per cent. of the liabilities, which, under both public and private deposits, have run off, the latter due to the redemption of private securities to the extent of 1,870,000*l.*

The Money market to-day has been easy, but bills have been maintained at 1⅛ per cent., while money at call and for short loans has been offering at ¾, 1 per cent. There was not much doing at the Bank in the way of repayment or renewal of loans, as from the last return it would appear that the bulk had been already paid off. With payment for the Treasury Bills on Monday, there may be some pressure, and on Tuesday there will not be the expected relief, and pay day on the Stock Exchange is on Wednesday, so that the probability is that money will be supported.

At the Bank 67,000*l.* in gold was received to-day. Bar silver was 1/16 easier, at 42⅞ per oz.

Owing to the opening of the Paris Exhibition on Monday last the amount of business transacted on the Paris Bourse was of the smallest dimensions, and the stagnation was, to a great extent, reflected here, as many members of our own Exchange were there. The tendency has been a little more undecided, but the final alterations, beyond a few special descriptions, has not been particularly important. The Funds have been good, and there has been a strong demand for all first-class investment securities. Foreign Government bonds were good in sympathy with the Continental bourses, and more particularly with Berlin, where the tendency has been almost buoyant. It is generally believed that during the run of the Exhibition peace will be preserved, as not even Russia would care to pick a quarrel with Turkey or Austria and thereby make an enemy of the French, who are building such hopes on the success of their gigantic affair. The chief demand has been for Egyptian, French, Russian, and Turkish descriptions. Amongst Home Railways there has been a demand for the "trade" lines, and Great Western shows the greatest rise, owing to the approaching Agricultural Show at Windsor. The traffic returns were very good, many showing a gross increase of five figures. Caledonian were good on conversion rumours. North-Western has risen 2, to 184, and there even seems a probability of the stock going, as many expect, to 190. Our transatlantic cousins are coming over here in their thousands on their way to the Exhibition, the bulk of whom will be carried by the North-Western to London; in fact, it appears as if that very cosmopolitan couple, "all the world and his wife," are making for the Exhibition, and must perforce benefit the carrying companies. The effect, however, on the Southern Lines has been somewhat overdone, and this week prices have given way ¼ to ¾ per cent. American Railways have been dull, and the general shrinkage for the week has amounted to $\frac{5}{8}$ to $1\frac{1}{2}$. Canada Pacific Shares were exceptionally strong. Grand Trunk Stocks were dull, although the traffic return was up to expectation. Mexican were also a shade off, but most Miscellaneous Securities were steady, while Brewery issues were irregular.

There has been a general shrinkage in the Stock markets to-day, this has been partly due to the realisations in view of the settlement, the arrangement of which commences on Monday next, and partly in sympathy with the dulness reported on the continental bourses. The Funds have given way ⅛, owing to the small amount of old Consols tendered for redemption. A general reduction of ¼ to ¾ is shown in the Foreign Government Department, the greatest decline being shown in Egyptian, Greek, French, Spanish, and Turkish issues. Dealers in Home Railways have been more disposed to realise than to enter into fresh engagements, with the result that the entire list shows a reduction of ½ to 1 per cent., the latter representing the decline in the heavy lines. Americans were dull, and ¼ to ½ down. Grand Trunk Stocks participated in the downward movement to an extent of ½ to ¾, but Mexican were stronger. Leeds Forge have given way ¾, owing to the delay in the granting of a settlement, and British Water-Gas, closed at 14¼, ¾ prem.

Annexed are the final quotations to-day:—Consols Account, 98 13/16, 98 15/16; Egyptian Preferenee, 103½, 103¾; Egyptian Unified, 92½, 92⅝. Freneh Four-and-a-Half per Cents., 105¾, 106¼; Hungarian, 87 15/16. 88⅛; Italian, 97⅛, 97⅜; Mexiean Scrip, 97¼, 97¾; Peru Five per Cents, 15 13/16, 15 15/16; Peru Six per Cents., 17⅝, 17¾; Russian, 1873, 104, 104¼; Portuguese, 68¼, 68½; Spanish, 76 7/16, 76⅝; Turkish, 1871, 93½, 94; Turkish Defence, 100¾, 101¼; Caledonian, 118½, 118½; Great Eastern, 76¾, 77; Great Western, 158, 158¼; Brighton "A," 153⅜, 153⅝; North-Western, 183, 183½; Metropolitan, 88¾, 89¼; Metropolitan District, 36¼, 36⅜; Midland, 143¼, 143½; North British, 55¼, 55½; North-Eastern, 174, 174½; South-Eastern "A," 114⅛, 114⅜; Taff Vale, 258, 262; Grand Trunk, 10, 10¼; Ditto First Preference, 63½, 66¾; Ditto Second, 46½, 46¾; Ditto Third, 25½, 25¾; Mexiean Ordinary, 52⅝, 52⅞; Canadian Paeific, 57¼, 57½; Denver, 17½, 17¾; Erie, 28⅜, 28⅝; Milwaukee, 67¾, 68; Lake Shore, 105⅞, 106⅛; Louisville, 69¼, 69½; Atlantie First, 31½, 31¾; Ontario, 17⅜, 17⅝; Ohio, 22¾, 23¼; Norfolk and Western, 54⅝, 54⅞; Reading, 22⅜, 22⅝; Reading Bonds, 84, 84½; Union Pacific, 62¼, 62½; Wabash Preferenee, 28⅛, 28⅜; Ottoman Bank, 12 1/16, 12 3/16; Anglo-Telegraph, 51¾, 52¼; United Telephone, 15½, 16; Hudson's Bay, 21⅞, 22⅛; Suez Canal, 94½, 95; Guinness, 30¾, 31; Allsopp's, 8⅞, 9⅛; Bryant and May, 13⅜, 13⅝; Nitrate Railways, 23, 23¼.

REVIEWS.

PARTICULARS OF NEWBERY-VAUTIN (PATENTS) RAPID CHLORINATION PLANT. By Charles Appleby. Licensed Manufacturers: Charles Appleby and Co., 89, Cannon Street, London.

The author of this pamphlet, Mr. Charles Appleby, of No. 89, Cannon Street, has had a large experience in the manufaeture of the plant of the Newbery-Vautin system, and is, we venture to think, specially qualified to deal with a subject whieh has excited general interest, and has awakened many hopes and calmed not a few fears in the breasts of those searehing for nature's treasures in the bowels of the earth. Investors, after having obtained a good mine, experienced and honest management, and an obviously remunerative quality of quartz, have frequently found themselves baffled and confounded by the want of suitable machinery to extract the gold. They have employed various kinds of machinery, only ultimately to have the mortification of seeing the greater part of their produce float away in the stream, or otherwise to be irrecoverably lost. At such a moment when every physical obstacle has been overcome, and yet defeat has stared the mine owner in the face—the Newbery-Vautin chlorination process has stepped in, and furnished the key by which the golden problem may be solved, and the prospect of ruin transformed, as by a magic wand, into what Dr. Johnson would call "the potentiality of growing rich beyond the dreams of avarice."

To show how this is done is the object of the pamphlet of Mr. Charles Appleby, who has probably manufactured more chlorination plant of this kind than any other maker in this country, or in Australia, his reeent deliveries comprising no less than eight complete plants of various sizes, or 19 barrels in all, of a total capacity of more than 1,000 tons per week.

He will find no one to contradiet his statement that, under many circumstanees, rapid chlorination is the eheapest and most effective method of extracting gold from quartz that has just been raised from the mine, from concentrates or from tailings. The subject of chlorination has commanded the attention of scientists for a long time, and is not by any means a new process, but the method of the Newbery-Vautin Company can claim to be comparatively inexpensive, whilst the working results are reliable and eonstant. The machinery is thus epitomised:—Chlorinating barrel with driving gear; compressed air pump; leaching vat or filter, with tipping gear; leaching pump of special design; precipitating vessels; shafting, pulleys, and belting for driving the barrels and the pumps, and pipes and valves for connecting the various parts of the plant. Each of these appurtenances he deseribes in detail, and in language free from the embarrassing teehnicalities which usually make sueh *brochures* obscure to the general mass of readers, he sets forth the whole proeess, and concludes with some pertinent remarks on the subject of the cost of treatmeut. He says:—"It is, of course, difficult to give reliable data as to the cost of treatment by this or auy other proeess, necessarily depending on the eost of labour, fuel, and local conditions, as well as on the size of the plant, and on the quantity of ore that can be prepared for treatment in a given time.—It will generally be between 15s. and 30s. per ton of ore or eoncentrates treated, and it is confidently elaimed that, having regard to the prime cost of the plant and to the expense of working, and of maintenanee and repairs, as well as to the small amount of chemieals required, the gold ean be extraeted more economically by this method of chlorination than by any hitherto known." Mr. Charles Appleby may be credited with having issued a pamphlet about this system more succinct and understandable than any that has yet appeared.

THE YURUARI CO., LIMITED.

IMPORTANT CIRCULAR.

1st May.—The financial year having just expired, I am instructed to inform you that the principal reason for the comparatively small returns of gold obtained since the formation of the company has been owing to the strikes of miners, and difficulties eneountered by the former company during the early part of last year, which rendered a large amount of development work neeessary. The directors are pleased to state that this has now been so far advanced that they are assured that within a month or two from date sufficient quartz of payable quality will be available to keep the mill fully employed. The improvements recently effected will enable the company by that date to treat about 5,000 tons per month, when they have every reason to expect very large profits will be earned. The directors have pleasure in stating that they consider operations for the year have been upon the whole satisfactory; and they estimate the profits to 30th ult. from all sources at about 10,000*l.*, or at the rate of 40 per eent. upon the paid-up eapital of the eompany for the past 12 months. The directors would state for the information of shareholders that the annual meeting falls to take place on or before the 30th of October next, but that every effort will be made as soon as the aeeounts are received to expedite the matter, and the meeting held at the earliest possible date, when the report and aecounts will be presented, and the fullest information given with reference to the compauy.—F. R. ROBIN, Assistant Secretary.

AT a largely-attended meeting at Ingleton, Yorkshire, on Tuesday, to hear a lecture on "Water-Gas," by Mr. Brewer, of London, it was decided to call a public meeting of the inhabitants with a view of forming a water-gas company for the district under license from the Yorkshire Water-Gas Company, Limited.

REPORTS OF MEETINGS.

SOUTH AFRICAN CO., LIMITED.

AFTER 12 MONTHS' WORKING THE CHAIRMAN CAN STATE THAT THE COMPANY IS IN EVERY WAY IN A BETTER POSITION—LOWER COSTS, BETTER PRICES, AND LARGER YIELD PER LOAD—AMALGAMATION—1s. INTERIM DIVIDEND TO BE PAID.

THE third ordinary general meeting was held at the Terminus Hotel, yesterday.—Alexander McKenzie, Esq., chairman of the company, presided.

Mr. E. O'DWYER (secretary) read the notice calling the meeting.

RESULTS TO DATE.

The CHAIRMAN: Gentlemen, I must ask your indulgence for a very short statement. I am suffering from a severe cold, and can scarcely make myself heard at all. With your permission we will take the report as read. (Hear, hear.) I have no doubt you have all studied it, and that you do not care to have it read again. I think you will be satisfied with the accounts that have been given of last year's proceedings. I will not go into the accounts, because what you will more prefer to hear will be the results of the present year's working. We have accounts up to the end of March. From these we can make a fair estimate of what we are doing, but we expect in two or three days more to have accounts to the end of April, and as far as the board can judge we shall then be able to

DECLARE A FURTHER INTERIM DIVIDEND OF 1s. A SHARE.

(Cheers.) The accounts we have received to the end of March show very satisfactorily in comparison with the corresponding period of last year. Our expenses are smaller (which is a very important point), the yield of diamonds is greater, averaging 32½ carats to the load (which is very good), and latterly, as you know, we have obtained a much better price for our diamonds in Kimberley, where the market has considerably risen. We hear by telegram that large remittances are on the way home, and altogether, as far as the board can judge, there is no doubt that we shall be able to give you the dividend which I have mentioned, and which we expect to declare about the end of the present month, or the beginning of next month. With regard to amalgamation—all I can say at present is that so far we have not been able to come to any definite arrangement. We have offers, but they are not as good as the board think they ought to be, or as the board hope to be able to get. I will now move: "That the report of the directors and the Kimberley Committee, together with the accounts for the year ending 31st October, 1888, be adopted." (Cheers.)

COL. BYRDE (director): I have great pleasure in seconding that motion. I am sure you will have received with great satisfaction the statement which has been made by the chairman. It is very pleasurable to think that besides the balance we have now in hand we have advices of remittances of 6,000*l*. out of the profits of two or three months, which will place us in possession of a considerable sum—really far more than is necessary for paying the proposed dividend. Of course we cannot tell what may happen in the immediate future, but we shall be able to carry forward a considerable balance, and we hope to pay a further dividend before very long.

AMALGAMATION—BUT ONLY ON GOOD TERMS.

As far as amalgamation goes we think our property a very good one, and we are not in a hurry to take less than the full value of our shares. We think we shall be studying the interests of the shareholders by holding to that determination, and we think also they will be wise to support us in it. We believe that that amalgamation may be affected at a future date, and that we should gain nothing by forcing a conclusion before our terms are fully and clearly met and accepted. (Cheers.)

QUESTIONS BY SHAREHOLDERS.

Mr. TALLERMAN: Will that interim dividend be paid in any event, or is it contingent upon anything that may happen?

The CHAIRMAN: Not at all. The dividend takes 6,800*l*., and what Col. Byrde mentioned was that we had advices of remittances to the extent of 6,000*l*. coming home, which, with the funds we have already, will supply us with ample means for paying the dividend.

Mr. TALLERMAN: I wish to ask if that dividend will be contingent upon anything unexplained?

The CHAIRMAN: We might possibly have this state of affairs, that we might have an offer of amalgamation giving us so much for our property, including our assets of every description.

Mr. TALLERMAN: Not our cash. Have you any reason to suppose any offer will be made?

The CHAIRMAN: Any offer made under the constitution of our company and under its articles, which involves the sale of our property from amalgamation with another company, must be submitted to a shareholders' meeting, of which meeting 10 weeks' notice must be given, so that you will have ample notice, and be able to decide upon it. It will then be for you to decide whether you would rather have an *interim* dividend and a somewhat less purchase arrangement, or *vice versa*.

Mr. TALLERMAN: Then it will be either amalgamation or an *interim* dividend.

The CHAIRMAN: In one way or another you will get it—that is what it comes to.

Mr. TALLERMAN: The diamonds from the mine, I presume, are sold in Kimberley.

The CHAIRMAN: That has always been the practice.

KEEP THE DIVIDEND.

Mr. MARCUS: I will suggest that the dividend, when the proposed amalgamation does take place, should be kept entirely distinct from your negotiations. The money the company has in hand and the balance it has in hand should not be bargained for. If a bargain be made it should be for the property and assets of the company, but not the money.

The CHAIRMAN: The money in hand is an asset.

Mr. MARCUS: I do not see why we should bargain for the money in hand; it belongs to the shareholders, and should be paid to them.

The CHAIRMAN: We are always glad to hear the opinion of shareholders.

Mr. MARCUS: It might be this way that amalgamation might take place, and a proposal be made to give certain shares in a certain company. Under those circumstances, I consider that the money we have earned belongs to the shareholders, and there is no bargain in that at all. It is out of the question entirely—it is merely for the property and machinery we treat. (Hear, hear.)

The CHAIRMAN: We will take note of your suggestion.

HOW THE DIAMONDS ARE SOLD.

Mr. MARTIN: What is the average price of the diamonds in Kimberley?

Mr. SYDNEY KRAUSS (director): We cannot tell you about Kimberley.

Mr. MARTIN: What is the last information by letter?

The CHAIRMAN: About 23s. per carat.

Mr. MARTIN: What was it at the time of the meeting this time 12 months ago?

The CHAIRMAN: About 18s. or 19s. per carat. I mentioned then that, for the greater part of the year, we had been getting 18s., but the price of diamonds has now improved, and for the last six months of 1887 the price was 19s. 1½d., and the average price for the December half of the year 19s. 7d. In the middle part of the year it was less, but was increasing towards the end.

Mr. MARTIN: Was my suggestion carried out for the sale of these diamonds by different brokers?

The CHAIRMAN: It could not be done. We could not get them to do it.

Mr. MARTIN: I am in the diamond trade, and will maintain that it is not right that the monopoly should be given to one firm. As long as your brother (Mr. Krauss) is there I have every confidence, and since you have been on the board I am sure you have given great assistance to the company, but I strongly object to the sale of our diamonds being left in the hands of one broker, not because I do not know the broker thoroughly, and not because he is not a man of whom the highest opinion may be expressed, but there are other brokers, and a change should be made. We are not under contract with him, and he is a member of the committee.

Mr. KRAUSS: The broker is not. We have changed the broker.

Mr. MARTIN: I still maintain that one broker should not have the monopoly.

The CHAIRMAN: We not only indicated all that passed at the meeting, and added a strong recommendation of our own that the committee should endeavour to carry out the wishes of the shareholders, but we took occasion to ask them if it had been done. They told us it could not be done, that no company did it and they were unable to do it.

Mr. MARTIN: I should take that for what it is worth.

IT CANNOT BE DONE.

Mr. KRAUSS: It cannot be done. I have made it my business to enquire into it, and no broker will undertake to sell diamonds if you say to him we will keep you for a month, and at the end of that month, for no valid reason, make a change. You will not find so many good brokers as you seem to suppose.

Mr. MARTIN: As long as your brother is satisfied that we are getting the full value I am satisfied. But, at any rate, the suggestion I made last time has done a lot of good.

Mr. TALLERMAN: Will you tell us whether the diamonds are valued by more than one broker. I think it is the case in some instances that there are several valuations.

HOW DIAMONDS ARE VALUED AND SOLD.

Mr. KRAUSS: The diamonds are valued by the committee and also by my brother, who has had 10 or 15 years' experience. We sell our own goods and know what they are worth in the market. The committee put a value on them with the assistance of the broker. He takes them to the different buyers. If he brings an offer, and the committee think it not satisfactory, they do not sell, but wait for a week or two for an improved market. You may depend upon it that the diamonds are fetching as good a price as is to be obtained.

Mr. TALLERMAN: The question I put was simply to elicit some information as to the way you disposed of them. At the last meeting I found some fault with the way in which certain ground was being disposed of, and we had difficulty in getting the committee to change the method. It strengthened your hands when it was discussed in our meeting that the blue ground should be dealt with in the manner we wished.

The CHAIRMAN: It was so. We could not get them to change until you passed that resolution.

Mr. TALLERMAN: I think discussion does good on these points. (Hear, hear.)

Col. BYRDE: At the suggestion of Mr. Krauss, whose addition to the board has been of great advantage to the company in guiding its decision upon the subject of brokerage and other matters connected with the working of the company, we were perfectly satisfied that the present arrangement would be satisfactory to the shareholders, and that we could not better it by any fresh arrangement, or any change in the brokers. We have good men who have served us faithfully, and we have thought it better to continue the arrangement, and I think the board consulted the interests of the shareholders in following Mr. Krauss's advice in this respect.

Mr. MARCUS: I do not think the London system is different from that in the colony. It is not usual for merchants or for diamond producers to continue changing their brokers. They employ a person in whom they have confidence, and when they cease to have confidence they make a change. There should be some radical reason if a change be made.

The report was unanimously adopted.

Mr. TALLERMAN: I beg to propose to the meeting that the three retiring directors be re-elected—Mr. Mackenzie, Col. Byrde, and Mr. Bonstead. I think we have every reason to be satisfied. Some of the suggestions we have offered have been acted upon, and as long as the directors consult our interests as they have done we cannot do better than re-elect them.

Mr. FELDHEIM seconded the motion, which was carried.

Mr. TALLERMAN proposed the re-election of the auditors, Messrs. W. B. Keen and Co., at a remuneration of 25 guineas for the year.

Mr. Martin seconded the motion, which was carried unanimously.

GRATITUDE.

Mr. Martin: I have great pleasure in proposing a vote of thanks to the chairman and directors for their services during the past year, and especially to Mr. Krauss, our director, and to his brother at the diamond fields. Both these gentlemen have given us every assistance, and I think the prospects of the company were never better than they are now. I only hope the directors will hold out for a good price on the question of amalgamation, and I quite approve the suggestion of Mr. Marcus—that our cash is our own. (Hear, hear.)

Mr. Krauss returned thanks, and said: Depend upon it I shall do my best in making as good terms as possible on the question of amalmation. for being largely interested in this company, in looking after your interests I am looking after my own.

The Chairman also returned thauks, and the proceedings then closed.

AFRICAN GOLD SHARE INVESTMENT CO., LIMITED.

"BREVITY IS THE SOUL OF WIT."

An extraordinary general meeting of this company was held yesterday, at the Cannon Street Hotel, for the purpose of confirming the following resolution unanimously passed at the previous meeting on April 25th last.

RESOLUTION.

That the articles of association of the company be altered as follows:—

1. "Article 83 shall be expunged, and the following article shall be substituted:—The qualification of a director shall be the holding of shares of the company of the nominal value of 250*l*. A first director may act before acquiring his qualification, but shall, in any case, acquire the same within one month from his appointment, and unless he shall do so, he shall be deemed to have agreed to take the said shares from the company, and the same shall be forthwith allotted to him accordingly." 2. "In article 84 (*d*) the words 'or do not acquire the same within three months after election or appintment,' shall be expunged."

Mr. E. J. Carson presided.

Mr. Edwyn Wolseley (the secretary) read the notice calling the meeting, and the above resolution.

The Chairman: Gentlemen, as you are aware this meeting is held simply for the purpose of confirming the resolution which we passed at our meeting held on 25th April last, and which has just been read to you. I will therefore simply propose that this resolution be now confirmed.

Mr. John Edwards seconded the motion, which was carried at once, and a cordial vote of thanks to the chairman closed the meetiug.

THE NEW FLAGSTAFF MINING CO., LIMITED.

THE RECONSTRUCTION SCHEME.

A meeting was held at the company's Offices on Thursday, the 9th inst., to confirm the special resolution which had been passed on 23rd April, and for the appointment of a liquidator to carry out the winding up and re-eonstruction scheme which calls up 2s. per share on the 240,000 shares.

The resolutions were passed without opposition, and Mr. George T. Veruey (the secretary of the company) was appointed liquidator.

The Chairman (Mr. G. W. Bacon) stated that the mine had still beenkept going during the re-coustruction, and that a cable had been received to the effect that the money remitted would suffice to pay the wages till the funds were available from the re-construction scheme, also that the most satisfactory feature was that the reports from the mine were still very re-assuring. He also stated that in his efforts to obtain subscriptions from the shareholders for money to keep the mine going during the re-construction, although he had interviewed or heard from holders of a majority of the entire share capital, he had not found a single shareholder who did not intend to take up his quota of shares in the new company. This fact, together with the improved outlook at the mine, seemed to insure beyond a doubt the entire success of the reconstruction scheme.

LATEST REPORT.

The following is the foreman's last report, dated 20th April?—Level No. 7: No. 2 west drift north is in 130 ft., and still has good-looking ground. Level No. 8: Bonanza drift west is in 37 ft. The incline is up 52 ft., and is looking very well. There are spots of galena. Black winze down 35½ ft., with no change in appearance. Level No. 9: North cross-cut is in 326-ft., still following streak to make counection with black winze.

Interest coupons, due May 15th. on the debentures of the Land and Mortgage Co. of Egypt will be paid on and after that date by the bankers of the company, Messrs. Barclay, Bevan and Co.

Richmond Mine.—As the Eureka Consolidated and Richmond Mines of Eureka are worked out in their upper levels, the Eureka Consolidated Company propose to sink deeper, if the Richmond Company will join them, and pay one-half the cost of running the pumps. This arrangement is opposed by Mr. Probert, resident manager, although the local directors would, if they dared, approve the plan; but out of regard for Mr. Probert's feelings they remain inert.—*Financial and Mining Record*, 27th April.

THE CARLISLE GOLD MINING CO., LIMITED,

7th May.—The secretary announces the following cablegram, received from the manager at the mine:—"During April the mill worked 28 days, and the yield was as follows: Buiiion, $11,700; concentrates, &c., $850; total, $12,550. The working expenses for the month were $10,700. There has also been expended upon development work about $2,000.

The following cable was published in the financial papers ou the 25th ultimo:—"Station has beeu completed, and winze No. 3 sunk 30 ft. below the lowest level; vein is well defined; the ore contains a trace of gold, and $2 to $4 in silver."

According to advices received to-day this winze has been sunk to 45 ft.; progress very slow, owing to water increasing.

It is with deep regret that the directors have to announce the death of their esteemed chairman, Mr. F. J. Bladon, on the 20th ult., and they feel sure that this sad news will be sympathetically received by the shareholders.

Mr. W. George Cavendish has been elected chairman in succession to the late Mr. Francis Joseph Bladon.

REPORT FOR MARCH.

14th April.—Mill: Lost time due to March 1st and 2nd being required for cleaning up and thoroughly overhauling the mill and entire water system, aud also to gcueral repairs during mouth. The ore crushed during the month was not quite as free as that in January and February, partly accounting for the decreased production. The concentrates, however, were higher grade, and the month's output will net not less than $2,000 here. Mine. first level—No. 1 east shaft: This has been sunk to a depth of 125 ft. For about 80 ft. in depth the ore proved of fair grade, but during March the ore has been of no practical value. A raise from the first level to meet this shaft has been carried up over 55 ft., but connection has not yet been made between the two. The ore in the upper part of this raise has also beeu very low grade. A winze, a continuation of No. 1 east shaft, has been connected with the east drift from block L 13, at a depth of 60 ft. below floor of first level, the assays for the month varying from a trace of silver and gold to $1 and $5 per ton. No. 1 west winze: We have been extracting a fair grade ore during the entire month from the stopes west of this winze, but latterly the vein has become very narrow, not over 4 ft. in width, and lower grade also. Iu the footwall portion we have found a bunch of ore of fair value that will yield about a month's supply for the mill, or probably more on further development. Cave above first level.—We have been stoping a large quantity of ore here during the month, most of which still remains in the cave or stone. The ore for the past ten days has been very poor, and we are now stoping downwards and cleaning out all ore broken there. I am mining all ore that I consider will pay expenses, and also developing in the upper levels, any ground in which there is the slightest probability of finding pay ore. Lower level—Fourth: We have commenced sinkiug winze No. 3, as planued by Prof. Clayton, but to date I have nothing to report. We shall sink this to a depth of 110 ft., allow 10 ft. for a sump, and at 100 ft. drive both east and west on the vein with all possible speed, and also as soon as possible cross-cut both footwall and hanging-wall. As the work progresses we shall be able to employ a larger force of men, and so complete all work proposed as fast as possible. Concentrates: Owing to the melting of unusually deep snows in the Mogollon Mountains, the Gila River has been in a state of flood for the past five weeks, aud we have consequently been unable to ship more than 100 tons of concentrates in February and March. We are, however, hauling them to and piling them up on this side of the river, 200 yds. from the R.R., and hope to ship them all within the rest of this mouth. We have not less than 600 tons on hand, which will net us about $7,000.10. This will account for the small credit to the concentrates account in March, and to my having to carry forward a debtor balance. I am reducing expenses in every possible way, and am also reducing stocks on haud considerably, excepting store department, which has slightly increased.—J. Henry Longmaid, General Mauager.

RE NACUPAI GOLD MINING CO., LIMITED,

(In Liquidation.)

AN END TO ALL THINGS.

May 8th.—I have very much satisfaction in stating that the High Court of Appeal, after a long hearing, have this day reversed the judgment of Mr. Justice Kekewich iu the action brought by Mr. Zuccani and others, and have decided the case in favour of the views which I placed before you at the last meeting. This important decision will, I believe, prevent any further litigation, and will enable me to call you together at an early date to pass the necessary resolutions to divide the balance of shares and close the liquidation.—Henry J. Leslie, Liquidator.

The issue of "Vanity Fair" this week contains what we believe to be the only portrait of Gustave Eiffel, the builder of the modern Tower of Babel, which has yet been published in England.

Shareholders of the Pennsylvania Railroad Co. who have not received the report for 1888 can be supplied with a copy on application to the London correspondent, Mr. T. W. Powell, 1. Drapers' Gardens, E.C.

RIO TINTO CO., LIMITED.

THE COMPANY IN RELATIONSHIP TO THE SOCIÉTÉ DES MÉTAUX, AND THE COMPTOIR D'ESCOMPTÉ.

REPORT OF THE DIRECTORS,

To be presented to the proprietors at the sixteenth ordinary general meeting, to be held at the Cannon Street Hotel, London, E.C., on Monday, the 13th day of May, 1889.

4th May.—Your directors beg to submit their sixteenth annual report and statement of accounts for the year ending 31st December, 1888.

ACCOUNTS.

Balance-sheet: The liabilities on capital account remain unaltered, except as regards the item of the company's mortgage bonds, which shows the reductiou effected by the sinking fund. The bouds drawn of the five per cent. issuc of 1880 amounted to 44,680*l*., and those of the five per cent. issue of 1881 to 17,600*l*., making a total of 62,280*l*., which has been charged to revenue and applied in reduction of the account diseount and expenses. An additional sum of 37,720*l*. has been charged to revenue to the credit of this account, making a total written off of 100,000*l*., and reducing the balance to 54,977*l*. 16s. 3d., which will disappear in the next year's account. The total of the bonds of these issues redeemed up to date to debit of revenue aeeount amounts to 390,680*l*. The cost of mines remains at 3,331,095*l*. 10s. Overburden: 134,333 eubie metres have been removed during 1888, as against 123,858 in 1887, making a total of 4,605,989 since the eommencement. The cost of the reuoval of this overburden, viz., 11,968*l*. 18s. 5d., was charged to pyrites aecount, and a further sum of 19,043*l*. 5s. 2d. has been written off, reducing the overburden account to 54,465*l*. 2s. 10d. Extension and development: The outlay incurred during the year, amounting to 3,320*l*. 4s. 3d., was also charged to the mineral extraeted, besides which 20,000*l*. has been written off this account, which is now reduced to 241,026*l*. 16s. 5d. Revenue account: The profits on sales of produce, ineluding the copper realised during the year and other items at the credit of revenue account, together with 27,260*l*. 7s. 11d. brought down from the previous year, amount to 1,142,777*l*. 11s. 5d. After providing further for all interest and expenses of administration, including income and other taxes, the 62,280*l*. amount of drawn bonds as stated above, the sum of 21,536*l*. 0s. 4d., for plant, &c., written off, the 25,821*l*. 1s. 8d., eost of repairs and improvements to main line, making in all a total of 254,905*l*. written off, besides 190*l*. 13s. 10d. for bad debts, there remains:—Net profit available for dividend, 754,706*l*. 3s.; the interim dividend of 20s. per share paid November, 1888, on 325,000 shares absorbed 325,000*l*., and your directors now recommend that a final dividend be paid of 14s. per share, say, 227,500*l*., making together 1*l*. 14s. per share, or 17 per cent. per annum—552,500*l*., and leaving a balance to be carried forward iu revenue account of 202,206*l*. 3s.

PRODUCE OF THE MINES.

Pyrites: The quantities extracted from the mine were, in tons:—

	For shipment.	For local treatment.	Total.	Average copper contents.
In 1882	259,924	688,307	948,231	2.805 per cent.
In 1883	313,291	786,682	1,099,973	2.956 ,,
In 1884	312,028	1,057,890	1,369,918	3.234 ,,
In 1885	406,772	944,694	1,351,466	3.102 ,,
In 1886	336,548	1,041,833	1,378,381	3.046 ,,
In 1887	362,795	819,642	1,182,438	3.047 ,,
In 1888	434,316	979,317	1,403,633	2.949 ,,

The average quality of the ore extracted continues to be satisfactory. The amount of the company's pyrites actually consumed in Great Britain, Germany, France and the United States was:—In 1882, 272,826 tons; 1883, 288,104 tons; 1884, 314,751 tons; 1885, 354,591 tons; 1886, 317,024 tons; 1887, 385,842 tons; 1888, 393,149 tons. Copper: The copper produced at the mines during the year was equal to 18,522 tons of 21 cwt., and the quantities produced in past years in various forms expressed in the common denomination of metallic copper, are as follows, viz.:—In 1876, 946 tons of 21 cwt. nett; 1877, 2,495 tons of 21 cwt. nett; 1878, 4,181 tons of 21 cwt. nett; 1879, 7,179 tons of 21 cwt. nett; 1880, 8,559 tons of 21 cwt. nett; 1881, 9,466 tons of 21 cwt. nett; 1882, 9,740 tons of 21 cwt. nett; 1883, 12,295 tons of 21 cwt. nett; 1884, 12,668 tons of 21 cwt. nett; 1885, 14,593 tons of 21 cwt. nett; 1886, 15,863, tons of 21 cwt. nett; 1887, 17,813 tons of 21 cwt. nett; 1888, 18,522 tons of 21 cwt. nett. The quantity of copper brought to market during 1888 amounted to 17,945 tons in addition to 7,830 tons contained in the pyrites delivered, making a total of 25,325 tons of copper. The copper stocks chiefly in matt and precipitate at Huelva and Cwm Avon, carried over at cost price amount to 4,600 tons. At the last general meeting your directors reported to you that they had entered into an agreement with the Société Industrielle et Commerciale des Métaux of Paris, for the sale to the latter of all the copper produced by the company at the mines and at its copper works in the United Kingdom, in excess of the requirements of previously existing contracts. The engagements with this company were fulfilled during the whole of 1888, and during the two first months of 1889, and all copper delivered was paid for in cash. It is a matter of public notoriety that the said Société des Métaux has since gone into liquidation, and that the Comptoir d'Escompte, by whom the agreement was guaranteed, has so far failed to recognise its responsibility. For the unexpired period of the contract, matters stand in such a conditiou that it is at this moment impossible to form any safe opinion as to whether the company will reap any further benefit from it. The copper reserves in the heaps at the mines now amount to 88,356 tons, and an amount of 36,815*l*. has been written off the cost in the books, thus reducing the average cost to 6*l*. 4s. 9d. per ton of copper, and the total cost being below what it was in the previous balance-sheet. The water supply stored at the mines is abundant for the company's requirements during the next season.

RAILWAY AND PIER.

The damage caused to the railway by the floods on New Year's Day, 1888, has been thoroughly repaired, and every further precaution has been taken that foresight and experience can suggest to guard against similar disasters in the future. The former Salomon Bridge, which consisted of three spans of iron girders, has been re-placed by a steel bridge of one span of 220 ft.; the water way of the Nicbla Bridge has been materially enlarged, and in many places the line has been further raised above flood level. The whole cost of these repairs and improvements, amounting to 25,821*l*. 1s. 8d., has been charged against revenue account.—H. M. MATHESON, Chairman.

EXTRAORDINARY GENERAL MEETING.

REPORT OF THE DIRECTORS,

To be presented to the proprietors at an extraordinary general meeting, to be held at the Cannon Street Hotel, on Monday, the 13th May, 1889.

SHARES TO BEARER.—By the articles of association, your directors are expressly precluded from issuing duplicate share warrants or duplicate share dividend coupons in instances where these may be lost or destroyed. This regulation has led to cases of distinct hardship for which there exists no remedy but an alteration of the articles of association, to be effected only by special resolution, and your directors are impelled by experience, extending now over many years, to propose to you such alterations in the regulations as shall enable them, at their discretiou, to provide the relief so urgently needed. It is, of course, understood that the directors will only use the power now sought at your hands under every possible care and under proper and sufficient indemnity. The directors therefore propose a resolution to avoid this inconvenience in the future.

ROBURITE IN THE ANTIPODES.

(From *S. Australian Register*, April 1st, 1889.)

On Saturday afternoon a party of 50 gentlemen, amongst whom were Capt. Lane, the well-known manager of Block 14, Capt. Hodges, late of the Bolario Mine, Mr. William Murray, a director of the Baker's Creek Gold Mine, and Mr. W. Hamilton, chairman of the Hamley Mining Company, proceeded, at the invitation of Mr. C. E. Stokes, to Glen Osmond Quarry, to test the qualities claimed by the inventor for roburite. Dr. Carl Roth discovered this explosive, which is now being introduced to Australia. The trials on Saturday were most interesting. The first two charges fired were in holes bored in the face of the high-level quarry, each containing 8 ozs. of roburite. A large quantity of rock was thrown down, and the standing rock cracked and so much shaken that the quarrymen could work down considerably more. The third shot contained the same quantity of roburite, but the hole had been drilled into a sort of buttress, giving the explosive an opportunity of throwing down some large masses of rock, and the work done was pronounced to be most satisfactory. One boulder measuring 3 ft. 6 ins. by 2 ft. 6 ins. was subjected to another test. Nine ozs. of roburite was placed on it, covered with a few handfuls of gravel, and discharged. On examining the result, it was found to have split the rock completely through with a direct downward action. After this a lifting charge was fired. A hole 3 ft. deep had been drilled at an angle of 45 degs. into a solid rock, whose surface only was exposed to view. The charge of ½ lb. lifted a quantity of the surface rock and cracked the remainder through in all directions, and from 5 to 7 ft. away from the hole. The mining experts present declared that this was a most satisfactory proof of the value of the explosive. The party then adjourned to a lower level, where a charge of 5½ ozs. of dynamite placed on a double-headed wrought iron rail broke the rail in two pieces. An equal quantity of roburite placed on another rail smashed its way through the rail, splitting the iron in every direction. Here was a proof of the different action of the two explosives. Dynamite being quick cut the rail in two, whereas roburite being slower in action does its work by rending and disintegrating. The next trial, and perhaps the most interesting from the value it gives the explosive in coal mines, proved that although the charge may be exploded while surrounded by an atmosphere charged with gas, it will not ignite the gas, and is in fact flameless. Again, a cartridge was placed in a cylinder and covered with fine coal dust. This test was to show that although roburite may be covered with an inflammable matter still no flame is produced, and the coal dust was not fired. A shot was then fired in water to the satisfaction of those who wished to see the experiment. For use in water roburite is packed in waterproof cartridge cases. In dry ground it can be used loose like ordinary blasting powder, though four times as powerful. To show how safe it is to handle, a lighted match was applied to it with the only result that it extinguished the match but did not explode, and some of it was placed on an iron rail and struck heavily with a sledge hammer, but concussion had no effect whatever. Those of the party who were anxious to test the freedom of roburite from fumes then adjourned to the Gilles Glen Osmond Mine, where some holes had been drilled in a drive running 350 ft. into the hill above Target Gully. There is no ventilation whatever in the drive. Two shots of 8 ozs. each were fired simultaneously, and the mining men were quite satisfied with the way the roburite did its work. The action was not confined, but spread forward and sideways, cracking the walls of rock for several feet, besides throwing out the stone cleanly and handy for removal. The party stayed some time in the fumes, but no ill effects were felt. Before the shots were fired the visitors extinguished their candles and watched for flame. This was a good test, but no light was noticed. This concluded the trials, and from the remarks of the mining experts, the company may feel well satisfied with the result of the experiments.

ROBURITE IN AUSTRALIA.

AFTER a series of successful public experiments in the neighbourhood of Adelaide, South Australia, a local company has been formed to work the roburite patents in the Australian colonies under license from the parent company. The Australasian Roburite Explosives Company, Limited, will have for its directors the following gentlemen:—Sir S. Davenport, K.C.M.G., chairman, Mr. Fulton (senior partner of Messrs. Fulton and Co.), Mr. W. Hamilton (chairman of the Hamley Mining Company), and Mr. Giles, M.P. We are informed that the capital of 10,000*l*. was privately subscribed in a few hours. The company begins work at once with temporary appliances, but has ordered a complete set of machinery for an output of a ton a day from Messrs. Heenan and Froude, of Manchester.

100, GRACECHURCH STREET, E.C

RIO TINTO COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the SIXTEENTH ORDINARY GENERAL MEETING of the Shareholders will be held at the Cannon Street Hotel, London, E.C., on MONDAY, the 13th May, 1889, at Two o'clock precisely, for the purpose of receiving the Directors' Report and Statement of Accounts, for the Declaration of a Dividend, and for other purposes; and Notice is also Hereby Given that at the close of the above Meeting an EXTRAORDINARY GENERAL MEETING will be held at the above place, when the subjoined Special Resolution will be proposed, and such resolution will, if passed by the requisite majority, be submitted for confirmation as a Special Resolution to a Second Extraordinary Meeting to be subsequently convened.

SPECIAL RESOLUTION.

That the articles of association be altered in manner following :—

(*a*) The following article shall be substituted for article 133.

"133. The Company shall not, notwithstanding any notice or knowledge they may receive or have, be bound to recognise any legal or equitable right, title, or interest whatever, to, in, or in respect of any shares or stock represented by a share warrant, except the following rights :—

(A) 'An absolute right in the bearer for the time being of any coupon so advertised as aforesaid for payment, to such amount of dividend or interest on the share warrant whereto the same coupon shall belong as shall have been as aforesaid declared payable upon presentation and delivery up of that coupon.'

(B) 'An absolute right in the bearer for the time being of the share warrant and the unadvertised coupons to the shares or stock included in the same share warrant, and all benefits thereof other than the dividends or interest which shall have been as aforesaid declared payable on the same shares or stock.'"

(*b*) The words "but they shall under no circumstances issue any new share warrant for any shares or stock for which a share warrant shall have been previously issued, unless and until the share warrant so previously issued shall have been first delivered up to them to be cancelled" in article 140 shall be omitted from article 140.

(*c*) The following article shall be inserted after article 140, namely :—

"140A. If any share warrant or coupon has been or shall be lost or destroyed, the Board, if such loss or destruction be proved to their satisfaction and if in their absolute discretion they think fit, may in the case of any such coupon which shall have been advertised for payment as aforesaid pay the dividend payable in respect of such coupon to such person as may in their opinion be entitled thereto, or may issue a new share warrant or coupon in lieu of the warrant or coupon so lost or destroyed, but every person to whom any such payment or issue shall be made shall previously pay to the Company all expenses connected with such issue or with the investigation of the evidence of such loss or destruction, and shall also previously give to the Company such an idemnity as shall be satisfactory to the Board."

(*d*) There shall be added on to article 154 the following words, namely :—

"All dividends unclaimed after having been declared may be invested or otherwise made use of by the board for the benefit of the Company until claimed."

Holders of share warrants to bearer will receive a ticket of admission, on depositing their warrants in accordance with the articles of association three days prior to the meeting, either at the Company's Offices in London, or at the Société Générale, Rue de Provence, 56, Paris, or at the Deutsche National Bank in Bremen.

The retiring Directors are G. A. Schroeder, Esq., and J. A. Crawford, Esq., who, being eligible for re-election, offer themselves accordingly.

The retiring Auditors are Messrs. Turquand, Youngs, Weise, Bishop and Clarke, who, being eligible for re-election, offer themselves accordingly.

The Transfer Books will be closed from Monday, the 6th, to Saturday, the 11th inst., both days inclusive.

By order of the Board,
R. J. FENNESSY,
Secretary.

	Paris	Yokohama

The Bank receives money on deposit, buys and sells bills of exchange, makes telegraphic transfers, issues letters of credit and circular notes, forwards bills for collection, and transacts banking and agency business generally.

INTEREST ALLOWED ON DEPOSITS

At 3, 4, and 5 months' notice, 3 % per annum.
At 6, 7, and 8 months' „ 4 % „
At 9 to 12 months' „ 4½% „
At 3 years' „ 5 % „

Interest paid half-yearly in London,—31st March and 30th September.

Interest paid half-yearly in Scotland—11th May and 11th November.

Current Accounts opened and cheque books supplied. Interest at 2½ per cent. per annum allowed on the minimum monthly balance, if not below 100*l*.

Advances made against approved banking securities. Pay and pensions drawn, insurance premia, subscriptions, and other periodical payments made at a uniform commission of ¼ per cent. Securities bought, sold and received for safe custody from constituents of the Bank. Interest and dividends collected at a uniform commission of ½ per cent.

Drafts issued upon the Bank's Eastern Branches at current rates, free of commission. Bills collected or negotiated, and every description of exchange business conducted.

Special Code Words registered at a fixed charge of two shillings.

Foreign Coupons and Interest Warrants negotiated or sent for collection.

A Writing Room is set apart at the London Office for the use of the Bank's customers.

A baggage and agency department has been added for the convenience of Eastern constituents.

The fullest information can be obtained by application at any of the Branches and Agencies, or at the Head Office.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of hard quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms:—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.
"New Mill crushed 29,000 ,, 25 ,, ,, 8.60 fcs. per ton.
"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

REPORTS OF MEETINGS.

THE SOUTH VOGELSTRUIS GOLD CO., LIMITED.

DIRECTORS ANXIOUS TO MEET THE WISHES OF THE SHAREHOLDERS IN A DIFFICULT POSITION—A SPECIAL MEETING TO BE CALLED TO CONSIDER THE CONTRACT WITH THE VENDORS—VARIOUS VIEWS AS TO THE PROPERTY.

THE first ordinary (statutory) general meeting of the members of this company was held at Cannon Street Hotel on Wednesday—Percy Tarbutt, Esq., in the chair.

Mr. H. E. RODWELL (secretary) read the notice calling the meeting.

ANXIETY OF THE SHAREHOLDERS AS TO THE PROPERTY.

The CHAIRMAN: Ladies and Gentlemen, I regret very much to announce that Sir William Arbuthnot is unable to be here to-day, owing to domestic affliction, which prevents him from attending to any business whatever. It therefore becomes my duty to take the chair. You are all aware that this is the ordinary statutory meeting, which has to be held under the Companies Act, and that no formal business can take place on this occasion. It, however, furnishes an opportunity to the directors to report to the shareholders what has been done since the formation of the company. This meeting has been called rather earlier than was necessary under the Act, on account of the action taken by certain shareholders who had become anxious respecting the value of the property purchased by the company. The company was registered on the 25th of January of this year, and the prospectuses were issued on the 26th January, offering 80,000 shares for subscription. The allotment took place on the 30th of the same month, and the amount subscribed was 53,627*l*. You will remember that according to the prospectus 20,000*l*. of the purchase-money was payable to the vendors either in cash or in shares, at the option of the company. Availing ourselves of part of that option,

WE HAVE AN AVAILABLE WORKING CAPITAL OF 25,000*l*.

Almost immediately after the allotment, it appears rumours were afloat in the City to the effect that this property was not what it had been represented in the prospectus, and these rumours being brought to the notice of the directors, we decided to have an independent report on the property. I was fortunately in a position to obtain the service of Mr. W. A. B. Anderson, who was formerly the managing director of Moodie's Gold Mining Company, and who is now managing director of Luipaards Vlei; Battery Reef, and other mines on the Randt. We telegraphed to Mr. Anderson on the 14th February (it required a long telegram to describe the property), requesting him to examine and report upon it. About a fortnight after that, while we were waiting Mr. Anderson's reply, we received a notice from solicitors who represent the shareholders, who are most nervous about the value of their property, requesting us not to complete the purchase for which we had contracted.

VENDORS MEET DIRECTORS FAIRLY.

We then interviewed the vendors, and I must say they met us very fairly indeed. We told them that we had already telegraphed for an independent report, that we were waiting for a reply to that telegram, and that we had received notice not to part with any money until the value of the property was confirmed. They agreed at once to await the independent report, and instead of compelling us, or attempting to compel us, to complete the purchase, they agreed to allow the money that was due on a certain date to be lodged in the names of themselves and the chairman of the company, and it cannot be released without the signature of the chairman. Some delay occurred in the receiving of Mr. Anderson's report, as although we did our best, we could not describe the property with sufficient accuracy in a telegram to enable him to discover exactly where the claims were. He, therefore, had to await our letter confirming the telegram. We received his report on the 23rd April, and at once had it printed and circulated amongst the shareholders. At the same time, we called this meeting about three weeks before it was due.

FALSE RUMOURS.

Now, gentlemeu, with regard to Mr. Anderson's report, we heard rumours that we had no property whatever, that we had no water rights, and that the whole thing was a swindle.

MR. ANDERSON'S REPORT.

Mr. Anderson's report, however, confirms the number and position of the claims. It confirms the number of reefs running through the claims. It confirms the value of the water right, and it confirms the facilities for working. What it does not confirm is the value of the reefs. The reefs were reported upon by Mr. Sherwell, and the Kimberley, it was said, would mill 10 dwts. to the ton. Mr. Jones is an engineer of very great experience. He was at one time chief engineer to the De Beers Company. He was afterwards chief engineer to the Goldfields of South Africa, which is one of the largest companies working there. He was employed by the directors before the issue of the prospectus to confirm, or otherwise, Mr. Sherwell's report. His report is, no doubt, as familiar to you as to me, and it was published with the prospectus. Mr. Anderson's assays run from 1 gr. to 2 dwts. and to 5¼ dwts. to the ton, but

THEY WERE TAKING FROM SURFACE OUTCROPPINGS.

He goes on at once to say, "From seven samples taken from different points of the claims (they were not from the Kimberley reef, which was the one reported on by Mr. Sherwell), I had assays and pannings made which I regret have been rather disappointing, but as the shafts were full of water, most of the samples were taken from the surface. Many of these banket reefs improve in going down." I know a great deal about the Randt, having spent some months upon it, and can confirm that last paragraph, for in nearly every reef we have sunk on the yield per ton has most materially increased as depth is attained, and in most cases the surface pannings are very small indeed. In further corroboration of Mr. Anderson's statement that the reefs may be expected to increase in value in depth, I will read a short extract from the report of the Red Reef Mining Company, which is mining upon the same reefs. They have had a number of samples taken from different depths which have given from 2 ozs. 2 dwts. up to as high as 13 ozs. per ton. For myself, I do not think the Kimberley and Red Reef can be expected to give anything like 13 ozs. per ton, but I do think that the Kimberley will give very much higher than 5¼ dwts., which was the best assay Mr. Anderson got from surface pannings. Almost immediately after issuing the report and the notice convening the meeting, a circular was sent round to the shareholders (which we, as shareholders, also received) by a firm of solicitors on behalf of the shareholders who are most nervous as to the value of their property, which practically advised them to request the directors to rescind the agreement and throw up the purchase of the property. (Hear, hear.) Of course, we, as directors, are practically the managing partners of a commercial undertaking, and our business is to look after the interests of the whole undertaking. We, therefore, thought it necessary to take the opinion of the most eminent counsel we could as to the entire position. That opinion we have, and I will ask Mr. Francis, the solicitor of the company (who will be better able to explain the position than I can), to tell you what that opinion is, but before sitting down I want you to understand that we directors are, as I said before, simply the managing partners of this concern. We have the onus of the undertaking, but our interests are identical with those of the shareholders, and whatever is best for them will be best for us, and we will use our best efforts to carry out their views. (Cheers.) I will now call upon Mr. Francis to read the opinion given by counsel as to the position in which we stand in regard to the vendors.

OPINION OF MR. RIGBY, Q.C.

Mr. FRANCIS (Messrs. Francis and Johnson, of Austin Friars) said: I laid the case before Mr. Rigby, Q.C., whose name must be familiar to you, putting before him exactly the position in which the company stood, the remarks that had been circulated with reference to the property, and the comments that had been passed, and passed very freely, upon Mr. Sherwell's report and the other reports received from the property, together with all the documents and agreements &c., connected with the formation and inception of the company as known to me. I also had the pleasure of being cross-examined by him yesterday at some considerable length. As the result he wrote his opinion as follows:—

"Having regard to the fact that the vendor appears to have made full disclosure throughout of the terms upon which he purchased, and that he is not shown to have made any representation which can be established to be misleading, I am unable, upon the case before me, to say that there is any legal ground on which the company or the directors can repudiate the contract. If the directors are urged by individual shareholders, whatever their holding may be, to decline to proceed with the contract, they should satisfy themselves that such shareholders are able to indemnify them and they should require indemnity from them, or require them to take steps to procure an injunction to restrain them (the directors) from proceeding to complete. If the indemnity is insufficient the directors must, in my opinion, act upon their own judgment, and will be protected against any personal liability in consequence of any exercise of such judgment or good faith. At present it seems to me that the reports mentioned in the prospectus are *bonâ fide*, and were acted upon by the vendors themselves, and unless it can be shown that those reports are to the knowledge of the vendors misleading, the facts put before me would not entitled the company to rescind.—JOHN RIGBY, 7, New Square, Lincoln's Inn."

A NERVOUS SHAREHOLDER.

Mr. DOUGHTY BROWNE: I am one of the shareholders who has been described as nervous, and I must say my nervousness has not been diminished by the statement the chairman has made. (Hear, hear.) I will also say that I have listened with great interest and a little amusement to the definition of the position of the director of a public company given by the chairman, in which he says he is only managing partner in the concern, and wishes to carry out the wishes of the shareholders. I should like to add to that, that when gentlemen put their names to a prospectus making certain statements they are also in their capacity of directors responsible for those statements. I have listened to what the chairman has said, and I wish to approach this question thoroughly as a matter of business. I was induced to subscribe for shares on the reports in the prospectus. I have refreshed my memory by again looking at that prospectus, and I do deliberately say that the results upon which we had to rely for profits were based upon a yield of 1 oz. of gold per ton. (Cheers). It says here "at least 18 dwts.," which is very nearly an ounce. On the other hand, it says that putting a moderate cost for milling we must expect a cost of 1*l*. a ton. Now, it is perfectly clear that if we do that, with a return from 1 oz. to 5 dwts., we shall hardly be able to pay our working expenses. We stand in the position of men who are asked to pay 55,000*l*. for a property. We were willing to do so on the basis of calculation given in the prospectus. That calculation was a profit of 50,000*l*. a year. If we do not do any better than Mr. Anderson's report suggests, we shall not be able to make any profit at all. I do not want to cast any reflections, and I wish to repudiate altogether the suggestions that we have no property, water rights, or facilities for working. I have no such knowledge; I simply took my shares on the face of the prospectus, but what I do say now is, that Mr. Anderson's report about the value of the property only enhances and increases any suspicion previously that may have been entertained.

A RESOLUTION.

Therefore, I wish to ask you (I know we can do no business at this meeting) to put to the meeting a thoroughly inoffensive resolution, but one which at the same time fairly meets the circumstances of the press:—"That this meeting is of opinion that the reports circulated with the notice convening this meeting do not justify the prospects held out in the original prospectus, and that it is, therefore, not desirable to complete the purchase until a report has been made by an expert, to be approved by the shareholders at a meeting to be convened for the purpose." It seems to me that, under the awful document that has been read to us, we are obliged to pay, and run great penalties, if we do not. The only thing we have to do is to lie down and pay our money, but I have also the opinion of counsel, which is directly the other way —(laughter)—which says we have a perfect right to repudiate this contract under the circumstances that are before us, and, therefore, I think when you hear that you will not be too frightened to vote for the resolution, which I now have the honour to propose. (Cheers.)

A REASONABLE REQUEST.

Genl. BERESFORD: Will you read your opinion?

Mr. BROWNE: I think I had better not. (Oh.)

Genl. BERESFORD: It is rather hard to have had our counsel's opinion read, and that yours should not be read. (Cheers.) I do not think you should put a resolution like the one you have moved to the meeting, and keep the opinion of your counsel in your pocket. (Cheers.)

Mr. BROWNE: In the exercise of my discretion as having taken this opinion, I think the best thing in the interests of the shareholders under the present condition of things is not to have that opinion read.

Genl. BERESFORD: This statement, said to have been made by the directors as to the value of the property, was not made by them, but was a report from an independent mining engineer. (Hear, hear.) They simply state that Mr. Jones has reported on the property, and they give his report.

A SHAREHOLDER: You are responsible.

Genl. BERESFORD: Responsible for what Mr. Jones says! (Laughter.) The man who applies for shares in a company when he reads such a report is supposed to have common intelligence. He sees that the report is not based upon the knowledge of the directors, but upon that of the writer, and has to do with a property which, in this case, is 7,000 miles away. The directors can only take the reports of competent people, and Mr. Joues is a competent engineer, and you who applied for shares on that report are in exactly the same position as the directors.

A SHAREHOLDER: Who sent out the report?

Genl. BERESFORD: We sent it out, after having done our best to test its accuracy. I am not going to beg the question. The directors feel that they are in the same position as the shareholders in regard to that report of Mr. Jones. We are willing to take the responsibility that properly attaches to them, and to express our belief to-day that you have a valuable property. (Cheers.)

Mr. JOHNSON: The directors issued the prospectus and Mr. Jones' report; a subsequent report is vastly inferior, and should now get a further opinion.

Genl. BERESFORD: We are only too anxious to do all the shareholders wish, but whatever is done cannot be done at this meeting.

A SHAREHOLDER: Are Messrs. Morley and Shirreff present?

Mr. SHIRREFF: I am present as representing my firm. What the shareholders are fairly entitled to is to express their opinion as to what course they wish the directors to take. I know that no valid resolution can be passed to-day, but if any expression of opinion comes from the meeting, I assume the directors will act upon it.

VENDORS PRESSING FOR A SETTLEMENT.

Mr. FRANCIS: I hope I may be allowed to say a few words. We have received every courtesy from the vendors, but their solicitors have plainly intimated that they are not going to be played with any longer. They gave us the latitude asked, in order that the directors might obtain an independent report to lay before the shareholders, and that the shareholders might meet to discuss it. Beyond that they are not apparently going to allow any more time, but will take immediate proceedings to have the contract fulfilled. I laid the case clearly, and with unbiassed mind, before Mr. Rigby, to ascertain what steps the company had better take through their directors. As the result, Mr. Rigby says we have no means of defending any action he may bring against us. Are we to go on with the company, or have a law-suit? If you decide to go on with the law-suit, then Mr. Rigby says the proper course for the directors to take is to obtain an indemnity from those persons who are anxious that the issue at law should be tried. Those gentlemen who are prepared to indemnify the company let them say so, or let them go to the court and seek power to restrain the directors. As far as the directors are concerned, they are perfectly ready to be restrained. (Cheers.)

MR. BROWNE COMBATATIVE.

Mr. BROWNE: I do not think it is necessary for us to take the course suggested by Mr. Rigby. I hope the chairman will put the resolution, as an expression of opinion on the part of the shareholders, and will see us properly protected if the vendors bring an action against us. I do not stand in a hostile position to any individual director, or the directors as a whole—I only find myself in the position of having 2,000 shares in a company, which I thought was going to be very valuable, but which is likely to realise something less than nothing. Under those conditions I ask the directors to pause before they pay 55,000*l*., so that we may really know whether we have a property or whether we have not. As to the question of having to pay 2,000*l*. or 3,000*l*. law costs, we must just run the risk of that. At any rate, the vendor will have to prove his case. Our position will be this—we shall have a property that is really worth its original value, and that will cost from 57,000*l*. to 60,000*l*., and on the other hand, if the vendor is unable to substantiate his statements, we shall be free from the responsibility of having to pay 55,000*l*. for a property which is worthless. (Cheers.)

POSITION OF SHAREHOLDERS WHO MAY DIFFER FROM MR. BROWNE.

The CHAIRMAN: I have listened with great interest to Mr. Browne's speech. If Mr. Browne represented the whole of the shareholders of this company, our course, as directors, would be extremely clear and easy. Unfortunately, we have no means of ascertaining that Mr. Browne does represent the entire body of the shareholders. Supposing we adopted the course which this resolution suggests, any shareholder who wished to complete the purchase would not like to be so overridden. Messrs. Morley and Shirreff have sent circulars to the shareholders very freely, and have asked them for proxies, but nobody who wishes to complete the purchase has asked for proxies. Messrs. Morley and Shirreff have obtained proxies for the amount of 28,140 shares, of which 6,040 have not paid their call due on allotment, and, therefore, have no voice. That leaves 22,000 out of a total of 47,000.

A SHAREHOLDER: Do the vendors vote?

The CHAIRMAN: They do not. It is just possible there may be a few shareholders amongst the majority who do wish to complete the purchase rather than fight a law-suit.

THE RESOLUTION.

I do not propose to put the resolution to the meeting, and many of the shareholders are not present. If we take the course proposed by Mr. Browne without requiring from Mr. Browne and those who are of the same opinion as he is to indemnify the company, or obtain from them the injunction which we are advised by the best counsel we can employ, we may be, on the other hand, laying ourselves open to serious liability to those shareholders who object to that course. Therefore, though a large majority wish to risk a law-suit, they ought to give the indemnity required, and not spread the costs over shoulders unwilling to bear it. That seems to me a very fair and business-like proposition. (No, and Cheers.)

Mr. GODDARD: In the case submitted to Mr. Rigby, did it include the personal liability of the directors? If the directors are personally responsible for any statements that are not justified, it seems to me that it is a convenient way of evading responsibility by asking for an indemnity from the shareholders.

Mr. FRANCIS: The points laid before Mr. Rigby for his consideration were the documents, the reports and the statements that have been made with reference to the value of the property, and the statements alleged to have been made by the vendors, with the view of seeing whether there was in equity ground for the repudiation of the contract. Mr. Rigby was not asked to travel out of the specific lines. Any liability the directors may have will remain with them.

Mr. COOK thought the voting would be unanimous, or almost so, in favour of the rescinding of the contract. He applied for his shares as an investment. Seeing that it emanated from the Gold Trust of South Africa, he was told the concern was respectable, and that he might depend upon the prospectus. Upon that he applied for his shares, but instead of the property being worth 53,000*l*. it was probably not worth the odd 3,000*l*. This meeting of between 150 and 200 shareholders was unanimous in favour of rescinding the contract, as compared with some half a dozen directors who were against it. (No.)

A SHAREHOLDER: How many shareholders are there in the company?

The CHAIRMAN: 240, of whom 63 only are present. (Hear, hear.)

Mr. BROWNE: If you have any objection to putting that resolution from the chair, I will put it myself.

The CHAIRMAN: One speaker stated that there were between 150 and 200 shareholders present who were opposed to this contract, as compared with six directors who were in favour of it. He makes a mistake altogether. All we want to do is to steer clear of possible complications in law. We are perfectly willing either to cancel the agreement or to go on with it.

A SUGGESTION.

I think the simplest way would be to send in a requisition asking the directors to call a special meeting for dealing with this question. If you represent one-third of the shares that will be easy enough, and then we can call that meeting, at which the resolutions will be binding. You must not suppose that we are in two camps; none of us are in opposition—we only want to do the best we can for the company. It does not seem to me that the resolution now proposed would facilitate matters.

Mr. BROWNE: I will put the resolution as an expression of opinion.

A PREMATURE ANNOUNCEMENT.

Mr. BROWNE: I think the practical course will be to put the resolution, because it will be an expression of opinion on the part of the shareholders on the first occasion that they had the opportunity of

giving one. The extraordinary meeting can come afterwards. Those in favour of the resolution—it is carried unanimously. (No.)

The CHAIRMAN: I think I am within my rights to put the contrary proposition—it is certainly not carried unanimously. (Hear, hear.)

Mr. BROWNE: I should like to have the names of those who voted against the resolution.

AN ACCEPTED CHALLENGE.

Mr. DIXON: You can have mine—T. C. Dixon. I have a thousand shares, and I have paid my calls. (Cheers.)

Mr. PELHAM CLINTON: I also voted against your resolution. I took my 200 shares in the usual way, and I have paid my calls. (Cheers.)

The CHAIRMAN: The business seems to have been taken out of our hands by Mr. Browne, and so I will ask him what he proposes to do to put into effect the resolution he has carried.

Mr. BROWNE: I understood the chairman to say he would not put it. I have not the slightest wish or intention of treating him with disrespect or discourtesy, and certainly not to take the business out of his hands. I respectfully suggest that the chairman should take the course he has mentioned, and that an extraordinary meeting should be called. We shall then be in a fair way of arriving at a solution of the problem. We shall know whether we have a property worth buying, or whether we have not, and, in the latter case, we must see what we can do to rescind the agreement.

The CHAIRMAN: I quite agree with Mr. Browne that it is desirable we should get the fullest report upon the property, but we must not forget that the vendors intend to take steps to compel us to carry out the agreement. I will ask Mr. Browne to lay before the meeting some definite proposition by which he will meet this contingency, which may probably arrive, of the company being served with legal notice to complete the purchase.

Mr. BROWNE: You say a special meeting should be called, and I think that should be done.

The CHAIRMAN: Then I will ask the shareholders to serve us with a requisition to that effect. The moment we receive it we will call an extraordinary meeting.

A SHAREHOLDER proposed a vote of thanks to Mr. Tarbutt for presiding.

Mr. BROWNE said he had much pleasure in seconding the motion.

The motion was carried, and, with the brief reply of the CHAIRMAN, the proceedings were brought to a close.

WHEAL CREBOR.

THE MINE LEASED TO MR. BAWDEN AT 2s. 6d. IN THE £ FOR 12 MONTHS—12 MONTHS' GRACE TO THE SHAREHOLDERS.

A SPECIAL MEETING of this company was held on Monday, at the Offices in Gracechurch Buildings, to consider the desirability of closing the mine—John Schofield, Esq., in the chair.

Mr. C. B. PARRY (secretary) read the notice calling the meeting.

POSITION CLEARLY PUT.

The CHAIRMAN: Of course, you are fully aware that the crisis in this company's affairs has been brought to pass by the fall of 40*l.* per ton in copper. We were raising a considerable quantity of ore of good quality, and have done so up to the present time, but the last sale realised about 500*l.* less than it would have done had copper remained at the same price it was some two months ago. Of course, we cannot go on exploring the mine, and driving the different levels, with the view of making further discoveries, because we now should land you in a loss of from 150*l.* to 200*l.* a month. The understanding was that if anything should arise by which we could not pay our working expenses, we were to call you together to see whether you would go on, or whether you would wind up the concern. That period has arrived, and you must decide to-day what you will do. The directors have given the matter their mature consideration, and with the advice of Mr. Bawden they think it will be a pity to shut up the mine if any means can be devised to keep it going, because there might be a rise in the price of copper which, if it would not enable us to make a profit, might help us to work without any material loss, and tide over another 12 months, so as to give time to the copper market to rise. Mr. Bawden has suggested that we should lease the mine at a royalty of 2s. 6d. in the £.

PROPOSED LEASE.

He says he thinks he can find parties who will be willing to make such a proposition. They will not explore in any way except at their own cost, and they will enter into sufficient guarantees to prevent any liabilities falling upon us in any shape or form. They will work the mines to the best of their judgment with the view of making as much profit out of them as they can, and the committee think you cannot do better than accept this proposition, and they recommend it to you. It would be necessary to get the Duke of Bedford to give his consent, and I think, providing that be obtained (as to which we anticipate no difficulty), we may safely recommend the suggested lease. Mr. Bawden says he thinks the persons in question might make a small profit, whereas we could not hope to do more than to make both ends meet. I shall propose a resolution to this effect—that negotiations be entered into with persons who are willing to lease the mine on royalty, and that the Duke of Bedford be consulted and his consent obtained. We will then call another meeting in the course of a fortnight to tell you the result of our negotiations. If you do not approve of that course the only plan is to pass a resolution to wind up and to appoint a liquidator. We did hope that we might have been able to carry on the mine without making a heavy loss, and we should have been able to do it if the price of copper had been maintained, and we had a chance of making a discovery in addition; but in the arrangement that is now proposed such a chance is out of the question, because that would involve a heavy outlay. The most we can do is to keep the concern *in statu quo*.

FINANCIAL POSITION.

Our financial position is this—we should have about 700*l.* in hand after paying all our liabilities, and the expense of the London office would be a few guineas per month. We must have an office, and there must be an executive. We calculate that the royalty paid to us would amount to more than the London expenses—in fact, it is calculated at the rate of about 25*l.* per month, and Mr. Bawden estimates the returns at 200*l.* a month, so that we should not lose anything during the 12 months, and our balance would not be entrenched upon. I shall be glad to hear from any gentleman present any observations he may have to make. I may say I have letters from two large shareholders deprecating the final closing of the concern, and suggesting the continuation of the mine in a tentative way, pending any revival in the copper trade. One of them, however, states that he is not in favour of a succession of calls. The second letter is much to the same effect. The cost of keeping the water down would amount to 35*l.* a month, and there is another alternative by which we might work the mine, and raise copper and mundic sufficient to pay the expenses, but if we lease the mine we shall at once get rid of all agency charges and all risk of loss.

Mr. BELLINGHAM: Will the lessees pay the lord's dues?

The CHAIRMAN: The Duke of Bedford has suspended the dues. We owe him about 500*l.*, but he has suspended the payment until we declare a dividend or until the concern is wound-up. There are to be no dues upon any ores raised in the past. We are only to pay royalty in future in case of a profit being made. We should have no royalty to pay upon the ore the lessee would raise.

Mr. BELLINGHAM: I presume that the proposed lessee is a responsible person.

MR. BAWDEN THE LESSEE.

The CHAIRMAN: I do not think there need be any mystery in the matter—the lessee would be Mr. Bawden himself. He would guarantee the company against all loss.

Mr. WAGSTAFF: I think we should like to have the candid opinion of our purser, Mr. Bawden.

The CHAIRMAN: I do not think you can do better, and I think it quite possible you might do worse, than the committee suggest.

Col. CRAGG (member of the committee): We have considered all the schemes that have suggested themselves to us, and this is the best.

VIEWS OF MR. BAWDEN.

Mr. BAWDEN: Mr. Schofield has given you the bare facts, and I do not think I can add much to them. I have thought a great deal about the shutting up of the mine since I received notice from the secretary, and on my way to town I have carefully considered the matter. As an ultimatum, rather than see the mine closed, I will become responsible for its working for 12 months, take the mine on tribute for one year, and give the company half a crown royalty on what I sell. I should in doing that take over all the local charges, but have nothing to do with those in London. In accordance with instructions from the secretary I got out a statement of what the local costs would be to keep the mine going for 12 months, and the lowest possible rate was 165*l.* 16s., and I estimated the returns at about 200*l.*; that would leave a profit of about 31*l.*, but against that there would be the rates and taxes, the London office and the water rates, which would absorb the whole of the balance, and probably a little more, so that the costs and returns would be about the same. The question was put to me in another way—for how much could the mine be kept free from water for 12 months without doing any other work? I estimate it would cost about 35*l.* a month, and there would be probably a few other expenses, making another 15*l.* or 20*l.* a month to spend if no work were done, but rather than see the mine closed, as I say, I will become responsible for 12 months' working, and will render to the company half a crown in the pound as royalty on the gross returns.

A SHAREHOLDER: Who will pay the London expenses?

Mr. BAWDEN: They must be paid out of the half a crown. The water and mine rent and rates I will take over.

The CHAIRMAN: The London office expenses would be reduced to almost nothing.

Mr. WAGSTAFF: I do not see why a committee is required. I think the secretary would be quite sufficient.

The CHAIRMAN: We want to keep the concern going, and must have an executive.

Mr. WAGSTAFF: If it is worth Mr. Bawden's while to keep the concern going, is it not worth our while?

Mr. MACFARLANE: As the largest shareholder I should be pleased to see the concern wound up. (No.)

The CHAIRMAN: I cannot see my way to that, because if we can tide over another 12 months our position will be much better. Mr. Bawden can give the matter much closer supervision than a company can do, and keep the mine going without loss, whilst we could not.

A SHAREHOLDER'S PRACTICAL VIEW.

Mr. BELLINGHAM: I think copper has seen its lowest. We have an asset of 700*l.*, and against that we owe to the lords 500*l.*

The CHAIRMAN: We have 700*l.* after paying that claim.

Mr. BELLINGHAM: If that is the case then we have 700*l.* to the good, and surely we can work at a moderate loss of 200*l.* a quarter, and tide over the next 12 months. I think with Mr. Bawden's experience, if it is worth his while to work the mine on his own account, surely it would be worth ours; and if we happen to strike anything good the profit would come to the company and not to Mr. Bawden. It is for us to consider carefully whether it is not worth our while to go on with the mine ourselves. Copper cannot be lower than it is, and the supply must become restricted, because many mines at present prices will have to close, and the supply of copper will get smaller. It is true that there is a large amount of copper in the market at the present time, but that will not continue. I would suggest the advisability of postponing this matter for a little while, and re-considering it hereafter.

The CHAIRMAN reiterated his opinion that the proposed arrangement would be advisable, because it would save the company from all possible loss, and enable them to keep in hand their balance of 700*l.* If it were worth while to work the mine later they would have this balance to go on with, but he did not believe the shareholders would, if this money was expended, submit to more calls. The mine was not looking well. They had not a single favourable point except at the 156-fm. level. There was no symptom of any immediate discovery. As soon as the committee saw the great fall in copper they stopped the bottom levels immediately, and saved 30*l.* a month in each level.

A SHAREHOLDER: Which was the richest level?

The CHAIRMAN: From the 108 to the 144 we had rich courses of ore. We are getting ore now on the exterior of those deposits.

MR. BAWDEN DISLIKES TO SEE CORNISH MINES CLOSED.

Mr. BAWDEN: There is not a level in the mine at this moment that has paid for driving for the last 12 months. The tributers were just making a living during the time copper was good, but the moment it fell they had to give up, and we are doing next to nothing on tribute now. I do not wish to take the mine on tribute; I merely suggest that as an alternative, rather than see it shut up. I dislike to see mines closed down.

A GOOD PROPOSITION FOR THE SHAREHOLDERS.

Mr. BELLINGHAM: We lose nothing, and we get one-eighth of the gross proceeds. I think on further consideration it is a very good proposition for the shareholders to adopt.

Mr. FIELD: I think this alternative is the wisest, and many things may transpire in the course of 12 months. We can wind up 12 months hence, and be in no worse position than we are to-day. I think it a bold thing for Mr. Bawden to make this proposal. If we wind up we lose everything, without remedy. (Hear, hear.)

WHAT THE COMPANY HAS DONE.

Mr. BAWDEN: We have worked this mine very boldly. We have sunk it from the 156 to the 200 purely on speculation, and though each level has been very poor, we have driven them all fairly. We have driven the 200-fm. level 13½ fms. west and 8½ fms. east, and the lode has been unproductive for the greater part of the distaucc. If I had the working of the mine myself—instead of stopping at the 200, I would sink another 40 fms. straight away, and push a level cast and west, because I cannot believe that the tremeudous courses of ore we had from the 108 to the 144 have died out entircly. I believe they will be discovered at deeper points. At the 156 we have driven 120 fms. west of shaft. and in the level at this moment we have about 3 tons of arsenical mundic per fm. In another 11 fms., at the 156, we might get under where we had the tin in the 144, and there the prospects are favourable. We are working on tribute now in the 108 to the 144 east and west of shaft, and it is from those places that I shonld take away the mundic and copper; but I have no desire to take the lease, and I wish it to be understood that I simply make the offer to prevent the mine being shut up, and for no other reason.

Mr. BELLINGHAM: Have those places been worked by the company?

The CHAIRMAN: Yes, vigorously.

Mr. PARRY: I believe the lode in the 144 was worth at one time as much as 16 tons per fm. for copper ore.

The CHAIRMAN: I propose "That this meeting recommends that the mine be leased for 12 months on a royalty of 2s. 6d. in the pound on the gross produce, and that the committee be authorised to take the necessary steps for effecting such an arrangement, and that this meeting be adjourned until Wednesday, the 22ud May, to be held here at 2.30 p.m., to receive the committee's report of the result of their negotiations."

Mr. BELLINGHAM, in seconding the motion, said he felt it showed pluck on the part of Mr. Bawden to keep the mine going for 12 months.

Mr. BAWDEN explained that the returns being made at present were only small—abont 200*l*. a month—and he would do his best to make them more.

The resolution was carried unanimously.

A cordial vote of thanks. on the motion of Mr. WAGSTAFF, was carried to the chairman.

The CHAIRMAN: I believe what we have done is the best that could have been done nnder the circumstances.

The meeting then closed.

JULIA NITRATE CO., LIMITED.

THE COMPANY POSSESSES A GOOD PROPERTY—EXPERTS' OPINIONS—THE PROS AND CONS OF THE NITRATE INDUSTRY OF TALTAL AND TARAPACA.

THE statutory meeting of the above company was held at the Cannon Street Hotel, on Monday—Mr. S. W. Carter presided.

Mr. F. STOBBS (the secretary) read the notice calling the meeting.

The CHAIRMAN said: Gentlemen, I wish to give you all the information that I myself possess about this company, and I propose to make you the best statement I can, and leave it to any shareholder to ask questions on points on which I may not have touched, or which I may not have properly explained. The purchase of the property was completed on February 11th last, through Her Britannic Majesty's Vice-Consul at Santiago, Mr. J. H. Thomas. Our agent, Mr. Baker, was in possession on March 1st.

THE EXISTING OFICINA.

We cabled instructions for the complete registration of the company on February 14th, and on the same day we cabled Mr. Baker to inspect and report on the existing oficina, and we received his reply on March 20th, stating that he had beeu in possession, as I said before, since the 1st of that month. We have a certain disadvantage in buying land with an oficina upon it which is not at work; it causes a certain amouut of delay. Of course, if the oficina is in work they go straight on, aud begin earning money for dividends from the date of the incorporation of the company. If, on the other hand, there is no oficina at all, the board is enabled to proceed immediately with the machinery necessary, they know there is no machinery out there, and it must be supplied forthwith. We are rather worse off in point of time than both these instances. That is to say, we have an oficina with a certain amount of machinery in it, and we must get a full and complete report of both the oficina and the machinery before we decide either to send out machinery to supplement that on the ground, or to buy new machinery altogether.

THE PROVISION OF NEW MACHINERY.

In the present instance we have advice from Mr. Baker that he recommends the provision of new machinery. His letter is almost due here, and we shall, no donbt, get it in two or three days, and then we shall have a complete report. Our friends on the other side have strongly advised us to build our oficina at the port of Taltal in same way as the Taltal Nitrate Company have arranged for and are doing. There are great advantages in having the oficina at the port. In such a case all the caliche has to be brought down instead of only nitrate having to be brought down, when the oficina is on the ground. It is impossible to judge which is the proper course for this company until we have got all the information from the other side. Then we shall make our calculations, and we shall decide what we think best for the good of the company.

A VICE-CONSUL'S OPINION.

I ought to mentiou, I think, that Mr. Quaert-fasleu, who reported on our company, and whose statement was embodied in the prospectus, is a man very well known as the manager of a nitrate company called the Santa Luisa, and another working in connection with it, called the Lautaro, I see, from a report printed this morning in the papers, that he managed to keep one of those companies under profitable working all through the very bad times, and we have very great confidence in his opinion, and we have taken measures to get his opinion, combined with those of Mr. Thomas (H.M. Vice-Consul at Santiago), and Mr. Baker (the manager of the Taltal Nitrate Company). (Hear, hear.) To make assurance doubly sure, the board has arranged with a gentleman, whose name I do not propose to mention at this meeting, who is proceeding to Chili on other business, to go to Taltal and consult with those three gentlemen I have just named on the entire programme to be carried out. He will return speedily, and the board will have the advantage of talking over matters face to face with him, which will be very much more instructive and beneficial in the management of this company than any written report could possibly be. (Applause.) I have no doubt most of you gentlemen have read letters addressed to the financial papers on the subject of nitrate companies.

"QUOT HOMINES TOT SENTENTIÆ."

If they could only be combined they would form the most extraordinary mixture of opposites that could possibly be imagined—(a laugh)—but I am very pleased to tell you we have in to-day's papers a very different document; it is a report from Mr. Thomas going fully into the pros and cons of the nitrate industry in Tarapaca and Taltal. If members have not read it I strongly advise them to do so. (Hear, hear.) It commends itself to my mind as an impartial, truthful, and disinterested statement, and I believe Mr. Thomas knows more of this subject than almost anybody we could find out. I take from his report an estimate that there are about 80 oficinas in Tarapaca. There are a quantity turning out amounts to the average of 925,000 quintals total value; two oficinas averaged 115,000 quintals; Antofagasto, and for a part of the time Agnas Blancas, averaged rather more than Tarapaca. Five oficinas in Taltal averaged 1,432,000 quintals, which is abont 50,000 more than the average of Tarapaca.

A COMPARISON OF THE RELATIVE MERITS OF TALTAL AND TARAPACA.

I think everybody will be able to see the force of these figures. Of course the number of companies in Tarapaca all at work is very large in proportion to Taltal. The reason of that, no doubt, is that they have good advantages of railway service, and their great number, compared with the oficinas in other districts, has caused the public generally to suppose that all the nitrate is raised in Tarapaca, whereas I have shown that on the small number of working oficinas in Taltal the quantity per oficina is 50 per cent. above that of Tarapaca. There is no doubt that, in a measure, the Tarapaca nitrate grounds are worked out. The companies working them have, naturally, I suppose, taken the best stuff as they came to it, and in order to get over good stuff they have to move the caliche a greater distance than hitherto to the oficinas. In that respect Taltal has a great advantage. But there is one circumstance which every shareholder ought to know in refereuce to our own company, and that is that the Julia has more nitrate than four or five Tarapaca companies standing at a high premium. (Hear, hear.) I do not know that I have any more to say, but if the shareholders have any questions to put I shall have the greatest pleasure in answering. (Cheers.)

A SHAREHOLDER: Is there any nitrate being produced now?

The CHAIRMAN: No, not any. Has any gentleman any other questions to ask?

Another SHAREHOLDER: Have the difficulties you mentioned with regard to water been overcome yet?

The CHAIRMAN: The nitrate on the Julia property has not been worked by us yet, and from the first I think it was made perfectly clear by the prospectors, and by everything else that has appeared on the subject, that there was an old oficina, which had been erected at a great cost before the railway was formed; but there was not a single word said about the nitrate being worked, that we were buying a going concern, or anything of that sort. (Hear, hear.) We cannot get to work until we have got thoroughly good machinery out at the property which will give us a profit, whereas probably by working the old machinery before great improvements had been made we might have made a loss, and we do not desire to do that.

WITH REGARD TO WATER,

we have plenty of it—at any rate, enough to make a very considerable return of nitrate. The remark I made just now with regard to Tarapaca generally having plenty of water, and, therefore, having a great number of oficinas. was a more general comparison between Tarapaca and Taltal, but I believe, if the averages of all oficinas in Tarapaca are taken, they will not be found to have such a good supply of water as the Julia. (Cheers).

THANKS.

Mr. HARRISON said, if there was no further business, he wished to propose a vote of thanks to the chairman. It was needless for him to enlarge upon the merits of that gentleman, as they all knew perfectly well that he would not take any business in hand that he had not thoroughly grappled with. He (the speaker) thought that they might consider themselves safe in his hands. (Cheers.) He wished to include the names of the directors also for their services up to the present time. (Cheers.)

Mr. SAMPSON seconded.

The motion was carried.

The CHAIRMAN briefly responded.

The meeting then separated.

ZIERVOGEL GOLD MINING CO., LIMITED.

ACTIVE PRELIMINARY OPERATIONS—PROBABILITY OF THE MAIN REEF BEING TRACED ON TO THE COMPANY'S PROPERTY—OFFERS RECEIVED FOR OUTSIDE CLAIMS—HOPEFUL OUTLOOK.

THE statutory general meeting of the Ziervogel Gold Mining Company, Limited, was held at Winchester House, Old Broad Street, E.C., on Wednesday, under the presidency of E. C. Elgood, Esq.

Mr. BEAUCHAMP O. C. ORLEBAR (secretary) read the notice convening the meeting.

SHARES LARGELY OVER-APPLIED FOR.

The CHAIRMAN : Gentlemen, as you are aware, this is the meeting that we are bound by Act of Parliament to hold within four months of the registration of the company, and there are no accounts or anything to put before you in the way of dividend at present ; but you will doubtless be glad to know the most recent information that we have with regard to your property. Starting with the incorporation of the company, you will remember that the shares were enormously over-applied for. I daresay some of you may have been disappointed at the time by the smallness of your allotment, but my fellow-directors and myself endeavoured to allot, as far as possible, *pro rata*. I think the average allotment could only be something like 7 per cent. The shares went to a very high premium, which we then considered, and still think, was well warranted, and my fellow-directors and myself bought shares almost at the very highest price touched.

PRESENT CONDITION OF THE MARKET.

The present condition of the market is, of course, reflected in the price of our own shares, which, although they have been down as low as par, have not, I am informed, as erroneously reported, been dealt in at a discount. Considering that the fall in mining shares, even in established companies, has been so enormous—as in the case of mines of proved value like the Roodepoort and Robinson—I think that even that shows the confidence of our shareholders in the future of this mine, and they are reluctant to part with their property. We have between 400 and 500 shareholders on the books, and that shows a certain stable foundation which could not happen if the shares were only in the hands of a few large shareholders who might be disposed from time to time to realise, and so depress the market. So much for the price of the shares. The price, however, will ultimately depend upon the dividends that we earn, and I think the information that has reached us from all points since we first proceeded to allot the shares has increased our confidence in the great value of the property, and the cheapness at which we purchased it. At the time when the Ziervogel was first offered to a company in England, it was a little off the fashionable run of the Raudt properties ; it was a little to the south and to the east, and at that time some people thought that we had not a very valuable property.

THE MAIN REEF.

Those of you who have followed the course of mining news from the Cape will have observed that the main reef ended with Knight's property on the east, and we were considerably to the south of it ; but shortly after the main reef took a dip to the south, and the reports that have since reached us have made it certain that the main reef, which is considered the most valuable reef in the Transvaal, is now upon our property. (Cheers.) Since we were floated, the Comet, the Cinderella, and the Blue Lilly, have been floated in the Transvaal, with very large capitals, between Knight's property and our own, and on the course which it is believed this main reef takes. I hold in my hand the *Transvaal Mining Record* of the 1st March, in which there is an account of the meeting of the Leeuwport Main Reef Syndicate—our property is on the Leeuwport farm—and this is a meeting at which the chairman reported that the Main Reef leaders ran through the ground, which consisted of 153 claims, in a direct line with the Blue Lilly Company, which was recently floated for 250,000*l*., and the shares of this syndicate were being sought after at 100*l*. a share ; and then he went on to congratulate the shareholders upon having such a fine property. That shows the estimation in which the properties in a direct line with our own and adjacent properties are held out there, and it is a point which is well worthy the attention of the shareholders.

332 CLAIMS.

You will have observed that we have 332 claims, for which we pay an average of 400*l*. a claim. I have here a prospectus of the Dreifontein Main Reef Gold Mining Company, the required capital of which, 300,000*l*., had been subscribed for privately out there, and whose object was to buy 152 claims, which capitalises it at nearly 2,000*l*. a claim. The Bantjes South has been floated in England, with a capital representing nearly 4,000*l*. a claim : the Red Reef, 1,000*l*. ; the Sutherland and others also at large figures. While in one case—the Balmoral was floated with a capital which represented about 10,000*l*. a claim. Of course, we have a very large property, and I think you will say we have acquired it at a very low price. (Hear, hear.) A further proof of the cheapness at which we acquired the property will be manifest when I tell you that we have had offers for the claims outside at prices from 200 to 300 per cent. premium on the prices which we gave, but in view of the fact—as we believe it to be—that the main reef is coming down through those outside claims, we have considered it unadvisable in the interests of the shareholders to pursue the negotiations further at the moment.

CAPT. JOHN T. RICHARDS SENT OUT.

We have sent out Capt. Richards, who was exceedingly well recommended to us by other gold mining companies, whom he served well in the past—we have sent him out, together with some skilled Cornish miners selected by himself, and before we accept any offer for the sale of outside claims, we shall hear his report as to what he thinks of the matter. (Cheers.) Of course he goes out armed with all powers, and will take the place of the agents who have hitherto been working the property, and continuing the management which existed in the time of the vendor, Mr. Ziervogel. I also have information from an eminent firm of mining engineers in England which entirely confirms all that I have told you with regard to the probability of the main reef dipping down to our property. The letter which we addressed to you on April 27th contained all the important information which we have received up to the present moment. The directors have had no little difficulty in choosing the man to send out to manage the property. We have seen, I am afraid to say how many scores of mining engineers, and we have had altogether, I suppose, some 40 directors' meetings since the company has been formed ; so that I do not think you will consider that we have been negligent of your interests. (Cheers.) The result of all this careful consideration of the claims of the mining captains and engineers is that we have sent out Capt. Richards, and, of course, he is all-important. We here can only pull the strings, and if Capt. Richards answers the expectations that we have formed of him, I feel sure that he will get out, economically and rapidly, the gold which we are perfectly convinced is there in large quantities. (Cheers.) In our circular letter of 27th April, you will have seen that we refer to the report of Mr. Knox. Since that circular has been issued we have received Mr. Knox's report, which is of a somewhat voluminous nature, and the subject matter of it we are not sending out any directions upon at the moment, because we want to have a consultation between Mr. Knox and Capt. Richards, who will be on the mine almost immediately. As soon as they have conferred together—if Capt. Richards and Mr. Knox agree upon the points in the letter which refer to the immediate development of the property, it will be proceeded with : if they do not agree upon all the points, those upon which they do agree will be proceeded with at once.

WATER SUPPLY.

The most important thing is the question of water supply, and we are assured by those in whom we place confidence that we have, as you will have seen by the map which accompanied the prospectus, nearly a mile of stream running adjacent to our property. Therefore, if the dam which we have already constructed, and which is reported upon by Mr. J. Douglas Forster, who inspected it a short time ago, as being one of the most substantial erections on the whole of the Witwatersrandt—if we find that that one dam is sufficient to keep us supplied with water during the dry season, then we shall have ample length of stream to construct another further down to supply the other batteries that we may erect. I think that there is nothing more that I can usefully tell you at the moment, but if any shareholder would like to make any inquiries I will do my best to answer them : if I cannot do so myself I see those in the room who have an intimate knowledge of our property in particular and of the Transvaal in general, and who, I daresay, will give all the information requested.

QUESTIONS.

Mr. H. E. GREIG : What do you mean when you speak of selling outside claims ?

The CHAIRMAN : The property of the company consists of a Mynpacht, which is a freehold property of the same area as 250 claims, and then on the east of that we have 43 claims, which we might term in England, leaseholds—that is to say, we pay 112*l*. a year for the whole 43, and those claims are ordinarily considered of less value than a Mynpacht, because as soon as a man has an agricultural farm, declared to be a goldfield, he is allowed to choose and peg off one-tenth of the total area of that farm as his own freehold gold mine, and he naturally chooses the best tenth of his property. These outside claims are pegged off on the farm, and the tenant has to pay a small rent to the Government. Those 43 claims are clearly marked as being outside the Mynpacht, and those are the claims which we might have been disposed to sell at the price that we paid for them some time ago. It is impossible to work the whole of our property at once. We have

A VERY LARGE PROPERTY,

enough to keep four or five gold mines going, and therefore until we learned what would be the best part of our property, we were unwilling to sell these outside claims. We shall now, at any rate, wait and see where the main reef comes before we sell any of these outside claims.

Mr. BROWN : When do you expect the stamps to be erected, and when is the first crushing likely to take place ? We were led to believe it would take place before this.

Mr. MERRILEES : How far south are the Ziervogel claims from Knight's property ?

The CHAIRMAN : Taking the last question first, I am afraid that we are a mile at most from Knight's Goldfield. Our property is the best part of a mile in extent from end to end.

Mr. MERRILEES : Do you mean running north and south, or east and west ?

The CHAIRMAN : It is an irregular piece—about a mile from east to west on the north, and a mile from north to south on the west.

Mr. MERRILEES : The main reef being known to run east and west—if the Ziervogel claims are a mile to the south, we must assume that the main reef is a mile in width.

The CHAIRMAN : From Knight's it takes a deliberate bend south—that is a matter of fact, not a conjecture. To the east of Knight's the reef bends to the south. (The Chairman hereupon handed a sectional map of the property to Mr. Merrilees.) Continuing, he said :

Brocksburg is within half a mile of us. I forgot to mention before that we have information that on the Leeuwport farm, outside our Mynpacht, no less than 1,500 claims are being worked by private individuals. So much for the position of the property.

THE STAMPS.

With regard to the stamps—the stamps, as we informed you in the prospectus, were in course of erection. I want to be thoroughly frank with the shareholders in everything. In making that statement we were correct and incorrect. We were correct in the fact that the buildings and excavations and foundations, &c., were in rapid course of erection. We were incorrect to this extent, that the rainy season having intervened between the last telegram that we had received and the formation of the company, the stamps were very wisely, as we think, stored in Johannesburg to avoid being left on the ground and exposed to the weather. There was then some delay owing to the great difficulty of obtaining skilled labour, and they have been erected much less rapidly than we anticipated. One of our last advices from the Cape said that we should have

THE FIRST CRUSHING IN SIX WEEKS.

We thought it advisable not to hurry on the crushing, because, as

you know, we had only 500 tons of ore on the dumps, and if we hurried on the erection of the stamps and employed our engineers, or people to mind the stamps and the batteries, and then came to an end of our available ore, it would be so much waste of your money in keeping the battery shut down while we were getting more ore ; so that it was thought better to hurry on with the development and sinking a shaft, and all that work, rather more than we should have done if we had 5,000 or 10,000 tons on the dumps to keep the stamps going until we got ore for ourselves. (Cheers.)

THE BOARD COMPLIMENTED.

Mr. H. E. GREIG : I really am very satisfied to hear that the board is so carefully providing for development instead of pushing on with the stamps. I have lived for a long time at the Cape, and know a great deal about this property from people who have been established there for years. I also, when I was a boy, knew Mr. Ziervogel—one of the most honourable and straightforward men that you could possibly have to do with. The chairman has almost anticipated what I intended to say, for I was going to beg and pray of the directors that they would not hurry, for the sake of prices on the Stock Exchange, the development of the company, so that when they are in a position to begin operations they will be able to go on continuously. (Hear, hear.) I know that that has been the cause of a great deal of the difficulty that has befallen several companies—they have rushed it too quickly. If the directors will not look at the price of the shares, but study to make this a *bonâ-fide* investment, they will never have cause to complain. (Cheers.) I beg to propose a cordial vote of thanks to the chairman and directors.

Mr. E. C. DENT seconded the motion, which was carried, and the proceedings terminated.

NATIONAL PROVINCIAL BANK OF ENGLAND, LIMITED.

A GOOD AVERAGE YEAR—IMPROVED TRADE—A HINT TO SOME OF THE 8,650 SHAREHOLDERS.

THE annual general meeting of the shareholders of the National Provincial Bank of England, Limited, was held on Thursday at the Head Office, Bishopsgate Street.

IMPROVED TRADE.

Mr. RICHARD BLANEY WADE, who presided, expressed satisfaction at not having again to make any special reference to the subject of depression of trade. Late last year a great improvement took place in many important departments of business, and that improvement had continued ever since. They must hope that it would extend to those departments where it had not yet been felt, and particularly that it might extend to the agricultural interest. No interest had given greater support to the bank in times past than the agricultural interest. The improvement in trade to which he had referred occurred too late for it to have any appreciable effect on their profits for the year—indeed, during the year the value of money for a long period had ruled very low, the average of the Bank rate only amounting to 3*l.* 6s. 9d. per cent., or about 9d. per cent. more than in the preceding year, and the market rate, which, of course, affected their profits a great deal more than the Bank of England rate, had been for the whole year only $2\frac{3}{8}$ per cent. Of course, that state of things affected their profits very considerably in connection with the large reserves they were obliged to keep.

A GOOD AVERAGE YEAR.

Nevertheless he believed they would agree with him that they had had a good average year, and that they had no right to complain. Out of the year's profits they had placed 20,000*l.* to the reserve fund, increasing it to 1,450,000*l.*, the whole of which was invested in Government securities. The increase of nearly 2,000,000*l.* in their liabilities to the public left them no other course than to strengthen the reserve fund. They had also placed 15,000*l.* to the credit of the buildings fund. Their new premises at Manchester were progressing, but they would involve a considerable outlay, and in addition they received constant communications from their branches asking for more space. They proposed in July to pay a bonus of 6 per cent. to the proprietors, when the usual dividend would be paid, and the return on the paid-up capital for the year 1888 would thus be 19 per cent., and they would carry forward 33,350*l.*, or about 2,000*l.* more than last year.

THE CONVERSION OF THE NATIONAL DEBT.

The great event of the banking world last year was the conversion of the National Debt, and the reduction of the interest upon it ; but he fully explained their views on that subject at their last meeting. This year the Chancellor of the Exchequer, in his Budget speech, had expressed a hope that he might be able to bring in a Bill to deal with the question of light gold and the country issues. They sincerely hoped that he might be able to do so, as the question of light gold very much affected the interests of the bank. After warmly eulogising the services of the general managers and the staff, the chairman referred to the balance-sheet, and said he was quite sure they had never presented one which was more satisfactory. It showed a large increase of business, and it also exhibited a strength which he thought could hardly be surpassed in any bank. They now had 8,650 shareholders, their number having increased during the year by 458, but he regretted to say that a great many of them did not keep their accounts with the bank. He concluded by moving the adoption of the report.

Mr. J. O. HANSON seconded the motion.

In reply to Mr. Reeves,

The CHAIRMAN said he quite agreed that the object of the Chancellor of the Exchequer was to act fairly towards all the great interests with which he had to deal, and to do his very best for the taxpayers.

The motion was unanimously adopted, and the retiring directors and auditors were afterwards re-elected.

THE MINING CORPORATION.

POSITION OF THE COMPANY CLEARLY STATED—DIRECTORS HAVE MANY DIFFICULTIES WHICH COULD NOT HAVE BEEN FORESEEN.

A MEETING of the shareholders of this company took place on Thursday, at the Cannon Street Hotel—In the absence of Dr. Clark, M.P., the managing director presided.

The notice convening the meeting having been read,

The CHAIRMAN said : I regret extremely that, owing to a domestic affliction, our chairman has been called away to Scotland. He went last night, and it falls to me to take the chair. I feel I am unworthy of the position, but I know a great deal of the history of the company, and I shall be pleased to give a statement of what we have done in the past, what we are now doing, and what we hope to do in the future. As most of you are aware, this company was originally thought of in the beginning of the year 1888, and on the 1st of May of that year the Act came into force increasing the registration fees. In order to avoid the heavy tax imposed upon the capital of companies this company was registered before the law came into force. Now under the Act a statutory meeting must be held within four months of the registration of the company. Times were not good then, and we did not think it advisable to go to the public.

WHAT HAPPENED AFTER REGISTRATION.

Within four months of the registration of the company the statutory meeting was held. About December some gentlemen came to us and said it was time that we were doing something, and they offered us 8,000*l.* We did not think it sufficient, so we refused it at first, but afterwards we took the 8,000*l.*, and said that when times got better we will go to the public, and if we get 20,000*l.* we will go to allotment, but we will not go to allotment unless we can commence with that amount of capital. If we do not get the 20,000*l.* then we will return your 8,000*l.* intact. Under these circumstances we took it. We came out in January, as you know, and we got the 20,000*l.* applied for. We went to allotment, and that, gentlemen, is the history of the company up to the present day. We need not have held another meeting, of course, until the expiration of 12 months, but we had no wish to conceal anything from the shareholders. We wished to take you into our confidence, and directly it was whispered that the statutory meeting was held rather curiously we at once decided to call the shareholders together. After all, many other companies are in a similar position to ours—that the statutory meeting has been held before the shares were issued to the public. As regards the business of the company, most of you who know anything of mining matters are aware that during the past four or five months there has been a heavy fall in all mining securities. The board, therefore, did not feel itself justified in embarking in any hazardous enterprises in the present state of the market. But, gentleman, if we have pratically done nothing we have, at the same time, spent almost nothing. But the board have not been idle in other respects. We have selected agents in various parts of the globe. One is on the Randt, who is on the look-out for us to pick up some properties cheap, another has gone to Barberton, and another has gone to America. Besides this we have made arrangements for carrying through some business, directly the market is favourable. The thing will not be brought out unless there is every prospect and probability of success. The Mining Corporation will make a fair profit out of that. There are one or two other matters which we are looking into carefully, and out of which we expect to make good profits. I trust that when we again meet we shall be able to announce the payment of a dividend. We, however, do not intend to make any rosy promises. The directors are all very much interested in the company, and in serving you they are serving themselves.

Alderman ALLDER asked if this meeting legalised the want of holding a statutory meeting.

Mr. ROMER (solicitor to the company) said the statutory meeting had been held. They were not bound legally to hold that meeting.

VIEWS OF SHAREHOLDERS.

The Rev. T. R. MAHEW said, if he understood rightly, the company was to be composed of 400,000 shares, of which 200,000 were to be kept in reserve. Only 10s. was to be called up, but 200,000*l.*, for which they would expect 100,000*l.*, would be obtained. Well, they now heard that there was really only actually 10,000*l.* to go into business with. They would go into South Africa, where a large capital was required, and where some of the mining companies had as much as half a million, and one of 200,000*l.* available capital—they would go there and undertake the work of a mining corporation with a capital of 10,000*l.* Now, he came that morning to the meeting hoping to have heard the chairman announce the death and pronounce the funeral oration of this company, because he was quite sure it could not succeed. (Applause.) He wrote some time ago to the financial papers in London asking advice as to what he should do in the matter, and he was told to get out as quickly as he could. (Laughter.) He wrote to his broker, asking what price he could obtain for his shares, and he replied that he was quite ignorant of the existence of such a company. He (the speaker) thought that the company should be wound up and the money returned to the shareholders. (Loud Cheers.) He was quite sure the directors were all gentlemen of responsibility—men of practical knowledge, and they would do their best for the shareholders. He was quite sure they would not go into this sort of thing, and meet with certain loss. (Hear, hear.) He thought it would be much to their credit if they would meet the shareholders in every possible way, rather than they should carry on the company against the wishes of the majority of them. (Hear. hear.) He was prepared to move a resolution that the company be brought to a termination, and that the money be returned to the shareholders.

Mr. ROMER (solicitor) pointed out that they could not pass such a resolution at that meeting. They could pass one requesting the directors to call a meeting of shareholders for the purpose of passing a resolution for the winding up of the company, but it would be necessary that the words "return the money to the shareholders,' should be left out.

ALDERMAN ALLDER seconded the motion.

POLICY OF THE BOARD.

The CHAIRMAN said he had listened with a great deal of interest to the remarks of the rev. gentleman. He quite agreed with a great

deal of what he had said ; but he might add, however, that the directors did not intend to go investing heavily in mining operations. There was another company with a capital only as large as their own that was paying handsome dividends. (Cries of "Give the name of the company." The chairman continued to say that it was the Gold Trust and South African Company, with a paid-up capital of 25,000*l*. (A VOICE : That company has 50,000*l*. capital.) The chairman said that at the time they paid the dividend they had only 25,000*l*.

A VOICE : That is so.

A SHAREHOLDER : I hope our money will be returned to us. (Hear, hear.)

Another SHAREHOLDER : The directors have no business to have gone to allotment on such a small amount. (Applause.)

Mr. ROMER pointed out that they could pass a resolution for a meeting to be held to wind up the company, but they could not pass one in the words of the rev. gentleman. It was not sense.

Mr. GLOVER : The shareholders find fault with the directors for going to allotment with such a small amount of the capital subscribed. (Applause.)

The SOLICITOR : It is for you to lay those views before the liquidator if you appoint one. I can simply tell you that you will waste money if you go to litigation. The business of the company has been conducted in an absolutely legal manner, and strictly in conformity with the articles of association.

The Rev. R. T. R. MAHEW observed that, looking at the fact that the directors were a number of respectable and honourable men, he would put the matter on this footing, that for their own credit sake, having launched a company, which, to say the least, is a misfortune——

All the DIRECTORS : Oh, no ; certainly not.

The Rev. MAHEW : Well, I think, as honourable men, you would wish yourselves to return the shareholders the money which you have received to carry on this mining enterprise. (Hear, hear.) I would almost leave it to their honour to do so. I do not think we want any legal quibbles. The directors themselves must feel that they are bound to return us our money. (Cheers.)

Mr. FLETCHER : I have been advised that the directors had no right to go to allotment upon so small an amount, and if we take action we can get our money back.

INSUFFICIENT CAPITAL.

Mr. HARRISON said he thought the directors had committed an error of judgment in going to allotment on such a small amount, but did not think they could call upon them to return the money that had been expended in carrying on the business. He would accordingly move an amendment that a meeting be convened for winding up the company, and that the last words of the previous resolution be omitted.

This was seconded.

A VOICE : What is the difference in the resolution and the amendment.

The SOLICITOR : The only difference between Mr. Mahew's resolution of Mr. Harrison's amendment is this, the one is sense and the other is nonsense. (Laughter.) If you pass the resolution, the directors will simply do nothing, and as it is not a legal one, they will be within their rights in remaining inactive, but if you pass the amendment they will proceed in due course to call a meeting.

A VOICE : How much money have we got ?

The CHAIRMAN : 750*l*. in the bank.

After some further discussion, the amendment was passed, and a vote of thanks to the chairman brought the meeting to a close.

THE NUNDYDROOG GOLD MINING CO., LIMITED.

REPORT OF THE DIRECTORS.

THE directors submit the accounts for the year ending the 31st December, 1888. The concluding paragraph of the last year's report contained the following passage :—"There is no doubt that since the 1st January last a fair amount of profit has been made from the mining operations ; and it is hoped that when the accounts for the half-year are made up (early in the autumn) the board will be in a position to declare a dividend." This anticipation was fulfilled, and on the 17th October last the directors had the satisfaction of declaring an interim dividend of 9d. per share on the fully-paid shares, and 4½d. on the partly paid shares, absorbing the sum of 5,112*l*. 15s. out of the profits made during the first half of the year. It will be gratifying to the shareholders to see that the profit for the whole year has amounted to 11,971 5s. 2d. From this amount the directors have written off 1,000*l*. for depreciation of the machinery and buildings. A balance of 5,861*l*. 10s. 2d. remains to the credit of profit and loss account. The directors have declared a balance dividend for the year of 9d. per share on the fully-paid shares, and 5½d. per share on the new shares (12s. 6d. paid), payable on the 18th inst. The operations of the company for the current year, as will be seen by Capt. Plummer's report, may show a diminished return as compared with 1888, yet, as the profits for the latter year have been earned. the shareholders are entitled to receive them. It will be seen from the balance-sheet that the company's financial position is a good one, and there is yet 7s. 6d. per share uncalled upon 25,000 shares, in addition to the asset of 1,160 shares still unissued. The directors desire to state that all the expenditure at the mines during the year has been charged to revenue account, with the exception of that for new machinery and buildings. This appears in the increased value of the inventories as represented in the balance-sheet, and the mine is now well provided in these respects. It will be seen from the annexed tabular statement that for the year ending 31st December, 1888, the mines yielded 3,887 tons of ore, producing 6,922 ozs. of gold of the value of 26,230*l*. 10s. 3d., being an average yield of 1 oz. 15 dwts. 14 grs. per ton. The total yield of gold from the mines up to the 31st March, 1889, being 10,098 ozs. of the value of 38,013*l*. 1s. Capt. Plummer's annual report (which is annexed) will be read with interest. It will be remembered that reference was made in the reports presented to the last annual meeting, to the cross-course, north of Webb's shaft, and to the fact that no quartz had been found north of this cross-course. This condition of things has caused the directors some anxiety during the past few months. The cross-course dips south towards the Ooregum boundary ; and although rich quartz has been found close up to the cross-course, the pay-shoot between it and the boundary becomes shortened as depth is attained. Capt. Plummer points out that cross-courses of this nature "usually disturb and heave the lode sometimes to one side, and sometimes to the other." Vigorous measures are being taken by putting out cross-cuts at the 370-ft. level, north of Webb's shaft, in search of the lode. The directors cannot do better than to repeat what Capt. Plummer says, under date of the 26th March, with regard to his expectations of finding the lode within a short period :—"Cross-courses, as a rule, do not destroy the lode, but in many cases simply heave them from their normal position, and if we fortunately find the missing portion to the west, it will not take long to open it out for stopes." Capt. Plummer reports that "there are seven productive places under operation, and from which we are getting the returns generally, and the ore is rich." The future returns will therefore have to come from these points until the lode be found, as it is expected, rich, on the other side of the cross-course. The mines are now yielding a fair profit, and it is hoped that this will be continued. Both Webb's and Taylor's shafts will be deepened, and no effort spared to discover the pay-shoot north. In addition to this work, Capt. Plummer has received instructions to explore the Champion lode (which is the same lode from which all the gold hitherto produced has been obtained) in some old workings near the northern boundary, and with respect to these, Capt. Plummer reports, "the pit has been sunk 20 ft., some stones of quartz have been exposed, and the *debris* indicates that the old men have been before us." In conclusion, the directors desire to say that they feel some disappointment in consequence of the shortening of the pay-shoot by the cross-course ; nevertheless, they entertain the most sanguine hope that before many weeks are past the pay-shoot will again be found.—W. H. ROWSE, Secretary.

NEW EMMA SILVER MINING CO., 1886, LIMITED.

THE MILL STARTED.

13th April.—I have to report work carried on at the mine for the week ending to-day, as under :—Level No. 1 south-easterly advanced 8 ft. ; total 250 ft. ; showing a little improvement ; rock is a little softer ; seam we have been following continues ; besides, we have cut another seam about 1 in. wide, filled with oxidised iron, and running diagonally across face of level ; the surrounding rock also is showing more mineral stains. Raise from No. 1 extended 4 ft. ; total 45 ft. ; not any material change to report ; still following the seam of galena ore, which continues, but is very narrow ; we are troubled with bad air ; in consequence have worked but one man during the week. Drift south-easterly towards footwall from No. 1 advanced 12 ft. ; total 43 ft. ; is looking about the same as report of 6th inst. : seam of iron continues about 4 ins. wide ; the rock on either side very much mineral-stained. Level No. 1 north-westerly : We are still raising through the caved ground, opening shoots for the purpose of running fillings to the mill. We are also drifting from this level through old workings. Have worked six men full time. Level No. 3 south-easterly advanced 16 ft. ; total, 419 ft. This level is improving ; the rock is changing for the better, is softer and more saturated with mineral stains, besides, we have a seam of oxidised iron about 2 ins. wide, which gives much encouragement ; worked four men full time. Level No. 4 north-westerly advanced 20 ft. ; total, 32 ft. This level improves as we advance ; seam is widening ; now 12 ins. wide ; filled with iron, clay, and soft limestone, with a little ore intermixed; besides, the surrounding rock is very much impregnated with iron, and the outlook is quite hopeful ; four men employed.—H. C. WALLACE, Superintendent.

April 20th.—I have to report work carried on at the mine for the week ending to-day as under :—Level No. 1 south-easterly advanced 8 ft. ; total, 258 ft. ; seams of iron continue, and ground is strongly stained with mineral. Raise from No. 1 extended 4 ft. ; total. 50 ft. Seam of galena ore continues, but does not appear to improve in width nor in quality ; however, is looking fully as well as it did last week. The air is still very bad ; we have, therefore, been able to work but one man. Drift southerly towards footwal No. 1 advanced 9 ft. ; total. 52 ft. Rock is a little harder, and the seam of iron has narrowed to about two inches, otherwise no change. Level No. 1 north-westerly : We are still raising and drifting through old works from this level, besides the fillings mined and run out for concentrating. We have also mined from this level some three tons crude ore, worth an average of 860 per ton in the market. Have worked six men full time. Level No. 3 south-easterly advanced 15 ft. ; total, 434 ft. This level continues to improve, although very slowly. The improvement during the week is slight, but nevertheless the rock is changing ; is becoming more seamy and more strongly impregnated with mineral stains, and is a trifle softer. Level No. 4 north-westerly advanced 18 ft. ; total, 50 ft. I am unable to report any change in this level, other than that the seam is a little wider ; is now fully 16 ins. and filled with same quality of material as reported in letter of 13th. Appearances are very encouraging and hopeful ; four men employed. —H. C. WALLACE.

LATEST TELEGRAM.

The following cablegram has been received from Salt Lake City :— "The mill has started concentrating, and is working satisfactorily."

THE directors of Elmore's Patent Copper Depositing Company, Limited, notify that the first general meeting will be held on Friday next, May 17th, at the Cannon Street Hotel, at 12 noon.

MESSRS. DAVEY, PAXMAN AND CO. AT THE PARIS EXHIBITION.—Whatever the shortcomings of to-day's ceremony, the Exhibition will excite great interest, and people of all nations will find plenty to please them. The Colchester engineering firm, Messrs. Davey, Paxman and Co., in conjunction with the Société Gramme, of Paris, provide the whole of the electric lighting required for the illumination of the two systems of fountains, the main central dome, and the magnificent Machinery Hall, designed by the French engineer, M. Contamin. By far the most important part of the lighting of the Exhibition thus devolves upon the two firms named, and it is very creditable that this enterprising English firm should have been able to start the running of their machinery as early as the 15th ult., and that, with one solitary exception, it is the only firm upon which the administration can rely for the necessary power for electric illumination on the opening day of the Exhibition.—*Times*, May 7th.

THE MYSORE GOLD MINING CO., LIMITED.

DIVIDEND OF HALF A CROWN A SHARE—BRILLIANT PROSPECTS OF THE MINE.

REPORT OF THE DIRECTORS.

6th May.—The directors present the accounts for the year ending 31st December last, duly certified by the auditors of the company. It will be seen by the balance-sheet that, excepting the small number of 810 shares, the whole of the issue of 25,000 shares, at 1*l.* premium, authorised by the annual meeting, held on the 17th May, 1888, was subscribed for by the shareholders. The capital of the company now stands at 175,000*l.* The additional sum so provided enabled the directors to continue the exploration at Tennant's, Henty's, McTaggart's and Schaw's shafts ; to provide a large addition to the rock-drill plant ; to increase the machinery and appliances for the treatment of the tailings, as well as to supply other machinery and tools of various descriptions. It will be observed by reference to the accounts that the company is now in possession of a large and valuable plant in machinery and tools, as well as a considerable stock of materials and stores, the whole, including the buildings, representing a sum of 84,180*l.* 2s. 10d. It will be a satisfaction to the shareholders to know that the mines are now so fully supplied with buildings, plant and machinery. In order, however, to keep pace with the increased output, a further expenditure will be necessary in the provision of additional haulage power, rock-drills, and more stamps. The capital account has been debited with 9,229*l.* 2s. 4d., being a part of the amount expended during the year on works of development and new machinery.

GOLD PRODUCED.

The gold produced during the year amounted to 18,868 ozs., realising 73,349*l.* 13s. 1d. ; this quantity might have been larger, but it was wisely determined by the shareholders at the last annual meeting that the production should be limited during the latter half of the year, otherwise the profits would have been much greater.

PROFIT FOR THE YEAR.

The profit for the year amounted to 22,934*l.* 16s. 2d., making, with 16,696*l.* 2s. 3d. brought forward from the profit and loss account to the 31st December, 1887, the sum of 39,660*l.* 18s. 5d. Out of this two dividends of 10 per cent. each were declared, one in June and one in October last, absorbing, with income tax, 32,022*l.* The directors have again written off the sum of 2,000*l.* to cover unproductive expenditure, leaving a balance of 3,902*l.* 3s. 1d. to the credit of profit and loss account. It will be observed that the sum of 733*l.* 18s. 8d. has been written off preliminary expenses, and it is proposed to cancel the balance out of future profits.

BIG PROFIT FOR MARCH QUARTER.

In order that the shareholders may have some idea of the results of the working of the mines since the close of 1888, the directors have great satisfaction in submitting the following statement for the three months ending 31st March last :—

Sales of gold, January	£9,283	17 5
Do. February	11,957	10 8
Do. March (estimated)	13,000	0 0
	£34,241	8 1
Less mines costs, royalty, expenses in England, &c.	15,161	0 0
Leaving an estimated balance of profit for the quarter of	£19,080	8 1

Adding to this the sum of 3,902*l.* 3s. 1d., being the balance of profit and loss account to 31st December last, makes a total of 22,982*l.* 11s. 2d.

DIVIDEND OF 2S. 6D.

In view of the above, the directors have this day declared an interim dividend of 2s. 6d. per share, payable on the 16th day of May inst. A glance at the table of reserves, given at the close of Capt. Plummer's report, will convey to the shareholders the great importance of the works of exploration which have been carried out during the past six months. Capt. Plummer's report gives in full detail an account of the operations in the past year. It is a record of a year of great activity in the development of the mines, and it is with special satisfaction that the directors point to the excellent work accomplished by the employment of the rock-drills ; as much as 90 ft. being driven in one month in one of the levels. The aggregate drivages in the four principal levels north of Taylor's shaft during the six months to the 31st March last has been 1,360 ft.

WORKS IN PROGRESS.

Taylor's shaft has reached a depth of 553 ft. 6 ins., and will be further deepened with the expectation of intercepting the shoot of ore worked upon south of this shaft. A new shaft, Rowse's, is being sunk 501 ft. north of Taylor's, for the purposes of ventilation and for facilitating the removal of the largely increased quantity of quartz which will be broken as soon as this shaft is communicated with the levels below. A powerful winding engine is on the way and will be erected on this shaft immediately on its arrival. Capt. Plummer has been requested to fix a site for another shaft north of Rowse's, to provide in good time for the ventilation and development of the mines, when the present levels are extended to that point. It will be seen that the bulk of the gold obtained and laid open during the past year has come from the property north of Taylor's. It will, however, be a gratification to the shareholders to know that the other sections of their mines are opening out in a satisfactory manner. Tennant's shaft is now down 219 ft., and has yielded gold from 6 dwts. to 1 oz. 15 dwts. per ton. Levels are being put out north and south at the 180, and both are in a productive lode. In Henty's shaft nothing has been done lately, but operations will be resumed when the 180-ft. level has been extended further south to Tennant's shaft. Schaw's shaft is 280 ft. deep, with a lode assaying 13 dwts., and in a report just to hand the directors are informed that some remarkably rich quartz has been found in the bottom of this shaft. In the 220-ft. level south, the lode, although not rich, has all along yielded gold. McTaggart's shaft is down 216 ft., and is at present suspended owing to an influx of water. The 152-ft. level south has been driven with fairly good results. Since the beginning of February 60 heads of stamps have been in operation, 30 working full time, the other 30 about half time, and with satisfactory results. Capt. Plummer states that the stamps are equal to over 3,000 tons per month, and that when Rowse's shaft is completed he anticipates no difficulty in keeping up a full supply for them. Considerable and important additions have been made to the tailings machinery, the whole of which is working in a satisfactory manner. It will be apparent to the shareholders that great energy has been displayed by Capt. Plummer in the development of the mines, and that the results obtained are of a highly gratifying and satisfactory character.

PROPOSED SUB-SALE.

A large portion of the company's property being altogether beyond the scope of the present scheme of development, the directors have had under their consideration the question of the disposal of a portion of the property on such terms as they believe would commend themselves to and be of advantage to the shareholders. When the proposal is fully matured it will be submitted to a special meeting of the shareholders for the purpose of taking counsel with them upon the same. In concluding their report the directors desire to congratulate the shareholders on the present condition, and the future prospects of the company. The directors who retire on this occasion are Mark Shephard, Esq., and Robert Henty, Esq. They are eligible and offer themselves for re-election. The auditors, Messrs. Turquand, Youngs and Co., also retire, and, being eligible, offer themselves for re-election. —W. H. ROWSE, Secretary.

ORE STAMPED AND GOLD PRODUCED.

12 Months to 31st December, 1888.	No. of tons of ore stamped.	No. of ounces of standard gold produced.	Value.

MONTANA COMPANY.

MONTHLY RETURN.

THE secretary of the Montana Company, Limited, begs to state that the following information has been received by cablegram from the resident director at the mine :—Total weight of ore crushed during April, 6,578 tons ; yield from the three mills, $120,400 ; working expenses for the month, $56,000.

N.B.—The estimated number of ounces contained in returns by assay being—gold, 3,328 ozs. ; silver, 40,000 ozs.

HOLLOWAY'S OINTMENT AND PILLS. — Old Wounds, Sores and Ulcers.—Daily experience confirms the fact which has triumphed over all opposition for more than 40 years, viz., that no means are known equal to Holloway's remedies for curing bad legs, bad breasts, sores, wounds, diseases of the skin, erysipelas, abscesses, burns, scalds, and, in truth, all maladies where the skin is broken. To cure these infirmities quickly is of primary importance, as compulsory confinement indoors weakens the general health. The ready means of cure are found in Holloway's Ointment and Pills, which heal the sores and expel their cause. In the very worst cases the Ointment has succeeded in effecting a perfect cure after every other means had failed in giving adequate relief.

THE MONTE DEL ORO MINING CO., LIMITED.

CIRCULAR TO THE SHAREHOLDERS.

6th May.—I have the pleasure of sending you herewith copy of a report by Mr. W. Bell Davies on the company's mine, which he has recently inspected in company with the chairman, Mr. Malcolm Low, M.P. It is intended to hold the annual general meeting towards the end of next month.—J. GARLAND, Secretary.

3rd May.—Since the date of my last visit to the mine in March, 1888, a considerable advance has been made in the development of the property. The following are the chief operations of interest carried out during the year:—Works at Taylor's engine shaft: Engine shaft sunk 41½ ft.; cross-cut east driven 59 ft.; 186-ft. level north of east cross-cut driven 144 ft.; 186 ft. old workings spilled through to shaft No. 6, 33 ft.; 186-ft. level south of east cross-cut driven 230 ft.; west cross-cut driven 63 ft.; 186-ft. level north of west cross-cut, 58 ft. Works at shaft No. 6: Shaft cleaned out to a depth of 160 ft.; old workings spilled through north, 170 ft. Works at shaft No. 5: Shaft cleaned out to a depth of 70 ft.; old workings spilled through and advance made north, 85 ft. Works at shaft No. 2: No. 1 winze sunk 150 ft.; intermediate level driven north of winze, 60 ft. Works at Underlie shaft: 80-ft. level driven south 146½ ft.; winze No. 6 sunk 40 ft.; the total shafts and winzes opened and sunk, 461½ ft.; the total levels opened and driven, 1,048½ ft. In addition to the above mining work the boilers have been placed into position, the pumping and winding engines erected and covered in with a suitable stone building, pit work put down, and all necessary connections made. The whole of the machinery is now working in a thoroughly satisfactory manner. The 186-ft. level at Taylor's shaft is the deepest working in the mine. At this depth a cross-cut was put in from the shaft east to intersect the lode; this was met in August last, and the cross-cut was driven a few feet further east to ensure the whole of the lode being found. A level was then driven both north and south on the lode. That south has been driven the entire distance of 230 ft. in whole ground. Assays have continuously shown the presence of gold, but not in sufficient quantities to constitute a payable lode. The lode is strong and well-defined, and this level should be continued with a view to explore the ground in the southern portion of the property. On the surface there are no extensive ancient workings immediately above the present end of the drive, but further south there are some, and should the dip of the pay ore be to the north, the pay shoot must, if the ore holds down, eventually be met in this drive. To the north the 186-ft. level was driven 144 in whole ground, assays have also continuously returned some gold, at this point the level came into old workings. At 33 ft. from their commencement an old shaft going to surface was cleaned out, and the level continued in old workings going north. The whole length of continuous old workings passed through is 200 ft. measured along the level; the end of the level is again in whole ground and should also be continued. The old workings at one spot in the floor of the level were cleaned out and whole ground met in a few feet, my sample from this place (No. 2) assayed 2 ozs. 9 dwts. gold per ton, a sample (No. 1) taken by me from a pillar of ground left in these old workings and assayed on my return gives 2 ozs. 13 dwts. gold per ton; these samples are of primary interest at the present stage of development, as pointing to the probable grade of ore worked by the ancients, and that which we may hope to open out beneath these old workings. The upper portion of the lode is soft, containing some sulphurets, and generally a little gold. From this I obtained a few pieces of quartz about 1 in. wide, which assayed 11 ozs. 6 dwts. gold per ton; it is from this stringer that a sample sent home lately assayed 45 ozs. gold. I attach importance to these assays, as a favourable indication of the auriferous nature of this portion of the lode, but cannot yet accept them as an indication of the grade of ore we are likely to discover in bulk. The following are the assays of the samples brought home by me:—No. 1, 2 ozs. 13 dwts. 13 grs. of gold per ton; No. 2, 2 ozs. 9 dwts. 16 grs. of gold per ton; No. 3, 3 dwts. 22 grs. of gold per ton; No. 4, 11 ozs. 6 dwts. 1 gr. of gold per ton; No. 5, 9 dwts. 3 grs. of gold per ton; No. 6, 2 ozs. 8 dwts. 8 grs. of gold per ton. No. 6 sample, being taken from No. 5 shaft, the workings in which are above the 186-ft. level, is of interest, as confirming the value of the ore sought after by the ancients; we can hardly expect to find much, if any, ground left by them in the higher levels to be of this grade. A cross-cut was driven from Taylor's engine shaft west, to intersect the small lode cut above in sinking the engine shaft. When met in the shaft the quartz from this lode gave an average assay of 6 dwts.; in the cross-cut it has proved to be poorer (3 dwts.) A level has been driven north on the lode for a distance of 58 ft., and should be continued. The lode is about 1 ft. wide, and is well-defined. No work seems to have been done by the ancients on this vein, probably because its existence was unsuspected by them. It is my opinion that there is a probability of this lode becoming valuable further north. Summary: The work done during the year has been carried out with energy and ability, and the result obtained fully confirms the expectation originally formed "that rich ores will be met beneath the ancient workings." That the old workings are going down below the 186-ft. level constitutes, in my opinion, a most favourable indication for the future of the company. I have strong hope that but a few months more work will enable us to open ground beneath them, and prove the property to be a valuable one.—W. BELL DAVIES.

For the purpose of preparing the dividend warrants for the half-year ended December last, the transfer books of the Bengal and North-Western Railway Co. will be closed from May 9th to 23rd, inclusive.

WATER-GAS PROVED A COMMERCIAL SUCCESS. A SAVING OF £10,000 PER ANNUM IN ONE WORKS ALONE.

THE BRITISH WATER-GAS SYNDICATE, LIMITED.

WATER-GAS.

The following extract from the *Times*, of January 2nd, 1889, relative to the manufacture and application of Water-gas, is reprinted for general information.

WATER-GAS.

"For many years past attempts have been made at intervals to produce what is known as water-gas—that is, gas resulting from the decomposition of water. Experimentally there have been several successes, but practically and commercially up to the present time, as far as we are aware, these have been only failures. These failures have mainly arisen from the difficulty experienced in separating the water-gas from the other products. This difficulty has now been overcome, not by one invention, but by the combination of the best features of several inventions having for their object the manufacture of water-gas. What is more, the patented inventions which have been combined in the new process are not those of one inventor or of one country, but represent several inventors and several nationalities—namely, England, Germany, America, and Sweden. The amalgamation of these various patents and the beneficial results which have accrued therefrom came about by reason of the exigencies of manufacture of corrugated boiler flues and press-flanged steel frame plates for railway rolling stock at the Leeds Forge Company's Works, Leeds. The metallurgical operations carried out there demanded fuel of a higher calorific intensity than could be obtained from either the generator gas of the Siemens' producer, or ordinary coal gas. Mr. Samson Fox, the managing director, therefore turned his attention to water-gas, and, having carefully considered the whole question, decided upon putting down a water-gas plant at the Leeds Forge. The works were begun on September 29th, 1887, and on March 29th, 1888, plant capable of producing 40,000 cubic ft. of water-gas per hour was started, and has since been in constant operation with perfect success, and without interruption. The gas produced gives every satisfaction, not only for metallurgical, but also for lighting purposes, the whole of the works being supplied with it.

"Water-gas is the result of a chemical re-action which takes place in passing steam through incandescent carbonaceous matter, and may be considered as the practical result on a wholesale scale of the ordinary laboratory experiment of decomposing water by passing steam through a highly-heated iron tube. In the water-gas apparatus the fuel, which at Leeds Forge is coke, is raised to a high temperature in a generator by the aid of an air blast. The blowing is continued for about 10 minutes, by which time the fuel has reached a dull red heat. During this period what is known as producer-gas is given off, and this is led away to a range of Lancashire boilers, where it is utilised in raising steam for the engines in the works. At the end of 10 minutes the valves are reversed, the air-blast being stopped, and the further exit of producer-gas to the boilers prevented. Steam is then admitted at the top of the generator for four minutes, and, passing down through the incandescent fuel, becomes decomposed, and a fixed gas results. This gas as formed passes away to a scrubber, where it is treated much in the same way as ordinary coal-gas. From the scrubber it passes to the gas-holder, where it is stored for use for metallurgical purposes in the works, such as heating and welding. For indoor illuminating purposes a portion of the gas is conducted from the gas-holder to the purifiers, where its purification is effected by means of oxide of iron. It will thus be seen that the process consists of alternately blowing the generator hot and making gas, and that a run of gas is made every 15 minutes, during which time the yield from each generator is about 17,500 cubic feet of producer-gas and 5,000 cubic feet of pure water-gas for heating and lighting purposes. The gas is also used most successfully for driving gas engines.

"The metallurgical purposes to which the water-gas is applied at the Leeds Forge are various. In the first place, it is used in the heating furnaces in the plate mill, where the steel ingots are rolled into plates for the manufacture of Fox's corrugated boiler flues. It is also used in welding these tubes and heating the plates for Mr. Fox's flanged frame-plates for railway rolling stock, and for his flanged boiler-fronts, besides which it is utilised in various other similar operations throughout the works. In the application of water-gas to the manufacture of Siemens' steel there is a marked improvement in the quality as well as the quantity of the product. With this gas 30 charges of steel per furnace per week can be turned out, as against 11 charges per furnace per week from furnaces of equal capacity using gas from Siemens' producers. Besides being used for metallurgical purposes, the offices and various parts of the works are lighted with water-gas, the burners employed being arranged on the Fahnejelm system. Burnt in the ordinary way, the water-gas gives a blue flame, but by suspending a comb composed of thin magnesia rods in the flame the filaments are quickly heated to a white heat, producing a bright glow light of high illuminating power, but which is neither unpleasant to the eye nor prejudicial to the sight. The heating power of water-gas was very great, as was demonstrated upon our recent visit to the Leeds Forge Works, where we inspected the method of its manufacture as well as that of its use in the various departments. To give one instance only, a piece of copper wire placed in an ordinary coal-gas flame was only made red hot. A similar piece of wire placed in a water-gas flame issuing from a similar burner was quickly and perfectly fused.

"An important consideration in the adoption of any new system is, of course, its cost; and in this respect water-gas comes out well. Its production per ton of fuel is about 30,000 cubic ft., and with fuel at 8s. per ton, labour at 3s. 6d. per man per day, and the production going on continuously, it is found that the gas costs slightly less than 4d. per 1,000 cubic ft. The experience of nine months' working at the Leeds Forge has led to the conclusion, based on carefully-ascertained data, that the saving effected on the whole works is about £10,000 per annum. Looking at the advantages of water-gas for illuminating purposes, it is to be observed that, besides giving an agreeable light, it does not develop any noxious fumes, nor does it produce smoke; health and cleanliness being thereby preserved, and paintings, furniture, and decorations remaining uninjured. For lighting mansions this would prove a boon, while the producer-gas can be utilised for heating purposes. Similarly, a mill-owner laying down a water-gas plant for lighting his factory will obtain gaseous fuel for steam-raising purposes practically for nothing. For small towns also the lighting could be carried out with water-gas, the producer-gas being used for steam-raising and manufacturing purposes generally. Although the installation of this water-gas plant at the Leeds Forge is the first in England, the system is being largely adopted in America and on the Continent, both at steel works and for illuminating purposes."

In addition to the above extract, the following papers have recently commented favourably on water-gas.

ERNEST JAMES WILDE, Esq. WALTER EDWARD MOORE, Esq.

RICHARD BLANEY WADE, Esq., in the Chair.

THE Directors have the pleasure to report that after making ample provision for all bad and doubtful debts, and providing for the rebate of discount on current bills, the profits for the year 1888, including £31,411 5s. 3d. brought forward, amount to £491,575 18s. 11d. From this sum the Directors have transferred £20,000 to the Reserve (increasing that fund to £1,450,000) and £15,000 to the credit of Bank Premises Account.

The Directors recommend that a bouus of 6 per cent. be paid, free of Income Tax, to the proprictors in July next (making, with the dividends and bonus already paid, 19 per cent. for the year), and that the balance of £33,350 18s. 11d. be carried to the profits of 1889.

The Directors have promoted Mr. William Fidgeon, who has for some years held the office of Assistant General Manager, to the position of Joint General Manager.

The Directors retiring by rotation are:—JOHN OLIVER HANSON, Esq., GEORGE HANBURY FIELD, Esq., RIGHT HON. VISCOUNT COBHAM, all of whom, being eligible, offer themselves for re-election.

In conformity with the Act of Parliament, the Shareholders are required to elect the Auditors and fix their remuneration. Mr. Edwin Waterhouse (of Messrs. Price, Waterhouse and Co.), and Mr. Roderick Mackay (of Messrs. R. Mackay and Co.), the retiring Auditors, offer themselves for re-election.

RICHARD B. WADE,
D. MACDONALD,
ROBT. WIGRAM, } *Directors.*

T. G. ROBINSON,
F. CHURCHWARD,
W. FIDGEON, } *Joint General Managers.*

We beg to report that we have ascertained the correctuess of the Cash Balances, and of the Money at Call and Short Notice as entered in the above Balance-sheet, and have inspected the securities representing the investments of the Bank, and found them in order. We have also examined the Balance-sheet in detail with the books at the Head Office and with the certified returns from each Branch, and in our opinion such Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by such books and returns.

EDWIN WATERHOUSE,
ROD. MACKAY, } *Auditors.*

At the Annual Meeting the Report was unanimously adopted, and the retiring Directors aud Auditors were re-elected.

The thanks of the proprietors were voted to the Directors, General Mauagers, Branch Managers, and other Officers of the Company, and to the Chairman.

PROSPECTUS.

THIS Company is formed to acquire and work the "Jackson Rae Phosphate Mine," situated in the East Templeton township, in the province of Quebec, being the west half of Lot 9, Range 10, and comprising 100 acres of freehold land ; also all the buildings, plant, machinery, and tools thereon.

The accompanying plan will show that this mine lies in the midst of the best phosphate-bearing district in Canada.

Mr. George Capel, who has inspected the property, says :—"The workings on the property show the presence of phosphates in considerable quantities over the entire area, in fact this lot seems to have been the centre of a great upheaval, and I am confident that when properly worked by shafts and drifts enormous bodies of phosphate will be opened up, as it has been thoroughly demonstrated that phosphate on the surface means more phosphate as you go down, and the openings at Nos. 1, 6, 7, 8, 9, B, C, D, and others have been and are producing very fine mineral. In a letter dated December 5th, 1888, the owner says : since the first of May last the results of working in a small way have been as follows :—

Realised by sale of 131 tons	... ...	$1,973.47
On hand, 200 tons No. 1 phosphate	... ...	$2,750.00
On hand, 100 tons No. 2 phosphate	... ...	$800.00
		$5,523.47
The actual cost for wages, etc.	... ...	$3,275.67
Balance of profit	...	$2,247.80

"The first three months of the above time were mostly engaged in opening a new pit, from which alone could be taken out now 100 tons a month. From a careful examination of the above figures I gather that working one pit alone 20 men and boys at an average daily wage of $1, for 26 days (say) $520 and allowing for stores, horse power and management, a further sum of $180 will produce 100 tons of first-class phosphate now being sold upon the ground at $13 per ton (say) $1,300, leaving a net profit of $600 dols. per month or $7,200 per year. This is the actual result to be obtained now, this month (March), but with a moderate amount of floating capital and some expenditure for plant, total not to exceed $ 25,000 ($5,000), certainly three times this quantity should be taken out next year, and the profit proportionately increased.

"It must not be overlooked that this property is no undeveloped or untried one, but is now in the position to be worked on a comparatively large scale immediately, and, as already intimated, is at this moment working."

According to these calculations, and with the working capital provided, the output could be at once increased to 3,600 tons of phosphate. If this were sold on the spot at the prices mentioned, which are very moderate, it would leave a profit of over 17½ per cent. on the whole capital of the company, but shipped to England as the directors propose (where phosphate of this standard would fetch £4 4s. per ton), would show a profit of 25 per cent. for the first year, and even this profit could be increased as the pits are further developed.

The following letter speaks for itself :—

"Billiter Square Buildings, London, E.C.,
"March 20th, 1889.

"Dear Sir,—In answer to your inquiry, we have much pleasure in stating, that having bought now for several years the phosphates from your mine, we have invariably found the material of the highest and purest test varying from 83 per cent. to 85 per cent. and over. We may further add that your phosphate has always been amongst the material which has fetched the highest price in our market. We could easily place a considerable quantity if you could now offer us same at 1s. and ½, basis 80 per cent., which is equivalent to 1s. 1d. for 85 per cent. If a guarantee of 85 per cent. we could, no doubt, obtain 1s. 2d. and ½ rise on 85 per cent., equivalent to about £5 per ton.

"Yours faithfully,
"MÖLLER, GRAETZ AND CO.

"To Jackson Rae, Esq."

"P.S.—We further beg to say that we are prepared to guarantee a minimum of £4 per ton (delivered U.K.) for all the 80 per cent. your mine intends producing for the next 12 months."

The *Morning Post*, of January, 1889, in speaking on the question of phosphates, which is daily assuming greater practical importance, says :—"Phosphorus is an indispensable element of plant food, and it is equally indispensable to animals for the formation of bone. Where hay, straw, and corn are sold off the farm, the phosphorus which they contain must be in some way returned to the soil, or the latter will become exhausted. Where milk or cheese are exported from the farm, or young growing stock are grazed, there is equally a drain upon the phosphatic reserves of the soil, which cannot be indefinitely prolonged, for all soils, even the richest, are naturally poor in phosphorus. Hence arises the continuous demand for phosphatic fertilisers. Our supply of phosphates from the United States is derived from South Carolina, where the deposits were discovered about 20 years ago, and whence upwards of 4,000,000 tons have been shipped. But the rapidly increasing home demand in the United States, in many parts of which the overworked soils are crying out for phosphorus, renders it probable that such prices will in time be obtainable on the spot as to practically shut out the European market. The extensive deposits of phosphate in Canada, occurring in Ottawa County and along the banks of the Lievre river, are familiar enough to geologists. These deposits have been for some years the seat of a quietly progressive industry, and freight trains laden with the apple-green mineral are no unusual sight in this region of the provinces of Ontario and Quebec. These extensive beds of one of the best known of the mineral phosphates of lime are likely to undergo great development in the near future, and therefore our supply of raw phosphates should be for a long time secure, unless, as is certainly not probable, the local demand in Canada, as in South Carolina, should compel us again to look elsewhere. Whilst phosphates and nitrates are alike indispensable in the soil, the sources of the latter are more varied than those of the former, and an interesting comparison may be made as to their effect on the soil. The chief difference, perhaps, is that in purchasing nitrates, the farmer always incurs the risk of losing part of the investment, when he puts nitrates in the soil, whereas this is not the case with phosphates. The nitrates are very soluble, and unless there is present a growing crop qualified to seize the nitrates directly they become dissolved, these costly salts become washed out in the drainage waters. Phosphates, on the other hand, are not washed out. Hence, whilst any application of nitrates beyond the quantity which the growing crops at once assimilates is lost, a similar application of phosphates will add to the fertility of the soil, and will remain stored up therein till the crop makes a demand upon them."

The *Times*, of January 14th, 1889, says :—"One of the greatest sources of future wealth of Canada probably lies in the development of such mineral deposits as are found in the phosphate lands in the valleys of the Lievre. In view of the scarcity of, and increasing demand for, phosphates, it may be well to point out that in our nearest large colony we have a source of supply which ought to be worked by British capital for the benefit of British agriculture."

This Company will afford an opportunity to the public of participating in a really valuable phosphate property, acquired at a moderate price, which is a going concern, and capable of enormous development.

The price to be paid for the property taken over as a going concern is £20,000, payable as to £8,000 thereof in cash, and, as to £12,000 thereof, in fully paid shares. All expenses will be paid by the vendor down to allotment. In respect to these expenses, the formation of the Company, the arrangement for the subscription of the capital, and the business of the Company, various contracts have been entered into, to which, however, the Company is not party ; but inasmuch as these may be deemed to be within the meaning of section 38 of the Companies' Act, 1867, subscribers for shares shall be deemed to waive all right to any further notice of contracts, and applications for shares will be received only on this condition. The following contracts in relation to the property have been entered into, namely :—A contract dated 1st May, 1889, and made between Jackson Rae, of the one part, and John Christian Masters, of the other part ; a contract dated the 7th of May, 1889, and made between John Christian Masters, of the one part, and Sydney Charles Whittle, as trustee for the Company, of the other part.

These contracts, together with the memorandum and articles of association, can be seen at the office of the solicitor of the company, where also can be inspected all documents upon which the statements in this prospectus are based, and intending subscribers for shares are invited to inspect these. Applications for shares may be made on the form accompanying the prospectus, or by letter to the secretary or bankers of the Company, accompanied by a remittance of 2s. per share. Should no allotment be made the amount paid upon application will be returned in full, and where the number of shares allotted is less than the number applied for, the surplus will be credited against the amount payable on allotment. Prospectuses, reports, and forms of application for shares may be obtained from the Company's bankers, brokers, solicitor, or secretary.

London, 8th May, 1889.

THOS. THOMPSON,

STOCK AND SHARE DEALER,

ANGEL COURT, LONDON, E.C.

Telegraphic Address: "NOSMOTH, LONDON." **Telephone No. 509.**

Mr. THOMPSON transacts business in all classes of Securities, Bonds (Foreign and Colonial), Banks, Railways, Insurance, Telegraph, Tramway, Gas, Water and all Miscellaneous Shares.

Shares sold at special prices for forward delivery (one, two or three months) on deposit of 20 per cent.

ORDERS BY LETTER OR TELEGRAM PROMPTLY ATTENDED TO.

A FOURTH GRAND MINING PRIZE.

COLON GOLD SHARES (17s. 6d. Paid)

Now at 5/6 to 6/6, are rising, and may possibly before long reach £5 or £6.

ORDERS SHOULD BE TELEGRAPHED AT ONCE.

See Mr. THOMPSON'S MINING AND INVESTMENT CIRCULAR.

PRESS OPINIONS OF THIS CIRCULAR.

"Life," 21st February.

"Colon Gold Mine shares are likely to rise."

"Fair Trade," 15th February.

"The Tetuan Gold shares, which we recommended as a mining investment some week or two ago, have thoroughly fulfilled our prognostication. Colons can be had for 2s. 6d. to 3s. There ought to be a big rush to be in this swim."

"Society Herald," 26th February.

"The interest which has been displayed of late in Colombian Hydraulic Mines continues. The favourite of the hour appears to be the Colon Mines, which are in the immediate vicinity of the Tetuan, Orita, Maravilla, and other famous Colombian mines worked by the hydraulic process. I am assured, on the same good authority which aided me in predicting so accurately the course of Tetuans months ago, that the advance in the price of Colon shares has only just made a beginning, and that they may be expected to cross 20s. within a very short time. Be it observed, I by no means mean to imply that they will not go very much higher than the figure mentioned, but my policy is to advise my readers step by step, so that those who have bought at low prices may turn out their shares whenever they have a good, respectable profit."

"Society," 2nd March.

"Colon Gold shares are likely to have a considerable rise. It is even wise to buy these shares and carry them over from account day to account day. They should, however, be acquired and put by until they show dividends—a time not far distant. The Colon Mines are situated in Colombia, a district now where the mines are significantly productive. All those who are investors should read the report of Mr. Welton, the engineer of the Colombian Hydraulic and Orita Mines. He is a great authority, and in his conscientious statement exhibits what this really legitimate property should produce to the Colon shareholders."

"Stock Exchange Times," 2nd March.

"COLON.—None should stop buying these shares."

"The Hawk," 19th February.

"Colon Gold shares have come with a rush in the last few days. The mine is undoubtedly one of the richest in the gold-paved district of Colombia, consisting of auriferous gravel deposits which are worked on the hydraulic system. It is a near neighbour of the celebrated Orita Mine, already cleaning up to the tune of £1,200 a month. Major Ross, a director of the Orita Mine, has just joined the board of the Colon, and his presence signifies that the works will go forward with redoubled energy."

"Country Gentleman," 2nd March.

"It will be remembered that last week and the week before last I had a good deal to say about Colon Gold mines, and stated that it would not be long before a report, which would astonish even those who believed most firmly in the mine, would be forthcoming. This report is now to hand, and, reading it, it really appears as if the engineer, Mr. W. S. Welton, who is responsible for it, had been drawing upon his imagination; but I am assured that this is far from being the case, and that Mr. Welton has underrated the brilliant prospects of the mine. One thing should be remembered, and that is that Mr. Welton is a well-known and highly-respected gentleman, and anything that emanates from him should be received with the respect that it deserves. Mr. Welton can lay claim to having seen his reports regarding other mines fully borne out by actual results."

"Country Gentleman," 23rd February.

"I can but repeat the advice I gave last week regarding Colon Gold mining shares, and that is to buy them at once. Since I first mentioned them they have risen from 3s. to 11s. 6d., and it is highly probable that they will go as high as 15s. and over. The property, which has only recently come into such great prominence, is situated quite near the famous Colombian Hydraulic and the Orita. It is stated by thoroughly competent authorities that the deposits cover over 1,000 acres, the property really consisting not of one mine only, but of five mines equally rich and promising."

"Country Gentleman," 16th February.

"COLONS.—The jump has been as smart as I prophesied, and I hear that the top has by no means been reached. The mine has suddenly been found to be far richer than was ever believed, and consequently the shares, of which there are not very many about, are in the most active demand. An enormous amount of business has been done in them during the week, and they close to-day very hard and firm. In fact, the movement in Colons has been *the* feature of the week."

"Country Gentleman," 9th February.

"Rumour says strong financial combination has wrought a change in the management of a mine for some time before the public, and that the shares, now at 3s., will have a large and smart rise. My readers will do well to watch for this. I may not mention the name at present, but next week shall be able to give full particulars."

"Financial Chronicle," 20th February.

"Colon Gold shares promise a further advance."

"Financial Chronicle," 23rd February.

"COLONS.—The rise has only begun."

"Rialto," 16th February.

"Colons seem to be good for a big rise in price."

"Bullionist," 2nd March.

"COLONS.—Investors and operators should buy at present prices An excellent report has been received upon the Colon Mines from Mr. W. S. Welton, one of the most experienced hydraulic miners of the day."

"Bullionist," 2nd March.

"Colons are steady, and should be bought. From all we can learn regarding this property, there is no doubt as to its great value, and when the results of the operations now being carried out under the new management become known, we quite anticipate the present price to quickly double itself."

"Stock Exchange."

"Colons will soon be better. Those who should know are buying the shares again quietly. Our readers might do worse than follow this example."

"Stock Exchange," 16th February.

"The feature of this market during the past week has been a great rise in Colon Gold shares. Early on Wednesday morning these shares—then only at 3s. 6d.—began to spring away by leaps and bounds, and in but a few minutes a rise of 5s. was to be recorded. Judging by the prospects of this undertaking, now that some important changes have been effected in the management, the shares ought to have a much further rise, and doubtless but a few days will see them several shillings higher than now."

"Stock Exchange," 23rd February.

"Colon Gold shares have met with great demand during the current week. The reports from the mine are of a very satisfactory character and, we consider, justify a further advance. Reports say that these shares will go a good deal higher."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Investors' Guardian," 23rd February.

"Colon Gold shares are very firm, and there are many indications of a further advance in price. It would not surprise us to see them go to double the present quotation."

"London and Brighton," 17th February.

"The Colar Mines are of the same nature as the Tetuan, being hydraulic, and comprise something over 1,000 acres close to the well-known Colombian Hydraulic and Orita Gold Mines. The advantage these cheap-priced shares present to the mining speculator is that there is pleuty of room for a rise, while the possible fall is very limited, and at the worst the loss is infinitesimal compared with high-priced shares which, if they have a chance of a rise of one or two points, have also the probable contingency of a drop of four, five, or perhaps more, at any time."

"London and Brighton," 20th February.

"Colon Gold shares are certainly good to buy for a rise."

"Mining News," 2nd March.

"In the case of Colons, one of the popular speculations, we feel sure prices will advance, and these shares offer an excellent investment medium at their current price. Colons will go much higher than now selling."

"Stock Exchange Times," 2ud March.

"We are confident that the shares will yet see from £3 to £4 each."

"Court Circular," 2nd March.

"Things speculative have been more or less depressed during the last few days, and even the shares of the Colon Gold Mines have had a slightly backward tendency, in common with the rest of mining investments. This is, however, not a bad thing for those who want to speculate, since the report from the mines would show Colons to be very good business, and, if they are a shilling or two cheaper, all the better for the buyer, seeing that they can be so thoroughly recommended."

"Financial World," 16th February.

"COLON.—A pleasant surprise awaited those connected with this hitherto unknown enterprise last week. Very little has been heard of this modest placer mine, until a demand sprang up in the middle of the week for the shares, which forced them upon the attention of the market, and, as a consequence, the shares rose in one day from the insignificant price of 2s. 6d. to 8s., an advance equally as important as some which have had to be recorded with respect to the Witwatersrand properties, when we consider how little has been done to bring them into prominence. As a thread of the gossamer will show the direction of the wind, the results which have lately been made by several well-known placer properties may be taken as giving in some degree an indication of what is yet in store for those whose faith is pinned to properties of this description, in preference to those of the quartz mines. A company whose shares can advance in one day 6s. ought to possess a property destined to make some flutter in mining circles."

"Financial World," 2nd March.

"COLONS.—These shares, we believe, have now reached their lowest ebb, and those who want to secure an interest in this ought to do so when the price stands at something reasonable. The decline in the price was due to indiscriminate selling by speculators who desired to realise."

"Mining World," 16th February.

"We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulations. We look for a steady advance in the returns in the near future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are managed with houesty and ability."

"Mining World," 16th February."

"Hydraulic mines have been to the fore, and particularly the share of the 'Colon,' of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, began to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success."

"The Capitalist."

"The most remarkable has been Colon Gold shares, which are now quoted 10s. to 11s., with every prospect of a still further rise."

"Financial News," 14th February.

"The feature of the mining market yesterday was the rise in Colon Gold shares. The Colon Gold property is a close neighbour of the Colombian Hydraulic, the Orita, and the Tetuan, and, if we may judge from the reports, a worthy competitor with them. Among the directors of the undertaking we notice Mr. Sankey, of the Colombian Hydraulic, and Major Ross, of the Orita—an ample guarantee that the management will not be lacking in enterprise or intelligence."

"Financial News," 15th February.

"In another column will be found the report of Mr. B. Anderson, a well-known American hydraulic mine engineer, upon the Colon mines, which we had occasion to mention in our yesterday's issue. According to Mr. Anderson, a sampling of the gravel gave, under hand washing, a profit of $1,351 the amount of water used being only 4 to 6 miner's inches. The mine, we understand, has been worked more or less systematically under the hand process, or sluicing, and always with results similar to the above. The new directors of the company have determined to work the mines in a more energetic manner, and have already entered into a contract for the construction of the works necessary to bring 500 miner's inches of water on to the mines at a cost of £14,000, this sum being only half the amount of working capital still remaining intact with the company."

"Financial Chronicle," 2nd March.

"COLONS.—We may shortly expect to commence moving again."

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

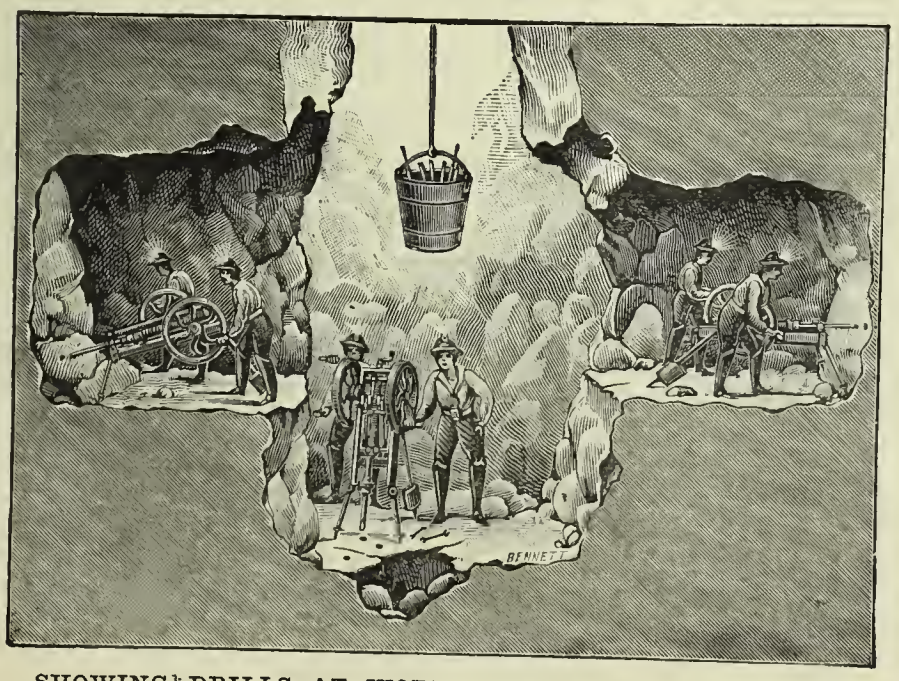
A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, testimonials, &c., to

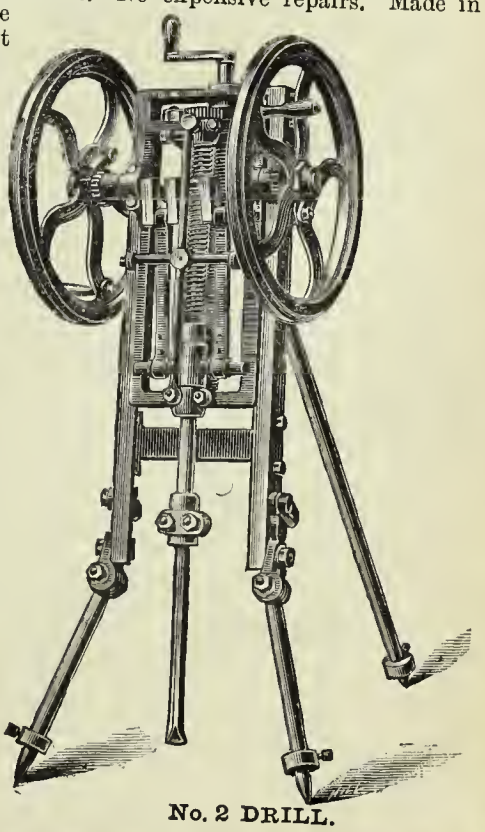
WELLINGTON & CO. (Successors to CLARK & WELLINGTON),

MANUFACTURERS.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.



SHOWING DRILLS AT WORK SINKING AND DRIVING.



No. 2 DRILL.

THE NEXT GREAT BOOM WILL BE IN

VICTORY GOLD MINES.

£1 SHARES. FULLY PAID.

Present Price, 9s. to 9s. 6d. **Going to £5, or over.**

THESE SHARES ARE DEALT IN BY ALL BROKERS INSIDE THE STOCK EXCHANGE AND MINING EXCHANGE.

This property is situated near the celebrated El Callao Mine, the returns from which have astonished the civilised world. Victory Gold have struck an enormously rich Reef, and from the reports just to hand, the ore is giving the wonderful returns of between 30 ozs. and 40 ozs. to the ton. Remember! a little over ½ oz. pays expenses, and the remainder is all profit.

VICTORY GOLD. £1 Shares. Fully Paid.

Will pay over Cent. per Cent. is now practically assured; all machinery is on the property; a competent staff fast developing the rich veins, and ample funds in the Directors' hands.

THIS IS TO BE A BOOM WITHOUT PARALLEL.

Buy at present quotation, 9s. to 9s. 6d., whilst you have a chance. There are very few shares on the market. The list of shareholders is exceedingly large, and to prove our assertions, if existing holders bought about 80 shares more each, they would buy every share in the Company over again, and by so doing dealers would be unable to deliver them, and the shares would, in that case, go to £50.

READ the SPECIAL EDITION "FINANCIAL WORLD" of yesterday, which contains the full Reports from the property, and also the testimony of Mr. Robert Larchin, one of the Directors, who has just returned from the Mines, and who predicts a dazzling future.

Every 1s. per share dividend at the present price is equal to 10 per cent., and that

VICTORY GOLD.

VICTORY GOLD are the only Shares in the Miscellaneous Mining Market worth buying. Do not buy rubbish, but proved Mines. Buy them for Speculation or Investment, and you will reap a rich reward.

Read the Financial Press Opinions contained in "FINANCIAL WORLD" of yesterday.

Present quotation, 9s. to 9s. 6d,; next week may be as many pounds, when the investing public realise their intrinsic value.

"Country Gentleman," 23rd February.

"I can but repeat the advice I gave last week regarding Colon Gold mining shares, and that is to buy them at once. Since I first mentioned them they have risen from 3s. to 11s. 6d., and it is highly probable that they will go as high as 15s. and over. The property, which has only recently come into such great prominence, is situated quite near the famous Colombian Hydraulic and the Orita. It is stated by thoroughly competent authorities that the deposits cover over 1,000 acres, the property really consisting not of one miue only, but of five mines equally rich and promising."

"Country Gentleman," 16th February.

"COLONS.—The jump has been as smart as I prophesied, aud I hear that the top has by no means been reached. The mine has suddenly been found to be far richer than was ever believed, and consequently the shares, of which there are not very many about, are in the most active demand. An enormous amount of business has been done in them during the week, and they close to-day very hard and firm. In fact, the movement in Colous has been *the* feature of the week."

"Country Gentleman," 9th February.

"Rumour says strong financial combinatiou has wrought a change in the management of a mine for some time before the public, and that the shares, now at 3s., will have a large and smart rise. My readers will do well to watch for this. I may not mention the name at present, but next week shall be able to give full particulars."

"Financial Chronicle," 20th February.

"Colon Gold shares promise a further advance."

"Financial Chronicle," 23rd February.

"COLONS.—The rise has only begun."

"Rialto," 16th February.

"Colons seem to be good for a big rise in price."

"Bullionist," 2nd March.

"COLONS.—Investors and operators should buy at present prices An excellent report has been received upon the Colon Mines from Mr. W. S. Welton, one of the most experienced hydraulic miners of the day."

"Bullionist," 2nd March.

"Colons are steady, and should be bought. From all we can learn regarding this property, there is no doubt as to its great value, and when the results of the operations now being carried out under the new management become known, we quite anticipate the present price to quickly double itself."

"Stock Exchange."

"Colons will soon be better. Those who should know are buying the shares again quietly. Our readers might do worse than follow this example."

"Stock Exchange," 16th February.

"The feature of this market during the past week has been a great rise in Colon Gold shares. Early on Wednesday morning these shares—then only at 3s. 6d.—began to spring away by leaps and bounds, and in but a few minutes a rise of 5s. was to be recorded. Judging by the prospects of this undertaking, now that some important changes have been effected in the management, the shares ought to have a much further rise, and doubtless but a few days will see them several shillings higher than now."

"Stock Exchange," 23rd February.

"Colon Gold shares have met with great demand during t[he] week. The reports from the mine are of a very satisfactory cha[r] and, we consider, justify a further advance. Reports say that these shares will go a good deal higher."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Investors' Guardian," 23rd February.

"Colon Gold shares are very firm, and there are many indications of a further advance in price. It would not surprise us to see them go to double the present quotation."

"London and Brighton," 17th February.

"The Colon Mines are of the same nature as the Tetuan, being hydraulic, and comprise something over 1,000 acres close to the well-known Columbian Hydraulic and Orita Gold Mines. The advantage these cheap-priced shares present to the mining speculator is that there is plenty of room for a rise, while the possible fall is very limited, and at the worst the loss is infinitesimal compared with high-priced shares which, if they have a chance of a rise of one or two points, have also the probable contingency of a drop of four, five, or perhaps more, at any time."

"London and Brighton," 20th February.

"Colon Gold shares are certainly good to buy for a rise."

"Mining News," 2nd March.

"In the case of Colons, one of the popular speculations, we feel sure prices will advance, and these shares offer an excellent investment medium at their current price. Colons will go much higher than now selling."

"Stock Exchange Times," 2nd March.

"We are confident that the shares will yet see from £3 to £4 each."

"Court Circular," 2nd March.

"Things speculative have been more or less depressed during the last few days, and even the shares of the Colon Gold Mines have had a slightly backward tendency, in common with the rest of mining investments. This is, however, not a bad thing for those who want to speculate, since the report from the mines would show Colons to be very good business, and, if they are a shilling or two cheaper, all the better for the buyer, seeing that they can be so thoroughly recommended."

"Financial World," 16th February.

"COLON.—A pleasant surprise awaited those connected with this hitherto unknown enterprise last week. Very little has been heard of this modest placer mine, until a demand sprang up in the middle of the week for the shares, which forced them upon the attention of the market, and, as a consequence, the shares rose in one day from the insignificant price of 2s. 6d. to 8s., an advance equally as important as some which have had to be recorded with respect to the Witwatersrand properties, when we consider how little has been done to bring them into prominence. As a thread of the gossamer will show the direction of the wind, the results which have lately been made by several well-known placer properties may be taken as giving in some degree an indication of what is yet in store for those whose faith is pinned to properties of this description, in preference to those of the quartz mines. A company whose shares can advance in one day 6s. ought to possess a property destined to make some flutter in mining circles."

"Financial World," 2nd March.

"COLONS.—These shares, we believe, have now reached their lowest ebb, and those who want to secure an interest in this ought to do so when the price stands at something reasonable. The decline in the price was due to indiscriminate selling by speculators who desired to realise."

"Mining World," 16th February.

"We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulations. We look for a steady advance in the returns in the near future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are managed with honesty and ability."

"Mining World," 16th February."

"Hydraulic mines have been to the fore, and particularly the share of the 'Colon,' of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, began to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success."

"The Capitalist."

"The most remarkable has been Colon Gold shares, which are now quoted 10s. to 11s., with every prospect of a still further rise."

"Financial News," 14th February.

"The feature of the mining market yesterday was the rise in Colon Gold shares. The Colon Gold property is a close neighbour of the Colombian Hydraulic, the Orita, and the Tetuan, and, if we may judge from the reports, a worthy competitor with them. Among the directors of the undertaking we notice Mr. Sankey, of the Colombian Hydraulic, and Major Ross, of the Orita—an ample guarantee that the management will not be lacking in enterprise or intelligence."

"Financial News," 15th February.

"In another column will be found the report of Mr. B. Anderson, a well-known American hydraulic mine engineer, upon the Colon mines, which we had occasion to mention in our yesterday's issue. According to Mr. Anderson, a sampling of the gravel gave, under hand washing, a profit of $1,351 the amount of water used being only 4 to 6 miner's inches. The mine, we understand, has been worked more or less systematically under the hand process, or sluicing, and always with results similar to the above. The new directors of the company have determined to work the mines in a more energetic manner, and have already entered into a contract for the construction of the works necessary to bring 500 miner's inches of water on to the mines at a cost of £14,000, this sum being only half the amount of working capital still remaining intact with the company."

"Financial Chronicle," 2nd March.

"COLONS.—We may shortly expect to commence moving again."

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

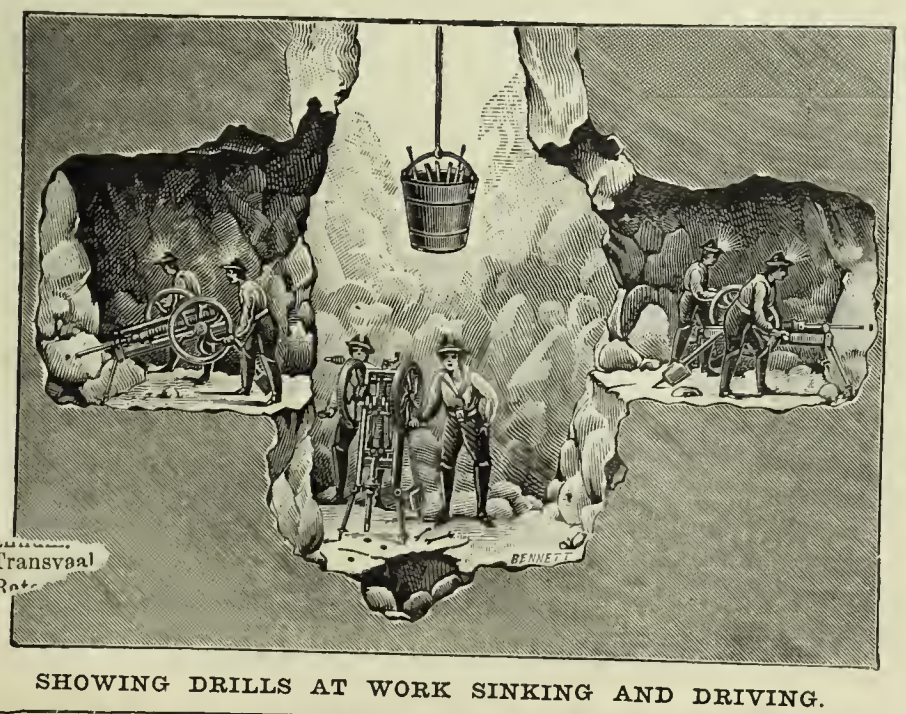
A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, testimonials, &c., to

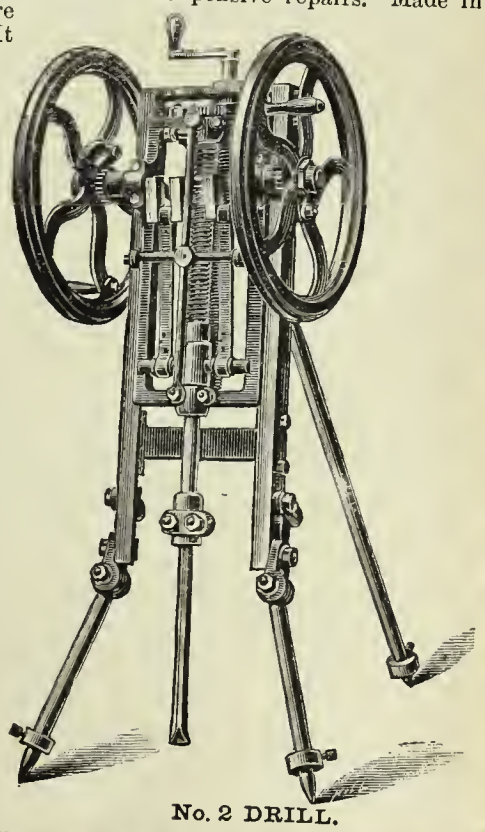
WELLINGTON & CO. (Successors to CLARK & WELLINGTON),

MANUFACTURERS.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.



SHOWING DRILLS AT WORK SINKING AND DRIVING.



No. 2 DRILL.

THE RISE IN YURUARI SHARES.

THESE SHARES HAVE BEEN
THE FEATURE OF THE MARKET
EVER SINCE OUR FIRST NOTICES APPEARED.
NO LESS THAN 300,000 SHARES
HAVE BEEN DEALT IN
DURING THE LAST ELEVEN DAYS.
AS A NATURAL CONSEQUENCE OF THIS
THE SHARES HAVE BEEN LARGELY OVER-SOLD.
AND A GRAND OPPORTUNITY NOW OCCURS
TO SQUEEZE THE BEARS,
WHO HAVE LARGELY
SOLD SHARES WHICH THEY DID NOT POSSESS.
IT IS NOW PERFECTLY CLEAR THAT
IF THOSE 300,000 SHARES
ARE TAKEN OFF THE MARKET
BY THOSE WHO HAVE BOUGHT THEM,
THE BEARS WILL BE SQUEEZED WITH A VENGEANCE.
THEY WILL HAVE TO SCRAMBLE IN
BEFORE MONDAY NEXT, AT 12 O'CLOCK,
AT ANY PRICE THE SELLERS CHOOSE TO EXACT!
THIS WILL CAUSE THE PRICE TO DOUBLE ITSELF
IN ALMOST NO TIME,
AND THE BEARS WILL BE SORRY
THAT THEY EVER SOLD YURUARIS
AGAINST PUPLIC OPINION!
BUYERS OF YURUARI SHARES!
YOU NOW HAVE A CHANCE
SUCH AS DOES NOT OFTEN OCCUR,
WIRE AND ORDER YOUR BROKERS
TO DELIVER YOU EVERY SHARE YOU HAVE BOUGHT.
BE AS MERCILESS TO THE BEARS
AS THE BEARS WOULD BE TO YOU!
CORNER THEM AT ONCE.
BY ACTING UPON OUR SUGGESTION,
AND BY BUYING AS MANY MORE
AS YOUR PRUDENCE AND POCKET WILL ALLOW.
BUY YURUARIS FOR THE GRAND RISE,
AND SEE THAT YOU GET THEM.
LET YOUR INSTRUCTIONS TO YOUR BROKERS
BE FIRM AND UNMISTAKABLE!
TAKE NO EXCUSE!
BE WHEEDLED BY NO ARTS! AND REMEMBER THAT
THESE ARE GOOD, SOUND BUSINESS FACTS!
BUY YURUARIS,
FOR THEIR INTRINSIC VALUE.
BUY YURUARIS,
BECAUSE THEY ARE DIRT CHEAP!
BUY YURUARIS,
BECAUSE THE PROFITS WILL BE GREAT.

BUY YURUARIS,
BECAUSE THEY ARE SOUND AND RELIABLE,
BUY YURUARIS,
BECAUSE THE MINE IS BEING WORKED
ENERGETICALLY AND WELL.
BUY YURUARIS,
BECAUSE THE MINE IS IMPROVING AT ALL POINTS.
BUY YURUARIS,
BECAUSE EVEN IN ITS BRIGHTEST DAYS
THE MINE NEVER LOOKED BETTER THAN IT DOES NOW.
BUY FOR THE RISE.
TAKE UP THE SHARES.
INSIST UPON DELIVERY, AND SEE THAT YOU GET THEM.
WE HAVE BASED ALL OUR CALCULATIONS
UPON SOLID FACTS AS THEY ACTUALLY EXIST.
THE WHOLE FINANCIAL PRESS, WITH FEW EXCEPTIONS,
CORROBORATE OUR OPINION THAT
THE YURUARI COMPANY
IS NOW ON THE HIGH ROAD TO SUCCESS.
AND THERE IS NO MISTAKE ABOUT IT.
YURUARI HAS THE SMALLEST CAPITAL, AND
THE LARGEST OUTPUT OF GOLD.
EXAMINE THESE FACTS,
CALCULATE THE CHANCES,
THEN ACT UPON YOUR OWN JUDGMENT.
CORNER THE BEARS!
IF YOU BOUGHT YOUR SHARES THROUGH ANY
RESPECTABLE OUTSIDE BROKER,
REMEMBER THAT HE IS, IN ALL PROBABILITY,
A MEMBER OF THE NEW MINING EXCHANGE.
AND IS SUBJECT TO STRINGENT RULES.
THE SHARES WILL BE BOUGHT IN AGAINST HIM,
AND HE WILL HAVE TO PAY THE DIFFERENCE,
OR BE EXPELLED FROM THE EXCHANGE.
THIS WILL ALSO BE THE CASE WITH
MEMBERS OF THE STOCK EXCHANGE;
SO EVERY SELLER
CAN EASILY BE FORCED TO DELIVER.
YURUARI!
WE WILL SEND, ON APPLICATION,
FULL PRINTED DETAILS, POST FREE.
SEND FOR THEM!
READ THEM!
AND DECIDE FOR YOURSELVES.

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

INDIAN SHARES DULL—SOUTH AFRICANS MARK A RECOVERY—COPPER SHARES DOWN—A WORD ABOUT MASON AND BARRY—MISCELLANEOUS MARKETS FAIRLY FIRM—WELSH MOUNT MORGAN.

To the surprise of almost everybody, Indian shares showed unsteadiness on the Mysore meeting, and Mysores themselves fell a point. Why they should have done so is, as Lord Dundreary would say, "what no fellah can understand." There was everything to send them up, but the Stock Exchange marked them down. The barometer pointed "fair," but dealers detected "cloudy weather." Nothing could be more satisfactory than the statements made, and facts were at the back of everyone of them, and yet, down went the shares. This is a conundrum, and in this hot weather we give it up. As a last expiring thought on the subject, however, the probable explanation may be that, rising in anticipation of the meeting. there came the reaction.

South Africans were very low at the beginning of the week. and Hatton Garden felt that it must bestir itself, and Holborn Viaduct thought it high time to be up and doing, so the shares were "put better," and close decidedly above the lowest points reached.

Copper shares also fell, notwithstanding the formation of the new French combination and the rush (in France) for its shares, which are said to have been subscribed for three times over. Mason and Barry shares are thought to be too high. The company is going in for law with a vengeance, and when that is the case. holders should seriously consider what they ought to do in their own interests.

In the Miscellaneous markets, the Colombian Hydraulic Mines are rather firmer—a tendency in this direction being shown by Colombian, Orita, Colon and Tetuan. There has also been business in Organos.

It is reported that the largest business done for months past in any one stock took place in Yuruaris during last settlement. Various estimates put the amount of stock which changed hands at from 300,000 up to half-a-million shares, and from enquiries we have made, we learn that the sale and transfer of at least one-half of this stock was certified by the company within the last two days. We predict a considerable rise shortly, as we consider the stock at present price about the cheapest in the Mining market.

The market for Queensland shares has been dull, though Gympie Great Easterns have commanded some attention.

The feature in the home Mining Market this week has been the sudden rise, to the extent of 5s., in Welsh Mount Morgan Shares—said to be due to an improvement in the lode.

Nearly the whole of the business week has been taken up with the settlement, which commenced on Monday and ended on Wednesday.

Africans.

This has been a most anxious week for dealers in the African Market. On Monday, shares generally made up fairly well, but on Tuesday and Wednesday the market was dull in the extreme. Yesterday, however, the Frenchmen came to the rescue, and bought heavily, several large transactions taking place. To-day, prices, although lower than last week, are, in many instances, from 1*l.* to 4*l.* better than on Wednesday.

The following have fallen :—Piggs Peak, 1/16; Sheba, 1/16; Moodies' fully-paid, 1/8; Aurora, 1/8; Bankets, 1/8; Bothas, 1/16; De Villiers, 3*l.*; Ferreiras, 20s.; Jumpers, 1/8; Kleinfontein, 1/8; Randfontein, 1/8; Simmer and Jack, 1/8; Spes Bona, 1/8. On the other hand a rise has taken place in Republics of 1s.; Thomas, 1/8; Johannesberg Waterworks, 3/16; Bixley, 1/8; Central Langlaagtes, 1/8; City and Suburban, 1/4; Cornucopia, 1/8; Crown Reefs, 1/8; Croesus, 1/2; Dornkop, 1/8; Goldfields of South Africa, 3/8; Jubilee, 1/2; Knights, 1/8; Langlaagtes, 1/16; Main Reefs, 1/8; ditto United Roodepoort, 1/4; Modderfontein, 1/8; Nabob, 1/16; United Langlaagtes, 1/8; Van Ryn, 1/16; Vogelstruis, 1/8; Wemmers, 1/8; and Wolhuters, 3/8.

Copper Shares.

The operations in the Copper market can be summed up in two words, "nothing doing," hence there are very few alterations to record. A fall has taken place in Bratsberg of 3d.; Cape, ⅛; Rio Tinto, ¼; and Tocopilla, 1s.; the only rise being in Quebrada of ⅛d.

Australians.

There has been but very little business doing in the above shares during the week, yet there appeared to be a scarcity of stock, and in consequence carrying-over rates were easy. The changes are but few. A rise is shown in Day Dawn P.C. of 1s.; Gympie Golden Crown and Mount Shamrock, 6d.; while the following have fallen:—Cumberland, 1s.; Day Dawn, 6d.; and Etheridge United, 3d.

Diamonds.

The market has still continued in a dormant state, and in consequence prices have not advanced, and, from present appearances, it does not appear that they will improve. The following show a fall:—Anglo-African of ⅜; Bulfontein, ⅜; New Jagersfontein, ½; London and South African Exploration, ¼; and Burma Ruby Mines of ⅛; whilst a rise is registered in South African of 2s.

Anglo-African	4½	—	4¾

London and South African Exploration	16½	— 17	xd & rights
Read's Drift Land Co.	1⅝	—	1⅞
Burma Ruby Mines	1⅛	—	1¼pm

Indians.

Little business has been transacted in the shares of Indian gold mining properties, and prices have not been upheld, this in spite of the fact that the meeting of the Mysore Company, yesterday, was of the most encouraging nature. In ordinary times quotations would have considerably improved. The shares of the Nundydroog Company, whose meeting took place this morning, have receded 1s., notwithstanding that a good report was put before the shareholders. Indian mines generally should improve ere long.

The following have receded:—Goldfields of Mysore, ⅛; Mysore Gold, ¼; Ditto West, 3d.; Ditto Wynaad, 6d.; Nundydroog, 1s.; Ooregum (ordinary and preference), 1/16; and South-East Mysore, 1s. The only rise to record is in Nine Reefs of 6d.

Foreign Shares.

There are but very few improvements to record in the general foreign market. A considerable amount of business has taken place in Balkis, Transvaal, Victory and Yuruari. The only prominent alterations however are as follows:—A fall in Coromandel of 6d.; Empire, 1/16; Frontino, 6d.; Garfield, 1s.; Montana, 1/16; New Organos 6d.; Tetuans, 1s. 6d.; Transvaal and Victory, 6d. The only rise on the week is in Balkis of 1s., and West Argentine 1/16.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.

LATEST FROM THE MINES.

Indian Mines.

Indian Consolidated.—The directors have sold, through Messrs. Pixley and Abell, the following gold, the result of the March crushings:—From the Phœnix section, 121 ozs., which realised 482*l.* 13s. 7d.; and from the Colar section, 94 ozs., which realised the sum of 350*l.* 10s. 8d., making a total for the month of 833*l.* 4s. 3d.

Colonial Mines.

Day Dawn Block and Wyndham.—A cablegram from the general manager at Charters Towers gives the resnlt of the crushing for the fortnight ending 11th inst. as follows:—"1,142 tons crushed; yield of gold, 1,010 ozs.; approximate value, 3,500*l.*; fortnight's expenses, 2,100*l.* The cablegram further states that the company's No. 3 shaft on the Day Dawn line of reef has bottomed on the formation."

Day Dawn P.C.—An *interim* dividend of 6d. per share, free of tax, out of the profits of the current year, was declared, payable on the 10th of June to all shareholders registered in the books of the company on the 28th inst. A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending May 11th, viz.:—"1,080 tons 1,491 ozs." (Estimated valne, 5,069*l.*) N.B.—The board have authorised the purchase of an additional 10-head of stamps.

Harrietville.—Messrs. John Taylor and Sons have received the following cable message, dated Harrietville, 16th inst., from Mr. T. G. Davey, the superintendent appointed by them to take charge of the mines, viz.:—"Crushed during the last six weeks 360 tons, yielding 413 ozs.; six stamps. Mine is looking well. I recommend putting up 10 more stamps at once worked by water-wheel; also concentration works for pyrites. I estimate the cost of erecting the machinery at 5,000*l.*"

Midas.—The following cable is from the mine:—"Yield for week, 104 ozs." (426*l.*)

Mosman.—A cablegram from the Miue Manager at Charters Towers, dated to-day, states that there were, at this date, 1,000 tons of the company's quartz in the paddock ready for crushing.

Foreign Mines.

Blue Spur and Gabriel's Gully Consolidated.—Telegram: "Mr. Lawder, mining engineer, has examined and confirms report. Has great confidence in mine; looks very favourable. Stout's letter will give you full particulars. Drainage accident has delayed; partial clean up; gold, April, 640 ozs."

Colombian Mines Corporation.—Memorandum of returns for the months of February and March:—Number of ounces of gold prodnced: February, 478; approximate value, $8,976; working cost, $6,867 95c.; balance being profit, $2,108 5c. March, 510½; approximate value, $9,300; working cost, $5,772 95c.; balance being profit, $3,527 5c. Expended on capital account; February, $212 80c.; March, $350 50c.

Dickens Custer.—The chairman (Mr. Wolseley) and the secretary started for the mines yesterday. The shares have been largely over-applied for, and cheques for applications for excess shares, which have not been allotted will be sent out at once.

Frontino and Bolivia.—Advices for the month of March, state:—Produce, 723 ozs. of gold; value, 1,615*l.* 10s. 10d.; cost, 2,331*l.* 5s. 10d.; estimated excess of expenditure, 715*l.* 15s.

Great Zaruma.—By telegram just received from the manager for the month of April, 350 tons have been crushed in 23 days, producing 360 ozs. of bullion, also 45 ozs. from blanket sand.

Jackson Rae Phosphate.—The first batch of letters of allotment, and regret to applicants for shares in this company, have been posted to-day.

New Eberhardt.—At a board meeting held on 14th inst., Mr. Osmund Gibson, C.E., was elected a director of this company in the room of the late Mr. Francis Joseph Bladon, and also at a board meeting held on 15th inst. Mr. J. Russell Clipperton was elected chairman of the company in place of Mr. F. J. Bladon.

Ouro Preto.—A telegram advises the April returns as follows :—"2,201 tons of ore produced 7,768 oits. of gold." (895 ozs.)

Pahang.—It is officially notified by the Pahang Company, Limited, that additions to the European staff at the mines have just left by the P. and O. steamer, Rome, viz., an explorer and prospector, who will explore and report on the less known part of the concession, an assistant mine agent and an engineer. An experienced chief mine agent will, it is expected, sail about the end of the current month.

Pinos Altos.—The ont-turn for April was $42,500.

Rio Tinto.—The company notify that at the tenth half-yearly drawing of their five per cent. bonds, 1884, to be held on the 1st proximo, bonds amounting to 9,120*l.* will be drawn, to be paid off at par on the 1st July.

Santa Barbara.—A cable message from Rio de Janeiro advises the amount of produce obtained for the month of April as being 1,816 oits. of gold. The value of this produce would amount, at 8s. 6d. per oit. to 771*l.* 16s. sterling. The message adds : "Damage is repaired."

Yuruari.—Mr. F. R. Robin (assistant secretary) writes :—I am instructed to inform you, in response to a very large number of inquiries, that all the authorised capital of this company has now been placed.

Home Mines.

New Cook's Kitchen.—A call of 3s. 6d. a share was made on Thursday, to liquidate a loss of 751*l.* on the 16 weeks.

South Crofty.—A call of 5s. a share was made on Thursday, to liquidate a loss of 1,607*l.* on the last 16 weeks' working.

Ticketing for Tin Ores.

A tin ticketing took place at Redruth on Tuesday last, when 196 tons were offered (average standard 88.89), with the following results :—

Value of Ores Sold by Each Mine.

Metals.

Copper has been steady. G.O.B. Chili bars and G.M.B. copper declined from 39*l.* 10s. to 38*l.* 12s. 6d. cash, but improved at the close of yesterday to 39*l.* 5s., and to-day are qnoted 39*l.* 10s., for cash and three months. Three months prompts have ruled about the same to 5s. below the cash price. The stocks in Liverpool and Swansea have decreased 1,023 tons during the fortnight, and the visible supply is now given as 123,150 tons against 124,447 tons on 1st May. Australian nominal. We quote English tough, 44*l.*, 45*l.* ; best selected, 45*l.* to 46*l.* ; strong sheets. 50*l.* to 51*l.* ; India sheets, 48*l.* ; yellow metal sheets, 4¾d. ; sheathing, 5d. ; ore, regulus, &c. 7s. to 8s. per unit.

Tin has further recovered its late depression. Straits has improved 91*l.* 10s. to 93*l.* cash, closing sellers thereat ; three months prompts have ruled from 15s. to 20s. per ton over cash. Australian more plentiful, and only commands 5s. to 7s. 6d. per ton preminm over Straits. The Dutch market has improved to 55¾fl. for Banca ; and 54½fl. for Billiton. English ingots, 96*l.*

Tin Plates quiet, and ordinary coke quoted at 13s. 3d. f.o.b. Liverpool.

Spelter, owing to the strikes in Germany, has advanced, and ordinary brands are now quoted 18*l.* per ton ex ship here. Specials, 18*l.* 5s.

Lead has been firm, and we now quote : Soft Spanish, 12*l.* 15s. per ton ; soft English, 13*l.* ; L. B. China Pigs, 13*l.* 2s. 6d. ; Sheet Lead, 13*l.* 15s.

Quicksilver quiet. Rothschild qnotations is 8*l.* 10s. per bottle, and second hands 8*l.* 5s.

Antimony dearer ; 51*l.* to 52*l.*

London Metal Exchange.

4.30.—Closing official report.—Copper : G.M. Brands, cash, 39¼, ⅝ ; three months, 39⅓, ⅝ ; best selected, 44, 5 ; strong sheets, 50, 1 ; English tough, 43, 4. Tin : Fine foreign, cash, 92⅞, 3⅜ ; three months, 93¾, 4¼ ; Australian, 93¼, ¾ ; English ingots, 95½, 6.

London Coal Exchange.

Wallsend :—Hetton, 16s. ; Lambton, 15s. 6d. ; Tees, 16s. ; Hetton Lyons, 15s. ; South Durham Tecs, 15s. ; Wear, 15s.

Glasgow Pig Iron Market.

3.15.—Business at 43s. 4d., 43s. 3½d., 43s. 6d., cash ; 43s. 6½d., 43s. 5½d., 43s. 8½d., one month ; closing buyers, 43s. 5½d., cash ; 43s. 8d., one month ; sellers ½d. more. Market firm, good business. Middlesbro' done 38s. 3d., cash ; 38s. 6d., 38s. 5d. one month ; closing buyers, 38s. 2d., cash ; 38s. 5d. one month ; sellers, 2d. more. Hematite done 48s. 3d., 48s. 4d. cash ; 48s. 6d., 48s. 5d., 48s. 7d., one month ; closing buyers, 48s. 4d. cash ; 48s. 7d. one month ; sellers, 1d. more.

COMMERCIAL NOTES.

Railways.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year : — Increases : — Caledonian, 2,576*l.* ; Eastern and Midlands, 3*l.* ; Great Northern, 2,820*l.* ; Great Western, 7,640*l.* ; Hull and Barnsley, 896*l.* ; London and North-Western, 9,508*l.* ; London and South-Western, 3,091*l.* ; London, Chatham, and Dover, 2,199*l.* ; Manchester and Sheffield, 3,893*l.* ; Metropolitan, 460*l.* ; Midland, 11,049*l.* ; North British, 1,134*l.* ; North-Eastern, 9,739*l.* ; and North Staffordshire, 1,017*l.*

The Brighton Railway traffic return for the week ended May 11th exhibits an increase of 2,934*l.*, and the South-Eastern an increase of 4,261*l.*

For the week ended 7th May, the Canadian Pacific Railway receipts amonnted to $239,000, against $221,000 last year. The Dutch Rhenish Railway earnings for the week ended 7th May were 7,680*l.*, being 191*l.* more than in 1888. For the week ended 28th April the receipts of the Smyrna and Cassaba Railway amounted to 2,117*l.*, compared with 1,723*l.* last year. The gross earnings of the New York, Ontario, and Western Railway for the first week in May were $32,461, being $1,163 in excess of 1888. For the first week in May the Mexican Central Railway's gross earnings were $117,643, against $86,622 last year. The Lima Railway receipts for the two weeks ended 8th April amounted to 3,186*l.*, compared with 2,631*l.* in 1888. For the first week in May the gross earnings of the Cincinnati, Washington, and Baltimore Railway were $36,800, or $2,000 less than last year.

Tramways.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results :—Increases :—London, 254*l.* ; London Street, 54*l.* ; Provincial, 43*l.* ; London Southern, 9*l.* ; Belfast, 226*l.* ; Southampton, 5*l.* ; Woolwich and South-East London, 18*l.* ; West Metropolitan, 24*l.* ; North Staffordshire, 18*l.* ; Southwark and Deptford, 26*l.* ; Bristol, 224*l.* ; Edinburgh, 76*l.* ; Swansea, 39*l.* ; Sunderland, 44*l.* ; Calais, 13*l.* ; Gothenburg, 41*l.* ; Germany, 425*l.* ; and Continental Metropolitan, 151*l.* ; while the South London shows a decrease of 14*l.* ; Hull, 6*l.* ; Burnley, 19*l.* ; North London, 54*l.* ; Stockton and Darlington, 18*l.* ; Imperial, 2*l.* ; Bordeaux, 305*l.* ; France, 78*l.* ; and Calais, 37*l.* For April the Tramways Union receipts were 6,463*l.*, against 6,855*l.* last year. The Anglo-Argentine Tramway receipts for the week ended April 1st amounted to 5,181*l.*, being 681*l.* more than in 1888.

Miscellaneous.

The shares of the Avala Quicksilver Mines, Limited, have been dealt in on the Stock Exchange, and closed at ⅜, ⅝ premium.

We are informed that Mr. Richard Larchin, one of the directors of the Victory Gold Mining Company, Limited, sailed from Southampton on Thursday for Venezuela, to personally superintend the erection of the additional machinery.

Dividends Declared and Announced for Week Ending May 18th.

Carried forward.

American Freehold Land Mortgage	230*l.*	10 per cent.
Bahia Gas	866*l.*	10 per cent.
British Land and Mortgage Co., of America	—	6 per cent.
Bombay Baroda and Central India Railway	—	¼ per cent.
Colorado Nitrate	—	7½ per cent.
Caledonian Insurance	—	1*l.* 3s. per share.
Cortez Mines	—	2s. per share.
Colonial Bank of New Zealand	4,419*l.*	7 per cent.

Simson and Mason	—	4 per cent.
Scientific Dress Cutting Association	—	6 per cent.
Scottish-Australian Investment	—	7½ per cent.
Trust and Agency Co. of Australia	1,613*l.*	22½ per cent.
United Telephone Co.	—	12s. 6d. per share.

It cannot be said that the Conservative side of politics is not now adequately represented in the half-penny evening Press. The *Evening News and Post* has been commenced under able auspices, and promises to be most successful. The contents are well arranged, the leaders smartly written, and the paper is, as a whole, a marvel of cheapness.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (20th April).—Have driven 50-fm. level north 8.4-10 ft. in lode matter; breast showing no metal; four men three days maehine drill. Have sunk Balvanera shaft 2.6-10 ft. Reasons for so little work—laek of labour, being Holy Week. Have driven 24-fm. level north 3.4-10 ft.; metal disappearing to the floor, with an inelination to the north-east. Have driven 12-fm. level north 1.7-10 ft.; breast showing more orless metal of a good grade; ground hard. All parts of mine in good order, exeepting San Juan winze (ventilation), whieh will need new timbers in the eoming week. From indieations my report next week will be more favourable.—H. C. CLOUD.

ANDALUSIAN (7th May).—The Barita adit is again going through slate, and carries half a metre of baryta, now and then showing a little galena. We are 20 metres still from the spot where the lode shows most baryta at the surface. I have decided to let the adit reach that spot before making a trial in depth, particularly as the aspect of the lode changes from one day to another. The Panadera adit is now 71 metres long. I think we might eontinue it till it is 100 metres, and then cross-cut east and west. The adit carries decomposed shale, coloured by iron oxydes, quartzite, and a little iron pyrites. Saturno lode: Nos. 1, 2, 3, and 4 shafts are stopped on account of the water. If between this and the 15th we have no very heavy rains we can resume our workings here, as the water is slowly going down of its own accord. We are driving an adit east of river; this has begun to get into rather harder ground, whieh is better for ore. We have about 500 quintals of galena ready for sale, and are preparing 100 quintals of carbonates. —HASELDEN.

ASIA MINOR (20th April.)—60 men driving; value of ends per fm., 6 tons; 180 men stoping; value of stopes per fm., 14 tons 5 ewt.; four men sinking, six men rising, 151 trammers, labourers, &c. Petri end west in air shaft: The lode in the forebreast of this drive is about 2 ft. wide, and at times is producing stones of silver-lead ore. The ground is favourable for opening, and the men are making good progress. The lode in the end east from winze under this level, as reported last week, maintains its splendid value; worth 3 tons of silver-lead ore per fm. The stopes continue to yield good quality ore stuff. Number of men employed at the dressing-floors is 74. Production to May 3rd, 3,198 tons crushed; yielded 406 tons rich silver-lead ore. Corresponding period last year, 3,390 tons crushed, yielded 404 tons.

BRATSBERG (6th May).—Mining report for week ending 4th May:—Hoffnung Mine: No. 2 adit level is worth about ⅓ ton per fm.: the rise in the back of this level is worth 1½ tons per fm. No. 3 adit level is producing about 1 ton per fm., and looking well. No. 4 level is worth 1 ton per fm., and No. 5 level east about ½ ton per fm. No change to notice at either the mid level at Murehisou's or the shallow workings. Johannes Mine: As intimated in last report we are now driving east and west on Howard lode, and during the past week about 3 metres have been driveu, and the lode maintains fully the value last stated, namely, ¾ ton per fm. Næsmark Mine: About 2 metres south and 1 metre north have been driven here during the past week. The south level is in a very disturbed pieee of ground, and so we have deeided to stop driving here, and put the whole of the men on the north level, where the lode is well formed and encouraging, although at present valueless. Surface work and remarks: The earting of the ore to Bandakslid has not got into its usual rate of speed on account of the roads. The company's road is for the season excelleut, but the state of the public road is very bad indeed.—J. D. HOLMAN.

CHONTALES.—The directors have received advices from their manager *via* Corinto and Panama, dated 4th April, who reports: During the past month the Consuelito main level was driven 13 varas, and rise put up, 6 varas; the ground in the end eontinues a little better for progress, and lode now 1 ft. wide, but not yet producing quartz of any value. The eost at the mines for March was 13*l*. Had it not been for the great length of hard ground we should have proved Consuelito without making a call.

COLAR CENTRAL (23rd April).—Low's engine shaft, 200-ft. east cross-eut: This has been advaneed 10 ft., making a total of 215 ft. 6 ins.: the ground continues much the same, but the water has again dimiuished eonsiderably; driven by one rock-drill. South drive from east cross-cut has been put in another 9 ft., making a total length of 46 ft. 6 ins. There is nothing promising here so far, though we still meet occasional small stringers of quartz; the ground is of the same character as in the main cross-cuts, but I purpose runniug this experimental drive for another week or two at least; driven by one rock-drill. The 200-ft. west cross-cut has been driven 12 ft., making a total of 220 ft. from main shaft. There is no change to report; as we get into the hill the ground seems, if anything, of even firmer eharacter and very dry; driven by one rock-drill. Underlay shaft: 171-ft. level east has beeu driven 7 ft. by haud labour; total length, 95½ ft. There is a slight change of ground here, and we eame across a little quartz very much mixed up with the eountry, and carrying a little pyrites, which we have not seen before; there is, however, no gold in the stone. East bonndary shaft: West cross-eut has been driven by hand-labour 13 ft.; total length, 46 ft. The country seems to be getting harder here, and no indications to note. East cross-cut has been advaneed 26½ ft., also by hand-labour; total length, 52½ ft. The only thing we have come upon here is a considerable iucrease in the water. Trial shaft has been sunk by hand-labour 12 ft. on the underlay; total depth, 45½ ft. The quartz here still continues to hold, and averages about 2½ ft. in size. It is of a rather more flinty charaeter than the quartz usually met with in the district, and at present is non-auriferous. We shall, however, continue to sink on it, as the reef is stronger at this depth than I have seen in any other of our trial shafts at a similar depth. Air pipes to underlay shaft are just being completed, and I hope to have a rock-drill working there by the end of eurrent week.—A. S. B. OAKLEY.

CORTEZ (27th April).—Work on the mines for week ending this date has been as follows:—Boss tunnel: Advanced 28 ft. Main tunuel: East drift advanced 8 ft. Center: Stoped 1 ton of 80 ozs. ore. Middle tunnel: West drift stoped 22 tons of 50 ozs. ore. North-east upraise: Stoped 81 tons of 55 ozs. ore. North-west upraise: Stoped 45 tons of 130 ozs. ore; east drift advanced 7 ft. Developmeut tunnel: Advanced 33 ft. Ore shipped to mill, 112 tons; ore treated at mill, 155 tons, averaging 83 ozs. per ton; shipped 13,000 ozs. silver. —WELSH.

DENVER (11th May).—I am glad to be able to say that the 200 west drift continues to present very favourable indications; in the past two days we have found some stones of smelting ore in the vein, and the general make up of the vein is most eucouraging. The 1,050 cross-cut continues to advance with fair speed. All other points are unchanged.—A. RICKARD.

DEVALA-MOYAR (22nd April.)—The footwall portiou of the lode in which we are sinking below the deep tunnel produces about 7 per eent. of pyrites. In the tunuel east of winze it is 4 ft. wide, divided in the middle with 1 ft. of blue rock, and will produce 6 per cent. of pyrites. The end of the tunnel west of cross-cut is in hard blue gneiss, mixed with quartz and pyrites, about 4 per cent. of the latter. In the stopes bottom of deep tunuel the lode is 5 ft., and contains 10 per eent. of pyrites. In the winze below the 48 the lode will yield 35 to 40 per eent. of pyrites. Assays this week:—Pyrites winze, 3 dwts. 11 grs.: stopes bottom of deep tunnel, 2 dwts. 14 grs.; tuunel driving east, 5 dwts. 6 grs.; west of eross-cnt, 2 dwts. 14 grs.; winze bottom of 48, 1 oz. 3 dwts. 11 grs.—J. WILLIAMS.

EDWIN BRAY.—Extract from the *Goldfields News*. "Barberton, April 13th, 1889. Edwin Bray: Work on this property is being pushed forward in a very energetic and workmanlike manner, under the supervision of the new manager, Mr. McDonald. The survey for the aerial tram is almost completed, and an inspection of the several drives proves the existence of an immense body of gold-bearing ore, pieces of which we knocked off indiscriminately during our visit to the property on Wednesday. Nearly every specimen bore visible gold, and invariably panned splendidly."

ETHERIDGE UNITED (14th March).—During the past fortnight at the Canadian West the reef has been taken out east of shaft over the 139-ft. level, whieh is 114 ft. in length, 7 ft. high by 6 ft. Having 200 tons at the mine ready for crushing, I shall commence to treat it next week; some of the stone looks very well, whilst other portions do not look so promising. This stone greatly resembles that of the Day Dawn, which I examined on my way through Charters Towers, last crushing of which yielded 1,545 ozs. 5 dwts. for 1,500 tons, the previous fortnight's erushing going 965 ozs. for 980 tons stone; estimated value, 3,281*l*. One feature I am pleased to observe and that is, that upon the footwall on which the reef lies, there is from 2 to 6 ins. of plumbago, intermixed with black slate, which feature I saw on the Towers, also in Gympie, where I know by experienee it is a sign of heavy gold. During the time that the 200 tons is going through the mill, I shall have the stone at the mine judiciously assorted, as there is 1 ft. 6 ins. of good reef, the remaining 4 ft. is very mixed; I shall then be able to see whether it is better to continue picking or put all through as quartz. In any case, it all has to eome out of the mine. For the last fortnight I have had to put in a eonsiderable amount of timber, and during the next I shall be busy putting shoots in so as to economise labour, wages being so high. Re Lord Nelson: The brown-stone in the above claim is, I think, going to pay well, the last crushing of 180 tons yielded 152 ozs. 13 dwts.; and the reef is looking well, being 2 ft. to 4 ft. in thickness. For the last fortuight stoping has been carried out to the extent of 25 ft., 12 ft. high and 4 ft. wide.

FRONTINO AND BOLIVIA.—The directors have received advices from the mines, dated 23rd of March and 8th of April; also a letter from Messrs. Restrepo, dated 12th Mareh, 1889. The statement of profit and loss for the month of Mareh is as follows, viz.: 507 tons from general mines produced 487 ozs.: tributers' gold, 236 ozs.; total 723 ozs. Also 2,240 lbs. of sulphurets containing 58 ozs. of bullion. Estimated value of the gold and sulphurets, 1,615*l*. 10s. 10d.; eost at the mines, Medellin, and in London, 1,969*l*. 12s. 6d.; paid for gold bought of tributers, 361*l*. 13s. 4d.; total, 2,331*l*. 5s. 10d. Estimated excess of expenditure, 715*l*. 15s. The dry weather continued during nearly the whole of the month. Towards its close a few showers fell, but these were not sufficient to affect the returns, which show a further reduction of 105 tons. In his letter of 8th April Mr. Hodge says: "We had a few showers, but they again fell off. While writing this the sky looks full of rain. The rainy season is elose at hand. May it come, and continue. If so, I am sure we shall, all round, have good eause to be satisfied." In his reports of 14th January and 8th February, Mr. Hodge stated that he had stopped all points in Salada Mine, except the works neeessary to prove the ground at the junction of the main and flat lodes, as the best of such points would not pay cost. He now reports that there is nothing of value at the junction, and has stopped the Salada Mine altogether. The expense of the explorations for the month are included in the month's cost, without any returns against it. This outlay, which has been considerable, will now cease. At Sileneio the lode in the 285, which had become disturbed, had settled again, and in the latest letter the lode in the 220 is stated to have improved, and to be nearly equal in quality to that at the 285. At Córdoba the explorations which have lately been going on seem to be on the eve of giving good results, but the mill is standing still for want of water. The mines Córdoba and Rosario are now amalgamated.

FRYERSCREEK.—The directors of this company have received the following advices, dated Fryerstown, April 4th.—During the past fortnight we have extended the 520-ft. level south a further distance of 20 ft., making 132 ft. from cross-cut. We have just met with a slide in the footwall dipping west and north very fast. From the hanging-wall of the lode to the slide is about 4 ft., full of leaders from 1 in. to 4 ins. in thickness, with black slate and small bars of sandstone. This is the best indication of quartz bearing country that we have met with on this lode for some time. I cannot say much about it as yet as we have not seen any gold in the stone. We are just on the point of the splice making as we go south; four men in this drive. We have not completed the repairing of the 420-ft. level as yet. We have six sets of timber more to put up in the drive to be put up to the face. After this is done I shall commence to rise south of the rise now up to the 320-ft. level. We shall have about 30 ft. to rise to get up to a block of stone passed through in No. 4 rise some eight years ago, whieh has not been worked in your mine. Stone in the hanging-wall. No. 4 rise has collapsed. We have also extended the 260-ft. level north 6 ft. through very hard ground, but no quartz as yet. I thought we should have met with the slide about this point, but there is no appearance of it as yet; total, 82 ft. from the winze. The 320-ft. level, western line of reef: In rising back of this level we have met with another splice of stone, but we have to stop this rise for a time as we have not sufficient air to go up any further with the rise. Rise now up 40 ft. from the back of the level. We are still stoping the back of this.

level further south towards the rise. We see gold in breaking, but very fiue. I do not thiuk it is quite as good as the last lot we crushed. We are crushing this week. Shall clean up before the departure of the next mail. We shall crush about 50 tons. Since my last I have retorted the silver which yielded 17 dwts. of gold. I have also smelted the gold from the last 42 tons crushed with the 17 dwts. we had in hand for some time. Result, 10 ozs. 5 dwts. melted gold. Mine looking favourable. Machiuery all in good order, and working well.

GARFIELD (27th April).—The mill was started again on morning of 25th inst., and has since been doing good duty. The directors have received the following cablegram showing the results for the month of April: Production, $7,500; revenue expenses, $7,115; capital and development expenditure, $1,639; tons crushed, $200; five stamps working 23 days.—HOOPER.

INDIAN CONSOLIDATED.—Mr. R. B. Johnston, the mill manager, reports that from the 1st to the 13th April 263 tons of quartz were crushed, which yielded 52 ozs. 5 dwts. of gold.

— (22nd April).—Colar section—No. 5 shaft: This shaft has been sunk for two weeks 8 ft. 3 ins., or 59 ft. 8 ins. below the 360-ft. levels. At present in the bottom we have small veins of quartz, indicative of the near approach of the lode, but nothing to value. The 360-ft. level driving south of shaft has been extended 1 ft., or 55 ft. 2 ins. from shaft; the ground here is very hard indeed, and coolies can make very little progress with the driving; there is no lode at present to notice. The 360-ft. level driving north of shaft has been extended 1 ft., or 62 ft. 4 ins. from shaft; the lode is 2 ft. wide; low-grade stone assays 2 dwts. 21 grs. The stope in the bottom of the 300 south continues to produce low-grade stone; assays 6 dwts. 12 grs.; lode from 9 ins. to 2 ft. wide. The stope in the bottom of the 300 north continues to produce stone of same quality; assays 3 dwts. 5 grs.; lode throughout fully 2 ft. wide. We have again commenced to drive the 300 north and south levels with a full gang of coolies; lode of no value in either of the drives. The rise and stope in the back of the 300 south continues much the same as for some time past; lode about 9 ins. wide; assays 1 dwt. 7 grs. We have re-commenced the 230 north and south drives by a full gang of coolies; nothing in the drives at present to value. The stope in the bottom of the 156 north level continues in a lode 3 ft. wide, low grade stone; assays 4 dwts. 13 grs. Davey shaft: I did not discontinue the 170 north level as intended last week, as we cut into some better looking quartz; this has now disappeared, and the men are removed to the eastern lode; drove 17 ft., or 111 ft. 8 ins. from shaft. The 170-ft. cross-cut driving east of the 170-ft. level south has been extended 5 ft. 6 ins., or 50 ft. 6 ins. from the level; ground at present very hard, but expect to meet with the cast lode in 14 ft. further driving, when we shall again get into better ground. New south: This shaft has been sunk 2 ft., or 144 ft. 2 ins. from surface; ground continues the same here, gneiss. Air shaft: We have timbered this shaft 20 ft., and completed cutting it down to 60 ft. The timbermen will commence to timber again to-morrow; work going on very satisfactorily. Trial shaft: This shaft has been sunk 10 ft. in the bottom or footwall part; we have a vein of quartz 9 ft. wide, which pans a little gold.—T. R. DAVEY.

ISLAND BLOCK.—The following is an extract from a letter from the manager, dated 2nd April:—The pipes are arriving in splendid order, and are the envy of every mining man who sees them. The boat is on the river and will be on the rope I hope in a few days. The water rights are now doubly secured, and I am calling tenders for the race and for the cartage of the pipes. I have 8 men on the stone embankment at the Fruid. I hope next mail to report the arrival of the main portion of the English order. I consider that everything is very favourable for the Company, and hope to be able to start at the end of July with the crushing.

JOSEPHINE.—Extract from superintendent's report for week ending April 20th:—The upraise at east end of 300-ft. level has been sent up 16 ft., and passed through the vein. Winze No. 1 has been sunk 12 ft.; total depth, 33 ft.; the winze passed through the vein at 28 ft. Winze No. 2 has been started 96 ft. east of No. 1, and shows a fine ore body; as also does No. 1.

— Extract from superintendent's letter, dated April 20th:—Winze No. 1: 33 ft. cut through the vein at 28 ft. Winze No. 2: 96 ft. east of No. 1 has been started, and looks well; the vein in both winzes is steady, and carries about 3 ft. of very good quartz. We still have considerable ground to stope out above the 300, but it now becomes necessary to at once commence drifting east on the 400 to connect with the winzes. From the appearance of the quartz in winze No. 1 we shall have a long drift in good quartz on the 400 east, same as we have had in the 300 east. East of the shaft on the surface there is a tunnel in the vein 70 ft. I have been doing some prospecting here lately, and find what I take to be the top of another ore shoot; the quartz is only a few inches wide, but of the same character as the top of the other two ore-shoots; there is a little gold in it, assaying $3.50 per ton, about same value as the other ore-shoots on the surface. In order to prospect for this ore-shoot at some depth I propose to at once start an upraise from the 220, and this upraise will prospect this ground, and would cut through any shoot of rock that may exist in this ground. Our greatest trouble will be for want of air. The air at the end of the 220 is bad, and for a long raise I may have to put in a fan, to be driven by the pump, and send air down by boxes or pipe; the expense of this, however, will be small, should it be necessary. It would be a great thing to find another ore-shoot above our present upper shoot, and much more profitable than finding another below our lower one.

MORUYA (7th May).—The secretary advises receipt of the following report from the mine:—The manager advises the shipment of 2 tons of ore per steamer, and expects now to make regular monthly shipments. Lode is now 4 ft. 6 ins. wide, and nearly all pyrites still looking well. When drives are opened I could keep the mill going with such a grand lode. I have every reason to believe that there are more rich lodes in the same hill if looked for.—T. BATT.

MYSORE REEFS (23rd April).—Fortnightly report.—Harvey's shaft: South of the east cross-cut at the 320-ft. level north 18 ft. have been driven in the band of quartz and arsenical pyrites, which makes a distance of 23 ft. south of cross-cut; a few branches of quartz are to be seen in the present breast of end, which show a little gold, but nothing to value. I shall continue this for a day or two more and then put the rock-drill to drive north of cross-cut. I have taken several samples from the south drivage, which show from 2 to 5 dwts. of gold a ton. Winze below the 250-ft. level north has been sunk 2 ft. 6 ins.; now 12 ft. 9 ins. below the level; the rock is much poorer, and worth now from 4 to 5 dwts. of gold a ton. Cross-cut west of plat at the 250-ft. level has been advanced 14 ft. 3 ins., now 193 ft. 9 ins. from plat; there is no change. Cross-cut east of the 250-ft. level north has been advanced by nine coolies 8 ft. 3 ins., now 175 ft. 6 ins. from level; the branch which I reported in my last has only a bearing of a few degrees north of east: I shall therefore drive on it for a few feet; a sample from it yesterday showed a little gold. Taylor's engine shaft has been sunk 5 ft. 6 ins., which makes a depth of 160 ft.; the rock is exceedingly hard, and we are constantly cutting down the air pipes and timber, which is a great hindrance. Taking advantage of the Easter holidays the engineer has overhauled the air compressor and cleansed the boilers, so the work reported is for 10 days.—M. SCANTLEBURY.

NEW CALIFORNIA (May 4th): Herewith statement of accounts for March. The month's operations result in an output of 829.139 tons of ore, of the good average of $13.68 per ton, making $11,343.50 from the mine alone. From the mill we have a profit on custom business of $468.32, amounting together to a total income of $11,811.82. The expenditure for the month is $7,259.87, which leaves a balance to the credit of the company of $4,551.95, or say, 940*l*. I may add that the returns for April already in are sufficiently good to admit of my saying that we shall show about the same profit for that month, and I can see nothing in the condition of the mine at present to prevent equally good results for May and June.—A. RICKARD.

— Mine report for second half of April.—The 1,900-ft. level west, in 564 ft.: The lode in the drift has fallen off somewhat, but the stope has improved; the vein in the stope is 3½ ft. wide, of good-grade milling ore, yielding 8 tons per fm. The 1,900 east level, in 204 ft.: No work is being done at this point at present, the men having been engaged in cleaning out the 1,700 east level. The 1,800-ft. level west main lode, in 1,048 ft.: The lode has maintained its value; yielding 8 tons of ore per fm.; in the end, however, it is of a little less value. The lode in the stopes is holding out very satisfactorily, and continues to yield ore of good grade, the last shipment of smelting ore having netted the best result of any preceding lots; returns showing an assay of—gold, 6.50 ozs. per ton; silver, 20.3 ozs. per ton. The milling ore is correspondingly rich. The 1,800-ft. level, north spur: The ore for a width of 2 ft. is of excellent grade. The other parts of the mine remain very much the same as when the last report was sent forward.

Telegram, May 15th:—"April output, 615 tons; yield, 710 ozs.; value, 2,500*l*.; mining costs, 1,200*l*.; expenditure on mine development and exploration, 200*l*. I will remit by next mail $10,000 on account of profit up to the present."—RICKARD.

NEW EBERHARDT.—The mine manager reports, under date 27th April, as follows:—Number of tons of high-grade ore assorted and placed on the ore dump at mine for the week 15 tons; the assay value of same, $56.14 per ton. We have also taken out, assorted and placed on the ore dump, 4 tons of ore; the assay value of same, $37 per ton, making a total of 19 tons. The general appearance of the south workings is certainly more favourable than it has been for some time, as will be seen by our output for the week past, namely, 19 tons; this amount I hope to be able to increase the coming week. Our present showing in the south workings are quite favourable, and I am feeling very hopeful of finding more ore. We are shipping the usual amount of ore from the mine, namely, about 9 tons per day, and we now have on our mill dump 305 tons of ore. Mill: The mill is running steadily, and I am pleased to say is doing good work. We are retorting to-day, and to morrow will melt, and Monday evening, 29th April, we shall, all being well, ship our first bars for the season. I feel quite hopeful of doing even better this season with our tailings than I did last.

NEW EMMA (27th April).—Below please find statements of work carried on this mine for the week ending to-day:—Level No. 1 south-easterly advanced 9 ft.; total, 267 ft. We still have several small seams of oxidized iron, and the rock continues strongly mineral stained. Two men employed. Raise from No. 1 extended 1 ft.; total, 54 ft. Galena seam continues narrow. Rock is also much iron stained. Air continues close, therefore but one man employed. Drift southerly towards footwall from No. 1 advanced 8 ft.; total, 60 ft. Rock continues hard; seam narrow, although the indications tend to an improvement as we advance. Level No. 1 north-westerly: We are still raising and drifting through the old works from this level, opening up and taking out ore for the mill; besides have mined some 2 tons of crude ore, making a total (estimated) of about 25 tons crude ore now on hand ready for shipment to market soon as road is open. Have worked six men full time in this level. Level No. 3 south-easterly advanced 13 ft.; total, 447 ft. Rock continues seamy, and also much stained. Four men employed. Level No. 4 north-westerly advanced 15 ft.; total, 65 ft. This level is improving; seam has widened to 20 ins., filled with same material as mentioned in former letters, and is showing a little more ore, but as yet not enough to save. Four men employed. During the week I have also been clearing the snow from around the concentrating mill preparatory to starting, and hope to be able to start in a few days.—H. C. WALLACE.

NEW LA PLATA.—The results for April month, as cabled by the manager, are as follows:—"Net royalties: Mine, $710; smelter, $540; profit, $375 Low-grade ore concentrating mill delayed owing to the severity of the weather; have had a heavy fall of snow." N.B. —Including rental of smelting works the profit for the month would be 200*l*.

NINE REEFS (22nd April).—Mining operations:—Malleson lode, Morrison's shaft: Sinking under the 185-ft. level has advanced 4 ft., total depth, 60 ft.: the part of the vein carried is about 4 ft. wide; the assay, 3 dwts. 22 grs. gold per ton. The 310-ft. level north of Baynard shaft driven 6 ft., total distance from shaft, 76 ft. 6 ins.; vein, 3 ft. wide; assay, 8 dwts. 11 grs. gold per ton. Stopes:—No. 1 stope in the back of the 185-ft. level north of main shaft: Vein, 6 ft. wide; assay, 13 dwts. 1 gr. gold per ton. No. 2 stope in the back of the 185-ft. level north of main shaft: Vein, 6 ft. wide: assay, 5 dwts. 5 grs. gold per ton. No. 3 stope in the bottom of the 185-ft. level south of Baynard shaft: Vein, 4 ft. wide; assay, 13 dwts. 1 gr. gold per ton. No. 4 stope in the bottom of the 185-ft. level south of main shaft: Vein, 4 ft. 6 ins. wide; assay, 10 dwts. 10 grs. gold per ton. No. 5 stope in the bottom of the 185-ft. level north of main shaft: Vein, 6 ft. wide; assay, 2 ozs. 5 dwts. 17 grs. gold per ton. No. 6 stope (1st part) in the back of the 310-ft. level north of main shaft: Vein, 5 ft. wide; assay, 13 ozs. 1 dwt. 8 grs. gold per ton. No. 6 stope (2nd part) in the back of the 310-ft. level north of main shaft: Vein, 5 ft. wide; assay, 8 dwts. 11 grs. gold per ton. Champion lode

Vyvyan shaft: 145-ft. level cross-cut east: 70 ft. south of Vyvyan shaft has advanced 1 ft. 6 ins.; a total of 22 ft.; no vein interseeted. Winze in the bottom of 145-ft. level, south of Vyvyan shaft, has advaneed 2 ft., a total depth of 2 ft. The vein has not been taken down, nor has a sample been assayed. The men employed in the cross-cut were engaged in the sinking of this winze. Stopes north end of south stope, in the back of 145-ft. level, south of Vyvyan shaft: Vein, 2 ft. wide; assay, 6 dwts. 12 grs. gold per ton. South end of the south stope in back of the 145-ft. level, south of Vyvyan shaft: Vein, 2 ft. wide; assay, 5 dwts. 21 grs. gold per ton. North stope in back of the 145-ft. level north of Vyvyan shaft: Vein, 1 ft. 6 ins. wide; assay, 10 dwts. 10 grs. gold per ton. New shaft: Sinking from surface has advanced 4 ft.; total depth being 74 ft.; vein, 2 ft. wide; assay, 4 dwts. 13 grs. gold per ton. In addition to the above work we are also engaged in retimbering a shaft about 420 ft. south of Baynard shaft, the object being to try the Malleson and Parallel vein at this point. Two samples of the vein matter, having at surface obtained from the works in connection with this shaft, assay 5 dwts. 6 grs. gold, and 6 dwts. 12 grs. gold per ton. Milling: The assay of the rock put through the stamps has been as follows, viz., battery, 8 dwts. 11 grs. gold per ton; tailings, 2 dwts. 14 grs. gold per ton. The mill continues to run well. You will be pleased at the assay of first part of the stope in the back of the 310 north of main shaft, viz., 13 ozs. 1 dwt. 8 grs. gold per ton. The reason for this assay is that there is for a short length a small seam of visible gold in the vein.—Capt. BENNETTS.

NORTH MEXICAN (25th April).—To-day we started to work taking out water and refuse in the shaft. I expect to begin sinking again next Monday. The whim we have now is working well. The water is running through the pipe-line. Hope from now I can continue sinking San Nicolas without stopping.—R. S. CARLISLE.

NUNDYDROOG (23rd April).—Mining operations: The west cross-cut in the 370 north of Webb's shaft has been driven a total distance of 41 ft. 6 ins.: the rock continues to be hard, and there is no appearance of a reef. Driving north in the 370 at Webb's shaft: This is north of the point where the cross-cut was started, and was driven in the week 2 ft. 2 ins.: there is a rib of quartz 2 ft. wide, worth by assay 3 dwts. of gold per ton; though it is small we are glad to see it—it may lead to something better after a while. Webb's shaft is down 414 ft. 3 ins.; the rock is barren. Taylor's shaft is down 368 ft. 11 ins.; the rock continues to be very hard and barren. The new shaft near the northern boundary was sunk 3 ft., total 43 ft.; there is a large influx of water or the speed would have been better. The stopes are looking much as usual. The one over the 370 is in a reef 3 ft. wide, assaying 3 ozs. 5 dwts. 6 grs. The intermediate is in a lode 2 ft. wide, assaying 5 dwts. 12 grs. The stope in the bottom of the 230 is in a reef 1 ft. 8 ins. wide, assaying 2 ozs. 9 dwts. The middle level is in a lode 1 ft. 8 ins. wide, assaying 1 oz. 13 dwts. 18 grs. The stope in the bottom of the 166 contains a lode 1 ft. 6 ins. wide, assaying 1 oz. 7 dwts. 6 grs. The rise in the back of the 230 north of Webb's shaft is in quartz 18 ins. wide, assaying 16 dwts. 12 grs. per ton. Assay of weekly samples from the mill: Rough quartz, 3 ozs. 3 dwts. 6 grs.; smalls, 2 ozs. 9 dwts.—B. D. PLUMMER.

OSCAR (9th May).—No. 3 lode: The men have made very good progress this week, having driven 9 ft.; the lode is nearly all quartz, of a very promising appearance, but at present only assaying 2 dwts. to 2½ dwts. of gold to the ton. Daw's lode: Fair progress has been made this week in levels, shaft and stopes. In shaft and bottom levels there is no alteration to note. The stopes are producing a little more quartz than last month, while the 370-ft. level south has considerably improved. Other places no alteration.—J. DAW, jun.

POTOSI (18th April).—New lode—No. 3 Tunnel: The total length of this is now 1 4 ft., and the lode in the forebreast is 1½ ft. wide of solid good-looking quartz. Since last writing the lode here has made larger than usual, having varied in width from 2½ ft. to 3 ft. with regular and well-formed walls; the ground, too, having become a little more favourable for driving, we hope to be able to show better progress here during the coming fortnight. No. 2 New Lode: The driving of the deep tunnel north continues to progress rapidly; 44 ft. having been driven therein since my last. The lode has varied in width from 2 ft. to 2½ ft. of solid quartz which is improving in value, there being now more visible gold in it than we have before seen. To all appearance we are just approaching the intersection of this with the east and west lode, where, as was the case in the upper workings, the most productive part of the lode was found to occur. Potosi Viejo—Zeiler's shaft: Progress has been slightly retarded in sinking this since last advised on account of foul air; 10 ft. have, however, been sunk, and this makes the present depth of same below the bottom level 100 ft., and I am pleased to say the lode hereat continues to open up most favourably. It is now fully 3½ ft. wide of solid good milling quartz showing colour throughout. The lode in both bottom levels—east and west—continues of the same size and value as when last reported. The men have been taken therefrom to sink two winzes, one on either side of the shaft. The winze sinking below this, the bottom, level on the western margin, about 88 ft. from the shaft, is already down 7 ft. below the level in a very good lode of quartz, of a thickness of over 2½ ft. The winze sinking below this level on the opposite side of the shaft (which is in from the same about 42 ft.) is already down 9 ft. in a lode 2½ ft. wide of good middling quartz. Western shaft: Having hung windlass and temporarily secured this, we have not been able to do anything in the bottom of the same, owing to the cold damp therein, which both a fan-machine and windsail have so far failed to dislodge. In the course of a day or two we hope to be able to resume operations at this shaft, with the view of effecting an early communication of same with old mine. Socorro lode: The driving of the deep tunnel south has been resumed since my last, and same has now been exteuded beyond the shaft in that direction 124 ft. We eontiuued to open up a very good lode at this point, which varies in width from 2½ ft. to 3 ft. of quartz, the like of which we have not before seen this lode produce. As soon as this level has advanced a little further we shall commence to sink below this level, and I have no fear or doubt as to continuing to open up a valuable lode in depth. The indications, I am pleased to say, are all that can be desired.—PRYOR.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending 21st April:—Dunderberg: Amount of ore shipped during the week, 78 tons; there is little change to note except a slight improvement above the 600 level. Eagles drift: The ground in the upraise has been better for the last week, and we have raised 9 ft., making a total of 194 ft. raised. We have 20 tributers and six contractors at work. Lord Byron: We have shipped 30 tons from this mine during the week. We have 12 tributers at work here. Bullwhacker: We have shipped 30 tons of low grade ore during the week. We have three tributers at work here.

— Telegram received to-day (14th May) from Eureka:—"56 tons tribute ore shipped; 45 tons tribute ore sold for smelting, producing to company $790."

SOUTH-EAST MYSORE.—The secretary writes:—Owing to the change in management no detailed report has been received by this mail, but the board has been promised a full report by the next.

VICTORY.—Under date April 2nd the underground captain writes as follows:—I am still continuing on with the work as fast as possible. East winze I commenced to drive out, and have driven a distance of 18 ft. West winze: I have sunk a further depth of 7 ft., making a total of 43 ft. Cantara, or air shaft: I have sunk a further distance of 5 ft.; total, 40 ft. I have commenced two drives, one south to cut the Cantara reef, and have driven a distance of 14 ft. The ground looks promising. I have also started another drive north for air to my winze, and have driven a distance of 6 ft. from the bottom of this Cantara shaft. The prospecting drive I have driven 21 ft.; total 45.

— Mr. Russell, under same date, confirms above report of work done, and says:—Cantara shaft: We are driving two drifts north and west to catch the vein of quartz which is dipping that way, and also to air the other workings. No. 3 east winze: Drift on the lode in good quartz. The stone in the tunnel still continues to give off good gold.

— Mr. Nicholls reports as follows, under date 16th April:—No. 1 east winze has been driven a further distance of 20 ft., making a total distance of 33 ft. No. 2 west winze I intend sinking 18 ft. lower, and then driving out a level which will give me over 30 ft. of stoping ground between this winze and the east winze. No. 3 Cantara, south drive, I have driven a further distance of 7 ft.; total, 21 ft.; but have not struck the rich leader yet, but I shall try and follow it higher up the shaft as soon as I have got air in to the workings below. Cantara drive north driven 20 ft.; total, 26 ft. This is the drive that will cut the reef and give me air round my workings. The additional machinery required for the mine has been purchased, and is on its way out.

WEST ARGENTINE.—The Nueva Carolina adit advanced 37 ft.; total, 196 ft. 11 ins. The reef reported in my last gave 3 dwts. 1 gr. per ton by mill trial, and 5 dwts. 21 grs. by assay. This result is highly satisfactory, as it points to much better ore in the cross-course. For the last 30 ft. several branches of reef matter, carrying galena and pyrites, have been cut, the whole country seems in fact metal-bearing. It is not thought that any of the reefs will prove worth working on the level east, but the flat courses and the metaliferous country ought to feed the cross-courses on which our main workings will be driven. It is hoped to cable favourable news in May.

THE PORT DARWIN GOLD MINING CO., LIMITED.

WE are informed by the secretary that a circular has been forwarded to the shareholders, of which the following is a *resumé*:—The directors have somewhat delayed forwarding another circular to the shareholders with a view of having some definite information to put before them. Mr. Welstead was heard from *en route* at Adelaide, stating that he had seen a gentleman there, who is a large shareholder, and well acquainted with the company's property, and he felt satisfied that it was "an absolute necessity for someone to come out." It is very gratifying to the directors to find their decision on this point so early, and so authoritatively proved. The board are much gratified at the energy and promptitude already exhibited by Mr. Welstead, and consider it a good augury as to his future proceedings and success. With regard to the mine, the conduct of those in charge, who constantly absented themselves from the company's property, has not given it the chance it should have had by being looked after in a proper and business-like manner. The last cablegram received indicates that Mr. Welstead is pushing on vigorously, and advices may at any time be received as to the results of working. The directors would remind shareholders, as stated in former circulars, that they will not be altogether dependent upon the existing property for a return upon their capital. Some shareholders seem to think the board have been somewhat tardy in communicating information. The present board only took office less than a year ago, and since that time have issued four circulars, besides inserting numerous notices in the public Press, and they think with the explanation given in the circular, shareholders must admit every information has been placed in their possession at the earliest date. The notices in the public Press both of Australia and this country, with reference to the undoubted riches of the district, are continual, and show that nothing is wanted but an honest, energetic representative on the spot to produce for this company good results, and the board are gratified that one of their own number, whom they consider thoroughly qualified, was willing to undertake this work, and trust the shareholders will support his action. If the shareholders should be called upon to contribute further funds for the carrying on of the works, it will be on the estimates and statements of one of their own directors, fully acquainted with all that the shareholders have gone through, and certain, as having a large stake in the company, to avoid any undue pressure on the shareholders, without a reasonable prospect of success.

RIO TINTO.—The company invite holders of share warrants to bearer to present coupon No. 21, for the dividend of 14s. per share, to be paid on the 3rd June.

NICHOLSON'S PATENT, LIMITED.—Letters of allotment and regret were posted to the subscribers to the stock of Nicholson's Patent, Limited, on May 10th.

THE SALT STRIKE.—It is understood that the minority of the workmen of the Salt Union in Cheshire, who had threatened to strike if certain demands made on their behalf were not complied with have determined to accept the terms offered by the directors. The difficulties had not been created by the union itself, but had arisen out of the circumstances in which the men had worked in the days of excessive competition prior to the formation of the union, which the directors have seen their way to modify to the advantage of both parties.

REPORTS OF MEETINGS.

THE ANTIOQUIA (FRONTINO) CO., LIMITED.

PROFIT OF £4,686—DEBTS CLEARED OFF BY THE PRODUCE OF THE MINE—£1,789 IN HAND—EXCELLENT PROSPECTS FOR THE CURRENT YEAR.

THE ordinary meeting of this company was held at the Offices, 184, Gresham House, Old Broad Street, on Tuesday, for the following purposes, viz. :—To receive the report of the directors and the audited statement of accounts of the company to 31st December, 1888 ; to elect directors ; to elect an auditor ; and for other business. Notice was also given that on the termination of the business an extraordinary general meeting of the company would be held for the purpose of considering, and if thought fit, passing a resolution for increasing the capital of the company by the amount of 25,000*l*., or such other sum as may be fixed by the meeting, by the issue of shares of 1*l*. each, such capital to carry a dividend of 10 per cent. per annum, payable out of the profits of the current year, and not to be cumulative ; or to have attached thereto such other preference or priority, or advantage as may be fixed by the said meeting.—Richard Donagan, Esq. (chairman of the company), presided.

Mr. J. JAMESON TRURAN (secretary) read the notice calling the meeting.

A GRATIFYING CHANGE IN THE COMPANY'S AFFAIRS.

The CHAIRMAN : The secretary has read the notice of both meetings, but we will take the ordinary meeting first. Therefore, I will ask whether you will have the report read, or whether you will take it as read. (Take it as read.) It will now become my duty to move the first resolution, which is :—"That the directors' report now presented be received and adopted, and that the accounts of the company to the 31st December, 1888, having been duly examined and audited, be, and they are hereby, passed and allowed." We come before you on the present occasion in a very much more jubilant mood than we have done at any time in the previous history of the company, because we are able to present better accounts for the year that is passed, and a better prospect for the year that is now current. In the accounts that are now furnished, the gold that is returned for the year is more than double that of the previous year, which is a very satisfactory thing, and a profit of 4,686*l*. was made by the mining operations, after allowing for depreciation on the stores and on the plant. (Cheers.) We have hitherto had a depreciation only on the plant, but now we can afford to write down the stores. This we have done, and it will be necessary to do so for some little time longer, because some of the stores are not of the value they were at one period.

DEBT TO THE BANKERS DISCHARGED.

An announcement, which you are aware of, I may as well make, and it is that the debt of Messrs. Restrepo, which has been an incubus for very many years, is entirely discharged. In addition, we have been able to pay off certain debts in England, and at the present moment the only creditors are the debenture-holders, the Frontino and Bolivia for its old debt, and the directors for their unpaid fees. In the accounts you will see that certain amounts are written back. They may, perhaps, require a few words of explanation. As to the directors' fees, they were reduced by half some years ago, and a sum of 500*l*. odd, written back for the reduction to that time. We have since been able to make a further reduction, and the fees, having been charged in former years according to the actual amount, the reduction comes in this year in reduction of the balance standing to the debit of profit and loss. The auditor had been for three years without his fees of 10 guineas per annum, and he generously accepted 15 guineas. Many of the ordinary creditors had given up their debt as lost. When they heard rumours of a chance of being paid, they were very sympathetic when it was proposed that a little reduction should be made, and we obtained a reduction to the extent of 77*l*. As to some of the debenture-holders, it will be in the recollection of the shareholders that a subscription was got up from a section of the debenture-holders for the purpose of getting certain debentures out of hands that were threatening all sorts of things unless they were paid. With that subscription we were able to pay them, and in some few instances were able to obtain a concession. It was rather hard that they should be paid principal and interest, and that their fellow debenture-holders should find money to pay them ; but we obtained a concession of 37*l*. As to the portion of Messrs. Restrepo's debt cancelled by the premium on exchange—Messrs. Restrepo found the money for the purpose of financing the company, and we were able to pay them back their debt from time to time. Exchange had considerably increased, which means that the dollar had gone down. The sterling value of the depreciated dollar, when we paid them, saved us 703*l*. 5s. 3d., which was a reduction from the time when we charged what we supposed we should have to pay them in full. The accounts used to be made up to April, but we changed them to December by bringing up accounts for one year and eight months, so that a year's interest on the debentures was charged against less than a year's return. On a subsequent occasion it was found we had charged too much debenture interest, and, therefore, we have brought it back again. The effect of all this—the profit that has been made, and the reductions we have made—is that the amount standing to the debit of profit and loss is no less than

4,870*l*. LESS THAN IT WAS AT THE CLOSE OF THE PREVIOUS YEAR,

which it is satisfactory, as far as it goes. The further effect was that we had 1,789*l*. cash in hand, against 101*l*. at the close of the previous year. The future of this company depends upon two things—first, that the ore continues to be productive below the adit ; and next, that we may be able to get at the lode effectually below adit, but we must be authorised to spend the money we have available to be able to do it. (Cheers.)

MINING DETAILS.

Since the directors' report was printed, further advices have been received from Mr. White giving the results for February, and detailing the state of the mine up to the 3rd of March. The results for February were, 415 tons produced 426 ozs. of gold ; average, 20½ dwts. ; value of gold, 1,130*l*. ; cost, 452*l*. ; profit, 678*l*. This, it will be seen, compares favourably with January, when the gold was 1,110*l*. ; cost, 619*l*. ; and profit, 491*l*. ; and the returns of these two months are the largest ever made by the company. The prospects at the mine were decidedly encouraging. Mr. White begins by an announcement which may prove very important. He says :—"The drift west under adit has now passed 2 fms. further west than the west of adit. I have resumed driving adit, although it carries no mineral, as it is only 16 ft. above the drift ; the pinch holds along in an almost horizontal direction, but the mineral in the end of drift shows signs for making upwards." Now, the exact meaning of this is perfectly clear, and it is this : That the drift west from the 1885 shaft is only 16 ft. below the adit ; that it has been driven 6 ft. further west than the adit ; that in the end the mineral shows signs of going upwards, and therefore, although the adit contains no mineral at present, and so far the pinch in the lode found in the adit is horizontal, Mr. White has resumed driving it, in the confident expectation that the indication of the lode going upwards in the drift only 16 ft. below the adit, and only 6 ft. ahead of it, will result in the lode being found in the adit a little further on—or, in other words, that the pinch hitherto found in the adit, but not in the drift, 16 ft. below, will shortly be found to open up in the adit itself.

IMPORTANT OPERATIONS.

If this should prove to be so, it is impossible to estimate its importance, for if the pinch opens out to the adit there is no reason why it should not do so above adit also. We, therefore, may find that we have a piece of lode going from the drift to the adit, which can be commanded by the hand pumps, and a piece of lode going from the adit upwards, which (if it is there) can, of course, be commanded without any pumps at all. And here, perhaps, I may be allowed to explain what a pinch is. Mr. White has sent us a little plan, showing as near as may be the pinch as it occurred in the Frontino Mine. This (showing an ingeniously-arranged plan) is the plan, but as it is very small I have had made an enlarged copy. Held in this way it shows what the lode originally must have been. A disturbance in the ground must have occurred, which is depicted by the movable piece on the plan, and which, when moved, shows how the lode was affected by the disturbance. Now you will see that there was the lode the old workers had in the hill-side. There is the pinch that we had in the adit, and there is the lode opening out again below the pinch, and which Mr. White by his 1885 shaft from adit, and his drifts from it, has been able to get at the fringe of, by which he has made the recent profits, by which he is now making profits, and by which he can make them for some little time longer, until the depth of his small workings renders it impossible to keep them free of water with hand pumps. This ingenious diagram makes it obvious that there is every encouragement now to sink the 1877 shaft deeper, and attack the lode by means of it in the bulk, and not on the mere edges of it, which is all Mr. White can do at present. Mr. White concludes his report as follows :—"The result of the working for the month of February is very satisfactory, and I hope that the shareholders will obtain the confidence necessary in the mine to allow of its being properly opened up and made a lasting mine." At a meeting of debenture-holders held on the 4th April last, I explained in detail what was required, and as the meeting was fully reported in the mining papers, and a copy was sent to each shareholder, I probably need not explain the matter at such length again, and I think that it will suffice to say that that in order, as Mr. White says, to make a lasting mine, the 1877 shaft must be deepened, and levels driven therefrom—for which object it would be necessary to apply the recent profits, and a portion of those to be made in the immediate future, to the execution of that work.

THE MACHINERY.

Mr. White, in his last letter, explains that the machinery used for getting the shaft down from the old adit to the present adit would not be suitable for getting such shaft down to the required depth, as there is already more water to cope with than there was then, and, moreover, that, to take off the water to the Fragua level, would interfere with the stamps, which, to work efficiently, would then have to be moved, involving not only the cost of removal, but also the permanently enhanced cost of conveying the mineral to the new site for stamps. Modifications of the plan will, therefore, have to be made. The different plan will take a little longer to execute, but it can, doubtless, if begun without delay, be completed before the present workings can get drowned out, so that if we can only get authority to use the money in that way there can be no reasonable doubt of the work being brought to an efficient issue, and well within the time that the life of the present workings will give us in which to do it. The plan will, moreover, enable us to go deeper than the other plan, 10 fms. at least. It will drain the 1877 shaft 19 fms. by gravitation, and when the water is brought in from below the stamps by means of the present adit (which, when driven, was specially constructed so as to be available as an inlet of water as well as an outlet) and left to run off by the adit now to be driven, the fall of water between the two adits will both in volume and depth be sufficient to drive, with clockwork regularity, pumping machinery of the requisite power to get the 1877 shaft down at least 70 fms. from the present adit—a depth sufficient to allow of a thorough opening up of the lode, and, assuming that the lode holds down as expected, to obtain ample returns for many years to come. (Cheers.)

HOW CREDITORS WILL BE DEALT WITH.

The chairman then proceeded to deal with the position of the debenture-holders and creditors of the company, and said if this money be used to pay the creditors the mine cannot be developed, and if used to develop the mine, the creditors must for a time stand on one side. The question then presented itself to us—will the debenture-holders and creditors take preference shares for their amounts? As to the debenture-holders, it is proposed to offer them the full amount of their principal and interest in preference shares. As to the Frontino Company's debt of 5,133*l*., which I have often explained—that company is willing to take 3,000*l*. in preference shares for the amount. 5,000*l*. was advanced in 1881, and no interest has been paid since, and I think if they take 3,000*l*. in preference shares they are acting well towards the company, but the reason is that they hold 10,000 shares (ordinary) and 1,500*l*. of debentures, which, of course, they wish to make valuable. As to the directors—they propose to take preference shares for their reduced over-due fees. The Antioquia Company will then stand as it has never stood before,

PERFECTLY FREE FROM DEBT,

with a profitable mine, and with a sum of money in hand sufficient to

develop that mine in the way I have explained. The amount of success we have achieved is mentioned at page 6 of the report. A few of the debenture-holders are still outstanding, but we hope by negotiation with them to obtain the assent of all, or at least nearly all, for two of them we believe to be dead and without executors. We cannot allow a few persons to interfere with what six-sevenths of the others desire, but we shall be sorry to take the course that is open to us under the Companies Act. We shall exhaust every means before we do so. In the Joint Stock Companies Act there is a clause, that any company that is being wound up, or is about to be wound up, can make an arrangement with its creditors, and that such arrangement is binding on the minority if two-thirds consent to carry it out, but it requires the very unpleasant process of winding-up, and it is also subject to an appeal to the Court of Chancery. We have an extraordinary meeting to increase the capital, so that we may have the preference shares for the purpose of discharging our liabilities in the way I have mentioned. This meeting will have to be confirmed, and we propose to fix the 5th of June for the purpose. The resolution to wind-up is still hanging over us, and it stands adjourned to that date. Certain persons threatened to wind up the company, and we took the wind out of their sails by stepping in before them. By that date we shall know exactly the position we are in with the debenture-holders. On June 5th we shall either be able to confirm the issue of these preference shares or wind up under the circumstances stated, but I hope that the moral effect of this meeting will bring all to see that their interests are identical with ours.

The Hon. Mr. Drummond seconded the motion.

Mr. Blyth (solicitor): Legally, the course the chairman has advised is practicable and in accordance with the Act.

There being no discussion the resolution was put and carried unanimously.

The Chairman proposed the re-election of the retiring directors, the Hon. C. F. Drummond and Mr. C. F. Lowe.

Sir George D. Harris seconded the motion, which was carried.

On the motion of Mr. Weldon, seconded by Dr. Holden, the auditor was re-elected, and the business of the ordinary meeting brought to a close.

THE SPECIAL MEETING.

The special meeting was then held at which the Chairman briefly recapitulated what he had said in regard to it in his opening speech. He proposed the following resolution :—

"That the capital of the company be increased by the sum of 25,000*l.* in 25,000 shares of 1*l*, which shall be entitled to a dividend of 10 per cent. per annum out of the profits of each year, but not to be cumulative, in priority to the ordinary shares of the company, and to a further dividend, rateably with the ordinary shares, whenever the profits of any one year shall after the setting aside, and carrying to a reserve fund of such sum as may be fixed by the company not exceeding 500*l.*, and the payment of 10 per cent. on the ordinary shares, be sufficient to allow a further dividend."

Dr. Holden seconded the motion, which was carried unanimously, and the confirmatory meeting was fixed for June 5th.

A cordial vote of thanks to the chairman closed the business.

LATEST REPORT.

The directors have received advices for the month of February dated 3rd March :—415 tons produced 426 ozs. ; average, 20½ dwts. ; value of the gold, 1,130*l.* 4s. 3d. ; cost at the mines, Medellin, and in London, less exchange on cost, 451*l.* 7s. 2d. ; estimated profit, 678*l.* 17s. 1d. Mr. J. H. White reports to the following effect :—Carmen Mine : We have little change to note. The drift west under adit has now passed 2 fms. further west than the end of adit, and carries good mineral. I have resumed driving adit, although it carries no mineral : as it is only 16 ft. above the drift the pinch holds along in an almost horizontal direction, but the mineral in the end of drift shows signs of making upwards. We are again sinking the 1885 shaft ; the lode is mixed up with broken rock-lime and clay ; between walls it is 7 ft. wide, and I have great hopes of meeting a strong body of ore of value, but as we are near the cross-course the lode will continue disturbed in depth. We followed the mineral in the eastern part of the shaft until it went out in the floor of the drift ; the mineral is of good quality in the floor of the drift. The drop in the produce per ton was owing to our having extracted more ore than usual from the shaft, where it was below average. Escobar workings : I am driving levels and re-opening the mine, but this section will not give any returns till we have erected the mill in the Hoyo Valley. The dry weather is doing harm to the farm, but so far the cattle have not suffered. The beans turned out well, and the maize we shall gather in free of cost.

SUTHERLAND REEF, LIMITED.

STATUTORY MEETING—MACHINERY ON THE WAY OUT TO THE PROPERTY—REPORTS EXPECTED IN AUGUST—AMPLE WORKING CAPITAL.

The statutory meeting of this company was held at Winchester House, Old Broad Street, on Wednesday, 15th May—W. G. S. Mockford, Esq., in the chair.

Mr. F. C. O'Neal (secretary) read the notice calling the meeting.

WHAT HAS BEEN DONE.

The Chairman : As you are aware, this is the statutory meeting which we are obliged to hold in accordance with the Companies Act. It is too soon for us to have anything really to communicate to you from the other side. The engineer is on his way to the mine. The whole of the equipment, including the battery, I expect by to-day is at Petersburg, which is about 150 miles from the mine, so that when the engineer arrives he will proceed straight to the property. It is expected about the 10th or 15th of June work will commence, and in August we ought to be in receipt of reports. If these reports are such as are anticipated by us here, and also by the whole of the Transvaal, they ought to be highly satisfactory to us all. I may mention that the company has a working capital of 20,000*l.*, which we consider quite ample to meet any contingency.

LARGE HOLDING OF THE BOARD.

It may also be satisfactory to you to know that the board hold more than one-fifth of the subscribed capital of the company. The vendor has not, and will not sell a single share until the mine is at work. I do not know that I have anything else to communicate to you, but if any of you desire to put any questions, I shall be happy to answer them. (Cheers.)

THE STOCK EXCHANGE QUOTATION.

A Shareholder : Why does not the company apply for a quotation ?

The Chairman : A settlement on the Stock Exchange is granted for the end of the month. There will be no application for a Stock Exchange quotation for some time, because we should not get it. Perhaps we shall do so next November or December, when I hope we shall be in receipt of gold, and be in a position to ask for a quotation. I may tell you that the large holding of the board is so exceptional that your interests and ours are identical. In fact, most of the board are simply directors, because they are large shareholders.

A Shareholder : Have you any private or other reports from the mine, according to which the statements that you would soon be able to pay 20 per cent. per month, or 240 per cent. per annum, will be realised ? (Laughter.) Have you any assays from the reef, and is the reef such a good one as the prospectus makes us believe ?

The Chairman ; We know that the engineer of the company went down and examined the reef in July last. The Harmony estate includes the great bulk of the Murchison range of goldfields. It has about 100 square miles of that range. That gold formation, for about 6 miles, runs through the Harmony property, and then on the Government land. They are working now about 22 miles from the Harmony estate eastward. They are unable to work on Harmony itself, because it is private property. On the Government land they can work. The Government land has the great drawback of having no water, and they have to carry from Harmony the whole of the water they require. The nearest property to Harmony is the French Bob, which will, I think, turn out to be on Harmony (the surveyors go down next month, and that point will be settled). If that is upon Harmony, perhaps the reef will fall into the Sutherland. If it is not in Harmony, we shall take the continuation. When the engineer was there, French Bob had gone down 70 ft., and was on a lode 3 ft. wide, which was giving 60 ozs. to the ton. These results are so sensational that I hardly like to name them, but

THERE IS THE HARD FACT.

They went down in October, and had a further examination, and I have reason to believe that we shall succeed greatly. The prospectus as drawn contained but one-fortieth of the statements put forward. These were so well substantiated that you could not discredit them, but we thought it advisable to reduce the figures as we have done.

A Shareholder : Has nothing been heard from the mine since the day the company took over the property with regard to alluvial ?

The Chairman : There is no alluvial. There is no statement of alluvial in the prospectus.

IT IS A QUARTZ MINE.

We went to allotment about the middle of February. The engineer arrived at the Cape on the 5th of this month, and should be well on his way to Petersburg. All this time is the rainy season, when it is impossible for anyone to make an examination. In fact, no examination is necessary, because it has been examined. The mill, I suppose, is on the way to Petersburg.

THEY ARE GOING TO WORK—NOT TO EXAMINE.

and the arrangement made with the company, which I think should be very satisfactory to the shareholders, is this : A section is marked out for them, but if, when the engineer goes down and the representative of the company, and they combine, upon examination, to work anything superior, they have the right of substitution. The intention is that this, the Pioneer Company shall be as successful as it is possible to make it.

Mr. Baird proposed a vote of thanks to the chairman, which was carried.

The Chairman : Gentlemen, I have to thank you, and I hope on the next occasion we shall have something more definite to tell you.

The proceedings then closed.

IMPERIAL RUSSIAN GOVERNMENT CONVERSION LOAN.

This is an issue of 49,120,783*l.* 12s. Four per Cent. Bonds of the Russian Railways, and will be applied exclusively to the conversion and repayment of the Five per Cent. Railway Loans of 1870, 1872, 1873, and 1884. Holders of the Five per Cent. Loans have the right to convert their bonds into the new Four per Cent. Stock, and any bonds not converted will be repaid at par before the end of the present year. In the conversion every 1,000*l.* of the Five per Cent. Bonds will be equivalent to 1,090*l.* 6s. 6d. nominal capital of the Four per Cent. Bonds. The new issue will be free from all Russian taxes. The coupons will be payable quarterly. A sinking fund will reimburse these bonds at par in 81 years by half-yearly drawings, the first of which will take place on 1st January, 1890. Applications must be made to Messrs. N. M. Rothschild and Sons.

THE WHITE LEAD CO., LIMITED.

Under this title a company has been formed to carry on the manufacture of white lead by a method patented by Mr. James B. Hannay. That an improvement in the manufacture of this article is desirable, both from a sanitary and an economical point of view, no one will doubt, and it is claimed for this process that both these ends are achieved. It is also stated that the lead manufactured by this process is superior as regards colour, covering power, and permanence to that manufactured by the ordinary method. The sum to be paid to the vendors for the patents, goodwill, leases, buildings, works, plant, machinery, &c., at Glasgow, and the rights of patents for the whole world is 150,000*l.*, payable 100,000*l.* in cash and 50,000*l.* in fully-paid up shares. The capital of the company is 200,000*l.*, in shares of 1*l.* each. Several testimonials and official reports accompany the prospectus. The list of applications will close on or before Monday next.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE current week was looked forward to with more or less apprehension in view of the conflicting movements of capital. The probabilities had been well canvassed, and the operation entered with comparative composure. The first large transaction, viz., the payment for the Treasury Bills, created surprise, because it appeared that the discount market was prepared to meet them without the assistance the Bank had provided. The onus, however, was only transferred. As discounters called in their loans, so the borrowers had to cover the amounts, which it was found they could only do by applying to the Bank, who, to facilitate the ease, granted loaus from day to day, and for two or three days as required, at Bank rate. The next surprise was that, small as the amouut of stock redeemed had proved, the money released was smaller still—estimated at little more than a million—due to "stops" and informalities as regards "Powers," &c., which all take time to clear. This fact making itself felt at the time of the settlement, led to a great demand at the Bank as the market was bare of the expected supplies, and it was estimated that two to three millions had been so borrowed. But the Bank figures indicate that the total was as much as 4,660,000*l*., this being the increase uuder Private Securities. Under these circumstances money rose to 2½ per cent., and fluctuated widely. The Stock Exchange, however, over-supplied itself, and money has since beeu more offering, but the quotation was 1 to 1½ per cent., while bills, at first firm at 1⅝, are now 1½, ⅝ per cent., little business offering. Heavy calls have fallen due this week, estimated at about four millions, and including one million for Local Loan and India Three per Cent. Stocks. The Bank return shows that 3,830,000*l*. of the amount borrowed has been placed to the private deposits; but the payment of the Treasury Bills has to a great extent confused the figures, so that the true position of the market is not so easily ascertainable as usual from an examination of the accounts. The stock of bullion has been increased by the influx of 788,000*l*. from abroad, and with a return of notes and coin from circulation the reserve is uearly a million better at 14,478,000*l*., or 37½ per cent. of the liabilities, against 41 per cent. last week. Compared with this time last year the position of the Bank is exceptionally favourable.

Short money is still in good demand, although after being 1½, 2 per cent. on repayments to the Bank, the rate shrank to 1 to 1½, and towards eveuing rose again to nearly 2. A call of about half-a-million was due on the last Indian Loan, but the India Council have been lending balances, and an impression prevailed that all the redemption money has not yet left the Bank. Discount was steady at 1½, ⅝ for three months' bills, still drafts were scarce. Sovereigns to the number of 50,000 have entered the Bank to-day. Bar silver closed firm, but rupee paper is nominal.

We learn that the Birmingham Banking Company has absorbed the Royal Exchauge Bank, London, an institution resuscitated from the Metropolitan Bank, and which has the *entree* to the Clearing House.

Business at the Stock Exchange has been inactive, owing to the arrangements of the fortuightly settlement, which proved a heavy affair, but was concluded without the announcement of any failures. The rates for carrying over speculative bargains ranged from about 2 to 3 on Foreign Government Bonds, and from 3 to 4 per cent. on American Railroad Securities. The strikes in Germany have attracted considerable attention, but are appareutly now in a fair way to a satisfactory settlement. The Fuuds have been dull, but other sound investment securities were in request, and towards the close of the week those of a second and even third-rate character were receiving some attention. Foreign Government Bonds have followed the course of the Continental bourses, where at first the tendency was excellent; but dulness subsequently supervened, but not to such an extent as to entirely reduce the previous advance. The feature was the strong rise in Argentine Hard Dollars, on the probability that the bonds will not be paid off in paper currency in July. Uruguay Bonds rose 2 to 2½, and while Egyptiau Preference advanced on conversion rumours, Russian, 1873, Bonds fell on the issue of the prospectus of the Conversion Loan. In the Home Railway Market the tendency has been good from a variety of causes. Traffic returns were good, trade improving. Stocks were scarce, and a large amount were taken off the market, said to be ou account of one or other of the Trust companies. Great Northern "A", Great Western, Midland, North Western, aud North-Eastern were 1½ to 2 higher, while the rest rose ½ to 1 per cent. American Railways, apart from one or two bursts of sunshine, have been a dull and listless market. and the alterations on the week are not particularly important. Milwaukee, Erie Preference, Virginia Funded, and Wabash have shown the greatest strength, while Reading, and the various Pacific issues, were the weakest. Grand Trunk Stocks show but little alteration, while Mexican were good on the result of the meeting. Miscellaneous Securities have been in better request, and prices have risen to a slight extent, particularly Nitrate Shares, Brewery Issues, Leeds Forge, aud Water-Gas Shares.

The Stock markets to-day have been particularly quiet, and the teudency has been heavy although really nothing disturbing, either political or financial, has transpired. The Contiuental bourses were similarly affected, and with just as much cause. The Funds, together with Indian Government, Colonial Inscribed and Home Corporation Stocks were quiet and without change. Foreign Government Bonds were dull, and the reduction ranges from ¼ to ½ throughout the list. Columbian Bonds, however, show a greater fall (1½) to 39½, 40½, but Uruguay Bonds were again firmer. Home Railways generally were dull, and nearly all show a fractional decline. North-Eastern were exceptionally heavy at a decline of ¾, and Metropolitau at ½, while Brighton "A" rose ⅛, North-Western ½, and Taff Vale, 3, to 259, 262. In the American Railroad Market dealings were almost at a standstill, and quotations receded ⅛ to ¼, with exceptional losses of ¾ in Wabash issues. Reading Shares, however, gained a point or so. Grand Trunk Stocks were steady, but Mexican a shade lower. There were but few alterations of importance in the Miscellaneous department beyond a sharp fall of 2 in Leeds Forge to 9¾, 10¼, and in British Water-Gas, which fell from 12½, 13 to 8½, 9½ premium. The Nitrate group was also dull, but there was a demand for New York Brewery Shares, which closed at 14¼, ¾, the preference at 12¼, ½, and the debentures at 103¼, ½.

Annexed are the final quotations to-day:—Consols Account, 99 1/16, 99 5/16; Egyptian Preference, 103½, 103¾; Egyptian Unified, 92½, 92⅝; French Four-and-a-Half per Cents., 104½, 105; Hungarian, 88 5/16, 88 5/16; Italian, 97⅛, 97¼; Mexican, 97¾, 98; Peru Five per Cents., 15 13/16, 15 15/16; Peru Six per Cents., 17 1/16, 17 1/16; Russian, 1873, 103 7/16, 103 9/16; Portuguese, 68 5/16, 68 5/16; Spanish, 76 3/16, 76 5/16; Turkish, 1871, 94¼, 94¾; Turkish Defence, 101½, 102; Caledonian, 119½, 119¾; Great Eastern, 76¼, 76⅞; Great Western, 159⅝, 160¼; Brighton "A," 154½, 154¾; North-Western, 184⅝, 184⅝; Metropolitan, 88, 88½; Midland, 145, 145¼; North British, 55⅜, 55⅞; North-Eastern, 174⅝, 174⅞; South-Eastern "A," 114½, 114¾; Grand Trunk, 10⅛, 10¼; Ditto First Preference, 67⅛, 67⅜; Ditto Second, 46⅞, 47¼; Ditto Third, 25⅜, 26; Canadian Pacific, 56⅝, 56⅞; Denver, 17⅝, 17⅞; Erie, 28½, 28⅝; Milwaukee, 69⅜, 69⅝; Lake Shore, 105¾, 106; Louisville, 68⅞, 69⅛; Atlantic First, 31⅜, 32; Ontario, 17⅜ 17⅝; Ohio, 22⅜, 23¼; Norfolk and Western, 53, 53¼; Reading, 23⅛, 23⅜; Reading Bonds, 84¼, 84¾; Union Pacific, 61¼, 61½; Wabash Preference, 29⅛, 29⅜; Ottoman Bank, 12, 12⅛; Anglo-Telegraph, 52, 52½; United Telephone, 15⅞, 16⅛; Hudson's Bay, 21⅝, 21⅞; Suez Canal, 93¾, 94¼; Guinness, 30¾, 31¼; Allsopp's, 8¾, 9¼; Nitrate Railways, 22½, 23; Hull and Barnsley, 33, 33¾; Hyderabad (Deccan), 9, 9¼; and Salt Union, 12½, ¾.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SALISBURY.—The April crushing of the Salisbury Company yielded 714 ozs.

LUIPAARD'S VLEI ESTATE.—The following cablegram has been received:—"Income for the month of April more than 1,000*l*."

SHEBA.—The following cablegram from the mine is for the month of April:—"690 tons of ore crushed at the mill, yielding 2,230 ozs. of gold."

WEMMER.—The London Agency have just received the followiug cablegram from Kimberley:—Returns for April month: 1,183 tons quartz and casing raised; 1,275 tons quartz crushed; 1,134 ozs. gold won.

MOODIE'S GOLD AND EXPLORATION.—The following cable of returns for April is from the secretary in Pietermaritzburg:—"Number of claims rented or leased, 646; number of claims rented or leased producing returns, uine; 1,160 tous crushed by claimholders, yielding 1,054 ozs."

LONDON AND SOUTH AFRICAN EXPLORATION.—The directors have sent out the accouuts and balance-sheet for the year ending 31st December, 1888. The revenue for the year was 85,326*l*. 5s. 2d., and compares satisfactorily with 83,541*l*. 6s. 6d. for 1887, and 77,864*l*. 7s. 7d. for 1886. The distribution was 15s. per share, viz.: 75,000*l*.

SOUTH AFRICAN (PULLINGER).—Notice is given that a further *ad interim* dividend of 1s. per share for the six months eudiug 30th April, 1889, has been declared by the directors, and will be paid at the Union Bank of Scotland, Cornhill, London, E.C., on and after Wednesday, 5th June next, to all shareholders on the register at that date.

JUMPERS.—Results for April, as per cablegram received May 16th, dated May 15th: "Won, 1,700 tons; crushed, 1,495 tons; obtained, 1,455 ozs. of gold; 30 stamps expenses, including permanent works, redemption account, 2,659*l*.; profit, 2,432*l*. The stopes continue to look well; reefs are most satisfactory, including second level, all free milling ore; 70 stamps erected; engine in course of erection. Everything now is in first rate order."

HILL'S WATERFALL.—The directors have received a letter from the manager (Capt. Pascoe), dated 16th April last, advising his arrival at Durban on the 14th, and that he was leaving on the same day for Johannesburg, which he expected to reach on the following Saturday. Capt. Pascoe states that the first part of the machinery which left here on the 28th February had been sent on from Durban, and he would use every effort to get it on the mines as soon as possible.

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from the manager's advices to this compauy of the 15th April:—Mines—Theta veiu: Ore extracted during week, 70 tons; assay value, gold, 4 ozs. 1 dwt., and silver, 2 ozs. per ton. Beta vein: Ore extracted, 10 tons; assay value, 1 oz. 16 dwts. gold per ton. Columbian Hill: At this place operations are proceeding on a large body of ore, but it has not yet been found to yield gold iu payable quantity in any of the drives. Brown's Hill mill—Battery: The battery rau irregularly during week, owing to the time occupied in fixing new gear and to break-down of the river flume, which uecessitated the turning off of the water for 48 hours for repairs. Time at work, 17 hours. Beta ore crushed, 16 tons; assay value, 1 oz. 17 dwts. per ton. Clean-up of plates yielded 25½ ozs. of amalgam. Transport of ore from Theta vein was proceeding satisfactorily. Pans: Time at work, 56 hours; Theta slimes treated, 20 tons; assay value, 3 ozs. 7 dwts. per tou.

It is with sincere regret we have to announce the death of Captain Hoare, R.N., a partner in the well known firm of Hume Webster, Hoare, & Co., of Abchurch Lane. Capt. Hoare had been ailing for some time past and his death was not unexpected. He will be missed by the large circle of friends by whom he was greatly respected.

COLON.—On and after the 23rd inst., the registered office of the above company will be No. 5, Copthall Buildings, E.C.

THE

Mining World & Engineering Record.

ESTABLISHED 1871.

Shareholders desiring FULL REPORTS of the MEETINGS of the Companies in which they are interested should Subscribe to and Read the Mining World—6d. weekly. One Guinea per annum, post free.

Half-year, 10/6; Quarter, 5/6. All subscriptions payable in advance. Subscriptions for the Continent, £1 3s. 6d.

Orders to be sent to

W. Dunbar Quinlan,

234, 235 & 236, Gresham House, Old Broad Street London, E.C.

CONTINENTAL AGENCY,

at which the Mining World may be purchased every Saturday

PARIS	- - -	224, Rue de Rivoli.
NICE	- - -	15, Quai Massena.

Subscriptions will also be received at the same addresses.

NOTICE TO READERS.

Beginner.—Hold the shares till after meeting is held.
Subscriber.—Buy, and take them up next account.
1, 2, 3 (Liverpool).—Sell A, C, and F, at once; B, D, and E, we advise you to join on re-construction.
Lombard.—The property is being vigorously worked. Keep your shares.
15 *years' sub.* (Bath).—10 days after "settling day" is allowed for delivery. Your shares can then be bought in if you wish.
Manila.—Very doubtful.
A. Smithssn.—The matter will be settled in a few days.
Dealer (N. B.)—The capital was subscribed four times over.
Kabooiga.—The management is reticient.
Secretary (P. O. L.)—There is no market for them on the London Stock Exchange.
J. Bays (Berks).—Advise a purchase of Nos. 2, 9, 4, 5 and 6; whilst Nos. 3, 7, 8, and 10 we cannot recommend.
A. F.—We expect Elmore and Victory both to go better.
Yuruari.—Send your address to us. We will then be pleased to give you the information required.
Mysores.—You should buy rather than sell. See meeting.
D. D. D. (Cambs.)—You are liable for the call, and, of course, must pay.
Tape (M. L.)—He is perfectly safe and respectable.
Cautious (F. A.)—We doubt if you can get 25 per cent. of the value from them. Send the list to us.
G. O. M.—It is all very well to quote such prices, but to get them in close dealing is quite another thing.
Mysore (Trader).—The meeting is reported in this issue. The dividend was paid on the 15th inst.
Rails (Willesden).—A little patience is needed. We advise you to keep them for better prices.
Troubled (S. Wales).—Sell them and cut your loss. Buy Gympie Great Easterns.
Party (R. S. O.)—They may go better, but we advise you to secure your profit.
Golden (Fife).—No dividend this time, hence the alteration in price. We advise you to hold on.
Walter D.—Yuruaris should improve.
W. L. C.—We cannot advise you to buy Elmore copper shares.
J. Y.—Leave Mason and Barrys severely alone.

The Mining World.

LONDON: SATURDAY, 18th May, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

We are obliged to hold over the whole of our reports of progress from British Mines, and a few reports from mines abroad. Next week we hope to recover all arrears.

THE MYSORE AND NUNDYDROOG MEETINGS.

If the nation is blessed that has no history, by parity of reasoning, a mining meeting is blessed that has no discussion. At the Mysore gathering on Thursday the chairman spoke, the deputy-chairman was to the fore, and Mr. John Taylor also took up his parable; but with poor William Abbott departed the other side of the table was almost voiceless, and that, too, in the presence of some of the most startling facts that have ever been laid before a body of shareholders. But though the shareholders did not criticise and did not even question the board, it must not be imagined that they were ungrateful. The cordial cheer which was aroused by the graceful allusion of Mr. James to Mr. John Taylor's happy recovery from an illness of considerable duration was at once a proof of the managing director's popularity with the shareholders, and of the value they attach to the eminent services he has rendered to mining. Thanks were also given to Capt. Plummer, who, since his visit of a year ago, is better understood and appreciated by the shareholders whose admiration he has kindled by his many-sided qualities as an administrator and a miner. The chairman and his colleagues, too, came in for a share of the thanks "for their administration of the company's affairs during the past year;" but perhaps many of the shareholders forget that their thanks were chiefly due to these gentlemen when they were engineering the company through a perfect sea of difficulty, and when they were like men crying in the wilderness to an unbelieving generation whom they sought to inspire with that faith in the mine which they had themselves. When the directors and Mr. John Taylor and Capt. Plummer are receiving thanks, now that the winter of the shareholders' discontent is made glorious summer by the sunshine of dividends and by results, it is probable that they are thinking most of all of the time when days were dark and friends were few, and when Indian gold mining was held in light esteem. Perhaps they are thinking, too, of the time when the whole future of Indian gold mining turned upon a balance of some 13,000*l.* which the Mysore Company had in hand, and which the shareholders thought of dividing rather than pursue an enterprise which seemed utterly hopeless, but which has since yielded 2¼ *tons of gold.*

The speech of Sir Charles Tennant was an admirable grouping of facts, and from it we glean certain salient points—omitting those to which we drew attention in our last issue. In the first place, the capital of the company will not be increased; the reserves have been slightly augmented; the gold is so pure that its value may almost be calculated at 4*l.* per oz.; the last return was the best yet received; the May crushings will be between 3,000 and 4,000 ozs.; the annual meetings in future will be held in March; the work of the rock-drills has been unprecedented, more than ¼ mile of levels having been driven in six months; the health of the establishment, consisting of 1,083 souls, has been good, thanks largely to the sanitary arrangements; there will probably be a sale of a portion of the property to the north of Tennant's shaft—as to which special meetings will be called; and last of all, there was a telegram from Capt. Plummer, mentioning the remarkable value of several points, and stating that he has now 50 stamps at work, and that all is going on satisfactorily.

Mr. John Taylor's speech, of course, dealt with mining details. If his recent illness has left any traces of weakness about him they were not perceptible to the meeting. He spoke with all his old force and judgment—never allowing himself to go beyond the bounds of the most studious moderation or outside the charmed circle of his facts. As he said himself, "the facts are eloquent enough." He first referred to the great improvement which has taken place at Schaw's shaft—an improvement which, at the meeting held exactly a year and a day ago, both he and Capt. Plummer foretold. At 319 ft. deep it is worth 2 ozs. 8 dwts. As the pioneer working in the southern part of the property, great importance is attached to this improvement, and it is 2,000 ft. to the south of the great mine at Taylor's shaft. It is round the latter that the chief interest of the year has centred. Four levels have been driven upon the Champion reef, all of which have passed through gold quartz. The lode in the end of the 296-ft. level, 3 ft. wide at the meeting a year ago, is now 6 ft. wide, worth 4 ozs. to the ton all but 1 dwt. Rowse's shaft (named after the secretary) is also showing important developments, proving still further that the dip of the Mysore Mine as regards riches is to the north. Even cautious Mr. Taylor was compelled at the finish to own that the present condition of the mine is "extremely satisfactory," and that "its prospects are brilliant." Could anything be more satisfactory than this—bearing in mind that every statement made bristled with facts in its support? And yet the reply of a sceptical Stock Exchange was to let the shares fall a point. The ways of speculators are inscrutable and past finding out.

NUNDYDROOG.

Of Nundydroog meeting, held yesterday, few words need be said. The company was on the high road to very great prosperity when a cross-cut disturbed the continuity of the lode and reduced the monthly returns, though not in time to prevent the payment during the currency of the financial year of two dividends to the shareholders. Capt. Plummer entertains no more doubt than he does of his own existence, that he will find the lode shortly. It is not the case of the vein "dwindling vilely," as Falstaff says, and gradually coming to the fine edge of nothing, but as Mr. John Taylor pointed out, experience teaches him that it will be found on the other side of the cross-cut, only for the time mining is rendered more complicated and immediate results more uncertain. Mr. Henry Plummer, who arrived in London on Thursday for a holiday, told Mr. Taylor what his father has repeatedly stated in his letters—that he has not the least doubt he will soon find the lode, and, indeed, he expected to be able to announce its recovery at the meeting. In the meantime, anyone who acquaints himself with the facts, as he may do by reading the speeches of the chairman and Mr. Taylor at yesterday's meeting, will be of our opinion that the shares are unreasonably low, and present a tempting opportunity to investors.

THE REDEMPTION OF CONSOLS.

THE completion of the Chancellor's financial operation is now within sight. Last week we announced that the response to the liberal offer of a 5s. per cent. bonus, to take payment by the 14th inst. in place of July 6th, had only reached at the outside 6,000,000*l*. In view of this, the wide powers which the Chancellor took in his Bill dealing with the debt are likely to be of the utmost service in completing the transaction. When dealing with such a mass of stock as 550,000,000*l*., which represented the Three per Cent. Debt at the time the conversion was proposed, it must be apparent that it would be difficult to reach all holders, especially those representing old accounts, of which they themselves know nothing, and of which alone the unclaimed dividends, which have long since been transferred to the Commissioners of the National Debt, form some indication. In the first operation, viz., the conversion offered, the "cream" of the accounts were, no doubt, first touched, and now, after the whole has been practically converted, we come to the dregs, and, as a result, find difficulty. The poor response to the last offer, which was undoubtedly favourable, compared with the 2s. 6d. per cent. lately offered to Reduced holders, is thus accounted for, and the Chancellor has now, as we expected, issued a further notice that holders may accept redemption previous to the 6th July, on the basis of the receipt of 101*l*. 10s. per cent. for principal and interest under discount at 1 per cent. per annum. It is apparent that this is the last "option" that will be forthcoming, and that all those holders who do not accept this, or take their money with the interest then due on the 6th July, will, with the Reduced holders, by the 1st October be allotted par for par the New Two-and-Three-Quarter per Cent. Consols, thus avoiding all difficulties that might and certainly would crop up in connection with numberless accounts of very old standing. By this means the Chancellor clears his books of the Three per Cent. Debt. It is estimated that the amount that will have to be so dealt with at the last will reach at least 3,000,000*l*. to 5,000,000, and it will be a matter of satisfaction to all, from the Chancellor himself downwards when the Three per Cent. Conversion becomes a thing of the past. The fresh offer of Redemption of Consols by the Chancellor is decidedly an inducement to holders to accept immediate payment, as it includes the equivalent of a bonus of 5s. per cent. upon the present selling price of old Consols. These are quoted 101$\frac{1}{8}$, $\frac{1}{4}$, say 101*l*. 2s. 6d. The Chancellor offers 101*l*. 10s., the full dividend to 6th July, less discount at the rate of 1 per cent. for the unexpired term. This is at present worth 2s. 6d. per cent., so that the holder gets 101*l*. 7s. 6d. thereby, instead of 101*l*. 2s. 6d. if he sells, and is left free to invest in Two-and-Three-Quarter per Cent., or any other stock, and receive the interest thereon.

THE FALL IN SOUTH AFRICANS.

ALTHOUGH the South African market somewhat recovered yesterday, the extraordinary fall in prices, as between the given dates below, justifies the repeated cautions we have given to the public as to dealings in these shares. Happily, the market has been mainly confined to the Hatton Garden and Holborn Viaduct gamblers, who commenced it, and upon whom a raid might be made with as much justice, though we admit not with the same facility, as that which took place the other day in connection with the Field and Adelphi clubs. The mistake appears to have been that the shares were rushed up too suddenly, like Juliet's lightning, "ere one could say—it lightens." The market "went away," as the stock jobbers say, and the pursuing public appear not to have been fleet enough of foot to overtake it. Punishment of the financial, if not of the poetic, kind has been meted out to the gamblers, whose sins, like unnatural children, have turned upon the parents who begot them. The doleful tale, as matters stood at the beginning of the week, is told in the following figures, though the quotations in our Mining market show an improvement on these figures:—

SOUTH AFRICAN SHARES.

	Present Price.			Price Dec. 24, 1888.	
Aurora	1¼	1½	...	3½	3¾
Bantjes	1⅜	1⅝	...	3½	3¾

THE MINING MARKET PAST AND PRESENT.

THE dove that left the ark of Noah could find no resting place for the sole of its foot, and so it showed its wisdom by returning to the patriarchal boat. The doves of the Mining market, until quite recently, were in the position of Noah's bird, minus the patriarchal boat. The open-air Rialto which lately did duty as a Mining Exchange was, until the recent improvements in Old Broad Street, formed by a sort of crescent, bounded by Isaac's fruit shop on the north, and Johnson's jewellery establishment on the south. The gathering of groups in this Broad Street oasis was permitted whilst the improvements were being made, but when finished it was discovered that the police had "peremptory orders" to keep the pathway clear, and they did their best to do so by chanting in a sort of monotone a refrain to the not inspiring words of "move on." From the day that the fruit shop disappeared and Old Broad Street became widened, dealings on the Mining market assumed a perambulatory character. Like itinerant street vendors, dealers walked about, flanked ever and anon by a guardian of the peace, and their bargains were done to the sound of the cuckoo-note "move on."

It became obvious to the members of the Mining market that such a position was neither calculated to bring dignity to their calling, nor personal respect to themselves, but still it needed that one should take the initiative, and to Mr. Thomas Thompson, we believe, mainly belongs the credit of having done so with the aid of several of his more spirited contemporaries, among whom we may name the members of the committee:—Messrs. Wm. Henry Bumpus, James Hy. Crofts, Samuel James, Thomas Thompson, Peter Watson, and Thos. W. Martin (secretary). They cast about for suitable premises near the Stock Exchange, in which the members of the mining fraternity might make their bargains without being baked in the summer, frozen in the winter, or "run in" at all seasons by the police. It required a good deal more work and time on the part of the committee than anyone would imagine ere matters could be put into shipshape and the Mining Exchange could fairly be regarded as an accomplished fact. That it is so now is clear from the book of "Rules and Bye-laws" which the secretary forwarded to us last evening. This book is deficient only in the one particular that in no place does it mention where the Mining Exchange is to be found; but this is of no importance, as we haste to state that it is in the basement of No. 9, Old Broad Street. The other day we inspected the premises, and found them admirably suited for the requirements of the members, though leaving perhaps something to be desired on the point of ventilation. By and by it may be necessary to secure more extensive accommodation, but as all things must have a beginning we congratulate the Mining Exchange on having begun so well.

The Mining Exchange is owned by the Mining Exchange, Limited. Every member must be a shareholder to the extent of at least 50 shares, and the shares must exclusively be held by members. There is a rule that those who desire to become members (after the first 50) must find security for 300*l*., and another rule warns them that if they become insolvent their membership will cease. Very stringent rules are made for members in dealing with each other and those who do not pay promptly will be dealt with sharply. There are a few persons to whom this hard and fast rule of prompt payment will appear harsh, but the great majority will welcome it as a means of excluding black sheep from the lily-white fold of the mining fraternity. Another wholesome rule is that each member must trade under his own name, whatever that name may be. Jones must not call himself "Abbott; Brown must not style himself "The London Share Exchange, Limited," and Robinson must be content with that appellation, even though his Christian name be Jack.

Representatives of the financial press will be admitted by special ticket, and the secretary will be the official buyer in or seller out, as the case may be. The rules are brought as far as possible into harmony with those of the Stock Exchange, and there will be a posting of members who may be temporarily or entirely expelled for misconduct. Smoking is strictly prohibited until 3 p.m., after which the members, like Samson Brass, may "blaze away."

This is a mere outline of the rules, which have been conceived in a spirit of fairness and in the interests of all who wish to place the Mining market upon a basis commensurate with its growing importance and its extensive ramifications.

BRITISH WATER-GAS, LIMITED.

The hero of Tuesday's meeting was unquestionably Mr. Samson Fox, who, after triumphing over difficulties of a scientific and commercial character in respect of water-gas, may fairly claim to have mastered those which attend the *début* of a candidate for oratorical honours in the presence of a body of shareholders. Speaking almost entirely without notes, he delivered what we cannot but term an exhaustive lecture upon the whole question of water-gas: its origin, its present position, and its possibilities in the future. It is something in these days to have a chairman whose feet are so found in the ways of righteousness that he does not know the path that leads to the Stock Exchange. Indeed, if he were asked to point out the Stock Exchange Mr. Samson Fox says he could not do it. If the shareholders want him to deal with market fluctuations, and the operations of "bulls" on the one side and "bears" on the other, they must get someone else, but if they want a matter-of-fact statement as to the soundness of their investment, from a commercial point of view, Mr. Samson Fox is equal to the occasion.

The public were asked, in the first instance, for 300,000*l*. for water-gas, and they would have subscribed many times that amount had they been allowed to do so. Since then the amount realised by sales to sub-companies has been 453,000*l*.; concessions have also been granted to the extent of 201,000*l*.—150,000*l*. being in cash; and further contracts have been entered into for which substantial guarantees have been given, which bring the aggregate amount to 1,000,000*l*. "Thus we have 1,000,000*l*. in the contracts on which we have deposits, and which we have agreed to sell at certain prices; we have 201,000*l*. on two fixed concessions, and 453,000*l*. on companies already floated, bringing out a total of 1,654,000*l*. in six weeks time." The faces of the shareholders were a sight to see, and the radiant countenance of the boy enjoying the proverbial apple paled its ineffectual fire before the glances of cupidity which each shareholder cast at his neighbour.

Mr. Samson Fox did not forget his subject-matter—in fact, he was full of it. If millions are to be talked of there must be some basis for them, and he was at pains to set forth what that basis is. In language which commanded the complete attention, and anon the applause of the meeting, he dealt with the history of water-gas from its birth to the present time; drew attention to its many capabilities as compared with solid fuel, which he held in light esteem, and demonstrated that water-gas must make its way for illuminating purposes. He foretold the time when Sarah Jane, before engaging herself to a new mistress, will ask, "Please, m'am, do you use water-gas?" and hinted that, if the reply were in the affirmative, Sarah Jane would, if not like the traditional steward in the comedy, work for his ruined master without wages, she would at least "take something off." His remarks upon water-gas for manufacturing purposes were received with attentive interest, and the figures he adduced, so far as the shareholders could keep them in their heads, were conclusive. It must be owned, however, that the millions spoken of earlier in the meeting had somewhat the effect of the new broom in regard to the figures that came later. All that he said has been demonstrated at the Leeds Forge, and, finally, he defied contradiction, and cast the gauntlet down to imitators, who, if they are well advised will not have the temerity to pick it up. The remarks from the shareholders who followed showed how deeply interested the whole company had been in Mr. Samson Fox's harangue, and the faith that had been inspired in them by the merits of water-gas, both from its commercial and scientific sides.

UNITED STATES GOLD PLACERS, LIMITED—A SUCCESSFUL RE-CONSTRUCTION.

That this company is again on its financial legs is mainly due to what we had almost called the heroic exertions of Mr. Thomas Gilbert, its chairman. Mr. Gilbert himself advanced 12,000*l*. to the company, or, as he naïvely put it at the April meeting, "I have shown, personally, 12,000*l*. worth of faith in the concern." A more generous and kindly chairman we do not remember to have found in connection with any other company. Some chairmen work hard, and deserve all the praise; others advance money without doing much work that is practical; but in Mr. Thomas Gilbert there has been a happy combination of both the monetary and the business elements, which has saved the company from the rocks towards which it had drifted, and which now augurs well for the future of a concern of which on more than one occasion we have expressed a high opinion. That opinion is confirmed by the later facts, which we shall briefly summarise.

Under the direction of Mr. Madden, one of the most experienced Californian Placer miners, who is now in full charge at the mines, the development of the property is being pushed on with the utmost vigour. The chief business now in hand is the strengthening and repairing of the ditch, after which, it is estimated, no further expense will be required for some years. An independent shareholder, Mr. Deacon, who spent a fortnight on the property, found it equipped as follows:—"There is a good plant, good head-quarters, stores, barracks for the men, an ice house, carpenter's shop, blacksmith shop, lumber yard, a saw mill, a large office, a dwelling house in Moutrose, and a ranche, which will supply the men with potatoes for 12 months, and also forage for the cattle, which is a matter of very great importance. All these things are actually there, and the whole may be described as a going concern." The shareholders may now congratulate themselves that in the new board at home (who hold and represent 61,000 shares) they have men who will look at matters from a business point of view, and abroad they have now a manager who, from the dual point of moral character and mining ability, appears to be all that can be desired. The scheme of re-construction has received the unanimous support of the shareholders. In fact, it is not too much to say that the scheme has been received with enthusiasm. High authority has stated that the placers owned by this company are unequalled along the banks of the whole of the famous San Miguel River. We doubt whether there will be any shares for the outside public, for the shareholders within the four corners of the company's list will certainly absorb them all, and would probably, if they were available, absorb as many again. The opportunity of the public will be presented by the market, and for this we anticipate a spirited future.

HAMBLEY FREEHOLD GOLD MINE, LIMITED.

We invite attention to the report of the Hambley Freehold Gold Mine, Limited, at which the chairman was not only able to make a most satisfactory statement, but to produce documentary evidence of great importance in support of what he said. It appears that on this property the discovery of fresh gold veins is almost of daily occurrence. It is being developed with great vigour by Mr. E. B. C. Hambley, who is not only bestowing upon it his time, his thought, and his utmost energy, but has given to it his name. Devotion greater than this can no man display. In one of his numerous communicatios to Mr. E. Foster Webster, the chairman, he says:—"We are still uncovering veins, and I am stronger than ever in my opinion regarding the nature of the property, I feel very sure that 12 months from this we shall have a very different tale; the gold is below, and as soon as the shaft is down, and we are able to extend drives and cross-cuts, we are, I believe, going to discover some very rich shoots." This gentleman is also the manager of the Sam Christian Mine, and his words in respect to that enterprise should make the shareholders take heart and hope. The main Hambley vein is 6 ft. wide, and shows gold. Circumstanced as the property is, it can be made to pay with almost an infinitesimal yield of gold. The capital of the company is 72,500*l*., and all the working capital has been subscribed. The present expenditure is at the rate of 2,500*l*. a year, and there is no likelihood of a call for some considerable time to come. Our readers will do well not to let this concern fade from their recollection.

NORTHWICH SALT CO.

The satisfactory statement that Mr. Edwd. Lloyd Clarke was able to make at the statutory meeting of this company on Wednesday must have sent the shareholders away with light hearts. Adverse opinions regarding the company had been freely circulated, but, as Mr. Clarke truly remarked, facts are stronger than opinions, and we think the most sceptical would admit that the facts which he adduced were of a most convincing character. At a depth of 126 ft. a discovery of strong and copious brine was made, which immediately rose to 80 ft. in the bore, and increased as greater depth was attained. The brine was tested and found to be 2 lbs. 10 ozs. to the gallon. Upon penetrating the rock to a depth of 60 ft. or 70 ft. a bed of salt rock was discovered, which Mr. Clarke described as practically inexhaustible. Having thus satisfied themselves on the all-important point of the existence of large quantities of salt upon their property, the directors are now energetically pushing on with the construction of a shaft and the necessary surface works, and it is expected that the first set of works will be in full operation in the course of a month.

THE AVALA QUICKSILVER MINES, LIMITED.

About 15 miles from Belgrade, the capital of Servia, and within a short distance of the main line of the Servian State Railway are situated the Avala Quicksilver mines. The riches of these mines have already been demonstrated, for it appears that a body of 87,750 tons of ore is now exposed, which is estimated to yield quicksilver of the value of 327,000*l*. The properties (two in number) which the Avala Quicksilver Mines, Limited, is formed to acquire, are held under titles from the Servian Government. The first extends over 1½ square miles, and is held under a lease for 50 years from July, 1884; the other, consisting of 12 square miles, is held under a grant—which the company has the right to convert into a 50 years' lease—by which is acquired the right during five years from November last to prospect, mine and work quicksilver, galena, and all other minerals. The average yield of the ore of the Avala Mines is said to be about $1\frac{2}{10}$ per cent. in quicksilver, and when it is borne in mind that the oldest and best known quicksilver mines in the world—at Idria—cinnabar, or quicksilver ore, yielding $\frac{5}{10}$ per cent. is worked with success, while, at California, ore yielding only $\frac{2}{10}$ per cent. is worked profitably, the statement of the prospectus, that the Avala will yield "splendid profits," and develop into "one of the finest quicksilver mines in the world" seems justified. This, too, is the opinion of several experts who have reported upon the property. The capital of the company is 180,000*l*. in 1*l*. shares, 105,650 of which shares are offered for public subscription. The price to be paid for the property has been fixed at 130,680*l*., the vendors taking 24,000*l*. in fully-paid shares. The purchase, we may mention, includes extensive reduction works.

A CHIMERICAL PROJECT,

After reading the prospectus of the "Aboukir Bay Treasure Recovery Company, Limited," we are forced to conclude that Carlyle, not without reason, described the English nation as consisting of 35,000,000 of people, mostly fools. Will it be believed that in a century, marked by progress on all hands, a company has actually been started with an admiral at his head, and with a capital of 30,000*l.* to recover the treasure lost in the French ship L'Orient during the battle of the Nile, estimated at 600,000*l.*? Upon the faith of this, a prospectus has been issued inviting the subscriptions of the investing public. Whilst the directors are about it we recommend a slight addition to the capital of the company, which would enable them to search for the treasure chest of Pharoah and the Egyptians lost in the immediate vicinity on a much better authority than can be produced by this prospectus or historical research, which it is known was sacrificed when the rash monarch pursued the Israelitish Host into the Red Sea. No one has yet recovered this treasure, but even failing this, there are at least the chariots which might realise a good income by exhibition in a museum in the first place, and by being broken up afterwards and sold as relics. Assuming the Aboukir Bay treasure were found, we fancy the French Government might have something to say about its disposal, but complications upon this point need not be feared, at all events, till the Exhibition is over, and even after that they may be safely relegated to the Greek Kalends.

After reading this prospectus we were furthermore persuaded that directors and trustees may be secured for any project under the sun, not excluding a Cook's tour to the moon. There was an influential board formed the other day and a company registered, the object of which was to prove that Great Britain was the lost tribe. That company has since come to grief, and this fate is typical of that which is likely to befall the one in question. If anything can surprise us in financial matters it is that Admiral Keppel should allow his name to appear in the foreground of such a prospectus as that of the Aboukir Bay Treasure Recovery Company. Admiral Keppel's business in Aboukir Bay is in strange contrast to that of his predecessor Nelson. The latter went to give an account of the French fleet, but the former proposes to engage in the doubtful task of picking up their leavings. The absurdity of the position ought surely to strike the gallant admiral. As a matter of fact, these attempts to recover sunken treasure have never succeeded. How often have we been told, and have our ears not frequently heard, of the attempts to recover the Spanish treasure lost in Vigo Bay, but they have all come to nothing, and the money expended has been practically added to that originally lost. A prophet is not required to foretell the same fate for the 30,000*l.* which this Treasure Recovery Company proposes to cast with unsparing hand into Aboukir Bay.

DRYING IN VACUUM.

Mr. Emil Passburg, of Breslau, has just published an interesting description of an apparatus for drying in vacuum. Various methods have been adopted by brewers, distillers, and other consumers of grains with a view to extracting the water these by-products contain, and thus preserve their nutritious qualities, prevent rapid decomposition, and permit of conveyance over great distances which has hitherto been impracticable on account of the heavy charge for freight. In the drying machines at present in use either too great a heat has been employed in order to shorten the process which has had the effect of deteriorating the nutritious qualities of the grains; or else, when a longer time and lower temperature have been employed, the capacity of the machines has been so small that the working expenses have rendered the processes unsuccessful from a commercial point of view. Mr. Passburg considers the following requirements essential for a successful and economical process of drying:—(1) Cheap evaporation of the moisture; (2) quick drying at a low temperature; and (3) large capacity of the apparatus employed. For the vacuum process the author claims each of these qualifications. The dried product, he says, remains perfectly unaltered in every respect, and is not in the least impared in its chemical composition and nutritious properties. The process has been tried at Messrs. Guinness's brewery with very satisfactory results. two machines drying the wet grains from about 500 cwt. of malt per day of 24 hours.

Grain damaged at sea can be dried by this apparatus with the greatest advantage and economy; and so also can grain harvested in a wet season, and containing too much moisture to be stored at once, as is often the case with barley, oats, wheat, rye, &c.. for which hitherto kiln-drying has had to be resorted to. In such cases the water only adheres externally, and is not contained within the grains themselves, as it is in brewery or distillery grains; it is therefore evaporated rapidly, and thus the drying capacity of the apparatus is largely increased. In general, the quantity of water to be removed is not more than from 20 to 30 per cent. of the whole weight of the wetted material; hence an apparatus which evaporates 20 tons of water out of beer grains in 24 hours dries easily in the same time 200 tons of grain containing only 20 to 30 per cent. of moisture.

DEVON GREAT CONSOLS CO., LIMITED.

REPORT OF THE DIRECTORS.

The directors submit a statement of receipts and expenditure for the half-year ending 30th April, showing that the sales of copper ore amounted to 2,040 tons 4 cwt. 1 qr., realising 3,462*l.* 17s. 9d., being an average price of 1*l.* 13s. 4d., or about 6s. per ton less than that obtained for the same period 12 months ago, and in money value some 600*l.* The receipts for arsenic have been satisfactory, amounting to 9,725*l.* The general expenditure side of the account, shows a saving of some 600*l.* to 700*l.* During the past six months, as will be seen by the accounts, the sum of 490*l.* 0s. 5d. has been expended in the purchase of a new Marsden's stone-breaker and engine for the purpose of breaking up the large rocks of halvans. This machinery is working well and is a great acquisition. The amount expended in connection with this, and the erection of same, may be put down at about 600*l.* Considering the fall in the price of copper, and the expenditure made for this new machinery also the outlay made in sinking shafts and driving levels, &c., the cash balance in hand on the 30th April last of 3,246*l.* 19s. 2d. should be considered satisfactory. As soon as the great fall in copper took place in March last the directors considered it desirable not to sell any more copper ores at such ruinous prices, until an advance should be made, which they hope and believe may shortly take place. Copper last year reached 100*l.* per ton and the lowest price this year was 35*l.* per ton, and is now about 38*l.* per ton, with a gradual increasing demand for the same. The average price of this company's copper ores realised per ton, was lowest in 1886—1*l.* 2s. 9d., and in the last six months 1*l.* 13s. 4d. It will be remembered that Capt. Josiah Thomas, of Dolcoath Tin Mine, as well as the agents of Devon Consols, recommended the sinking of Railway shaft to the 260-fm. level, to ascertain if tin could be found in paying quantities. This work has been accomplished, and, as will be seen by the report made by Capt. Josiah Thomas, dated 1st April, 1889, and also the report of Devon Consols agents, dated 9th April, all concur in the recommendations that deeper sinking should not be proceeded with at this part of the mines. In the event of nothing being shortly discovered of importance, the pitwork will be taken out of the shaft, when considered desirable, and the miners employed at more favourable parts of the mines. The directors hope the shareholders will read with some interest the report of Capt. I. Richards, dated, 2nd May, because, after a great expenditure of money (some 10,000*l.*) and time (some 10 years), at last it will be observed a most important discovery of mineral has been made at the 160-fm. level cross-cut from Watson's shaft, where the lode, so far as seen when this report was written, was for 3 ft. wide valued at 4 tons per fm., but has since then been further extended, and is now reported as 6 ft. wide and worth 8 tons per fm. The discovery is considered the best made in Devon Great Consols for many years. The shareholders will remember it was at the Wheal Maria part where the enormous riches of copper ores were found. On this part of the mines Capt. Richards concludes his remarks thus—"In conclusion, I beg to observe that our prospects in the main portion of our points of trial continue very encouraging. At Wheal Maria, on the Capel Tor lode, the grouud throughout the workings is of a most favourable kind for the production of mineral, and the lode is more or less productive of mineral at all points of trial. At the 86-fm level, the deepest point opened on it presents a strong appearance, and yields some copper and mundic ores of excellent quality, and being in close proximity to our main cross-course in conuection with which cross-course our greatest and richest courses of ore were found on the main lode, we have every reason to hope for and to expect that as our workings are deepened and extended east and west this lode will also prove profitably productive." According to the general appearance of the lode and rock formation, as now being developed, it would seem that he feels himself perfectly justified in expecting important discoveries of mineral at this part of the compauy's property. A contract for this year's produce of arsenic has been entered into at an advanced price. —Peter Watson, Chairman and Managing Director.

POSITION OF THE RICHMOND MINE.

The directors of the Richmond Company have caused to be issued a copy of the report of the United States Senate Committee, which was instructed to inquire into and report upon the claim for timber alleged to have been taken from domain lands. As is usual with such documents, the gist of the whole matter is to be found in the closing remarks of the committee, which are as follows:—

The land used for agricultural purposes would be abandoned if mining was stopped. No mining can be profitably prosecuted in the Eastern part of the State without the use of this scrubby timber for fuel. The commencement of the timber suits in question has caused the closing down of many mines and would depopulate the country if the Government were able to prosecute them successfully; but your committee is of opinion that the decision of the United States District Court of Nevada is correct, and that it is impossible for the Government to recover. The United States, however, is a powerful litigant, and whatever may be the right of the case while these suits are pending, the mining operations in Neveda must necessarily be paralyzed. Ths Richmond Mining Company is a Neveda Corporation and not an English Corporation, as stated by the special agent, and repeated by the Commissioner of the Geueral Land Office, and the Eureka Mining Company is a California Corporation. Both of these corporations have suspended operations awaiting the result of these prosecutions. They could not do otherwise, because their fuel has been replevined and is in the hands of keepers. These Companies are the principal support of the people of Eureka and vicinity. They have been in operation for many years, and a large town has grown up depending upon them for support. They have produced since their development between eighty and ninety millions of gold and silver, and are reducing the ores produced from the surrouuding couutry, and the outside miners depend upon them for the reduction of their ores. The suspeusion of the operations of these companies and other mining operations of individuals by these suits has thrown a large number of people out of employment and caused great incouvenience embarrassment and distress in the mining region of Eastern Nevada. Your committee can see no reason why more than one suit should have been commenced after the decision of the United States District Court. If the Attorney-General had differed in opinion with the court, the question of the right of the miuers to use the fuel obtained from the mountains in that region could have been tested in a single action, without multiplying suits, harassing the people and putting the Government to great expense. Your committee cannot refrain from expressing the opinion that all these prosecutions emauated from a desire on the part of the persons in Neveda engaged in prosecuting them to make fees out of the Government or obtain money from the people. As showing the view taken of this question by the people of the State of Nevada, as expressed by the Legislature of that State, a recent memorial of that body to Congress is attached to this report. . . . . Your committee therefore find that the suits brought by the United States, under the circumstances above stated, have been a great obstruction to the mining industry in Eastern Nevada; that they are needless and vexatious; and that the Attorney-General, in authorising three of these suits, must have done so under a misapprehension of the facts.

REPORTS OF MEETINGS.

ELMORE GOLD MINING CO., LIMITED.

COMPANY UPON A GOOD WORKING BASIS — NEW DIRECTORS APPOINTED—PLENTY OF CAPITAL, AND ALL GOING WELL.

THE statutory meeting of this company was held on Monday, at Winchester House, Old Broad Street—John Ramsdea Armitage, Esq. (chairman of the company), presiding.

STATUTORY MEETING.

The SECRETARY (Mr. John Richardson) read the notice calling the meeting.

The CHAIRMAN, who was heartily received, said: Gentlemen, as you are aware, this is a statutory meeting—the first meeting of the company, required to be held, according to the law, at the date not more than four months from incorporation. The liquidators of the Alturas Gold have been so very energetic in their proceedings generally (this matter included) that they have made it two months instead of four, and it has been exceedingly hurried work and difficult to get matters into shape so as to be able to hold this meeting. Some things that would have been a little better organised have had to be hurried for the purpose. For instance, with regard to the issue of the scrip and transfers—we have not been able to get them. First of all, there was the form of certificate to settle, and then to put it into the printer's hands. That would have taken two months in the ordinary course of things, and so we have not the certificate at present, but we hope to have them shortly, and I say this to appease those shareholders who are not able to get their certified transfers and their certificates. There has been a great deal to do, and, with the assistance of the liquidators of the old company, a great deal has been done. I may say that the provisional directors have done all that they could, but not anything of a permanent character that they could avoid. Their object has been to put the matter into train, and to leave the more permanent portion of the work for the permanent directors to take in hand.

PROVISIONAL DIRECTORS.

As you are aware, the names of myself and two colleagues, Messrs. Gretton and Leak, were introduced into the articles of association as provisional directors. Messrs. Smith and Biggs thought fit to put us there for the purpose, and we have endeavoured to fulfil the object he had in view by that appointment. Our resignation is *ipso facto* in your hands now. We were only appointed until this meeting. I will tell you perhaps, before I ask you to go on to the substantive work of the day— the appointment of directors—a little of what has been done. I think you are all aware of the fact, that the whole of the capital stock of the company is now placed. (Hear, hear.) I believe that has been issued, and you have been informed of it by circular. The result of that, and the calls that have been made, and the allotment money paid, is that

WE HAVE OVER 21,000*l.* PAID UP,

out of a possible 22,500*l.* About 1,300*l.* remains unpaid. The former sum has enabled your directors to place money in the hands of the liquidators to pay off the large creditors, Messrs. Bowen and Brotherton. I have not seen Mr. Bowen's receipt, but I have seen that of Mr. Brotherton, and his debt is quite wiped off. I must give him a little credit for what he has done.

MR. BROTHERTON COMPLIMENTED.

He has entered into a four-cornered agreement to give to the Elmore any possible advantages that may accrue to him in the neighbourhood of its mine. That was a sort of condition he made to the liquidators, but as it was verbal it was not binding upon him, and so he has had the graciousness to make the agreement, and I am willing to afford him all credit for having done so. Besides putting this money into the hands of the liquidators we have been in correspondence by telegraph, and some letters have also passed with the liquidators which practically the directors had to deal with, but we have sent to the manager of the mines a sufficient sum of money to enable him to go on with their development. We have instructed him to go on with development work without adopting too large or too costly a scheme unless he first submits that scheme to the board. Plans of the property, we were advised by telegram some time since, are in course of preparation, and will be forwarded as early as possible. One of the first things the permanent board may look for is to have these plans and details and the whole scheme before them, and it will be a very serious and important matter for their consideration. Of course we have tried to do all we could in the interests of the company. We had to begin (three directors who are here present) practically unknown to each other. I do not suppose that any one of the three was known to the other until some of the first meetings of the Elmore Company. More might have possibly been done, but we have endeavoured to do our duty on your behalf, and now it becomes a question of placing confidence in those who will take up all the details connected with the mine, and assume energetic control. I would say this to you—you want someone on whom you may rely, not merely one who is honest, but who will take a full grip of the situation on the other side, and when you have secured that, the chances are that you will get dividends out of the property.

FAITH IN THE MINE.
